A method for manufacturing a record includes an image layer-forming step of forming an image layer by applying ink containing resin and a solvent A to a recording medium, a heating step of heating the image layer to a temperature not lower than the glass transition temperature of the resin, and a solvent-removing step of removing the solvent A from the image layer after the heating step. The central portion, made of refractory concrete, is a parallelepipedic body with rectangular base and two chambers, one frontal roasting chamber where foods, placed on a vertically movable steel grill, are roasted, and a rear combustion chamber in which solid fuel or charcoal is transformed into embers that, by actuating on a crank, fall onto the rear chamber bottom. The apparatus further comprising a motion sensor for providing a signal to actuate the movable edge gripper to close and open the moveable edge gripper for capturing and releasing the substrate. In addition, a push manager allows the data consumer to register performance data items that need

to be handled, wherein the push manager calls the data consumer to process the performance data items at each time the periodic interval elapse. The invention further comprises a corresponding control method. Fluid that flows through the assemblies of the invention can have any material dispersed or dissolved in the fluid react with, be absorbed by, or adsorbed onto, the active particulate within the nanofiber layer.

1459827267-09eb245c-1cf3-4f23-a699-512d08c572b3

This invention relates to thermal spray coatings, powders useful in deposition of the thermal spray coatings, methods of producing the powders, and uses of the thermal spray coatings, for example, coating of piston rings and cylinder liners of internal combustion engines. A second stage that communicates with the first stage and the control input and that includes a current source drivers. The second support is movable relative to the first support in a cross direction. The server is further capable of comparing the total cost to drive the traveler's vehicle on the trip to the total cost to drive the rental vehicle on the trip.

1459827267-409b1102-22b2-4b00-99e4-ebb171b73154

The present invention discloses an exercise device which has a base, a vertical upright member attached to the base and at least one roller attached to the vertical upright member. The fan apparatus may be driven by a BLDC motor that stably drives the fan and increases an air flow rate. A sheave supporting beam to rotatably support cage-side sheaves is disposed in a space between an upper beam of the cage frame and a ceiling of the cage, and disposed below rotary shafts of the cage-side sheaves. If, however, the e-mail appears on the basis of the evaluation to be the last in a series of illegitimate e-mails or otherwise has characteristics inconsistent with the profile of legitimate e-mail usage, the e-mail may not be delivered and the postmaster and administrator at the source of the e-mail is contacted. The optical fiber is mounted, such that, the optical fiber is adjacent to and aligned with the light emitting side of the semiconductor laser.

1459827267-4c781ea5-fa56-4d0e-9472-c370925a2fd0

A method of testing a digital mobile phone network such as a GPRS or 3 G network comprises creating test traffic using an unmodified test mobile phone coupled to a computer, and using the computer to measure a parameter associated with the network's response to the test traffic. The fluid is an easy to handle, stable suspension of finely ground PBBMA in water. The synthesizer and the transmitter generate a signal in a first or a second mode based on the clock or mode signals. After one of the two beams is subjected to an image inversion, the two beams are condensed such that they interfere with each other. The technology enables real-time baseball gameplay between a first team associated with a first baseball field and second team associated with a second baseball field. Further, the DFC utility creates a zone ID for the FCoE endpoint device.

1459827267-9cebf2ae-1a12-4fcf-bee9-ec1b2793f92e

The present composition relates to fabric care compositions comprising an organosiloxane polymer. In the nonreciprocal circuit device, one of a plurality of matching capacitors is connected in series between one of a plurality of central conductors and a port of the central conductor. The microwave return signal is modulated by a moving target to produce a Doppler signal. The stationary arm is tapered forwardly, and has a front end distal from the front end wall, and an inclined contact face that is inclined rearwardly and gradually toward the insertion slot from its front end.

1459827267-ab196093-f749-484b-ad68-2ae2ef1538fa

SU-8 photoresist compositions are modified to improve their adhesion properties by adding 1% to 6% of an adhesion promoter selected from the group consisting of glycidoxypropanetrimethoxysilane, mercaptopropyltrimethoxysilane, and aminopropyltrimethoxysilane. A switch control is coupled to the switching circuit

for selectively coupling and decoupling the current probe inputs to the current sensing circuit such that the current signal continuously flows in the device under test. Dielectric layers containing atomic layer deposited hafnium oxide are thermodynamically stable such that the hafnium oxide will have minimal reactions with a silicon substrate or other structures during processing. The timer measures elapsed ozone treatment or exposure time.

1459827268-3ad23724-4394-4d2a-b0e3-207a3782f3db

A liquid crystal device includes a first polarization grating, a second polarization grating, and a liquid crystal layer. The system further comprises at least one processor for converting the incoming video data into outgoing video data as a function at least of one item of information delivered by a detecting element. The infusion pump body may include a carrier frame that may be adhered to the skin of a user. nonprofit giving, travel, mutual funds, savings, etc. The biasing element is coupled to the casing and the rotatable element. The dielectric coating is formed using a high dielectric constant material such as an organic polymer or an organic polymer mixture.

1459827268-64166129-2d0b-463d-8dba-4e00a7c64672

A decoding method and apparatus include providing capability for decoding data symbols that were encoded in a transmitter by either a serial-concatenated code or turbo code in a parallel processing fashion. The fuel hose comprises at least one layer including an innermost layer which comprises a thermoplastic polybutylene terephthalate elastomer containing a dimer acid moiety. The first body section is configured to attach to a drum.

1459827268-dbc6392a-dce5-44bd-bc6c-02fafb2c1cc3

There is provided an optical adaptor mounting metal fitting for mounting an optical adaptor through a panel without wobbling and an optical adaptor with the mounting metal fitting attached thereto. With respect to a gray-level achromatic color configuring a text in the specified text area, the inversion processing unit changes the color to be brighter than the case where the brightness is inverted. These antioxidants are food approve. The method includes forming a separator plate having a land height for orienting the fibers in a desired through-plane direction, then removing a portion of the land height to obtain the desired geometric configuration for the separator plate.

1459827269-62cb080a-2a35-41c1-bd04-98048d89c8a0

A magnetic flux pad for generating or receiving magnetic flux has two pole areas, a permeable core and a coil wound about the core. An optional perimeter member partly surrounds the screen and can comprise a perimeter tube fluidically coupled with the vertical risers to form a tubing assembly. The method may additionally include commanding an auto pilot to control the aircraft in response to not receiving acknowledgement from the flight crew. By employing multiple bremsstrahlung beams directed upon a container in multiple planes, the non-intrusive inspection system reduces the number of orientations and geometries of items within a container that might otherwise be employed to avoid the detection of harmful materials being transported within a container. The optical signal transmitter is particularly useful in providing the last mile connection between cable service operators and end users. Consequently, it is effective for enhancing waterproof performance to include the dead end.

1459827269-93890566-2f0c-4051-ac10-ad20cf1cc572

Systems and methods for compensating for pressure increase which may occur in various enclosed spaces of a pumping apparatus are disclosed. The first electrode layer and the second electrode layer are arranged opposite from each other. The server initiates a first call to the client using the low-level protocol. Further, a cover assembly for a fiber optic connector mounted to an end of and terminating a fiber optic cable. The color filtering layer includes a color portion arranged in

the display area and a blocking portion arranged in an interleaved portion of the first peripheral metallic layer and the second peripheral metallic layer.

1459827269-ef3a137f-a85d-42f9-b518-932cc0b851f2

Generally, the present invention provides a device for insertion into a body of a subject being treated to deliver localized x-ray radiation, and a method for fabricating such a device. The mounting system uses a tapered sleeve mechanism to secure the bearing assembly on the shaft. The device is configured to receive guide information associated with the program. The first wiring part includes a connecting line being a conductive layer on the first surface to connect the first output terminal to the first electrode, and a canceling line for canceling charges generated at the connecting line in response to a change in temperature of the substrate.

1459827270-0d3835cc-d935-4403-8394-e8dda162e479

It is an object to provide an aligner for centering a wafer and adjusting an angle of a notch or the like of the wafer while gripping edges of the wafer capable of attaining a shortened takt time and miniaturization of the apparatus by employing a mechanism capable of infinite rotation without being restricted by a rotational range, by eliminating cables and/or tubes at the rotating portion. One embodiment is a method for generating a map that comprises retrieving, by a computing device, location data from a mobile computing device. The blade portions are formed as separate components and arranged to extend lengthwise in opposite directions from a junction where the blade portions join.

1459827270-23b82fdc-f938-4531-8030-eb0454882bc2

A golf club head having selectively oriented zones of relatively high flexural stiffness is disclosed. Thus, the computation time for correction of the layout can be reduced, thereby reducing the production time of the photomask. The second iterative process is performed until each extent in a source stride is depleted of data. A locking arm for fixing the drive-out member is provided on its leading side in the direction of engaging rotation.

1459827270-2d0e6571-69cf-4b82-9cc7-7197267b3b45

A tool holder is provided that is configured to deliver coolant to a work piece and/or a cutting tool. According to the disclosed method, a vessel containing contents to be mixed is positioned in a mixing machine, and a splash shield is positioned over the opening of the vessel. A retention structure may be coupled to the distal end of the elongated segment to inhibit the distal end from migrating when the stent is placed within a body of a patient. A sampling of the current is performed based on the first sampling signal. This way the network is able to check, using the corresponding algorithm, that the charge information stored in the SIM module of the mobile station is correct. At least a first of the plurality of artifacts can be stored by a first tool, and at least a second of the plurality of artifacts can be stored by a second tool disparate from the first tool.

1459827270-917436bd-db7c-4bae-8f6b-34da92256e68

An electric toothbrush with a handle and a brush member having a brush head, individual cylindrical bristle holders with tufts of bristles held rotatably in the brush head. The characteristic of the backup jobs can take into account a number of the backup jobs that are stale. A frequency of the first test clock is an even multiple of a frequency of the second test clock. At the ends of the T slot track and rail is an interlock. A section of the primitive that maps to the fully covered tile is tested to determine whether that section of the primitive may be drawn in its entirety.

1459827270-fc1e2a0c-f1e9-4fd4-8f95-7bc88cea23c4

An all optical chopping device for shaping and reshaping comprising an all optical AND logic gate having a first input for receiving a first optical signal, a second

input for receiving a second optical signal and at least one output. Each bearing zone may include one or more radial holes in fluid communication with one or more grooves, respectively, and one or more axial channels formed along the longitudinal length of the countershaft. The drum or support surface contains at least one groove to increase the difference in reflectivity between the plate and the support surface.

1459827271-55226931-f2a8-4b52-90c8-b68cba6d32d5

A deoxidizer includes a porous body of fluorite-type cerium oxide represented by  $CeO_x$  and having a reversible oxygen deficiency. The method comprises maintaining the multiple predefined profile sets for a subscriber in a communication network. Ground and power planes are paired on adjacent layers of the PCB with a portion of the power plane relative to the ground plane removed. In response to a camera event, a camera event indication is sent to the accessory device. A phase error table 15A contains a phase error between the phase of a received signal point as an output of the inverting circuits 13 and 14 and an absolute phase only for a first quadrant of RI, RQ. One or more directional acoustic transducers that have an associated characteristic acoustic pattern will include at least a portion of the associated characteristic acoustic pattern in cooperative alignment with the limited viewable angular area of the display.

1459827271-5716da50-bcd4-482a-af5e-d4eb2b287c3d

An article of manufacture including a first adherend and a mixed two-part adhesive disposed on the first adherend, wherein the first part of the two-part adhesive includes a first fluorescent dye. Each electrode is formed by interconnected metal traces, the metal being intrinsically opaque, but the metal traces being sufficiently narrow to be practically invisible. Afterward, an etching angle is set in a manner dependent on the layer thickness of the sacrificial layer and also the first and second dimensions, and the sacrificial layer is etched at the etching angle set.

1459827271-7e5a56e5-df68-4b55-b05a-bf87e241d9e1

The present invention is directed to the removal of nitrogen and sulfur containing impurities from high molecular weight petroleum feedstock obtained from fluid cracking catalyst or distillation zone of a petroleum treatment plant. The on-die termination device includes a voltage comparator that compares an external voltage to a set internal reference voltage. The compositions and methods of the present invention may be used to identify antibiotics to treat a large number of human pathogens through the use of genetically engineered rRNA genes from a variety of species. The sensor does not include a pinned layer structure nor an associated AFM pinning layer, which allows the sensor to be constructed much thinner than prior art sensors.

1459827272-639c87b1-707f-4896-ba07-21f696f25ac4

According to an embodiment of the invention, a method for operating a data processing machine is described in which data about a state of the machine is written to a location in storage. Pharmaceutical compositions containing these compounds, methods of using these compounds as inhibitors of nitric oxide synthase and processes for synthesizing these compounds are also described herein. In one embodiment, the disk storage subsystems receiving a request to write data. The protective garment has an inner liner, which is attachable detachably to the outer shell so as to be wearable within whichever of the expansive surfaces becomes the inner surface of the outer shell. To achieve the function for clipping different size discs, the moveable clipping elements are placed at a specific angle and a specific curvature. The outer rotor element forms a shape-mating pair with the inner rotor element, the inner rotor element and the outer rotor element being shaped in such a way that radial detachment of the outer rotor element from the inner rotor element is prevented.

1459827272-7c410a54-3625-417f-8b59-05bb95db574a

A siderail support mechanism with multiple locks and an impact release feature is configured to positively lock in an upright deployed position, but is adapted to release upon imposition of a longitudinal impact load such as that caused by striking a stationary barrier. In some instances, such a device can include a wire holding device that may be considered to be disposable. Signals from an electro-optic component travel through traces in a ceramic substrate forming one side of the hermetically sealed first housing. Encoding of the synchronization signal is facilitated by a repetitive cyclically permutable codeword derivable from the selected CP codeword. A tested device on a receiving side extracts a clock included in the test data, detects the data synchronous pattern, the error detecting pattern, and the frame synchronous pattern in synchronization with the extracted clock, and determines a homo-code continuity proof test by the detection/undetection of each pattern. An event correlation engine detects various event correlation rules to analyze events to be detected and then retrieves event processing languages from an event definition storage module to implement and receive other relative events using a process engine.

1459827272-8a97c755-d699-4bff-a9b9-c87631fbab09

At least two devices are provided that can each form part of a system to inductively exchange power and data. The calculating unit calculates the viscosity of the recording liquid based on the operating state of the pump detected by the detecting unit, while the recording liquid in the tank circulates so as to serially pass through the supply passage, the internal passage, and the return passage. Two of these smaller sections of tubing carry the air to be chilled. The redundancy steering control circuitry is configured such that word line activation of the main subarrays and the redundant subarray is performed in parallel with address compare operations performed by the redundancy steering control circuitry. The circuit also includes a transmission gate or a pass transistor connecting the virtual ground node to the virtual supply node to enable charge recycling between the first circuit block and the second circuit block during transitions by the circuit between active mode and sleep mode.

1459827273-42a6745b-9494-4cba-914e-484d4a31bb08

An internal power-source potential supply circuit for supplying an internal power-source potential with high accuracy is disclosed. The first substrate may include a first set of electrical conductors which electrically connect the assembly. The databases to be searched may be identified by a multi-database search instruction that is loaded during a single data cycle, which may overlap with the control cycle. The linkage is attached to the vehicle and extends into the vehicle interior where a handle is provided allowing the user to aim the light and night vision camera from the interior of the vehicle. The agitation mechanism is operable for preventing fluid channeling to ensure good fluidization of the gypsum products from collecting adjacent the bottom wall of the housing. The binder matrix includes a non-energetic binder material and dimethyl malonate non-energetic plasticizer and has a softening temperature above at least about 125 C.

1459827273-506ec2fb-3992-4561-9357-3e2ed31c46e0

A method for treating an electroless plating liquid or other metal-containing solution that also contains reducing agents. The deposition mass are retained to the base plate by engaging unit in a disengageable manner, and alignment marks used for positioning the deposition masks on the base plate are formed on the base plate. In the safety position, the arm support panel is positioned so that it does not present a rigid edge oriented directly toward the occupant, but rather is in a partially or completely folded position. The transmission gate isolates the fuse from the latch. With the tunable matching circuits, the present invention allows the narrow band power combiner to be tuned to different frequencies. A sphincter electropotential mapping device includes a mapping electrode.

1459827273-98c2c137-3338-4d25-8dc4-a6ed2d33ea40

A prepaid computer service operating on a personal computer and a networked computer is activated at a point of sale. The secondary display presents a count of messages that are waiting to be accessed by the mobile device user. In both upstream and downstream modes of operation, the transmission is bypassed to increase flywheel energy storage and use, as well as expanding the functionality of the flywheel. In another embodiment, the auction operator computes the auction results and publishes proofs of the results' correctness. A search result is then received from the database and provided to the user.

1459827274-07061273-1413-43b3-a666-230f28d049c7

A self-service terminal having a port for transferring data is described. The spray latex foam includes a latex system and a gaseous coagulating component. This frequency shift is achieved by introducing a timing difference between the electrical input signals. Furthermore, an ordinary mode and the toner save mode are automatically switched or arbitrarily switched manually. The quantity of charge accumulated on the substrate at the predefined region and the charge-to-mass ratio of the medicament powder in the cloud control the amount of medicament deposited and retained by the substrate.

1459827274-07bc6bf3-9daf-4a74-a99c-09d814358712

Disclosed are a system, method and device for negotiating a data transmission mode over an attachment unit interface. The web server 12 is configured to send a registration request to register communication parameters of the peripheral device 10 in association with a piece of identification information at the application server 13. Two threaded holes are defined in opposite ends of the main body, respectively. One specific embodiment of the present invention is a bead interactor system that is a user playable sound and light show system. An output display may be used to report the performance characteristic to the operator in the field.

1459827274-6a0c4670-57b3-403d-9c23-97fe7b78ab53

An industrial control panel is provided that comprises a zone enclosure unit and an equipment segregation unit. The overlaid pixels are superimposed as a layer above, i. By adapting the boron-containing layer as the capping layer, the thickness of the mask layer can be thus reduced. A drawer member is positioned under the base member to allow a person seated in a wheelchair to have access to any necessary items. The divider divides the image into plural regions by using changed separation degree. These fissures are produced by the stretching and tearing of the embossment base.

1459827274-90d31e11-443c-4ce3-bfd5-9815bedf1591

A red light emitting element material with high color purity and a light emitting element using the red light emitting element material. The next web page is fetched \u201cin the background\u201d and stored in cache memory without interrupting the user. The computer configured to receive aircraft positional data from positional receivers mounted on an aircraft and overlay a model of the aircraft on the received aircraft positional data to determine a coordinate system for the aircraft. The wireless communication standard that was used to transmit the output signal is determined and then the corresponding protocol is employed. The other pair of opposite sidewalls have one outer connector sized to receive three-quarter inch standard trade size ENT conduit and another outer connector sized to receive one-inch standard trade size ENT conduit. Some of this routing internal to the dedicated function block may be controllably variable.

1459827274-c862ecb7-411d-4c1a-a7b8-b4e4555b96c8

A bearing sleeve 8 is press-fitted into a housing 7, and an axial portion 2a of an axial member 2 is inserted into the inner peripheral surface 8a of the bearing sleeve 8, and then a thrust member 10 is attached to the lower end of the inner peripheral surface 7c of the housing 7 and positioned in a predetermined position

to fix it by ultrasonic welding. The graft composition can be implanted to replace or induce the repair of damaged or diseased tissues. c\u2032, m\u2032, and y\u2032, which have been limited by \u03b1, are then normalized.

1459827275-296085eb-17ee-4eae-9092-b3cfad3d417a

Generally, a fixture for securing optoelectronic packages may be used to secure one or more optoelectronic packages for mounting one or more components and/or one or more wires to at least first and second mounting surfaces at different relative angles. To open the hood of the vehicle, a person presses a hood release button. A first, second, and third heat exchanger are enclosed within the housing. The transmission can be wired or wireless. This electrophoretic displaying particulate has high masking performance, improving the displaying contrast of the displaying device.

1459827275-4d6f7578-e52c-4e8e-80e0-1d6cd3e90edb

A processing system optimized for data string manipulations includes data string execution circuitry associated with a bus interface unit or memory controller. Each keyword permits corresponding selected optimizations by a compiler even though the volatile type-qualifier is also declared. The system translates a sample between an imaging position and a testing position. In another embodiment, a surgical assemblage is provided wherein a porous distal portion having similar fluid flow characteristics is located along the distal end of a catheter, and a needle point is attached to the distal end of the catheter for piercing tissue. The pliant adapter utilizes flexible winglets for compensating between dimensional differences between the cup holder insert and a receiving cup holder. The gasket also has a sealing portion and an elastic support for elastically supporting the sealing portion to the gasket base.

1459827275-56d376c7-d5a6-49b3-9f3a-cb1fef3db82b

A skag having a rod elongated rod and rearwardly-angled threaded studs upwardly-extending immovably from the rod. Each antenna or other type of device includes at least two multilayer ceramic modules and a MEMS device fabricated on one of the modules. Therefore, since the lens housing is installed in the housing of the terminal, even in a state in which the lens housing is rotatably installed on the housing of the terminal, damage and breakage due to exterior impacts can be prevented and the restrictive terminal design problem due to the lens housing is overcome.

1459827275-90ca7fec-3df4-41f6-b9dc-8470f9f828ea

A wireless communications system may include a plurality of wireless communications devices and a wireless device locator. A plurality of tension zones is defined in the printing system. An input gear set includes an input gear and a transfer gear mounted for common rotation. The additional functions may be selected from fragrance, bluetooth device, insect repellent device, sensor device, infrared device, remote control device, power failure light, emergency light, or other electric device.

1459827276-2e5fed47-c3a6-4f0e-99db-e704f1d33acc

The present invention provides a semiconductor device comprising a single-crystal silicon substrate; and a single-crystal oxide thin film having a perovskite structure formed through epitaxial growth on the single-crystal silicon substrate. In a sand separator box, a barrier element divides the tank into an upper compartment and a lower compartment. 5 times said value, so that the following holds true: DTrench\u2266DMesa\u22661. This invention illustrates how this model can be used as a Large Vocabulary Speech Recognition System. A method is further provided for packaging such disc-shaped item and other material within the packaging device. The addition of N-alkyl imidazole to the acetyldisulfide sulfurization solution enables the use of industrially preferred solvents or solvents that are derived from renewable resources.

1459827276-e0376331-3f56-4b10-8aca-f02cfa41bfc9

A lube-oil pump system for a diesel engine's fuel injection system has a first and second pump. The gas generator is preferably used for generating protection gas or reducing gas for start up, shut down or emergency shut down of a SOFC or SOEC. The chemical composition would be brushed onto dentures in an effort to clean the dentures of any powder or substance on them that remains to them after a person has removed them from their mouth. The time interval counter continues until it counts to a second threshold value corresponding to a timing metric.

1459827276-fb2460fb-9e1d-4852-a4fb-a53fc7916cad

A system for communicating signals between a transmitter and a receiver using digital modulation techniques is provided. The system may comprise a transmitting unit, which transmits one or more data packets. The emulation occurs transparently to higher levels of operating systems or applications so that the applications or operating systems which are designed to only access locally attached storage may be enabled to access networked storage. The optical unit is capable of detecting modulation of the optical beam.

1459827277-8ba2d340-eff3-4dae-a61c-226bb8980b36

A system for distinguishing between a fire sprinkler water flow and a domestic use water flow by supplying water to a dwelling through a multipurpose piping system to at least one domestic use and at least one fire sprinkler and providing a means for distinguishing between the fire sprinkler and domestic flow. In a retracted position, a portion of the central window panel is articulated to an elevated position with respect to the C-pillars in order to increase usable space below the retracted system. The network can have protection for failures of various components. Color-coded sock clips are included for holding paired socks together. The parameter of the wireless communication link can be adjusted based on, for example, the location of the link. The invention solves this problem through the use of polymers which are notable for their very low oxygen permeability.

1459827277-a99f1732-478b-44c5-909b-458f61f3ad2b

A styptic powder applicator and file for use with pets. An external agent requests data from the memory system of a computer system at a target address. The invention leads to an efficient implementation of given channel changes causing a minimum of disturbances. The received address is transferred to an interrupt handler which also resides on the processor subsystem. The information technology unit integrates the application into a computing production environment of the entity.

1459827277-aaf620ef-03e2-487b-88fb-2c367fca1d47

A new and distinct variety of nectarine tree, denominated 'Nectapink', has fruit of very long shelf life without alteration after harvesting, a semi-sweet yellow flesh of high eating quality and an attractive, very high percentage red skin. When various commands are received in a multiplex manner via the same port from plural host devices, the channel adapter of the storage subsystem extracts commands of a first kind from the received commands. A vacuum may be used to hold buns in a filled lane in order to close the lane. A controller is provided and configured to selectively retard the phase of the second intake cam to effect later closing of the second cam actuated intake valve sufficiently to reduce the effective compression ratio of the engine. The method includes the replacing of the downflow quencher and related duct work with a bypass for connecting the incoming flue gas duct with the upflow absorber, and the adding of a quenching zone in the absorber comprised of spray headers. Specifically, the method uses local oxidation wherein a portion of a transparent metal oxide layer is locally oxidized to be converted into a semiconductor layer so that the oxidized portion of the transparent metal oxide layer can be used as a channel region and the unoxidized portions of the transparent metal oxide layer can be used as source and drain electrodes.

1459827278-45d9b1db-68df-4621-a273-fa2a72e1d7f7

The present invention relates to the identification of chemokine biomarkers predictive of future acute coronary syndromes including unstable angina pectoris. The handle adaptor includes a handle extending from a neck having a first end and a second end. Information from one device is then automatically transmitted over the wireless communications link to the other device. The OCT components may be implemented within a hand held imaging probe. The bandwidth selection data may be transmitted via the EOC channel of the ADSL connection.

1459827278-727dcead-6045-44ec-bba4-f996e3203eb4

An interactive educational system simultaneously provides educational materials to multiple users. The MEMS arrays include polysilicon or polysilicon-germanium components that are mechanically superior to metals used in other MEMS applications, but that require process temperatures not compatible with conventional CMOS technologies. A second-group barrel provided rearward of the first-group barrel on the optical axis is driven by a stepping motor.

1459827278-b908c4f3-c329-4214-bd55-3d2bf68e2ed7

A method for setting default values of timers in a wireless communications system includes setting default values of timers Timer\_RST and Timer\_Poll to be a first value. The noise has spatially varying variances. One or more electrical controls may be provided on the handle to accommodate different functions.

1459827279-0529ea3c-e459-4bc5-ae49-ab201e6317fd

A mattress retainer bar attachment system is provided that includes a mattress retainer bar adapted to preserve a position of a mattress disposed on top of a mattress support. The magnetic recording medium includes a substrate, a non-magnetic layer, and a magnetic layer. Opening of the gate means to an extent sufficient to allow the contents to fall into the dispensing chamber generates a signal from a limit switch indicative that the loading chamber is empty. A server node is configured to receive the interface request from the portable terminal for identifying a user interface for use in interacting with the appliance.

1459827279-063a9caf-42a1-4da7-838c-6d1642ec72c6

An apparatus for orthopedic treatment including a first upper surface, a second upper surface, bottom surface, and an angle of inclination formed between the top surface and the bottom surface is disclosed. For example, the system classifies the audio signal into speech and non-speech portions, genders of speakers corresponding to the speech portions, and channel bandwidths used by the speakers. The distributed shunt regulator is made up of a plurality of shunt regulators connected in parallel and is configured to regulate a peak voltage of a voltage signal to below a maximum voltage threshold. The fast path and the control path are utilized in mapping virtual to physical addresses using mapping tables. In use, a surface of a component is translated relative to at least one jet for a period of time to form a plurality of features thereon. A fabric is bonded to the underside of the sheet material in one embodiment or a second layer of urethane is molded to blanket underside to form a major portion of the fingers and the projection in a second embodiment.

1459827279-37be4d75-19a1-4167-a8ed-84292badd8f0

Conventionally, in the process for inspecting a molded product, a measurement point indicating a portion to be measured is defined by using attribution information, such as a tolerance difference, and a measurement program is created, or a manual measurement instrument is employed to conduct the measurement. A waterproof structure according to one aspect of the present invention includes a first case having a groove formed therein, a packing that is disposed in the groove, a second case that pushes the packing and forms a sealed space with the first case. 7-hold or less the thickness of the layer Lb.

1459827279-9ab82071-3629-4347-8b1f-3692a30dd334

An unpurified silicone oil is treated with fibrous activated carbon, yielding a silicone oil of high purity, which will find use in the electric and electronic industry and as cosmetics. In use, rearwardly directed sound emitted from a rearward-facing, rear-mounted speaker travels through the speaker engagement section to the sealed acoustic enclosure, and primary sound from the speaker is emitted through sound leaks in the wireless communication device. The sensor is further adapted to emit a continuous signal proportional to the force. In such manner, NOx emissions of the gas turbine can be reduced.

1459827279-d0ea7fac-32c6-4548-8269-105b409136ff

A blade for a blender includes a center portion which includes the axis of rotation. The system includes an oven for preheating the substrate and the plurality of electronic components disposed thereon, a supplemental heat source disposed in the oven for providing additional heat energy to reflow the solder, and a pallet for supporting the substrate, wherein the supplemental heat source creates a stream of hot gas that flows transversely across the substrate. The structure further includes a second FET having a channel of a second compound semiconductor of second atomic proportions resulting in a second band structure and a first type. A notch used for applying an adhesive to the side plate of the rod lens array is disposed corresponding to the pin insertion opening and is formed to be open from the lens storage compartment to the linear illuminator storage compartment. Preferably, the extracted timing irregularities are stored and formatted into a timing irregularities file readable by the integrated circuit tester to allow the tester to reinject the timing irregularities back into the cycle-based test data using its own timing irregularities injection tools. The coating vehicle includes an organic solvent, and a resinous material being dissolved in the organic solvent.

1459827279-d2ce5730-b365-48f9-ae44-979e10d38f70

Data of a zeroth bit is supplied via a charge control transistor for the zeroth bit to a corresponding capacitor, data of a first bit is supplied via a charge control transistor for the first bit to a corresponding capacitor, and data of a second bit is supplied via a charge control transistor for the second bit to a corresponding capacitor. A melt spinning apparatus 1 is provided with a tube 2 having a nozzle 3 at the bottom thereof, a coil 4 for heating the tube and a cooling roll 5 having a circumferential surface 53 in which gas expelling grooves 54 are formed. The cleaning step electrochemically cleans the block of Invar with an acid solution while applying a negative voltage bias to the block of Invar. The frequency of performing threshold tests and the frequency of storing threshold test results may be varied according to the threshold stability.

1459827280-4c361b24-6244-4535-acee-673bcf636ef7

A high speed computer processor system includes a high speed interface for a graphics processor. The plastic parts are supplied in the form of a belt in which the plastic parts are linked together by at least one flexible web. The number of the at least two first data lines is an integer multiple of the number of sub-pixels in each pixel. The composition parameters  $x_1$ ,  $x_2$ ,  $y_1$ , and  $y_2$  satisfy  $y_2 y_1 > x_2 x_1$ , and the second layer includes an interface layer of the stoichiometric composition formed at an interface with the metal layer.

1459827280-a097a261-3f0a-4e7d-95bd-80405fa7fdf6

A data processing system is provided with mechanisms such that when a data value is stored within a data register, further data values are stored within one or more further registers such that the total number of signal transitions from high to low and from low to high does not vary in dependence upon the data value being written or the previous data value. The coated film is scanned to produce an electronic representation of the developed image. The width of the pulses as well as the frequency and phase correspond to the first signal. The periodically calculated ratio is used as an input parameter to a Random Early Detection algorithm. The

flange is formed integrally with the tank wall and is countersunk therein. The VPN identifier may alternatively be encoded in the packet by including the VPN identifier in the packet, for example, in a header within the packet.

1459827280-f0b32418-2f7a-4f14-9b88-5e5d18817b6c

A magnetic resonance apparatus has a cylindrical body coil composed of a number of resonator segments distributed around the circumference and a control device for separate activation of the individual resonator segments. The method and system treats each consecutive pair of layers together so as to minimize dummy filling overlaps between each layer. The raw data are calibrated, corrected for missing lines and clutter, corrected for molecular scatter contamination, and enhanced through multispectral combination to yield value added products. Magnetic sensitive devices are inserted in air gaps between the two pairs of upper and lower protruded magnetic substance portions. The heat exchanger includes a container defining a coolant depot adjacent to and in heat exchange relation with the flow channel and adapted to contain a coolant to accept heat rejected by the components when coolant is not flowing in the coolant channel between the inlet and the outlet. A data processing flow is provided which leads to a modified GDS layout for each of the two masks.

1459827281-043aeaa2-1248-4b9a-a7ae-e57e4f49c23c

A vessel filter comprising a first region and a second region wherein the filter is movable between a collapsed position for delivery to the vessel and an expanded position for placement within the vessel. The allocation plan allocates a first portion of advertisement impressions to satisfy guaranteed demand and a second portion of advertisement impressions to satisfy nonguaranteed demand. A kit for purifying nucleic acid containing a coated matrix and an integrity maintenance provider for preserving the matrix and purifying nucleic acid is also provided. A lubricant filling is possible, which reduces wear and as a result makes a lifetime brake possible. In particular, it was discovered that PTHrP levels in broncho-alveolar lavage are indicative of lung \u201chealth\u201d and \u201cdisease\u201d, and can be used to predict lung disease in patients at risk of chronic lung disease and/or to evaluate the efficacy of a ventilation regime.

1459827281-5384b64a-d388-40ab-9482-f9014e09bac1

A loudspeaker system includes a loudspeaker drive unit and a rear sound absorption system having a multiplicity of tubes connected to the rear of the loudspeaker drive unit. The NOC is configured to transmit one or more handshake messages to the AP after sending the configuration request. In another embodiment, the work function \u03a6 of the surface of the latent image carrier, the work function \u03a6 of the toner, and the work function \u03a6 of the surface of the intermediate transfer medium are set to satisfy a relationship \u03a6>\u03a6>\u03a6. A flow meter is coupled to the flush line between the flush valve and the junction, where the flow meter is configured to monitor a flow rate of the water within the flush line. A locking assembly having four vertical guideways containing slider strips for coupling the punch point insert to the punch driver ensures precision registration of the punch point insert with its driver. A high impact, moisture resistant wall panel includes an inert substrate composed of a high density inorganic material, wherein the substrate is dimensionally stable, a laminate composed of a substantially rigid polymeric material, and an adhesive for engaging the laminate to the substrate.

1459827281-98656af9-3862-4178-9995-e300d4f30f23

A genetic optimization computer system comprises a model and an optimizer. The conductive metal particles have a number average particle diameter of 5 to 100 nm, a BET specific surface area of 0. The transmit mixer is followed by a power amplifier that is on the same die as the VCO. Incentivation is accomplished at least in part through generation of incentive offer based on available knowledge, which is associated with an operator of the insured entity rather than with the entity

itself. A second identifier corresponding to the information to be communicated or item or service being sought is generated.

1459827281-a93019d3-8337-4c1d-8598-2e4c2d1f5872

In block-based motion or depth estimation, a block is assigned a motion or depth value as a result of minimizing the matching error over a limited set of candidate values. The system includes hardware in the form of sensors and other components and software to among other things monitor the operating condition of the mill's moving parts and predict their failure. The output of the block correlators are conjugately multiplied and summed to produce a low-variance estimate of the phase change between correlators. The change of the timing at which the optical flux is radiated from the optical flux generator is performed by changing a period of the dot clock.

1459827282-018e2d3b-9ca6-45a8-ab85-598f2a1a9107

An inflator having at least first and second gas outputs and configured to generate gas. Terminals extend through the casing and connect electrically with an electronic element mounted on the casing through wires. The upper and lower portions combine to define a forwardly-protruding convex shape and include mating structure forming an expansion joint that permits collapse and expansion as the upper and lower portions are flexed between a more-convex shape and a more-planar shape.

1459827282-0fa8d890-01ac-4f7d-b4e5-0cb61e561f32

A method for processing radiological images is provided. The first voltage is applied to the control gate of the transistor, wherein the control gate has at least a portion located adjacent to a select gate of the transistor. In one embodiment, the radius of curvature may be greater than about 500 mm at a temperature of about 20 degrees Celsius and may be less than about 600 mm at a temperature of about 85 degrees Celsius at a thickness of about 10 microns. In a warm-up phase of the internal combustion engine, the fuel, which ingressed into the engine oil, can thus likewise be combusted, even if under certain temperature-time conditions, particularly in the partial load operating mode and during idling, more fuel is present in the fuel-air mixture than is actually required for operating the internal combustion engine. The transmitting member having a frangible portion that leads a collapse of the transmitting member against an impact applied in a vertical direction between the driving member and the movable member and absorbs energy of the impact. The apparatus provides a total of six degrees of freedom.

1459827282-169d8dd2-6d15-44e5-829f-10426f5b5195

An outboard motor comprises a cowl, having a top cowl and a bottom cowl, that cooperate to define an engine compartment. A center through hole and an offset through hole are formed in the external gear. Carbon nanotube reinforcement in the matrix further improves impact resistance.

1459827282-4bfcc151-dd8c-4d02-99d9-44ecff7c54e4

A process for fabricating a medical assembly having a medical device at least a portion of which is formed of inorganic material is provided. The user determines to browse the advertisement or not. The sPAC may be a binary weighted sPAC, a thermometer coded sPAC, or some other sPAC.

1459827282-ac05025d-566b-498f-8fbb-ad08d653ba96

A field replaceable sensor module having a housing, that is capable of being ready connected and disconnected to a multipurpose device The housing includes one or more input ports and one or more electrical interface connectors. A limit switch 24 is disposed in such a manner that it detects movement of an optical pickup 11 to a position which is located at a radius of 23. The folding body is mounted on the opening top of the base and has a connecting ring, a folding segment and a mouth. 5\xb0, which is one beam inside the outermost position. This disclosure presents

the surprising discovery that levels of complement pathway components on reticulocytes can be used to diagnose, monitor, or predict the occurrence of acute episodes of chronic inflammatory diseases or conditions.

1459827283-c3c6261e-ad03-4af1-a99b-0dab0910e24d

In the fabrication of semiconductor devices such as active matrix displays, the need to pattern resist masks in photolithography increases the number of steps in the fabrication process and the time required to complete them and consequently represents a substantial cost. In accordance with the method, three or more of the pressure sensors are arranged to be subjected to the same pressure and their readings measured and compared whereby to identify a sensor whose reading does not correspond to that of the others. Also disclosed are methods for preparing these catalyst activators and polymerization processes utilizing same. The time to respond to the page can be a function of a paging cycle. The method may be implemented on a router to avoid and/or mitigate the harmful effects of a Distributed Denial of Service attack on a computer system or network. Each said identical typing unit consists of a protruding segment, an impact tip, one or more anchoring devices and a gripping appendage assembled so that said protruding segment and said impact tip extend away from the base of said gripping appendage.

1459827283-c740adbe-c477-4833-b351-9a6337215253

Present invention relates to a slotted toothbrush body and neck. A maximum width of the male terminal is longer than the shorter side and is shorter than the longer side. The oxidized organosilane or organosiloxane film has good barrier properties for use as a liner or cap layer adjacent other dielectric layers. Also provided are means for distributing a flow of fluid over a protection area ranging from about 144 square feet to about 400 square feet, the fluid distribution having a density of at least 0. The anamorphic surface unit offsets a distortion of a light spot resulted from obliquely incidence on the light valve, thus an asymmetric light spot can be improved as a more symmetric one to increase illuminating collection efficiency and uniformity. A data storage system according to the invention includes a shared resource, a plurality of processors coupled to the shared resource through a communication channel, and a lock services procedure providing the system lock procedure and the faked lock procedure.

1459827284-59a4e7f2-aa5a-435c-99bb-1b8f9956130b

A system and method for removing harmful biological and organic substances from an enclosure, vehicle or container includes protecting heat-sensitive articles within the enclosure. The guide tube lower end plug has a threaded recess in its upper surface that mates with a corresponding dashpot end plug threaded extension that is formed as an insert in the lower end of the guide tube. And in the case when the disk start mode setting device is set in the enabling mode, the disk start control device carries out control to start the hard disk and the processing section. A system for carrying out the method is also disclosed. This invention thus relates to the seeds of soybean variety XB44G07, to the plants of soybean XB44G07 to plant parts of soybean variety XB44G07 and to methods for producing a soybean plant produced by crossing plants of the soybean variety XB44G07 with another soybean plant, using XB44G07 as either the male or the female parent. The advantage is that a halo effect around the patch coating is obviated.

1459827284-79d89d87-8fb0-4530-a3b8-6095cbd94d06

The invention describes a system for and a method of creating and using dependencies to determine the order of servicing transaction requests in a multiple queue environment. The main site server system carries out a remote updating of contents of tie-up pages at the partner site server system, when the authentication between the main site server system and the partner site server system succeeds. During the preparation of the conference the system responds to the user's input of key words by identifying persons. The controller selects one of the plurality of the monitor circuits based on predetermined rules to obtain the loss at the output

ports and/or the differential loss between the channels of the optical switch. The method includes steps of: capturing a current frame, generating a current luma frame according to the current frame, generating a foreground binary image according to the current luma frame, a background luma image and a sensitivity, and updating the background luma frame according to an updating frequency and the sensitivity. The mobile device transmits a response signal to a receiver if receiving the request signal transmitted from the first or second transmitter.

1459827285-17ffcc60-79d6-45d4-ac83-d28d4a2bbd2d

The present invention relates to a terminal board applied to a multi-band and multi-carrier wireless system and an apparatus thereof. The organic pigment present in the paper is modified by the addition of a metal-charge complex which causes anionic colorants in the ink to be precipitated on the surface of the paper. Alternatively, the two compensating pulses are added at different times from each other in one horizontal scanning period. A receiver acknowledges the data packet upon obtaining sufficient transmissions to decode the packet. By implementing most of the MAC functionality in software within the host computer, the preferred MAC provides lower cost, lower power consumption, and generally greater flexibility.

1459827285-4020a209-0c28-4095-a6b7-9292da397b1c

A semiconductor device and a method for manufacturing the semiconductor device capable of reducing a short channel effect are provided. In one embodiment, the flash memory controller is coupled to a plurality of flash memories, and comprises a driving current generator and a processor. In the preferred embodiment, the controlled release fish attractant includes: an attractant and a substantially hydrophobic, film forming release agent. The product can be cooled before or after UV curing. A warning device is coupled to the security support arm and activates to provide a warning as the support arm and the security bar rotate between a plurality of positions. Various other apparatuses, systems, methods, etc.

1459827285-7336f0d1-c4e3-4914-9273-b09984c9762f

A printhead assembly is provided comprising a plurality of nozzles arranged to eject ink from an associated nozzle opening onto media in an ejection direction, and a nozzle guard arranged to cover the nozzles in the ejection direction so as to provide a space between the nozzles and the nozzle guard. The broadhead includes a rotating, sliding shaft with a spirally wound, scalloped grooved, pointed tip and tip base having two or more of cutting blades mounted thereon. Each lobe comprises a first curved profile extending from the circumferential segment toward the center of the dimple and the first curved profile of each lobe abuts each other in an uninterrupted manner. If the precoding is matched to the ISI, others of the output signals would be distorted by the ISI to signals representative of signal points that are quantization levels of the AD converter. The top surface of the poly node is higher than the surface of the silicon layer, so that it is high enough to ensure that a nitride liner used as a CMP etch stop for STI oxide surrounding a top portion of the poly node will be higher than the STI oxide, so that the nitride liner can be removed prior to forming a silicide contact on top of the poly node. A cut-out is provided on the interior side of the spout to insure there is no contact between the ball and the spout when the spout pivots back to the neutral position.

1459827285-edf9f393-a67f-4216-b8d1-fcd755a8db10

A battery and ink charging stand includes an ink reservoir, preferably removable, and has a receptacle for receiving a mobile telecommunications device having an internal printer. The method includes the steps of reacting amides with or without amines in the presence of various types of metal catalysts, at a temperature of about 250°C., application specific integrated circuits, that are assembled according to designer specifications, and bonded to a semiconductor substrate comprising the polymorphic network. Maintenance operations are then performed by exchanging data and commands with the assets of the mobile transportation unit.

1459827286-39ab9d3d-19a3-4a1d-b274-ee1b6a582b2b

In a stacked-type semiconductor device, a first semiconductor device and at least one second semiconductor device are stacked. An avatar associated with a virtual universe account may be misappropriated and/or used inappropriately by a non-comporting user against the wishes or without the knowledge of the virtual universe account owner. Each of the beamformers combines RF signals coming from the antennas.

1459827286-3f863180-04bf-4cab-b88c-66becff6b912

A process for preparing branched olefins comprising 0. Embodiments comprise tomosynthesis systems and methods for creating a reconstructed image of an object from a plurality of two-dimensional x-ray projection images. The first RNC determines that the session-establishment request indicates that the access terminal does not currently have a session, and responsively queries a second RNC to determine whether the access terminal currently has a session with the second RNC, which the access terminal does.

1459827286-3fb1cf9f-c89d-4c94-9776-9df17de06cb1

An electrical connector for a chargeable battery includes a housing, a number of pins, a number of springs and a number of terminals. The battery generally includes a case in which an electrode assembly is disposed, and a cover provided with a fill hole and fill plug, and a terminal structure that forms a battery terminal. A plurality of tines extending from a central portion of the inner contact, the tines may be angled outward from a longitudinal axis of the inner contact and/or provided with a shoulder. The machine provides a monitor to enable the athlete to track the progress of the exercise, and to determine whether the exercise is being performed correctly. The present invention further relates to a method of using such compositions to reduce gastric acid secretion in a mammal. To make a plug with a disintegratable check, a ball dropped in the well is of a type that disintegrated in frac liquids.

1459827286-81b7ea14-5531-42fd-a178-26936f5a5640

Interface plate intended to be inserted between a snowboard binding and the upper face of a snowboard, and which comprises: . The sensor includes two independent electron excitation regions and one photodetector for monitoring emission from excited species from both chambers. The service request is checked against number portability information related to the identifier of the terminating station, and against accounting information of the originating station.

1459827286-b44a1e7d-3146-4a5c-8367-5e525585fc70

A finishing apparatus modifies the physical structure along the edge of a metal knife blade wherein the edge is formed at the junction of two edge facets presharpended with abrasives. Also described are methods of operating the devices as well as lighting systems and passenger service units. The present invention further provides a method to produce an eyeglass that corrects higher order aberrations, such as those that occur when retinal tissue is damaged due to glaucoma or macular degeneration.

1459827287-2dc207e1-043e-4358-8653-7213496d28e8

Diffraction grating based fiber optic interferometric systems for use in optical coherence tomography, wherein sample and reference light beams are formed by a first beam splitter and the sample light beam received from a sample and a reference light beam are combined on a second beam splitter. A pixel number conversion block applies pixel number reduction conversion to an image pickup signal from the CCD image sensor 14. A processor has input terminals for receiving the signals from the piezoelectric devices, and the processor is programmed to determine tire parameters in response to the output signals from the piezoelectric devices. The compartment forms an extension of the furnace vessel. In this manner the performance of the server may be tuned to optimize the effect of using keep-

alives according to current operating conditions. The tracer material is a fluid permeable partially soluble material which at least prior to installation is not physically or chemically bonded to the adsorbent matrix and is either mixed with the adsorbent matrix or is located in at least one section of the casing separate from but in contact with at least one section of the casing holding the insoluble adsorbent matrix.

1459827287-43558a22-c393-4e45-acfa-eed8a999402e

Boarding device for aircraft and flying wings equipped with such a device. An operational mode is obtained for each of a plurality of climate control devices. When the membrane is disposed in its deployed configuration, the membrane and the cover form a receptacle that is configured to receive an ear or a portion of an ear of a user when the ear warmer is worn by the user.

1459827287-a9803710-4f21-4294-85e6-ed1f5ddc9dfe

A system includes at least one strip of ferromagnetic material and a plurality of pulsingreceiving coil circuits. The liquid crystal display can include a liquid crystal display panel including pixels formed of a plurality of sub-pixels each corresponding to different colors, and an illumination device, wherein the liquid crystal display panel includes a transfective layer and a color filter of color corresponding to each of the sub-pixels. An area of the external metal foil layer above the internal contact area is selected.

1459827287-d4a492e3-936a-4d29-9a34-f60219d681da

A multilumen catheter that maximizes the blood flow into and out of the patient's vasculature while also providing for passive and/or active perfusion of tissue downstream of where the catheter resides in the vasculature. We have found that the liquid hydrocarbon oil composition prevents the stress cracking promoting materials from interacting with the polymeric structure of the stressed container to prevent or inhibit stress cracking in such materials. Thanks to this construction, the lead-through terminal can be fastened for example from outside to the housing wall of an electrical apparatus without it being necessary to provide further fastening means inside the housing. Methods for memory management in such a user unit are also described. The water soluble material is an alkali metal peroxide or a combination of an alkali metal peroxide and a transition metal-containing compound.

1459827288-1072c173-5277-46eb-a257-fd8f19f3fde9

Disclosed is a system architecture, components and a searching technique for an Unstructured Information Management System. In one case, the needle guide is attached to the exterior of the sheath; in another, a needle guide adapter is attached to the exterior of the sheath; in still another, an adhesive is attached on the inside of the sheath to assist in attachment with the transceiver. The telephony endpoint device also comprises a switch, coupled to the gain boost circuit, wherein operating the switch will control whether the gain boost is to be applied to the audio signal.

1459827288-483e6437-92e1-4b5c-8db5-4cbfc9fe6a2c

A device housing includes a main body, a metallic layer, and a paint layer. The number of concurrent disk agents is changed during the backup of the objects to the storage devices. In this manner, the higher frequency signals for wireless transmitters, or for other applications, may be generated more easily. A flexible connection interconnects the periphery of the rotator drum with the end of the extension arm of the pivoted anchor post. Therefore, the detector detects a voltage of the drain of the first transistor.

1459827288-6f299a8b-f319-404b-88e4-ebdab8378834

The present invention provides a method for detecting the start of a dive for a portable electronic device comprising a pressure sensor for measuring the value of the ambient pressure as well as electronic circuits for processing the pressure

measurement results comprising a time base and at least one memory zone. The selected peak to average power ratio signal is summed with a desired average transmit power signal. An LED chip and a protective device are mounted on mounting areas of the first and second lead frames, respectively and electrically connected to the first and second lead frames.

1459827288-94a873ae-9c64-4888-9837-093b664129f3

The present disclosure includes methods, devices, modules, and systems for operating semiconductor memory. The press system further includes a mandrel extending along a longitudinal mandrel axis through the first die. The tri-layer dielectric layer can include a high leakage dielectric layer sandwiched between two lower leakage dielectric layers. In the classification compartment, the rotor of the magnetic stirrer is arranged. Further, pitch range limitation ranges are set in corresponding relation to various rendition styles, and the applicability of a designated rendition style is controlled depending on whether or not a tone to be imparted with the designated rendition style is within the pitch range limitation range corresponding to the designated rendition style. Low molecular weight heparin products and methods of use are described.

1459827288-db7c6ad0-475c-4718-a9a6-8cd0ec365ec5

There is provided a technique capable of executing a predetermined processing while continuing a database processing. Alternative embodiments provide a single pair of metal herringbone rolls, two pairs of metal herringbone rolls, or a front pair of metal herringbone rolls and a rear pair of compressible surface herringbone rolls. Minimizing overlap may maximize device performance and minimize the generation of defects between gate electrodes. An expandable structure is provided having a first portion configured to annularly enlarge the connector by engaging the interior of the connector.

1459827289-129a6e55-9ee4-4e7c-b4f2-5534af78153d

An apparatus including an audio data processor is connected to a data bus to receive encoded digital audio signals. The circuitry may use a self-timed architecture that controls the width of clock pulses that are generated so that the pulse latches that are controlled by the clock pulses exhibit a reduced risk of race through conditions. The n sub-regions are arranged in a specific area ratio. The edge portion of the vibrator is bonded with a first adhesive, and further, its circumference is bonded with a second adhesive. A system is described having an at least dual Network on Chip as well as methods of operating the same.

1459827289-3de1ddda-c127-4c07-97f4-38659331111e

Provided are a conditioner of a chemical mechanical polishing apparatus for polishing a substrate over a platen pad that rotates and a method thereof. The platform structure comprises a box-like support structure and a planar floor structure which are tiltable relative to the wall separately from each other. A control unit is capable of control each of the subsystems so that the image forming apparatus flexibly provides functions that are tailored to individual users' requirements.

1459827289-868577f3-e6bf-4c67-a13b-46e83167ebba

A method of bonding a first article to a second article is provided. The lace system includes specially shaped, sized, and positioned thong holes in the stop member of a lacrosse head, and a lace lock attached to the lacrosse stick below the thong holes. Further, employing a very thin CMP stop layer, and recessing surrounding materials by about an equal amount to the thickness of the CMP stop layer, provides improved planarity at the surface of the device. In contrast, the switchable hologram transmits the first bandwidth light without substantial alteration when operating in the inactive state. In another embodiment, the ink conduit plug has two plug sections banded together with either a flexible material or angularly disposed links. Methods of forming a photomask and an intermediate

semiconductor device structure are also disclosed.

1459827289-e0e10a85-537b-4fb3-8bb2-e0c58b472f08

A light emitting device includes a wavelength converting member for absorbing light emitted by an exciting light source and emitting light of a different wavelength. A loft sensor detects leaving the ground and returning to the ground. The detector generates signals according to an angle of incident energy. The power selector selects either the first power source or the second power source for provision to the at least one load based on characteristics of the at least one load. The tool may be pressed against a surface, first engaging the materials with a low coefficient of friction.

1459827290-0df16df3-61a7-49dc-9970-2b3e2d36d781

An optical glass for precision press molding that has desired optical constants, a low glass transformation point, and a devitrification temperature that is lower than a temperature of a glass melt, at which a viscosity suitable for forming of a preform material is obtained, is provided. The formulation comprises herbal components selected from a group consisting of Radix Codonopsis, Rhizoma Atractylodis Macrocephalae, Sclerotium Poriae Cocos, Rhizoma Zingiberis Officinalis, Radix Paeoniae Alba and Rhizoma Coptidis. The assembly further includes a cold sleeve assembly comprising a plurality of braid elements mounted to a cooler block and a highly thermally conductive block mounted between the cooler block and the outer thermal shield.

1459827290-1aa6894a-2d21-4846-aa10-01c5b55263f5

A print engine having a maximum physical sheet capacity, and being operable at an operational sheet capacity equal to or less than the maximum physical sheet capacity, includes a marking device which applies marks to sheets of media supplied thereto and outputs the same. The two measurement terminals are connected respectively to both ends of a to-be-evaluated device. The damping component is subjected to plasma etching to produce a surface which readily bonds to component of the transducer.

1459827290-628da19c-6cbb-4642-9315-fb72fec05fa8

An energy generating module includes an enclosure, a modular cage, a fuel chamber, and a railcar chassis. A device for controlling an operation of an internal voltage generator includes an internal voltage driver for outputting an internal voltage to an output terminal, an internal voltage over-driver for compensating for a potential level of the output terminal, and a controller for controlling an enable timing and a disable timing of the internal voltage over-driver. A right uniting member runs lengthwise of the frame for uniting the right rectangular tube and the right side rail in assembly, and a left uniting member runs lengthwise of the frame for uniting the left rectangular tube and the left side rail in assembly. Since the sheath can be oriented in a selectable direction, so can the filter, allowing the sheath to be introduced via a jugular or femoral approach to the vena cava. Further, the paths for each of the seams are determined. According to the inventive method, high-purity montelukast or its sodium salt can be prepared in a high yield.

1459827290-7aefb537-cf56-4aa6-89d7-03fdc1215086

Disclosed is a \u201ckeyboard overlay\u201d that sits on top of a touch-sensitive display screen of a computing device. The method includes supporting the rear end of the vehicle in a raised position by providing replacement rear wheels of larger diameter. The task group is assembled with other task groups having identical priorities in a task group queue.

1459827290-a4f0bb72-67ec-43e6-9872-86194759b860

Novel methods for preparing perfluoroalkanes are disclosed as are uses for these compounds. The elastic mount also has an intermediate sleeve having a plurality of windows through which a plurality of pockets formed at respective circumferential

positions of the elastic body are open in the outer circumferential surface of the intermediate sleeve, respectively. The connection and circuitry of the device are much simplified and improved. connected by a Fiber Channel Arbitrated Loop. A plurality of radial holes are arranged in the valve slide, through which radial holes flow can pass and which radial holes interact with a plurality of circumferential control edges in the housing which seal the valve slide in the hole in a leakfree manner by means of suitable sealing rings.

1459827291-2673e349-8846-4dd3-a9fe-b0e48b07ce89

In a spectrographic type spectrometry measuring apparatus employing a concave holographic diffraction grating or a replica thereof, a small-size and light-weight spectrometry measuring apparatus having a high reliability with a spectrum position does not move in a photo detector plane in spite of an occurrence of a temperature change. The impedance matching network comprises a first inductor bridging between the first and second dies, a second inductor coupled to the first inductor and disposed on the first die, and a metal-insulator-metal capacitor disposed on the first die. Chamber is bordered along at least two sides by a dam. In addition, the radius surface can be adjusted to specifically dictate the exit bend radius allowed on the cable coupled to the resistance mechanism cartridge. In one embodiment, an docking station includes a base, a platform on which the notebook computer can be placed, and a platform support armature that extends up from the base and supports the platform, wherein the armature can be pivoted to change the height of the platform and the platform can be pivoted independent of the armature to change an angle of inclination of the platform.

1459827291-2cc374ba-1430-436f-b5b3-6ccdd1d50598

An adverse condition detector that allows the user to visually determine the type of adverse condition being detected. The apparatus or method receives and returns light from the section and from sites adjacent to the section. By sandwiching the organic insulating film between the inorganic insulating films, a stress can be relaxed.

1459827291-68dcba4d-4ce3-412d-8c85-90a39697db39

Embodiments of the invention generally encompass a digital, application specific integrated circuit has been designed to perform excitation of a selected mode within a vibratory rate gyroscope, damping, or \u201cforce-rebalance,\u201d of other modes within the sensor, and signal demodulation of the in-phase and quadrature components of the signal containing the angular rate information. An embodiment comprises inserting a blocking material into vias between the contact and the test pad. The system may further include a contact aggregation engine coupled to the network interface and a network contacts database. It is noted that this abstract is provided to comply with the rules requiring an abstract that will allow a searcher or other reader to ascertain quickly the subject matter of the technical disclosure and is submitted with the understanding that it will not be used to interpret or limit the scope or meaning of the claims. When the results of measuring the group movement parameters meet conditions that have been set in advance, the external network relay device transmits group movement notification messages instructing group movement to the internal network relay devices of its own group and causes the internal network relay devices to change to other groups.

1459827292-5262b3e4-bb96-4310-9a3a-6796a79a7488

The printer includes a print head having nozzles that are arranged in a plurality of lines and that form dots by discharging ink onto a medium used for printing. The user interface provides a list box interface having pull down menus for the display and selection of component defined installation actions. The lower transport conductive layer is scribed and the gap formed from the scribing is filled with the layer formed above the lower conductive layer, such as the electrode layer formed directly above the lower conductive layer. The locking pawl is mounted on a movable base which secures the locking pawl to the housing.

1459827292-d121ab0a-a64c-49b7-a393-c47cdbdfc76f

An analyzer for analyzing a specimen includes a central control unit that instructs systems of the analyzer of a process operation; and a primary control unit that time-divisionally outputs an instruction by the central control unit. Core nanoparticles and/or quantum dots containing one or more elements from group IB and/or IIIA and/or VIA may be coated with one or more layers containing elements from group IB, IIIA or VIA. The film is sealingly fixed to the transparent substrate for preventing dusts from entering the light reflection pattern during the process of assembling the spread illuminating apparatus. The reader head is operable and operably engaged with and moveable along the reference element for measuring relative movement of the reader head along the reference element. Data indicating a selection of a particular interaction page is received. One aspect utilizes tracking near-resonance complex impedance for a quartz resonator based calorimeter sensor to derive ultra-sensitive temperature measurement from the sensor.

1459827292-da91d876-458f-4d6c-b5ac-1dea0fe219ba

A valve assembly for a motorcycle engine including a valve body and a plurality of reed valve constructions. An important advantage of the present invention is that a user interface for controlling and monitoring the programs in the computer network system remains unchanged when compared to the user interface of single computers. Each of the electronic modules is communicatively coupled to the network in a standardized scalable architecture.

1459827292-e9542a0c-3698-442e-9767-607094743546

An embodiment of this invention pertains to a versatile and flexible logic element and logic array block. A convolutional operation is conducted on the sound data that are subjected to the frequency conversion and the generated sound field synthesizing parameters in order to synthesize the sound of the sound source of each channel. The second dielectric layer covers the lateral faces of the pad electrode layer and prevents the first dielectric layer from touching the lateral faces of the pad electrode layer. In a described implementation, each ACP is associated with a zone root key. The embodiments of this method allow the creation of sound decoders that may be securely downloaded with sound and IPL data and that will operate in power limited environments with resistance to power drop outs and are significant improvements beyond prior art devices.

1459827293-8f8f8f76-5c09-4205-84f8-27ee33e9166d

Disclosed is a method for controlling the operating point of a battery, such as a lithium ion battery, a nickel metal hydride battery or a lithium polymer battery. The database categorization system can analyze a DBMS to identify the types of database statements executed on the DBMS and can then categorize the statements automatically, outputting the categorization for presentation to a DBA. The method also includes identifying the user based on the verified first authentication, determining, based on an actual location of the communications terminal, that the user is restricted from accessing the communications terminal, and requesting a second authentication from the user when the user is attempting to access the communications terminal from an unauthorized or undocumented location.

1459827293-d2186ad7-543c-44e0-a2a9-bdb05bd71e3b

A solar cell includes a first electrode, a second electrode and a stacked semiconductor layer. Resist compositions comprising the polymers are sensitive to high-energy radiation and have a high sensitivity and resolution at a wavelength of less than 300 nm and improved resistance to oxygen plasma etching. This tool series is assembled near the end of a production tube string upstream of the well production screen. The annular mixing element is oscillatable about an axis lying in a plane tangent to a point on a wall of the mixing element. A limit pin is adapted for inserting through the trigger and the operation element and abuts with the shell device. It also has a control system that includes process software of

the position data acquired by the measuring devices, from which it determines the required movements to be carried out to achieve the desired final position of the track.

1459827294-15f9ad32-ec9f-4a0b-8404-faa3e3813628

A precharge command can be issued to a single bank or a precharge-all command can be issued to all banks of an integrated circuit memory device at any time during normal operation of the device. The trellis would measure roughly 8 feet long and 8 feet high. The evaporator is comprised of a vapor chamber enclosed by a tube having liquid inlet and vapor outlet ports. The surgical instrument may be a power-assist motorized device including a battery for powering the surgical instrument during use.

1459827294-ba6b7ceb-d54a-4f7d-9cb5-d8dca130e3da

A patch panel in which an adapter and a panel can be installed on the framework of a machine with fewer components. The light source is arranged in opposition to one end surface of the light guide plate. The wavelength output from the regenerator is converted into another wavelength different from the wavelength that is input to the regenerator and can be processed by the WSS in advance. The sync card is further adapted to communicate with at least one other sync card by one of receiving reference clock input and raster sync signal from a previous sync card corresponding to a previous chassis and transmitting reference clock input and raster sync signal to a next sync card corresponding to a next chassis. This identified time-sensitive data is then contiguously transmitted after the first data. Each said part or half and incorporates at the free end and back face thereof hooks for fastening to the clasps of the garment, in such a way that said elastic elements cause traction between the clasps producing the girdling of the garment.

1459827296-05e06d28-17a7-4c82-b008-69b439d6d131

A system for multi-chassis interconnection and a method for chassis connection are disclosed. A fixed income online retail enabling mechanism analyzes a request received from a user to determine the requested operation related to online retail fixed income. Updating the mosaic can include color correcting.

1459827296-13c9fc1a-88da-484a-9396-416cc6201093

Collection systems and methods use a separation chamber that receives blood or a suspension containing red blood cells and performs a separation process including separation of red blood cells from the blood or suspension. The chamber case of a brake chamber of a vehicle is configured to surround a power spring and a piston, and a top portion of the chamber case is formed to have a relatively greater thickness than a side portion thereof to reinforce the strength of the chamber case. The wireless wide area network may simulcast call content to the broadband access gateway via a broadband network. The network includes input/output controllers, having a first communications port for communicating with the master controller and a second communications port for communicating with peripheral devices. The new compounds compositions may be used either alone or in combination with at least one additional agent for the treatment of a Raf kinase mediated disorder, such as cancer. It is possible to cope with the game environments of the individual game terminal devices, easily perform a modification process as compared with the conventional system of the type in which a setting operation is performed in each individual game device and enable an autonomous modification instruction of the game terminal device side.

1459827296-455b6dc3-fd77-4db6-a3ef-d8c97877cfee

A supplemental step assembly for a vehicle having a vehicle step includes a step which has a first end and an opposite second end. The mobile device can then obtain and display the call statistics. Adjustments to the position of the nanospray needle within this assembly are made independent of the remainder of the ion source. The hollow interior of the container body is sealed and provides a fluid-

tight reservoir to hold a fluid or a frozen or partially frozen fluid or gel. A single-column analog gain amplifier may amplify an analog pixel signal value of each column prior to processing by a respective multi-column shared readout circuit. The method for preparing the IGZO particles comprises the following steps: providing a solution of metal acid salts, which contains a zinc salt, an indium salt, and a gallium salt; mixing the solution of the metal acid salts with a basic solution to obtain an oxide precursor; and heating the oxide precursor to obtain IGZO particles.

1459827297-66a057a3-5642-4fa7-940f-32941893d758

A portable main drain utilizing top and bottom walls with an attached flexible conduit for the removal of debris from bodies of water, ponds or spas, which operates with suction at the cleaner suction port and/or the skimmer from the circulation pump. The tooling system is adapted to accommodate any stock part and generally includes a flexible tool device, a stock part with opposed ends defining an edge therebetween, and a securing device. Disclosed is a method by which the UICC exchanges information with a terminal, such as an Internal Key Center and a Bootstrapping Server Function enables a procedure where multiple local keys specific to applications and Network Application Functions are used for authentication and to encrypt and decrypt messages.

1459827297-9c5f8fb3-27c8-4bb5-8d75-092d12210587

A method of facilitating communications between a mobile terminal and a display device includes determining an orientation of a mobile terminal with respect to a display device that is physically distinct of the mobile terminal, and determining a manner in which wireless content data is to be communicated between the display device and the mobile terminal. The call agent allocates a QoS agent for each endpoint involved in a call. A power steering valve is attached to the lower portion of the steering wheel, and grooves in which hydraulic pipings connected to the power steering valve are arranged are formed in the fuel tank. A brake-steer shaft is coupled to the brake mechanism.

1459827298-27a99a2a-0a29-4323-bee9-a20f121808bf

Provided is a memory system that has a plurality of memory banks and a plurality of link controllers. The invention also includes an apparatus for removably attaching the blanket itself to other objects such as a highchairs, baby bouncers, infant swings, car seats, strollers, or shopping carts, for play control and stability. A pulse generation module is configured to determine a plurality of generic pulses based on the plurality of pulse defining parameters.

1459827298-4cc5cefd-d833-4273-ac09-dc2542f4c993

Digital camera systems and methods are described that provide a color digital camera with direct luminance detection. In particular, provided are processes which utilize an amplification mixture comprising a polymerase, a deoxynucleotidetriphosphate mixture which contains modified dNTPs, a first primer and a second primer. The rotational balance between rotational parts including the double-headed pistons is achieved only by first and second balance weights which are inserted and incorporated into both ends of a crank shaft coupled eccentrically to a shaft. The method also comprises bringing the charge carrier into an oscillatory movement along a path.

1459827298-6d9f3ac1-e1fd-4855-a6a6-9466539a7509

Novel mixed agricultural compositions, and methods for their use are disclosed. A user computer stores a stored address. The bus pipeline stage may be coupled between the first bus and the second bus and configured to delay an access between the first bus and the second bus at least one pipeline cycle. Another rotating disk has a long hole corresponding to an anchor element to limit a starting point and an end point of inclined angle travel caused by the above-mentioned dividing holes so that it can be used to adjust the inclined angle of computer, and avoid falling

down due to an over-adjustment.

1459827299-01e88804-36ab-4c26-904e-6146f4467bba

A duty cycle stabilizer circuit receiving an input clock signal and generating an output clock signal having a first duty cycle includes a leading edge pulse generator and a pulse width extender circuit. The insulating region can have a first side and a second side opposite the first side. A biased armature member is adapted to force a friction plate member with friction linings thereon against a housing or cover which is rotating at input speed. The results signals can be output for analysis and/or used internally for defect detection or setting of operating parameters such as a reference used during read operations.

1459827299-8d031e94-6a04-4f38-8179-aab041ecab82

The invention concerns a new flexible or rigid packaging for an electrochemical accumulator. The first format video data has jitter frames inserted therein and is displayed at a first frame rate. The dividing diode is mounted between adjacent LED arrays. Alternatively, the concentration of oxygen in the first layer may have a two-dimensional fluctuation, and a first region where the concentration of oxygen is equal to or higher than 40 atomic % and a second region where the concentration of oxygen is equal to or lower than 35 atomic % may be provided in the first layer. Also provided is a method of forming a dielectric filled, shallow trench isolation region for a MOSFET device where the shallow trench is filled with an aluminosilicate, an aluminum silicon oxynitride or silicon oxynitride dielectric alloys. The received signal is obtained by dividing and re-arraying each of K symbols in terms of a chip period as a unit, each symbol being spread with the spread code at a rate of M chips per symbol, and on repeatedly inserting into the re-arrayed symbols a signature pattern of a length K having one chip period as a unit, by M times, where  $N=K \times M$ .

1459827299-f21cd1b7-933a-4486-88e2-c42c615b7d00

A marking pen having a deformable tip, and adapted to apply ink or the like to a surface in a stroke of uniform width. A secure removable engagement with the top of the ladder is provided by walls descending from a top which form a skirt to surround the top end of the ladder and hold the device from sliding therefrom. The damping material is arranged such that the density of the material in the chamber decreases as the distance from the driver increases. The rotary body has a rotary blade including a first edge portion.

1459827300-16508ad7-f585-4646-8328-8f68256f1b2d

Automatic planogram programming for a glass front snack or cold drink vending machine is accomplished using tray, product and price barcodes, each preferably a different type of barcode. The limiter valve includes an adjuster for adjusting a press-fit position of a spring pin press fit in a plunger. The components are interconnected such that the controller component can selectively vary the steering angle relative to the input control angle.

1459827300-3be778a8-307d-466a-9d22-eddc1caa4528

A method for analyzing a structured integrated circuit is provided. A plurality of the non-intensity modulated optical information signals are converted to intensity modulated signals while the plurality of non-intensity modulated optical information signals are multiplexed in at least a portion of the WDM signal. , bits in one or more header fields. The apparatus also has a contacting portion interconnected with the handle.

1459827300-915ddfe8-ae0d-48eb-ba66-92b4f1a32843

This invention provides a high-volume check stand with a front transport that has two belted input conveyors so that a customer can load one belt while the cashier is checking out products purchased by a second customer on the second belt. The exposure apparatus has a light emitting element member that exposes the image

carrier and is arranged on a substrate. The discharge space is provided with high voltage from a discharge power source and high current from a plasma energy supply power source to form plasma having high temperature and high pressure in the discharge space.

1459827300-b33e64e0-13f6-4fee-8337-cd0eec746290

A compressor case support arrangement for a gas turbine engine includes a fan section having a central axis and a compressor case for housing a compressor. In one embodiment, Aggregation Point Noise Blocking provides for blocking or filtering the noise contributed by one or more of the branches coupled to an aggregation point that are not carrying the signal from a particular terminal. The midframe portion further includes a manifold to directly couple the air flow from the compressor section to a combustor head upstream of the turbine section.

1459827300-f82a93b5-1e8e-45f1-b3c7-f83e260c16cc

Memory systems and methods of forming memory modules. In various embodiments, enabling pulse clocks are configurably generated for a selected one of a first and a second signaling mode, employing a configurable enabling pulse clock generator configurable to so generate the enabling pulse clocks. Thereby this device has the capability to switch 2 sets of retro-reflected optical light transmission paths, the method of said approach is a demonstration of 2\xd72 optical switching function. The requests are placed by the respective requestor by asserting a request signal, and the request signal is deasserted by the respective requestor when a response is sent back. Said panel can be advantageously obtained by using also recycled, injected thermoplastic material, that allows the resulting panel to be conveniently used when the wind causes strong impact, for example, along railway lines where the compression waves generated by trains traveling at high speed over time tend to disassemble the riveted aluminumsteel sound barriers currently in use.

1459827300-fffa1288-ca3e-483c-849b-a1450eb1c331

In a vertical machining center, a spindle head is movable in three mutually transverse axes directions relative to a workpiece and a table is arranged below. A storage object handle is provided on request and a storage object is mapped within a first storage environment. A transport section transports the medium in a sub-scanning direction along the first and second nozzle lines. Parasitic resistance and capacitance elements can increase the further in distance a sector and associated decoder component are from a booster component, which is utilized to increase the voltage at a boost-strap node within each decoder subcomponent to facilitate performing read operations.

1459827301-2c63556c-08c5-4f8b-929e-d7ff70d64624

Disclosed is a catalyst distributor and process for mixing spent catalyst and recycled regenerated catalyst in a regenerator vessel. The alloy for medical use according to, for example, an embodiment of the present invention is mainly composed of three kinds of elements of gold, platinum, and niobium. The plurality of independently steerable wheel assemblies, each steerable about a steer axis of rotation include one of the plurality of wheel assemblies being designated a master wheel and the remaining wheel assemblies being designated slave wheels. When incorporated into the chewing gum, these particles are adapted to produce a fast release or a delayed release when the gum is chewed.

1459827301-6b1d4500-1a42-4c07-a3b4-c5088c4781d3

An activemark mechanism for a live parsing editor allows marks in text to be referenced or linked to any editor command, macro, or any external tool activated by the editor. For oligonucleotides, the eTag reporters are synthesized at the end of the oligonucleotide by using phosphite or phosphate chemistry, whereby mass-modifying regions, charge-modifying regions and detectable regions are added sequentially to produce the eTag labeled reporters. The virtual segmentation system further includes a virtual segmentation subsystem that is associated with the

protocol data unit receiver subsystem and is configured to perform virtual segmentation on the protocol data unit. In addition, the spent cloth can have been used as metal working filtration media and the foreign solid particles removed from the cloth using a brush. The transmitter is configured to transmit the aggregated encrypted data and the total value of the message authentication codes. The filtered radiation is detected, and a depolarization ratio is calculated using the detected filtered radiation.

1459827301-cb9d48af-f6f9-418f-b874-988ceee899f8

It has been identified in accordance with the present invention that Nell1 is essential for normal cardiovascular development by promoting proper formation of the heart and blood vessels. Desorption of the sulfur and sulfur compounds from the catalyst occurs at a temperature less than 600 degrees centigrade. The first support has a peripheral edge. In some other embodiments, the external fixator ring further comprises angled flanges extending radially from the inner or outer surface. Little is known about the T-DNA integration process, and no plant genes involved in integration have been identified prior to the present invention.

1459827301-eadfa84c-2837-4fc3-85ce-b84c8a903305

A method and apparatus for connecting threaded members while ensuring that a proper connection is made. In one exemplary implementation, multiple associative memories or associative memory banks are configured to substantially simultaneously generate a plurality of lookup results based on a lookup value. The piece-wise update-and-hold technique results in a pseudo high pass filter response with an equivalent corner. Decoding rules associated with the message type are generated by the High Level network layer component. A memory access controller is included on circuits with a memory such that serial data may be written to and read from the memories without having to repetitively cycle through multiple shift operations. 2 to 2 are administered to felines to treat feline inflammatory bowel disease.

1459827302-33d9d664-1966-4cfc-91a4-5562f224ad18

A Scan-BIST architecture is adapted into a low power Scan-BIST architecture. The characteristics of the first network connection can be potentially different than the subsequent network connections. By permitting flush mounting the meander line antenna, not only can the antenna dimensions be minimized due to the use of the meander line loaded antenna configuration, but in aircraft applications no part of the antenna exists above the skin of the aircraft, thereby to minimize turbulent flow. The systems of the present invention provides the ability to distinguish between tissues of varying viscosity. Operation of the gas turbine is stabilized using a low limit value of a pressure drop ratio, wherein the pressure drop ratio is a quotient of a pressure drop which occurs at the control valve and of a pressure upstream of the control valve.

1459827302-609f0374-ba00-4ecc-bcf4-6ee3f986573d

The nursing garment of this invention is in the nature of a bib, small enough to be easily carried with a baby's paraphernalia and easily positioned over a user's conventional outerwear when desired. The reinforcing structure includes a front pillar whose peripheral wall has an outer panel and a reinforcement to provide a double wall structure, and an adjusting mechanism for making a buckling-mode waveform of the outer panel in a substantially-reversed phase to a buckling-mode waveform of the reinforcement. The instrument may have a toggle member with one or more selectable positions that may selectively activate any of one or more operational states of an electrosurgical electrode comprising the instrument.

1459827302-6e76ea57-5808-4f19-8421-f7655c3e1d73

A method of flying an aircraft, where the aircraft has an associated performance envelope, along a flight path based determining an altitude profile for a cruise-climb along the flight path based on the performance envelope of the aircraft and flying the aircraft along the flight path to approximate the altitude profile. A

police activity transponder is configured to read speed data available through an on-board diagnostic system or an intelligent vehicle data bus and using an internal clock, calculate a 0 to 60 mile per hour or a quarter mile time for display and function as a speedometer. An access rule defines which API server on the online commerce site a specific third party application may access when using a specific API function call. The valve is configured to selectively permit and restrict flow between the channel and the cavity via the passage.

1459827302-d6be9b55-50ee-4b18-beb1-a7c60a83abcf

A method and apparatus for authenticating entities to use an intelligent interactive Electronic Document Code stored in an RFID tag attached to a document as a means for third parties to ascertain a document is not counterfeit and has not been revoked or changed. The composition comprises collagen, elastin, sphingosine and cerebroside. The present invention also relates to a self-adhesive label web comprising successive plastic labels, and a method for manufacturing a laminate to be used in manufacturing of self-adhesive labels.

1459827303-37921faf-9737-4cd7-a6ab-86b128bb46b5

An expandable pallet which includes a pair of deck members which have at least one column member extending therebetween. One embodiment includes asymmetric primary and secondary lenses. The lighting elements are coupled to the secondary winding. The base paints are blended in the blending device according to the predetermined ratio forming a secondary paint having the hue and chroma previously selected. 6A, an image obtained by enlarging a spark portion of the image preceding the current image by a predetermined number is drawn in such a manner that it looks semi-transparent to obtain the image as shown in FIG. The drain-side passage is formed by exhaust passage holes whose number is an even number equal to four or more and which are arranged at regular intervals in the circumferential direction of the valve seat member.

1459827303-55697960-d58e-4c74-a9aa-ddaea6385f8b

A security system for monitoring a premises. Alternatively, or in addition, a digital image can have text that is adjacent to a predefined insertion field. Held by a taper, slant or curved face against insides of the slotted holes, the steel balls move axially, overhanging the enclosure.

1459827303-726adaf6-66cf-48bc-9e7a-8fe160844f51

Provided is thermosetting urea-formaldehyde resin binder formulation, preferably prepared with modified styrene-maleic anhydride. The semiconductor device includes a lower semiconductor chip bonded onto a surface of a wiring substrate; an upper semiconductor chip; and one or more spacers which are bonded to the surface of the wiring substrate and which support the upper chip over the lower chip and at a location separated from the lower chip. The inlet forming member is configured to provide an inlet cavity in the casting mold to enable casting material to enter the casting mold. In one embodiment a buffer is provided between the microphone and the mixer to help synchronize the timing of the signals to be mixed.

1459827303-bf0fde4e-d3f8-4a66-b495-dfc89e9a6055

The invention is directed to a method of treating chronic spinal mechanical pain by intravenous administration to a subject in need of chronic spinal mechanical pain relief of an effective amount of bisphosphonate. The first member has a cylindrical stem with a coupling tooth projecting from the stem. The logic gate has a first input connected to receive a first logic value of a bus line, and a second input coupled to receive data output from a subarray.

1459827303-f4695468-d863-438a-bcf4-c386ee40a4fa

A broadband optical via provides a low loss interconnection between waveguides in two vertically adjacent planar waveguiding layers. The primary module comprises a first supporting body having a first main gas flow path through the body. On the

contrary, the wavelength-swept laser according to another aspect of the present invention suppresses mode-locking to produce continuous output by tuning the filter frequency change speed to the frequency shift speed of the frequency shifter. This eliminates occurrence of poor welding in the electric resistance welding.

1459827304-0b635a91-6709-469a-b283-9550d6e8ffa7

The present invention provides a medical device, preferably an ophthalmic device, more preferably a contact lens, which comprises a lubricious coating including a capping layer of polyvinylpyrrolidone and/or at least one layer of a lubricious coating material and one layer of a polyionic material having charges opposite of the charges of the lubricious coating material. The system is a foam-dispensing container and an aqueous emulsion of an oil component with improved foamability. The display is received in the recessed portion, and is pivotably connected to sidewalls of the recessed portion. Another method is disclosed including receiving at a network access element on a first uplink communication path a bandwidth request from a user equipment. The slide member includes an aperture for receiving the line therethrough and a groove along a peripheral portion for sliding engagement with the hook.

1459827304-8948cf7e-9738-49c7-a061-77f1036456ca

An image arranging device arranging an image in a predetermined region, includes: a regulation obtaining section that obtains an arrangement regulation of the image in the region; and a data obtaining section that obtains print image data which represents a print image to be printed on a print medium and in which a finish size of a printed matter is designated. The inner layer is made of a bearing material that includes a thermosetting resin. After the high-power optical burn-in, the output of the lasers can be measured to determine if the lasers are operating within specifications. The response of the system is measured as the Position Error Signal, for the magnetic head moved by the micro-actuator. Such information can be analysed and compared against known optical systems to provide a means of identification.

1459827304-c18aa4c8-a9f9-404b-bb91-4f24a2d7a038

An integrated cap assembly of a secondary battery. The third member 14 covers the first member 10 in which the first room 24 is formed and the second member 12 in which the second room 38 is formed. The material surface indicator is at a height above the depth guide substantially equal to the predetermined depth. The basic body is made from a first material with a first density and the insert is made from a material with a second density, which is lower than the first density.

1459827304-f34a6bd2-29dc-412a-8f05-ffd0c0113deb

Additional information on the phase of an external clock signal is obtained by using clock signals to determine if a phase difference between an external clock signal and a first internal sampling clock signal is less than a pre-selected value. A first and a second conductor patterns are formed on the first and the second surface respectively. Routing circuitry is configured by the stored block repair configuration to output some row and column address bits from received row and column addresses in a selected ratio. The valve member is mounted on a valve shaft that is rotatably supported by the valve housing.

1459827305-1e541837-f9d2-4f60-b41c-b83a7376e2e4

A tool for measuring, marking, or cutting material, the tool formed of a rigid sheet of transparent material having a plurality of lines formed thereon, and a plurality of windows formed in the lines to enable viewing of material underlying the tool. The layers are individually formed and laminated together, the laminated combination subsequently cut into a plurality of discs. The presence of the thermal isolator eliminates the thermal short, and substantially increases the effectiveness of the temperature controller and enables the miniaturization of temperature-controlled optoelectronic transceiver modules. Also provided are a

color filter and a liquid crystal display which are formed by using the ionizing radiation-curable resin composition.

1459827305-7051780d-cce6-407a-9ff1-e470ff40c643

This magnetic recording medium is characterized in that in the magnetic recording medium having a magnetic layer on a non-magnetic substrate by intercalating at least an under layer, the proportion of functional groups per 100 carbon atoms in a diamond-like carbon protective layer mainly composed of carbon for protecting the magnetic layer exceeds 20%. The aperture specifying unit instructs a beam-limit control unit to take the calculated aperture of the diaphragm blades in an X-ray beam limiting device. A diagnostic module enables one or more engine diagnostic modes based on the selected engine rotation mode. The valves must criss-cross to open/close. In addition, the bottom antireflection coating provides a reliable adhesive surface for the color filter array, substantially eliminating lifting of the color filter array resist structures. Adjacent signal lines are not active at the same time.

1459827305-9b87c9d0-b831-4e4b-a75a-1eed89b2016b

This invention is directed to a composition comprising: platinum group metal powder, alloys, or mixtures thereof as a powder or deposited on graphite supports; poly, derivatives, or mixtures thereof; carbon-based electrically conductive filler; and thermoplastic polymer or mixtures thereof. Gas being produced by the well is used to create a pressure differential between two spaces. Also disclosed are systems and methods for linking product attribute data obtained during the manufacturing process with one or more data sources including raw material data, process setting data, product quality data, and/or productivity data.

1459827305-f0ce375f-fc60-4d5f-862c-bd44c3032828

A disc-shaped analysis chip has an internal space. The system is based on purified polymalic acid. At least a portion of the headspace gas is a sulfide gas. The light source is disposed over the mask pattern generator to a photo-resist layer on the substrate. The compositions of the present invention are useful for treating and removing biofilms, as well as inhibiting sulfide production in a variety of aqueous systems. By way of example, a base character and the various accented forms thereof can be said to have a logical proximity to one another that is closer than their logical proximity to any character having a different base character, whether additionally having a diacritical element or not.

1459827306-32c1d957-aeef-4ee7-8f98-74ae669e45ef

A transport cage and enclosed case combination, wherein the cage is adapted to attach to a vehicle rack where the cage functions simultaneously as a transport container and as a supplemental rack. Entrainment reflects a harmonious balance between the two branches of the autonomic nervous system within the body. Adjustment of an input can include shifting the mantissa by the leading bit count and adjusting the exponent accordingly, while adjustment of the output can include shifting the mantissa by the sum of the leading bit counts of the inputs and adjusting the exponent accordingly. The method includes using the radiation shield device in processing a workpiece using a processing tool.

1459827306-950313c9-d0b3-46ff-8823-5e1fd79de569

A cup for dispensing liquid and solid medication. It employs a housing, with an opening on one end, and at least one layer of parallel strings or line stretched across that opening. Deformation of the pedestal in response to the downward pressure is concentrated in the connector segments and, to a limited extent, an innermost portion of the disk member, providing improved structural integrity for a given downward force required to release the disk.

1459827306-c6f05372-b455-4f98-9b33-385fa7a4e928

Rate based monitoring includes performing test cycles on a monitored system when

predetermined conditions are met. The clamp assemblies are adapted for releasably clamping the conduit sections. The HFHCL process includes applying a dilute of HF for a select amount of time and applying a dilute of HCL for a specific amount of time. A pipe is extendable into the receiving aperture and a ferrule positioned on the pipe is alignable with the opening.

1459827307-26699d78-1600-4270-b39c-0c96cde8e13c

A steering column assembly includes a column jacket and a rake bracket for mounting the column jacket to a vehicle. A user selects or submits a media file for authentication. A voltage monitoring circuit has a control register holding a value predetermined for a selected operational mode.

1459827307-39b85c26-a385-471e-ba20-256fccc6833e

An apparatus is shown for installing a pulling a submersible pump from a well bore where the pump is supported on a length of flexible tubing. For enhanced performance with regard to efficiency in a structurally less costly manner, a rotation-symmetric flow guiding element is mounted on the outlet side directly or indirectly on the stator and concentrically with respect to a stator hub. A poiyo1 mixture is then selected. The rate at which the DC bias voltage builds up on the substrate controls an ion energy distribution and an ion angular distribution within a plasma exposed to an electromagnetic field emanating from the substrate. The technique provides a robust, reliable and accurate method of genotyping which is suited to automation.

1459827307-aa0637ad-d23a-4681-b08b-3de787e271ad

A fluid dynamic bearing motor features a stationary assembly, a rotating assembly supported on the stationary assembly, a fluid dynamic bearing system in a gap between the stationary and rotating assemblies, a radial capillary seal defined proximate a first end of the journal gap, and at least one re-circulation hole extending from the radial capillary seal to a second end of the journal gap. The prostheses are readily attached to the pedicles of a vertebral body and support at least one element that defines an artificial facet joint structure. A difference Fourier map is calculated and the ligand position and points of interaction between the atoms of the macromolecule and the atoms of the ligand can be deduced and visualized.

1459827307-dd8a820e-9ee3-45b5-a752-6139c1e2edd5

A system and method can rout traffic between distinct subnets in a network environment. The storage medium stores AV data; and metadata for conducting an enhanced search of the AV data by scene using information regarding at least one search keyword. A static capacitor is electrically connected between one leg of the first section of the cell and one leg of the second section of the cell. A MSE equation is derived based on assuming the ratios between any two sampling points separated by N samples are identical, and the IQ imbalance parameters can be estimated by solving the MSE equation using the LS algorithm. When cut in half each filter tube produces two cigarette filters.

1459827307-e49d844f-3721-4e39-ae0e-c91b85346f35

A beverage preparation system, a method of preparation and a device for securely engaging with a cup unit for preparing a beverage. The electronic device is provided with a calculator unit to calculate linear functions, a device to generate arbitrary functions, including nonlinear functions, and a selector device to selectively put the electronic device in a first mode to calculate linear functions and a second mode to generate non-linear functions. The rod may be formed of any desirable metallic material, for example stainless steel or a nickel-titanium alloy.

1459827307-f4d8fa11-7fe2-4ae2-9a99-a03e772d1eb7

Exemplary embodiments provide a verification technique that facilitates

administration of a health-related procedure to an intended recipient patient or group of patients. A secret key generation unit uses a user ID as a public key to generate a secret key corresponding to the user ID. The driving signals SP1 to SP17 are sequentially supplied to the switches S1 to S17 to turn ON or turn OFF them. The frequency dividing number of another frequency divider in the another communication block is set to a non-integer, and communication local signals supplied from the frequency divider to the mixers become non-quadrature signals having a phase difference at a predetermined offset angle from 90 degrees. While the blade is moving from the inoperative position to the operative position the blade engages the deflector.

1459827308-320c1e72-3466-40b8-846d-b15e3333c8b3

Compounds are described herein useful for treating diseases and conditions by modulation of one or more alpha adrenergic receptor. The method continues by utilizing some of the frequency bands of the single DSL channel and frequency bands of at least one other DSL channel to support the data communication when the loop length of the single DSL channel is unfavorable or the data rate of the data communication is unfavorable. In another part, methods and devices are disclosed for oscillating force when opening. One of the split beams is then directed to an image transformation system, which may perform an image inversion which inverts at least one coordinate in image space. The third transistor is used in an IO circuit.

1459827308-4759fd82-46c8-48cd-b63c-e62f14abea3e

A torquing device for assisting in the removal of a lid from a container. Furthermore, products made by the various processes of the present invention are further described. The invention further relates to genetic complements of plants of variety CH087822. Trace logic is provided for receiving indications of the sequence of operations being performed by the device, and for generating from the indications a stream of trace elements. The response of the system being displayed or otherwise communicated, and perceived as essentially instantaneous.

1459827308-7e64c292-0f9f-4140-91d3-e811f20c8ee1

A laminated piezoelectric element that includes a piezoelectric element layer and a matching layer. A cane having a brake releasable and engageable by the substantially downward force of a user's hand while the user's hand substantially continuously maintains a grip on the cane and while the user walks beside the cane. The configuration of the FEM circuit permits the use of common, relatively low cost semiconductor fabrication techniques such as standard CMOS processes. The identifier is matched with an identification pattern included in a record of a database accessible to the computer system.

1459827308-ceca969c-4f88-4e55-8812-9e28146918d7

A tool and/or other system is provided that simulates write pacing in connection with a requested operation for a storage system to allow an analysis of the effect of the requested operation on the storage system. In a single coat embodiment, the entire coating is loaded with at least 75 phr zinc powder. A docking station for the communication and locator systems is also disclosed.

1459827309-13dc6f43-8549-4fcb-8676-9818a2367156

Dispensing equipment for dispensing blown loose-fill insulation. The artificial dielectric antenna structure includes a plurality of layers of dielectric material. The present invention also includes feline interleukin-18, feline caspase-1, feline interleukin-12 single chain and canine interleukin-12 single chain nucleic acid molecules encoding such proteins, antibodies raised against such proteins and/or inhibitors of such proteins or nucleic acid molecules. The contaminated vapor includes steam and hydrocarbons.

1459827309-5f8431db-3ae6-4334-bff6-de187cf8ead4

Aspects of the subject matter described herein relate to integrated database

deployment. The human serum albumin is present in an amount effective to reduce one or more side effects associated with administration of the pharmaceutical composition. Responsive to an input, a rate at which the data is received by the browser is reduced, wherein the portion of the bandwidth used to receive data is reduced.

1459827309-b0eabf58-d557-4d33-95e9-96a9cb667098

A system is provided for conveying information to an occupant of a motor vehicle. Each cylindrical electrode includes hemispherical silicon grains. This dramatically reduces the volume, weight, and cost of the device. The blurring is performed according to a blur radius.

1459827309-c70591ac-e15d-4bee-beef-78fbec1da970

An audio amplification circuit comprises an amplifier having an input and an output, as well as an audio output to which a load can be connected. The spacing between the voltage-limiting region and the central junction defines the breakdown voltage. 5 to 30 mg memantine or a pharmaceutically acceptable salt achieves particular pharmacokinetic criteria such as change in plasma concentration of memantine over time and ratio of maximum memantine plasma concentration to mean memantine plasma concentration. The calculation unit calculates coloring information that occurs at the interest pixel based on coloring information corresponding to a combination of the converted color material data of the chromatic color material and the determined color material data of the achromatic color material and the coloring information that occurs at the surrounding pixels. The data security logic is operable to perform at least one data security function associated with the non-volatile memory array. A semiconductor device includes a semiconductor substrate, a wiring layer that is formed on the semiconductor substrate, and a drive circuit that is provided in a circuit forming region of the semiconductor substrate.

1459827309-deaeee142-1d72-4fc5-b1af-5979d82aa6f3

Systems and methods for adjusting print queues to obtain more efficient printing are disclosed. The regulator includes monitoring, control, and protection circuits with a phase signal monitor, a field switching circuit that operates the field coil in response to electrical power demands, and a field enable switch in series with the field regulating switch. An opening of the thrust control valve is defined by a variable spacing between the thrust ring and the rear bearing.

1459827310-03b17773-7f73-4b6d-9601-ea3bb983c0a8

Provided are an apparatus and method for calculating the number of leading zero bits of a binary operation. The mobile terminal can mechanically change the position of the display unit in the horizontal or vertical direction to vary the magnitude of the image displayed on the display unit, so that the user can watch movies, motion pictures and contents through a larger screen. Batteries and battery charger that are used in conjunction with another controller to provide an emergency source of power. Capture is confirmed when the amplitude detection feature has a positive polarity. The motor lock is defeated and the milling commenced using the downhole motor. The compounds, compositions, methods and kits are useful in the treatment of subjects suffering from diseases or conditions and or symptoms associated with diseases or conditions in which RhoA expression has adverse consequences and for conferring neuroprotection.

1459827310-2162bd93-27e8-4c68-afd4-85bcc5a4800c

An optical imaging lens assembly includes, in order from an object side to an image side, a first lens element, a second lens element, a third lens element, a fourth lens element, a fifth lens element, and a sixth lens element. A fluid separation unit having a housing containing separation means, the housing having an inlet and an outlet spaced from the inlet, each including a fitting for attachment of the housing to a manifold or other device allowing fluid communication through the

separation means to a point of use is provided. The encoder includes a sparsity-based de-artifact filter for performing sparsity-based de-artifact filtering on the portion. This user-specific information can then be used by the user's mobile computing device to manage, e.

1459827310-492eaed4-f0ad-4ba9-912d-edbd4b90a415

A telescopic vertical take-off aircraft is disclosed. In accordance with an important aspect of the invention, damage to relatively fragile structures, such as submicron dimensioned structures on semiconductors are minimized by utilizing an adhesive tape to peel off undesired metal in close proximity to submicron dimension structures. This arrangement reduces the need to power the cabinet.

1459827310-7d11cb41-8f0f-4124-b137-91dbe7f957db

A method is for calibrating a contrast offset value for an LCD contrast control system in a mobile device. A microprocessor, or other on-board computer, uses avionic sensors to sense an irreversible catastrophic or dangerous situation, thereby initiating automatic ejection. The lid has a free edge, with a liquid passage opening allowing liquid passage when the lid is in said closed position. Such articles include, but are not limited to electronic devices, dust handling equipment and notebook computer enclosures. The TRD utility uses the single target to utilize the minimal resource allocation which allows listening on a single connection.

1459827310-7fa80cf3-5ce1-4524-a7ea-73aad1939c6b

A head and neck protection system includes a head protector, a shoulder protector, and a neck guard for protecting an athlete from injury. The lifeline has an intermediate portion interconnecting a first end and a second end. The server gives a notification that the defective condition arises in the CORBA library and the server itself to the control section. At least one chain ring is configured to rotate a driven wheel of the bicycle. After alignment of the probe pin holes in the various pieces, probe pins are injected into these holes.

1459827310-d85f27cb-a7b3-4988-9d69-539357eae83a

Thiol-linked polymeric prodrugs and methods of making and using the same are disclosed. A coil-like or zigzag-like linear fastener element row of synthetic resin is mounted on a side edge of a fastener tape, and then a rod-like body is inserted into a coupling space portion in a rear side of coupling heads of plural fastener elements at a terminal end of the fastener element row and attached thereto. A set of a maximum number of vertices, where no two vertices are coupled by an edge, is determined.

1459827311-3384e111-b905-4c66-926a-944f35641b77

Implantable devices are provided useful for creating fusion particularly in intervertebral spinal fusion. A received signal-combining scheme is determined according to the strength of an interference signal included in the signals received from the antennas. At least the first and at least the second optically functional interface have, at least in sections, a cylinder lens geometry or a cylinder lens-like geometry so that these optically functional interfaces each have a direction lying in the interfaces and along which at least in sections the curvature of the surface is essentially constant. Each ligand is macrolide antibiotic, aminoglycoside, lincosamide, oxazolidinone, streptogramin, tetracycline or other compound which binds to bacterial ribosomal RNA and/or one or more proteins involved in ribosomal protein synthesis in the bacterium.

1459827311-47005329-742f-453e-8a51-ddc037c7089f

A slidable mobile terminal including a first body having a first surface and a second surface, a second body having a first surface and a second surface, the first body being movable with respect to the second body between a closed position where the first body substantially overlaps the second body and an open position

where the first body partially overlaps the second body, is provided. The valve assembly includes a port in a firing chamber in an engine head, the port having a valve seat on a side opposite from the firing chamber. Other embodiments are described and claimed.

1459827311-4f45d923-44f1-4a97-9b73-23ada17bfa5c

A system and method for summarizing data corresponding to properties of interest on an unstructured grid that includes active cells and inactive cells on an output surface. The transmitting system stores messages to be transmitted in a pending message queue and applies a dynamic window to the pending message queue to define a message bundle to be sent through the slow communication link. The system predicts the location and movement of the wake based on the nominal wake model and correspondingly performs an uncertainty analysis on the wake model to determine a wake hazard zone, which comprises a plurality of \u201cwake planes,\u201d each moving independently from another. The cannula and stylet hubs further include a base and a cap, with the cannula and stylet hub caps being maintained at all times within the inner channel of the hub strap.

1459827311-dfe2f963-9fce-4634-b68f-7909e6249997

Biodegradable coatings that include natural biodegradable polysaccharides are described. The gaming system also includes a display for displaying a randomly selected outcome of the wagering game and a touch-screen input device in association with the display. The latest defect list and the latest DDS are provided in a recorded disc management working area neighboring a border between the recorded disc management working area and an unrecorded disc management working area, where the latest defect list precedes the latest DDS in the predetermined direction. When these indicator biomolecules come in a contact with a pathogen, chemical and/or morphological changes occur in the film and electrical current flowing through the electrodes is modulated.

1459827312-10a6cf4b-c945-403b-91b2-e875e9ecd314

An AlTiC-based substrate suitable for a thin-film magnetic head is provided. The semiconductor device has a first terminal, an amplification circuit coupled to the first terminal, and an output buffer whose output terminal is coupled to the first terminal. Rotating the handle to increase the overall length of the invention decreases its flexibility at the coiled spring. In this way it is possible to produce panels with various radii of curvature using a single mold. The method also includes updating a virtual defragmentation map to record the actual location of the block and the defrag location for the block. The charge accumulation circuit controls the switch provided between the capacitors and thus can dynamically vary electrostatic capacitance of the charge accumulation circuit which applies a voltage to a constant voltage circuit.

1459827312-1edd85f6-d5e0-43e8-94da-d6ead5df9a8e

A semiconductor integrated circuit effectively makes use of wiring channels of wiring formed by a damascene method. These esters are derived from poly-hydroxy functional compounds sequentially reacted with ethylene oxide or propylene oxide, followed by the reaction of the alkoxylate with fatty acid. A logical exclusive OR combination of the closest match entry and the data block is performed to form a spatial difference vector identifying locations wherein the data block differs from the closest match entry. Each jaw includes a helical ridge for engaging the outer surface of the extrudate to cause a helical groove to be formed therein which constitutes a chip flute in the tool. Subsequent write pulses are applied to the RRAM cell until the RRAM cell is in the desired data state or until a predetermined number of write pulses have been applied to the RRAM cell. Systems may modify what has already been stored or displayed as a result in revising segmentation information based on analysis utilizing the new data samples.

1459827312-2ed81668-bfc8-4323-a226-ed58014ab291

A method is provided for graphical display of hierarchical hardlinks to files in a file system that includes identifying multiple hardlinks for a file and displaying relationships among the multiple hardlinks and the file. The second set has the first capacitance value and each of the N capacitors has a third capacitance value that is greater than the second capacitance value. An internet-connected device running an app transmits the current geographic location of the device, and a remote processing center executes a default action when finding correspondence between the geo-fence of a registered location and the current geographic information of an end user's device, and in one embodiment, the default action may be to enter and pay for parking at a registered location. Any one of a number of pigment compounds may be utilized in the temporary aqueous aerosol paint composition, including fluorescent colored pigment compounds, thereby permitting use in a variety of applications.

1459827313-09a1bfbd-858c-4ea2-91b8-ef094813a053

A scannable latch for use within a circuit path of a series of one or more dynamic circuits is provided. The method comprises forming a liquid crystalline matrix on the tissue surface wherein the matrix comprises a tissue surface component. The sensor includes a float linked by means of a linkage to a first magnet axially rotatable on a first axis. The elongate support also defines a plurality of second groups of holes aligned with the first groups.

1459827313-516567c0-b2ad-4da4-bae8-13d8838c6c79

An encryption apparatus and method for generating a ciphertext from an input plaintext of the same length as the ciphertext by parallel processing of the input signal. The access control system provides components and circuitry to enable a user to securely assign and designate any card reader compatible card as an appropriate programming card and thereby activate or deactivate users and/or cards. The first bit and the second bit form a data bit.

1459827313-5cc41fd3-d842-4abe-bb14-549efe3a1dcc

The invention concerns a passive terahertz radiation source configured to emit electromagnetic radiation having frequency in the range of 10 GHz to 50 THz and a method for generating a terahertz radiation. Differing anisotropic forms can be achieved by different strip widths, strip thicknesses, strip intervals or strip materials. The areas where occlusal contact occurs is displayed on the user interface in a readily perceptible manner, such as by showing the occlusal contacts in green. If the last data packet should be located at the location of Px, then the last but one packet is located and moved to the memory buffer. If the shared secret is successfully verified, then the peripheral device is unlocked allowing use of the device by using an encryption key that is made available by the verified shared secret.

1459827313-6ec6ae48-21a6-4394-b422-c4e4376bc67d

In a process for converting methane to aromatic hydrocarbons, a feed containing methane is contacted with a dehydrocyclization catalyst in a reaction zone under conditions effective to convert the methane to aromatic hydrocarbons. The compounds are characterized by a particularly light feeling. A control handle is attached to the proximal end of the catheter body and includes first and second members that are moveable relative to each other. The two adjoining segmented photodiodes function like one segmented photodiode, and thereby, the resolution of the applied scale slit is made  $\propto$  of the reference resolution. The user also identifies a type of association between the selected objects and the field. The pivot axis is located adjacent to the third wall of the housing and extends generally along the third wall of the housing.

1459827313-9ac49c09-e9d9-4660-b608-2cfbce7c17f9

A method and system of encoding and decoding digital video content. The integrated source code file is stored on a computer readable medium and the computer program

created therefrom is executable by a computer system having a front-end for interfacing with a user, and a back-end for performing batch functions. A dentist can utilize the video mirror images as a frame of reference when performing dental work. The cover has a widest width dimension along the longitudinal sides intermediate of the end walls that exceeds a pre-defined maximum width for rail transport of the nacelle.

1459827314-72d46185-a917-4f1c-a042-c142c0f0918c

A new cultivar of grandiflora rose, Rosa \u2018BAIcent\u2019, characterized by its clusters of double, high-centered blossoms on long, straight stems with apricot to pale yellow flowers that turn creamy white. By expressing information to be recorded in phase difference or frequency difference, it is made possible to record or reproduce the information at the varying timing of amplitude, and the bit inversion interval can be controlled by regulating the timing of amplitude variation. The gaming device also includes a game controller for managing and operating the plurality of games, and a game rating system in communication with the game controller. The splitter end of the cable assembly of the LCP may also include a splice tray assembly and/or a fiber optic routing guide.

1459827314-77d237aa-00e1-4ff5-b6cf-4040d039c045

A method is provided for facilitating device-to-device communication. The belt includes a plurality of cleat sets extending at a non-perpendicular angle across the axis of the belt. A decoder is formed on chip for performing logical operations on demodulated digital data.

1459827314-e7fd0820-620d-40ce-bafa-7fed494246d6

A new mail transport protocol is proposed for use over a reliable byte-stream transport. The layers are sandwiched with gel and thermal-pressing to constitute the support structure. The carriage is supported on the framework of a building roof and moves along a building wall for dispensing vertical lengths of insulation which are secured to the wall.

1459827315-6a361ff9-80d3-4173-94d1-91c195424467

The present invention relates to variant EGIII cellulases that have improved stability and/or performance. When the vulnerability of the resource is determined not to have been addressed and when a recovery time defined in the memory corresponding to the resource is longer than a predetermined time, the measure selecting apparatus evaluates measures defined in the memory corresponding to the vulnerability determined not to have been addressed, and calculates an evaluation value of each measure. The audio jack has an insulative housing and two sets of terminals.

1459827315-8ca5f503-50b5-4df7-b41d-7a6feaacc312

An intra-oral camera for producing an axially aligned picture of an intra-oral item of interest permits a rapid taking of pictures, whereby burdensome usage requirements are avoided without, however, suffering any diminishment in the quality of the picture that is taken. At least one cavity insert is removably mounted within a cavity plate, the at least one cavity insert defining a mold cavity, and a first portion of a gate for communicating the fluid between the nozzle assembly and the mold cavity. The forcer is composed of a forcer housing in which the through-hole is defined and a coil member which is arranged on an inner peripheral surface of the through-hole of the forcer housing and to which the electric signal is applied. The counting module provides a counting operation for the copyback operations at different logic addresses of the first memory and, according to a counting result of the counting operation, determines whether a checking and correcting requirement has been satisfied by any of the logic addresses.

1459827315-8dea5f2a-84bc-4281-9784-8c8332c96ba1

An evaluation pattern, for evaluating the extent of occurrence of thermal interference, is recorded with recording power being varied stepwise from a low recording power to a high recording power. The integrally adjustable insufflation device includes one or more one fluid control mechanisms to regulate the pressure rate and/or flow rate of the insufflation fluid being supplied to the subcutaneous area from within a sterile field surrounding the subcutaneous area. A gear shifter may disengage the pinion gear member from the rack gear. The sleeve has a constricted portion, which is disposed between the open ends and has a cross-sectional area less than any other cross-sectional area between the open ends. The flange has a threaded aperture extending through it.

1459827315-911e0000-b164-4edd-8de5-9a83a7717f4f

A pharmaceutical composition and treatment method to reduce the proliferation of cancerous or tumor cells, in which the combined active agents are methylglyoxal, ascorbic acid, creatine and melatonin. In some embodiments, a set of encoded credibility scoring rules are used to compute each of the component credibility scores, wherein the credibility scoring rules are derived based on factors that have been identified by a grouping of people that preferably represent a primary demographic of users that consume the content of a particular classified type of website. The validation system also performs a validation query to a domain name services or other public service on the network to obtain public data about each service. The hydraulic valve actuator may be configured to selectively actuate at least one valve in communication with the hydraulic valve actuator in response to the at least one cam lobe.

1459827315-97460d94-0bf8-493e-b47a-3089cacb9a69

A dynamic service level allocation system and method is disclosed in which a host, who has been allocated a bandwidth in which it can communicate with a satellite, shares this bandwidth with a user at the intermediate frequency level. The glass fibers can be used, for example, in a lead acid battery. The optical film of the present invention is an optical film including a polyester type film and a functional layer provided on the polyester type film, the functional layer containing a high-molecular weight polymethyl methacrylate, an acrylic polyol, an isocyanate type curing agent, and a polyester resin. Moreover, the control unit receives voltage V1 of the DC power supply from a voltage sensor to stop the up-converter if voltage V1 does not match voltage V2. The deflection system provides dynamic stabilization while reducing the stress exerted upon the bone anchors and spinal anatomy.

1459827315-beddd136-7aef-4d4c-ae73-98358351cc9f

In a communication system, a content server reads required data from a content database and transmits the data by packet communications over public communication lines, and a network management server receives and stores the required information from the public communication lines. Players make wagers on the outcome of a single roll of the three dice. Additional joints may be joined during the same brazing step. When the SIP is deselected, the application is notified and enters a pen mode, whereby the pen events are interpreted as digital ink strokes instead of characters. If there has been no run, a bond fault alarm status signal is generated, halting further bonding operations. An adjusting member is slidably attached to the frame and movable within a second plane of travel non-parallel to the first plane of travel of the second end of the shock absorber.

1459827315-f4fba6c9-3373-4d3c-8343-c68b39fd643f

The present invention provides a sound source supply apparatus capable of playing music with less degradation of sound by processing an original sound source such that music is not determined to be a noise. The electric motor is electrically driven by the electronic power unit, the electronic power unit is electrically controlled by the electronic control unit, the system includes an average speed controller and a device for monitoring the position of the electric motor, both

implemented by the electronic control unit. Oxide-nitride-oxide structures are formed between the substrate and the word lines, wherein the nitride layer provides floating gate storage for the NVM transistors.

1459827316-bc36452f-618e-4d0f-ab43-25649ec164d0

An actuator, comprises a housing, a first prime mover for producing rotary motion, a first gearbox arranged to convert in use the rotary motion from the first prime mover into rotary motion having higher torque and lower speed. Each of a plurality of automatic performance data in an order designated by a playlist data stored in a storage device is sequentially reproduced. Motor tensionable cables joining larger joint structures allow for simulating muscular tension affecting the ability to reduce a dislocation of the joint. These peptides can be quantitated if they reside in a modified or an unmodified form. The disclosed systems and methods may be implemented in one exemplary embodiment to allow users to leverage the capability of a variable pressure keyboard by providing an information handling system having individual variable pressure keys that are each capable of outputting a different macro or multi-key sequence per key pressure level sensed. Preferred tertiary-heteroalkylamine compounds are substituted N-phenyl-N-heteroalkyl aminoalcohols.

1459827316-c4e77c58-47fd-4143-bc4e-5b583cb81168

A vehicle seat is provided in which a shock reducing member provides an optimum state both under a usual seating load and in a rear-end collision load, the sinking amount of the passenger's body to the vehicle rear at the time of rear-end collision can be increased, and a shock applied to a passenger at the time of rear-end collision can be reduced effectively, independently from a headrest. In accordance with some embodiments, the memory cell includes first and second resistive memory elements configured to concurrently store complementary programmed resistive states. The controller may control the opening and closing of the optical shutter and discharging of the amplification device so that the amplification device discharges when the pulsed laser light that has passed through the optical shutter passes through the amplification device. A user interface exported by the object representation is initialized.

1459827316-e16f8e86-8b07-4477-9c73-e708d869bf5a

Systems and methods are provided for managing a plurality of applications comprising application instances running on a plurality of computer servers. An optical detection unit converts a downstream high speed and low speed optical signals into electrical signals. The quality of synthesized speech is improved on a basis of one additional odd sub-frame pulse, as more of the second pulse-related information in the enhancement bits is received by a decoder. A grinding blade with a plurality of blade elements is mounted on the central drive shaft below the fan impeller blade and effects additional pulverization of the debris. Further, the operator may manually set the speed ratio via electrical means on the mechanical speed change mechanism. Identification and classification of intuitive hand configurations and motions enables unprecedented integration of typing, resting, pointing, scrolling, 3D manipulation, and handwriting into a versatile, ergonomic computer input device.

1459827317-624d0292-927b-4810-b8d6-62cb00668cc6

A long stator motor, particularly for driving a magnetic levitation transport system, includes a stator iron, inside of which grooves for accommodating cable windings are provided. The turbine can be a vertical axis wind turbine configured to generate power from wind energy. The raised-ridge microstructured contact pattern preferably comprises ridges which meet at joining points, wherein no more than three ridges meet at any one joining point.

1459827317-aacbe125-ca8e-4bf2-8715-203fe41aa11e

A transmissive fly's eye integrator is disclosed that includes a first array of lenses and a second array of lenses. Each mission may include one or more tasks to

be performed by one or more of the plurality of sensors. Streamed application file page requests are broadcast to other clients using a multicast packet.

1459827317-e026d59c-5a33-4cb5-807a-7bcb5fd7a757

X type MEMS gyroscope has a first mass vertically vibrating on a substrate and a second mass horizontally vibrating on the substrate. Each plate has alternating coolant channels and lands formed on an inside facing surface. An optical tool assembly is in opposed relation to the non-optical tool assembly and together therewith forms a mold cavity for forming the ophthalmic lens mold section. On the other hand, a console unit accesses the mail server and reads the status mail in a proper time period to the console unit. Contents of the first element are copied into the second element obtained from the first group.

1459827318-0d209425-40c5-4ac4-8339-4655add96015

Analytical reagents and mass spectrometry-based methods using these reagents for the rapid, and quantitative analysis of proteins or protein function in mixtures of proteins. The heat sink protecting retention module has a main frame, protective feet, hooks, and a positioning mechanism. The detection surface agitating member includes an elastic sheet elastically deformable to scrape away the developer accumulated on the detection surface and disposed at a substantially same angle to an axial direction of the shaft of the screw as the spiral screw blade.

1459827318-370f0771-ffec-4268-ae23-eb9d9e3ae4a3

A differential termination and attenuator network having an internal common mode termination voltage generator includes first and second termination resistors coupled in parallel with corresponding resistive attenuator circuits. The fossil fuel may be coal, which is contacted with an aqueous electrolyte medium used in the systems. Unlike silicon oxide, the first structure layer 22 has internal stress in the tensile direction, and can thus prevent the occurrence of bending. Further, the number of inline cache initializations performed via a compiler, such as baseline JIT compiler, can be reduced to improve processing performance.

1459827318-4e5d81ec-2c83-4ecf-861d-c0016a56ca28

A system is provided for transmitting signals. The cylindrical part extends over substantially a half circumference of an equatorial edge of the hemispherical part and is defined by a plane inclined on the equatorial plane. The inventive brake assemblies enable the worker supported on the platform to selectively activate and deactivate the respective brake assemblies from the platform. The reader system also includes a fluorescence detector that is configured to detect fluorescent signals from the substrates and code pickup optics that are configured to project the output signals from the optically readable codes onto a Fourier plane.

1459827318-5d4f3d47-d73c-449c-a03b-5553d24cc8ec

The present invention relates to rhesus monkey DNA molecules encoding the melanocortin-5 receptor protein, recombinant vectors comprising DNA molecules encoding rhesus MC-5R, recombinant host cells which contain a recombinant vectors encoding rhesus MC-5R, the rhesus MC-5R protein encoded by the DNA molecule, and methods of identifying selective agonists and antagonists of rhesus MC-5R. The sources of electromagnetic energy may comprise semiconductors emitting at different bands of wavelengths, wherein each band comprises a different color. Finally, the data processing apparatus displays, on its window, both of the above-described information in a manner of being organized and arranged side by side. The resource device receives an access token request that includes the symmetric key, verifiable authentication data, and the redirection URI. Additionally, a collection channel is provided for collecting water entering into the dwelling from the exterior.

1459827319-309f5a2e-246e-4dd6-9a20-67c3bfe92b1b

Herein described is a method and system for providing shared access to data residing within non-data pool related file systems. An embodiment of the invention

entails receiving a request to read a binary value stored in the memory cell. Such an implant may be a rod for a posterior spinal fusion system. With this arrangement, the weight and the cost of parts can be reduced while securing the strength thereof and realizing a belt folding-back function, and further a degree of design freedom of the layout can be improved. The method for converting between data in hexadecimal form and data in quads includes providing data in hexadecimal form, reorganizing the data provided in hexadecimal form, storing the reorganized data in several memories, and reading several of the memory locations, which contain all of the elements of the quad, in one clock cycle.

1459827319-95cf0d46-b6ef-43b3-bdfd-3cf53cd28081

A clock generator generates multiple clock signals based on an input signal and adjusts the phases of the clock signals relative to a phase of the input signal, based on a control signal. Method further includes partially deflating the expandable member to an intermediate pressure, and drying the therapeutic agent on the expandable member, and, if a folded expandable member is used, at least partially refolding the expandable member. The delay circuit also includes a controlled delay circuit for generating one or more delayed periodic signals. There is no necessity to wash or filter the product. The points of inflection at one end of at least one of the rings are staggered in their location along the longitudinal axis whereby, with axial withdrawal of a surrounding sheath at a stenting site, to deploy the self-expanding stent, the individual points of inflection at said one ring end escape from the sheath sequentially, with continued withdrawal of the sheath, rather than simultaneously. 3, the weft material is put in weft knit processing such as plain stitch, rib stitch, pearl stitch, welt stitch, half cardigan, full cardigan, plating stitch and inter-lock stitch, and Brinell hardness of said hard metal wire is 90-240 and Brinell hardness of said soft metal is 40-55.

1459827319-cbefebe3-b4b4-4c1c-b046-343a7ee24915

A disc drive including a rotatable data track, a dual-stage actuator with a primary actuator motor supporting an actuator arm, a readwrite head supported by the actuator arm and communicating with a secondary actuator motor, and steps for controlling range of motion of the secondary actuator motor. An exemplary ROM array includes a plurality of columns, a plurality of rows, a first plurality of transistors or other switches representing a \u201c0\u201d data state or low voltage state, and a second plurality of transistors or other switches representing a \u201c1\u201d data state or high voltage state. The assembly is particularly designed for use in deep water. The front portion is hourglass shaped and has a narrowing. The cradle comprises a plurality of cavities, each of the plurality of cavities being adapted to releasably mount one or more electronic devices therein.

1459827320-2467f146-12ac-49b2-9068-1f3801c905a3

Two magnets in a circumferential direction of a rotor are provided in each slot of the rotor. The pedal system also includes a pedal, which can be fastened to the bicycle, can rotate about an axis, and which has a seat for accommodating the detent element. The system includes an object order form handler, an object order handler, a view objects handler, a reseller form handler, a reseller handler, a reseller permission handler, an add object handler and a server database. If the CID gas pressure inside the collision cell is high, a decrease in ion speed becomes remarkable, and the rising of the ion intensity becomes slow. Once the force is removed on the spring, the spring returns to its original position close to the body of the shaft.

1459827320-64d3e7c2-9afc-49da-866e-b0ad131730f5

A secure flexible plugin architecture allows plugins to dynamically interconnect in highly flexible arrangements to permit the handling of many kinds of file formats. Corresponding program code and apparatus is also envisaged. The outer structure includes front and rear panels that are coupled to each of a first side panel and a second side panel via at least one corner panel. This gap may be adjusted by

employing spacers.

1459827320-dbfd29e0-57db-4bc6-90a0-94ca95570528

The invention relates to a variable speed drive connected upstream to an electric power grid and downstream to an electric motor, the variable speed drive comprising notably a main casing comprising a base and a main closure cover closing on the base, a rectifier module, an inverter module, these modules being inserted inside the casing, and one or more bus capacitors. The two elongated pivotally mounted members include cutting assemblies ends that cooperate to come towards each other in a substantially parallel fashion. The second order prediction may involve a process similar to conventional intra-prediction, but is performed on the residual video blocks. The capacitive network is coupled to a differential input of a fully differential amplifier, and maintained at a differential output of the differential amplifier during a second output time interval. Given a preference model, information extraction actions can be taken with the highest expected utility.

1459827321-270bcd9b-ff5c-4d48-8a61-0d8a2987f538

A shift register includes a plurality of pulse generation portions for generating a series of pulse signals in response to a level change of inputted clock signals, and a plurality of shift pulse generation units. In this method, a menu item is added to a context sensitive menu of a graphical user interface at the request of a subsystem module. The steering axis is rotatable about the tilt axis and a horizontal plane in which the central axis is disposed remains above a horizontal plane in which the tilt axis is disposed. The segments are disassembled for portage. A tracking bandpass filter 136 further bandpasses and up-converts the second analog signal 148 to output a transmittable signal 150 having a tracking-filtered selected analog signal representation 196.

1459827321-5ac9cca0-8bba-4b30-b691-9e685a71e568

A rechargeable battery has a battery cell at least partially enclosed by a casing. The method comprises the steps of determining an average bit rate of the video stream over a period of time, and detecting a change of the average bit rate indicating the boundary of the content item. A deformable member may be attached to an end of the set screw and provides for the set screw to more fully engage the elongated member to prevent potential damage to the elongated member and prevent the set screw from backing out of the fastener.

1459827321-73ae60b0-62b7-4f37-a532-dde0fd2eb62d

A method for manufacturing a multi-density shoe sole is described, the method incorporates repeated injections of sole material onto a shoe upper mounted on a last and placed in a mold. The present invention is also directed to treating identified patients with dopamine agonist therapy. In addition, caches may be flushed to reduce the soft error rate. This invention also separately provides methods for transmitting environmental conditions information. This results in a gate oxide that is resistant to boron contamination without suffering any loss in its electrical properties.

1459827321-a2c0b923-0d21-4bf8-81c4-bed574d69f77

A generator of repetitive sets of spreading sequences includes an element for counting and for forming an address and a table containing L sets of S sequences. In the multiplexerdemultiplexer, a first grating receives to diffract a multi-wavelength light signal from a first port into light signals with different wavelengths. The technique also includes combining a first measurement signal generated from the first sensor with a second measurement signal generated from the second sensor to determine a sensed parameter. The maximum intensity projection of the 3D data formed by 2D data of non-overlapped slabs and 2D data of the corresponding overlapped slabs is implemented so as to generate a final image.

1459827321-e918b8af-db72-4b0c-8ecf-1df0dc08fd1b

A cord seal for use in an underwater niche including a main seal and a seal cap. A BTS calibration server is networked with the base stations. The card shooter apparatus includes a card housing for containing cards, a card guide unit that guides cards pulled out one by one from the card housing, and one or more black light sensors that read the ultraviolet-ray reaction code from a card guided by the card guide unit. At least one opening is positioned at each side of the horizontal plane. Cross-sections have a first diameter larger than a second diameter.

1459827322-0a2536cd-a6ea-4a31-8c20-075fed7f2985

Sorbents for removal of mercury and other pollutants from gas streams, such as a flue gas stream from coal-fired utility plants, and methods for their manufacture and use are disclosed. The rotor system is used to move the rotary wing vehicle in directional flight. The photoresist composition exhibits high resolution, high sensitivity, excellent film characteristics and improved mechanical properties, which are required for the formation of semiconductor buffer coatings.

1459827322-b2bfcf3b-a2fc-43f2-95dd-8ec83b03f624

Systems and methods for protecting a series capacitor bank are provided. The motor is operable to rotate the blade assembly in order to impart motion to water retained within the water retention structure. The transistor of the semiconductor device includes: a recess with a predetermined depth in a semiconductor substrate; a first gate electrode disposed within the recess; and a second gate electrode disposed on the first gate electrode into which ions of one or more of nitrogen, oxygen, arsenic, aluminum, and hydrogen are doped. The main baffle cooperates with the enclosure and the plate assembly to establish a path for the flow of fuel gas through the reformer from the inlet port to the outlet port. In the predictive program operation, bit lines of the selected memory cells are setup according to a logic value of a third latch of the page buffer that corresponds to each of the selected memory cells. The adaptive controller provides a smooth and efficient transition to low load conditions by dropping operation of one or more phases and redirecting modulation pulses to the remaining one or more phases, and reduced phases improve power efficiency for the low load conditions.

1459827322-e54e83e6-3fb8-45a5-9761-73439d690b28

Semiconductor diode lasers are tiny sources of light powered by electricity. The present invention is also directed to an apparatus capable of carrying out such methods and/or systems. When the designated search point similarity exceeds an object detection determination threshold, the detecting detects surrounding search point similarities between a plurality of surrounding search points around the designated search point on the model image and the template. An apparatus is also described containing means for providing a signal to a first signal processing path, tuning to a channel in the signal provided through the first signal processing path, tuning to the channel in the signal through a second signal processing path, and determining that crosstalk exists if the channel is present on the second signal processing path.

1459827322-f8b65cc8-cc97-482b-9e95-818ce6f11a13

A system and method is provided for executing both managed and unmanaged code in a managed environment and managing memory employing a garbage collection system or service. When the distance between the waterborne vessel and the other object exceeds a certain distance, the cable causes the at least one elongated member to be released from the vessel or other object. A first flip-flop has the input signal as a clock input and produces an internal level-sensitive signal and is reset by the output level-sensitive signal. An octet stream protocol layer is defined for the transmission of unstructured octet streams as a certain layer in the first protocol stack and a certain layer in the second protocol stack. by looking up suitable information that has been stored in one or more graphics textures.

1459827323-57ac1a16-e14a-450e-afac-1075a78eca42

The present teachings relate to techniques and equipment to insert documents into either letter envelopes or flat mail envelopes on the same dual mode mailing inserter without the need to do machine setup between letter and flat mail envelope insertion. The implement portion is selectively translatably adjustable and selectively rotatably adjustable relative to the anchoring member. Methods for designing, building, and using such a table are included. The connector circuitry module includes connector-connecting circuitry formed of a first bus bar stack and a flexible printed board, while the fuse circuitry module includes fuse-connecting circuitry formed of a second bus bar stack.

1459827323-9b7efd10-ee18-4930-9729-10aadfdc3560

An operating method for a memory unit is provided, wherein the memory unit includes a well region, a select gate, a first gate, a second gate, an oxide nitride spacer, a first diffusion region, and a second diffusion region. The plurality of semiconductor pillars is horizontally spaced apart by portions of the insulation layer. Also, the steps further include: when the verification result indicates that there is a failed-shift memory cell which was passed previously but is failed presently, setting the voltage of the bit line of the failed shift memory to a mitigation voltage for mitigating the voltage of the next program pulse. A guide carriage is sized to be received with the guide member and moveable therein along the longitudinal axis. The access door includes a shielding board and an extending board. In the above configuration, positive terminals and negative terminals of the secondary battery cells are connected to opposite surfaces of a terminal block to provide a series-parallel connection of these secondary batteries through the terminal block.

1459827323-a8f9910f-3c40-45c0-a7f4-dbcec22de41a

The invention also provides for a bottle opener that includes a finger engaging portion adapted to at least partially surround at least one finger. The bracket comprises a central area and a pair of opposing legs. This invention provides the first entity with the ability to troubleshoot in a live production system without disrupting the users or the system.

1459827324-00b57fd7-1e20-4320-b506-e371666b09a3

A pharmaceutical drug product with at least one drug substance capable of providing immediate release or modified release profiles. The artificial neural network structure is constructed by interconnecting RBF elements relating to each other among all RBF elements via a weight. Analog and digital pixels enable mixed-mode output. The pumping module and the other optical components are provided to counteract thermal lensing effects, induced thermal birefringence effects and to achieve enhanced amplification and efficiencies. The host then retrieves the results of the atomic operation from the hub.

1459827324-23363397-8694-4839-8d06-3413709dcb0f

A method for controlling connections from an IP entity to a server. The motor-generator comprises a rotor having a rotor body rotatably disposed about the shaft and having an outer region. The data manipulation device is arranged to carry out the conversion by applying a pseudo-inverted form of a point-spread function matrix to a column vector representing the requested pattern.

1459827324-611eeca6-2407-4b00-b2ae-d4b1a74b9697

A cosmetic, dermatological or pharmaceutical preparation comprising from 10% to 99% by weight of one or more lipids, from 1% to 90% by weight of one or more waxes and at least 20% by volume of one or more gases. The riser assembly includes an adapter having a mounting structure at one end for connection to a manifold and having an opening at an opposite end. After the game, input timings at which buttons are operated during the game are collected and then evaluated so as to determine an absolute and relative timing coincidence in a predetermined period. In one embodiment, the present invention is comprised of an encasing structure having an

opening and configured to receive and have disposed therewithin the handheld computer system.

1459827324-bbdc367c-0d3e-4738-92b0-5730d3f6c33d

A III-nitride power switch that includes a III-nitride heterojunction, field dielectric bodies disposed over the heterojunction, and either gate conductive bodies that do not overlap the top surface of the field dielectric bodies or power contacts that do not overlap field dielectric bodies or both. In an exemplary embodiment, the method includes comparing an effective load mass of the vehicle to a baseline load mass. The invention further relates to genetic complements of plants of variety CH327446. The first passage facilitates fluid communication to a first port in the advance or retard chamber and a second passage to a second port in the other advance or retard chambers. Additionally, the block can assist in conveniently connecting/disconnecting the connector to/from a mating connector. The hole has a vertical angle of 72 to 80 degrees or 100 to 160 degrees.

1459827324-c1bf39cb-fb4d-4be0-9551-fa796cdd5792

A latch plate slides along a slide plate attached to the body of a refuse container. Each weighting value is stored as an alpha value in the alpha channel for the corresponding texel in the texture map. Thus, it can implement a local loop of TDM voice, reduce IP loop of RTP streams and efficiently reduces network resources such as steps for digital signal processing, echo elimination and etc. Converting emulates one or more first peer to peer communication links of the one or more first communication technologies as one or more second peer to peer communication links of the one or more second communication technologies. Another has the unequal lead screw formed into a perpendicular-to-axis cross-sectional shape that changes.

1459827325-081a4aa3-ccfc-4693-9148-13cf4fdaf81b

A fluid inlet and distribution system for a volatile organic removal device includes a cabinet having an upper wall and multiple downcomer assemblies positioned within the cabinet accessible through a cabinet access. The stack comprises a first volume of a temporary material, a second volume of at least one insulating dielectric and a third volume of a first electrically conducting material. The air inflow port is provided at the bottom of the first cyclone and the outflow ports are provided at the lower ends of the second cyclones. Located within the rotor cheek underneath the at least one braking surface is a vibration damping element. under 791 kPa for CO<sub>2</sub>/CH<sub>4</sub> separation.

1459827325-5a183ea9-f97a-4ef3-80c9-7dd2820f34cb

A system and method for implementing a Quality of Service fallback using Resource Reservation Protocol includes initiating a communication session with a QoS precondition between a first domain and a second domain. The strong watermark identifies the content producer and is designed to survive all typical kinds of processing and malicious attacks. 5Ti4015 type crystal structure, as a main component, wherein the piezoelectric ceramic composition has an atomic ratio of 0<math>\leq 22660</math>. The encoded microcarriers may be used, for example, as support materials in chemical and biological assays and syntheses. Since a large coupling ratio between the control gate and the floating gate is available on the field oxide film, memory rewriting requires only a low voltage.

1459827325-8fc447ea-2006-46ef-a3e4-e856ed6c5b8c

Apparatus and methods are disclosed for optimizing the transfer time of files in a peer-to-peer network. The base member includes an insertion opening that is provided on one of a top surface and a bottom surface of the base member to provide access to an interior space within the base member. Such peptides or other molecules may be employed for prophylactic and therapeutic applications in TNF associated diseases. The plurality of training sequences is included in a second field of the preamble. The flexible stent may be configured for intraluminal

coupling to the fenestration of the tubular graft, so that the entire prosthesis may be assembled and anchored into a main lumen and a branch lumen with a minimally invasive procedure. Also, the invention provides compositions comprising at least one lipid modifying agent and an IL-1 $\beta$  modulator.

1459827325-fde7b3b9-f17c-4334-b3db-56216a9fc64d

The present invention uses a silver-silver chloride composition and ink jet technology in the art of digital printing, especially for use in blood glucose sensors. Bennet and Wiesner, using EPR-pairs, showed that  $n$  bits can be encoded by  $n^2$  quantum-bits, from which the original bits can be retrieved. A readout error of a sector number due to a detection error is compensated for by recording address marks AM for attaining byte synchronization of the header field in both of a head portion and tail portion of information recorded in the header field. The mobile device may be enabled to play videos, capture photos, and stream multimedia content. The PMD compensation system then determines a modification of the optical signal based on the differential group delay and the principal states of polarization of the PMD. The invention thus relates to the plants, seeds and tissue cultures of the variety CH998883, and to methods for producing a corn plant produced by crossing a corn plant of variety CH998883 with itself or with another corn plant, such as a plant of another variety.

1459827326-03974107-ce87-41f4-96c4-9d3e9faa4e50

The invention pertains to new materials based on donor carbene intermediates for the improvement of electron injection and electron transport in organic electronic components like organic light-emitting diodes, organic field effect transistors, and components based on organic photovoltaics, in particular organic solar cells. This control apparatus detects tiredness of a driver, and restricts an operation of the electrically driven motor based on the detected tiredness of a driver. AMS comprises a computing device, a biometric reader connected with the computing device, a storage device connected with the computing device, a program module stored on the storage unit, and a communication module connected to the computing device. A non-scan latch is forced to load the logic built-in self-test value from the scannable latch in response to asserting the override control signal.

1459827326-b85f647d-2a9f-49fe-a2f4-29f4a76637a5

A clay-epoxy nanocomposite may be prepared by dispersing a layered clay in an alkoxy epoxy, such as a polypropylene oxide based epoxide before combining the mixture with an aromatic epoxy to improve the nanocomposite's thermal and mechanical properties. Especially partially automated and automated manufacturing processes with constantly decreasing cycle times and higher precision requirements demand modern measuring procedures and devices, monitoring the quality criteria required and controlling manufacturing processes. The register device can be associated with both of the strands or webs. In yet other embodiments, the user device attempts to join every group to test which groups are provisioned for it. The scribe line is disposed within the scribe line region and includes a crack stop trench which is disposed in the matrix and adjacent to the circuit region. The clamp assemblies are moved downwardly along the length of the respective carriages so as to provide for the opened film to progressively bag material positioned thereunder.

1459827326-da9d76e7-c3b8-47e8-bb68-718a7a257651

A steering-heater device 1 capable of temperature control without causing an excess current to flow into a steering wheel Sw is provided. A core precursor is formed having a nose compartment. The wear member includes at least one pin-retainer-receiving opening in one side. The transceiver reads the value from the RFID tag and communicates the value to control circuitry in the light source unit, which tracks use of the light bulb within the light source unit. The tube groove is configured for accommodating the hinge. The computer also performs performance analysis based on the sheet thickness distribution, the post-formation strain

distribution, and the shape of the formed product or of the member, as state amounts of the formed product.

1459827327-396f3f39-5c07-441e-8d5b-94c01982ab73

A pedal assembly for electronically controlling an engine throttle. For a first embodiment, the method accumulates a length of input signal that comprises a plurality of independent signals from independent signal sources. According to the method, metal nanodots can be uniformly disposed in the nanowires, and nanowires having various physical properties can be produced by controlling the size and interval of the nanodots.

1459827327-783afea6-e7a6-431d-adb5-85956714c50d

Methods and devices for encoding and decoding that involve sorting bins according to their respective estimated probabilities to form subsequences, each subsequence having an associated estimated probability. A clip code generated depending on the previously obtained comparison results from exponent part and fraction part compare units, rather than depending on a zero flag according to a result of an addition or a subtraction and a sign of the result of the addition or the subtraction, can rapidly be generated without the circuit increased in scale. The package includes a semiconductor chip disposed in the recess and a backplane disposed under the membrane portion of the isolating container.

1459827327-c5596d53-1668-4f1e-8307-bf22cde1b442

A fill spout for a drainage device is disclosed which permits the user to supply water directly to a water seal chamber of the drainage device for establishing a water seal therein. The handle, at one end, is interconnected to a tray to be deployed beneath the animal in advance of urination. On the other hand, a P-channel type third MOS transistor and a P-channel type fourth MOS transistor serving as protection transistors are connected in series between a high power supply potential and the output terminal. A subset of current user terminals with representative user terminal environments may be identified. The multiplexer is coupled to selectively communicate the quotient signal from one of the at least two paths to a stage output to select one of the stage delays. The surgical tools are designed to be customizable or highly selectable by patient to increase the speed, accuracy and simplicity of performing total or partial arthroplasty.

1459827328-3cde3f3d-d4be-4cce-9ecb-bae8413cd7ea

An impact absorption panel is adapted for playground use and comprises a panel section and a plurality of projections. A location is detected of a physical touch within the display area. , in a clocksignal distribution apparatus is provided that substantially reduces jitter due to power supply noise.

1459827328-73c90084-83b3-47fb-9d3e-eabf5b645d37

The present invention relates to the field of electrochemical cells and fuel cells, and more specifically to polymer-electrolyte-membrane fuel cells and direct methanol fuel cells. All devices on the bus may monitor the bus, receiving all packets transmitted by other devices and recognizing when they may initiate transmission. A corresponding system for detecting the anomaly in the network flow data is also provided. The stably tethered structures may be administered to subjects for diagnostic and/or therapeutic use, for example for treatment of cancer or autoimmune disease. When the electron reaches apogee, an electric field pulse is applied that ionizes the atom and accelerates the electron away from its parent ion. The membranes are useful in fuel cells or any device which requires hydrogen to be separated from carbon monoxide.

1459827328-b8e9feb4-f5fe-4e54-995a-36422122f393

An image capture device includes a first memory, a second memory and an icon changing unit. As an improvement over prior water-based polymer coating compositions an anionic and/or nonionic surfactant is present in an amount effective

to plasticize the coating formed from the composition. A local server cyclically monitors each host of its subset of hosts at time instants separated by adjustable monitoring periods to acquire host-characterizing data and determine an optimal set of filters. The cover has holes arranged on a circle for passing filled bottles therethrough. The internal clock signals are respectively provided to the application circuits. The mounting device may be obtained by cutting multiple hook preforms into the surface of the base plate while leaving at least one bending edge per hook preform.

1459827329-eecfcc91-bd47-4a95-adee-14e0251560d1

A method, system, and computer program product for processing a stream of tuples are disclosed. The luminance compressing section subjects three color signals to luminance compression according to a luminance in a preceding frame, and outputs compressed color signals. An image is corresponding to the visual information transmitted through the electro-mechanical actuator module. Optical fiber embodiments are also included. The first product intention rule is stored in a database. Each industrial device can have an individualized messaging protocol enabling each industrial device to receive commands and transmit status and measurement data using the individualized messaging protocol for each industrial device.

1459827331-2ef8844f-a9a0-4ad8-a83e-644aa751dc1e

An access point measures a congestion level of a transmission channel representing a collision probability between frames at a channel busy duration and transmits the congestion level to a terminal. The recovery unit is provided for at least the development unit other than the development unit that transfers the developing-agent image first in sequence among the plurality of development units. The mandibular tray carries a mandibular bite pad projecting upwardly toward an opposed maxillary occlusal surface. A \u201ckey\u201d is then set on the machine indicating that the filesregistry entries are installed. Through the use of the method and system of the present invention, significantly more accurate results can be obtained as compared to prior art test methods, and without the implementation, operating, and maintenance costs of comparable test methods.

1459827331-b19e58c4-b05f-4fdb-9d1d-c0bb4a916980

Methods and systems for spatial data encoding and decoding are described. A system using synthetic aperture beam forming detects motion in an image and displays a degree of the motion in various manners, and thus, a user is allowed to actively cope with the motion by adjusting the number of synthetic beams, or the system is allowed to immediately change the number of synthetic beams with reference to data stored in advance. Each building block is associated with source code that defines an action to be taken when the building block is processed. The received signal is generated by a remote transceiver.

1459827331-cbd41698-e1e2-4894-a421-6d6d84b45c15

A method is disclosed to determine an optimal power level to encode information holographically. The position of the filter and perforating gun remains fixed relative to the casing during perforating, fracturing and/or packing, and production of the well. The CDN is shared among the content providers. The digital counter is operable to control the cascaded arrangement of multiplexers so as to output signals from the functional logic blocks based on a counted signal. A service mapping unit determines a service which the service-request-incompatible apparatus can provide, based on the information on the service-provision state and information on the determined service-request-incompatible apparatus.

1459827331-d30c37b3-ba70-42ca-8fee-bc5e92a80ae6

The invention relates to a method and apparatus for control of a charged particle cancer therapy system. The strain of flexural oscillation reaches a maximum and the effects on the phase difference in the longitudinal oscillation mode can be

cancelled out. Then, the at least one welding program is downloaded to the welding-type system. The clamp set has a driven base and a clamp base. The vehicle control apparatus starts the engine earlier when a load of the vehicle is larger than a predetermined set value than when the load is not larger than the predetermined set value.

1459827332-7ab1365c-1da2-4723-a2b3-f4902ef0648e

A multi-port network interface circuit and related control method. A computer interacts with the user to allow the user to specify criteria for event tickets the user wishes to purchase. The common voltage adjustment circuit has a first register, a second register, a first digital-to-analog converter, a second digital-to-analog converter, and a regulator. In addition, robust mode operation is provided for ranging and registering of transmitter devices when entering the communication system. A mounting member may be attached to the adhesive layer and, in some embodiments, the adhesive layer may be treated so that the mounting member is less adherent to the adhesive pads than to other parts of the adhesive layer, easing removal of the adhesive pads with the microelectronic components. The one dimensional array is masked.

1459827332-93ed3cbf-beb9-4aed-b687-103000e68f27

The invention relates to a liquid crystal display device used as a display part of an information equipment and a method of manufacturing the same, and has an object to provide the liquid crystal display device which can obtain excellent display characteristics without raising the manufacture cost and the method of manufacturing the same. The antenna is electrically connected to the circuit board. A member may not view another member's full personal profile if the measure of relatedness between the two is greater than the visibility preference of the other member.

1459827333-2155babb-5e02-4b9b-85f2-e972fef08d98

The present invention provides a low cost animation sequence function for OSDs. The stack is provided with a humidifying device which takes advantage of the atomization of a water stream over a high specific surface metallic material, and with a cooling circuit withdrawing the heat generated therein by thermal exchange on a peripheral region, external to the single cell active area. The memory cell may include a trench in a carrier, a charge trapping layer structure in the trench, the charge trapping layer structure comprising at least two separate charge trapping regions, electrically conductive material at least partially filled in the trench, and sourcedrain regions next to the trench.

1459827333-28a665c8-f9be-43b2-9e04-8445f43fb509

One or more levers are carried by one of the races, each in its respective recess. Dynamic configuration and reconfiguration of a quick page message is provided. In certain embodiments the label stock is electrostatic dissipative. The clinch bolt member includes a threaded shank.

1459827333-461425be-385d-4622-91f0-c22edc0fa559

N,N'-biscyclohexane-1,4-diamine, of formula, is a new compound that is prepared by hydrogenation with Raney nickel catalyst of N,N'-bis-cyclohexane-1,4-diamine, the latter being prepared by reaction between 1,4-cyclohexanediamine and acrylonitrile. At step S391, a C INC OUT discriminates whether or not moveout history information is present. The blade is either rigid or non-rigid and may be supported by a framework. The souvenir can include other customer-related elements, such as stock images, composited images that include the customer or customer-related people or objects, and text and sound.

1459827333-638dccf9-368e-4825-bb12-edbb179d9b39

Systems and methods for providing sensitive and specific alarms indicative of glycemic condition are provided herein. A switching circuit is couple to a feedback

circuit to generate a switching signal for regulating an output of the power converter. The balloon assembly, the collar, and the neck plate are disposed together. The switch is used to switch off a series of white LEDs while switching on a series of red LEDs.

1459827333-92a01aca-52f1-4d95-88e5-c2d20571004d

A modular drive cage assembly for mounting drives, such as, for example, floppy drives, hard drives, CD ROMs, tape drives or optical drives, into a computer case. In many embodiments, a runtime provided by an application platform enables the execution of a non-natively implemented hosted application in which executing instructions in a scripting language within a background page control the downloading and modification of web content to create user interface pages for the hosted application. The first and second contact patterns are substantially electrically identical to permit the package to be either vertically or horizontally mounted to an underlying apparatus. A removable bar abuts the catalyst element. In some embodiments, the method identifies a route for the net based on both the different congestion goals on different layers and between different layer pairs. A value obtained by dividing a radius of curvature of an inner circumference portion of the curvature region by a thickness of the drift region is not less than 5 and not more than 10.

1459827333-f7e49124-a5ce-4210-bfe0-d9caa0df9fb0

A method for examining document of a software product against a list of strings files of an interface of the software product to detect whether the document includes list of strings of the interface is provided. The first casing is disposed against an exterior surface of a sidewall of the basin. Free ends of the wires extend past the elastomeric compound to provide contacts of the connector. A user downloads encrypted content from a content repository. As a result, varied distortion is effectively corrected.

1459827334-06521833-f07e-4833-bbc4-d28db24ca0f5

A hard cover product having an outer liner attached to a pair of sheet members disposed in spaced-apart relation to define a gap. , on a display screen of a display section 40, and test cases that are tentatively determined to be tested in the current round of testing is selected based on various parameters received from the operator. SLA-aware and timeout-conscious and preemptive and replayable lock manager is designed to account for different operational goals and different importance to satisfy various SLAs. In one embodiment, the system removes the security restriction from the resource to allow at least one of: access to the IT account of the user, and operation of the apparatus. The latch is hingedly attached to the heating vessel, and has a locked position and an unlocked position.

1459827334-0c11a6e2-5c18-4525-9b9a-2b993c0448a6

Disclosed are processes and techniques for fabricating semiconductor substrates for the manufacture of semiconductor devices, particularly CMOS devices, that include selectively formed, high quality single crystal or monocrystalline surface regions exhibiting different crystal orientations. A variety of integrated CMOSmicromagnetic components are thereby capable of being formed, including components containing planar inductors and transformers. The actuator structure is arranged such that it is capable of causing the trailing edge section to move or deform relative to the main blade body in response to aerodynamic loads on the blade. The obtaining unit obtains an information regarding number of defective discharge nozzles in the nozzle group based on the detecting pattern.

1459827334-2c0b3af7-34b5-4426-8969-eb70a87b1936

A passenger conveyor handrail includes a sliding fabric layer having a low-friction coating on at least one side of the sliding fabric layer. In one embodiment, the carriage assembly comprises a first actuator arm having a windward side face, a leeward side face, an outer surface and an inner surface, and a second actuator arm

having a windward side face, a leeward side face, a first inner surface opposed to the inner surface of the first actuator arm and a second inner surface positioned on the side opposite to the first inner surface. An extended portion is pulled out from the mounting unit, is bent so as to return to the direction of the mounting unit, and is overlapped with the first flexible circuit board on an outer surface of the first flexible circuit board. The support region can include a guide for limiting the movement of the inner casing in the outer casing.

1459827334-6487641e-df25-4b47-ab55-e1b60a00db45

In a fuel high pressure accumulator for fuel injection devices an intersecting region between a storage chamber and a connection opening of a connection pipe, as well as a region of an outer wall which is opposite to the connecting region are designed to improve pressure strength. According to the method, a polysilazane solution is applied to a dry oxide layer that is painted with a water-soluble, anionic color, and the coating is then hardened at a temperature ranging from 40 to 150°C. Antenna resonating elements may be mounted in the antenna cavities to form cavity antennas.

1459827334-bf183e26-db59-4c5b-8b6f-71b19c88cb95

According to the invention, there is provided seed and plants of the hybrid corn variety designated CH327469. In addition, the tool includes a pair of guide members which are attached to the clamping members of the tool and which provide, when the tool is clamped about the item, a substantially enclosed, smooth-surfaced passageway through which the sheathed cable can be routed to eliminate any contact between the relatively sharp edge and the sheathed cable routed around or past the relatively sharp edge. The DOA components associated with the plurality of client stations are compared with each other and two or more client stations are selected to participate in an uplink collaborative spatial multiplexing transmission session based on dissimilarities of their DOA components. The experiment management unit provides power and data from the orbital vehicle related to the operation of the orbital vehicle and permits an experiment check simulation prior to integration into the launch vehicle. Each administrative query has associated with it a query to be executed on a table of process records that indicate statuses of the processes being monitored, a scope that defines a subset of the process records upon which the query is to be executed, a schedule from which a time of next execution of the administrative query can be computed, and an activity.

1459827335-0e89f90c-c9cf-4fe3-a4ef-f9a83a55c973

An apparatus for testing for the presence of a drug is provided. Various embodiments of the present invention also provide an organization scheme of data, which describes an access bit, an awaken count, and a pointer to the list of waiting threads. , tar mats, in order to improve the efficient production of hydrocarbons from the well.

1459827335-90e1fd17-25fe-4880-a840-e47de7e7cb54

A power tong apparatus for rotating a pipe comprises a tong housing and a ring gear, rotatably mounted in the tong housing. A metal tab extends from the wall adjacent the slot. A connecting wiring pattern for connecting the pair of connecting electrodes is provided between the connecting electrodes.

1459827335-9f5195c5-61bc-486f-a986-7689384150c8

A catheter insertion sheath assembly including a tubular sheath body having a proximal end, a distal end, and a hollow passage extending between the proximal end and the distal end. The generator can be controlled to generate a projected linear scene including a targeted object and arbitrary spectral content that duplicates the spectral content of real targets and backgrounds to facilitate testing of target identification software of a hyperspectral imaging system in view of expected actual field operation of the sensor of the imaging system. The measuring station comprises a magnet system for generating a constant magnetic field of high

homogeneity.

1459827335-9f601eb0-4d65-4b2f-9548-f74a51c380d0

Various apparatus and associated methods involve a light source that provides light at wavelengths that substantially correlate to local maxima in the spectral sensitivity of a diurnal avian. The object of the present invention is to provide a dual-flow screw spindle machine which is easily adaptable to changed process conditions. Lowest member of low temperature part is a counter current shaft exchanger having an input under the level of hot gas output from the highest cyclone of high temperature part. In the opening, there is provided a hood garnish panel that turns over rearward upon deployment of the airbag. When the piezoelectric material suffers a stress, the piezoelectric material will generate a voltage by the deformation. Geometry associated with one logical level may be used as a keep-out region for the same physical layer when generating physical design of a different logical level.

1459827336-46eeb076-09a3-48af-be6b-8c5dd5beeb7a

A layout system for laying out a plurality of contents disposes the plurality of contents in a layout area, moves the plurality of contents in accordance with an overlapping of the disposed plurality of contents, and moves the plurality of contents again in accordance with weight information allocated to the layout area. This creates a pressure gradient and a pneumatic cycle means that facilitates the massaging movement on the limb towards direction of the heart. The method comprises: identifying the LED fixture 1 sending via a communication network a configuration request to a configuration database, receiving configuration data from the configuration database; and configuring the LED driver according to the configuration data. The conductor is over, under, or on both sides of the inductor and used as the other electrode plate of the capacitor. A processor determines a context for the digital message and matches the message context to content of advertisements stored in an advertisement database in order to identify at least one relevant advertisement. A second processing device, which may be, for example, a computer or other station of the wireless network, receives the transmitted information and is able to determine therefrom that the information originates from an emulated access point rather than an actual access point.

1459827336-4e01a220-e194-4ed0-b5ad-16e4d704f262

Embodiments of the present disclosure provide methods and apparatus for configuring additional CPICHS, e. The apparatus comprises: a soft magnetizable sheet, having an outer surface arranged to face the article in use, and an opposing interior surface; and a permanent magnet, shaped such that its magnetic field contains perturbations giving rise to indicia. Sense signal lines are manufactured such that at some point they are in close proximity to a signal trace which is to be monitored. Each co-occurrence pattern is mapped to different subsets of elements of an input signal. The hypothetical recognized component list is displayed with confidence levels at the remote center for selective checking by a human data center operator.

1459827336-687e3fbd-6930-4043-a9b1-56ac542b0d1d

A technique facilitates controlling flow in a wellbore. The form factor card comprises an adapter region for interfacing the card with the host electronic device, an on-card electronic device for performing a task for the host electronic device, an on-card intelligent controller, and an indicator in communication with the on-card intelligent controller to communicate an operational status of the form factor card. The default license information generating unit obtains rights expressions for the operation substances acquired by the secondary processed substance acquiring unit to generate default license information including the rights expressions as an initial value. The method additionally includes writing the ML data in the text format as a text format ML document to a data storage device, and writing the ML data in the parsed binary format as a parsed binary

format ML document to the data storage device.

1459827336-d99cae64-c1d7-4335-bf6e-d75e0e10cbd1

A rolling cone drill bit comprises a bit body and a plurality of rolling cone cutters mounted on the bit body. A front wall reinforcing member for reinforcing the front wall is mounted along an inclined surface of the front wall. One collaborator is an identity service. The alternative material is then delivered electronically to a designated recipient of the mail piece. The camera axis makes an angle of 45 degrees with both light axes and the horizontal.

1459827337-30c8f982-9267-4f38-b056-bb0aa1a97253

A system for providing protection against pirating of software product or products or any other digital information being sent over the Internet, or by physical means, to a computer system. The computer heat dissipating structure comprises a heat sink that is mounted on the principal heat source, and a fan that is mounted at one lateral side of the heat sink. Specifically, each of four electrodes 41a to 41d formed of the metal plate members has an edge surface facing an ion optical axis C and extends along the ion optical axis C.

1459827337-43110baa-b8b5-476c-a00d-7fcf48136b18

A plant growth support medium is described to enhance soil characteristics and provide where required, improved water, or nutrient contents. At least one sacrificial lead wire extends from the anode. In addition, the monolithically integrated optic triplexer may include a thin film filter that is located between the first photodiode and a second photodiode. The item may be stored in an item queue in a database. Next, the corneal tissue bounded by the incision is lifted to mechanically separate the flap from the remainder of the cornea along the interface between layers of lamellae.

1459827337-567f92f8-46d2-4f9c-8421-858ffadac400

An improved oven is aimed at optimizing heat transfer and delivering an optimal cooking efficiency in comparison to conventional high-speed cooking ovens. The plant watering device comprises a dispenser for insertion into a soil surrounding a plant. The first control module electrically coupled to the spindle motor and the OPU controls the spindle motor to be operated in a present mode.

1459827337-eccae17c-123f-4cec-98c1-31af72666ca7

A blade-pitch control system has a swashplate configured for continuous rotation with an associated rotor and mast, and at least one link connects the swashplate to each blade of the rotor. Ceramic particles are encased or embedded in the matrix material for increasing the strength of the semifinished product with respect to torsional loading or transverse loading. The rinsing area contains a hot water intake opening, a steam intake opening, a cleaning agent intake opening, or cold water intake opening, and also a connection opening for the detachable introduction of the portion to be cleaned. A ground layer inside the relay board shields between the soldered parts of the pair wire to transmit output signals and the soldered parts of the pair wire to transmit input signals. The tubes may be joined end to end to produce products of significant length, and are highly suitable in removing even very fine sediment during use in erosion control.

1459827338-3defd980-4b27-48a7-a7f4-c62b9c434f6c

Methods of manufacturing a semiconductor device are provided. Unlike present methods for setting such targets a figure-of-merit quantity such as the frame error rate need not be measured to set the reverse loop transmission power for a wireless unit. The proxy object may be recursive, such that it may contain references to other proxy objects, as well as to column proxy objects, which represent individual columns in the database. A coil spring biases the shuttle upwardly toward the ratchet rod. In addition, the method includes using the difference between the actual end point and the target end point to adjust the charge set points for the

energy storage system.

1459827338-80bf1d82-2219-4087-9e84-c0305274c4c1

A contamination mitigation cap for a hard disk drive actuator pivot assembly is affixed to the rotatable carriage of an actuator assembly and, in conjunction with a bearing hub cap, forms a labyrinth seal for retaining pivot bearing contamination. The present food serving set is comprised of a plurality of individual containers with sealable lids for maintaining food items in a ready-to-eat condition. A protection printing ink is coated on the wax layer. A charge storage layer is formed over the NVM region and the high voltage region of the substrate. In one embodiment, a system and method pertain to collecting color information sensed by image sensor pixels, and estimating color information as to a pixel under consideration that is not collected by the pixel by weighting color information collected by adjacent pixels that are positioned in a direction in which color is shifted due to lateral chromatic aberration. Such wick further includes a booster member having each of a second predetermined length, a second predetermined width and a second predetermined thickness adhered to the strip of wood.

1459827338-a0c5d50b-3c31-431f-9871-24b8b159b841

A system for adjusting page placement on a continuous feed print engine. Each surface conduction electron-emitting element comprises a pair of opposing electrodes disposed on the substrate and a conductive circular pattern disposed between the opposing electrodes and contacting the electrodes. The track is of a design adapted to be secured to a ceiling joist.

1459827338-a935612b-bf99-4b9b-ac82-db8b569e1e94

A laundry machine and a control method thereof are provided in which laundering ability may be improved while also improving efficiency and noisevibration. 0 when the relative viscosity of the polyamide polymer is less than 2. The seal can be injection molded and molded onto the base body in the injection-molding process.

1459827338-d4d07a0c-b1b6-4ff8-9fbb-f769e5314cde

In a camera-assisted presentation system, a microcomputer activates a motion detecting module to detect a motion of an object, based on a variation in luminance of image data representing a material photographed by a photographing module. The probe contains a region that base-pairs with a polynucleotide to form a duplex and a T<sub>m</sub> enhancement domain that increases the stability of the duplex. Once the 3-D model fit is completed the full 4-D shape model is updated. Chaotropic agent may be supplied as a dried reagent adhered to a container. A further module vessel is mounted within the filtrate vessel to form a membrane chamber containing a membrane filtration module.

1459827339-006b07d7-ce17-4d82-83d0-f66b6ddab193

The present invention provides a method of applying ink containing dyes to fabric composed of synthetic and cellulose fibers using an ink-jet system to print the fabric with high color shade depth and brilliancy and ink-jet printed goods obtained by the ink-jet printing method. First, the method includes evaluating each of the plurality of sequences including characters which form each sequence. Process failures for manufacturing an organic light emitting display device may be prevented by the donor substrate, so that the organic light emitting display device may ensure improved performances.

1459827339-0f28c870-7c24-4c58-85ec-75cfb3aaf0fc

A system and method for remote monitoring of vehicle tire pressure include monitors in each tire to transmit signals representative of tire pressure and receive control signals for use in regulating transmission of the tire pressure signals. The integrated circuit and the interposer are comprised of bodies that have substantially similar coefficients of thermal expansion. The mixture is kinetically

sprayed onto a first side of a dielectric material to form a metal matrix composite layer.

1459827339-2f7cad72-35b6-4e50-8df2-f7696c933a9e

An apparatus, A method is disclosed for performing semi-automatic dataset maintenance. The method includes: scanning a knee of a patient with medical imaging equipment to obtain 3D imaging data with such equipment; processing the obtained 3D imaging data in a digital processor to determine two lines tangent to the bottom of the knee condyles in an axial and a coronal plane; and automatically scanning the patient in the defined plane. Each spool half has a central hub with an axial opening, which allows the spool halves to mount onto a drive shaft.

1459827339-83b10199-4f83-4183-9fdd-2eda6160bf0d

In an access network which supports a mobile IP protocol, a mobile station may perform several handovers between access nodes during a long session which may cause inefficient mobile IP routing. Thus, for example, lovastatin is reacted with methoxyethylamine, alpha methylated 2-methylbutyryl side chain of the amide formed, hydrolyzed and lactonized to produce finally simvastatin of high purity. Ceramic grains, preferably silicon carbide, are mixed with powdered metallic binder that may be based on a refractory metal, preferably rhenium. The clasping element comprises an annular clasping body, a first clasping portion axially extending from the clasping body and a second clasping portion extending outwardly and then downwardly from the clasping body. In use, the load bearing pile arrangement can be used to recover heat from the surrounding ground; store heat in the surrounding ground; or, to store coolth, especially in a desert locality.

1459827339-c54d48b9-7892-44ac-a82f-1d6a49134f37

A block of intermediate transfer material for use in a printing apparatus having an intermediate transfer member, said intermediate transfer member being equipped with a heater to heat said intermediate transfer member to a temperature of at least about 40°C. A data broadcasting device generates output attribute data about multimedia data in a data analyzing portion. The substrate table and the pad member are relatively tilted and/or moved in a vertical direction before the substrate table is moved away from under the optical member. The work flow manager is executed utilizing the server computer system. Further, a wave spring can mount on the receiving portion between the nut and the base plate. A feedback loop is between an output of a last active circuit and an input of a first active circuit so that the plurality of active devices function as a non-linear device, such as an inductor.

1459827339-cac03086-8f98-4a71-97d5-3e438d624c7d

The present invention describes a novel process for the preparation of optically active 2--5-methoxytetraline and 2--5-hydroxytetraline compounds based on the optical resolution of mixtures of the enantiomers of 2--5-methoxytetraline and 2--5-hydroxytetraline respectively. A burner and an air shutter can be within the sealed combustion chamber. The smart computing device monitors environmental conditions to distinguish a user impact from an environmental impact.

1459827340-0b43899d-b356-4584-91e0-e8a4e4105ba1

A TFT including a gate, a gate insulation layer, an oxide semiconductor layer, a translucent layer, a source, and a drain. The method involves exposing the individual to combined music, preferably anxiolytic music, and randomly selected voiceover. Each the selection of light reflectors includes openings and surfaces matching the number and orientation of light emitter packages for one of the selection of heat sink trays. The entities located within an image may have a different shape, color, texture, or other definable characteristic, but still belong to the same classification.

1459827340-2f7207f8-cee7-4069-bef3-9fd340bdca37

A method and apparatus for heating and cooling a substrate are provided. Piezoelectric driving devices known so far show a characteristic with which the electric power applied to the motor drops when the load increases. The composition comprises an acrylic acid ester group-containing polymerizable substance, an alicyclic epoxy group-containing cationical polymerizable substance of which is ring-opening polymerized by heat, and a hydroxyl group-containing substance which is reactive with the alicyclic epoxy group-containing cationical polymerizable substance. The support arm may include a plurality of pivot axes with a motor in each of the pivot axes to adjust the viewing angle along the vertical and horizontal planes. In addition, at least one of the vertical stiffness or the horizontal stiffness may be tunable by adjusting a stiffness-related parameter of the damper stack. The tasks that are accepted for processing can be scheduled to timeshare the processing resources available so that the task complete within the time allowed.

1459827340-3a23acde-97aa-45a8-87f0-7086cfbf2209

A piezoelectric electroacoustic transducer includes a piezoelectric diaphragm having a substantially rectangular shape which vibrates in the thickness direction when an alternating current is applied between electrodes of the piezoelectric diaphragm, a housing which stores the piezoelectric diaphragm, and a pair of terminals formed in the housing by insert molding. Virtual connections may be admitted to a virtual path if the cell rate of the requested connection is less than the allowable cell rate statistically determined from the mean number of cell timeslots in the path available for use by high-priority cells. The first and second breakdown voltage holding layers constitutes a breakdown voltage holding region having a thickness in an element portion. Example, moving tile on the terminal will send move tile to move the same tile on the main monitor and all other terminals. The present invention provides a method and apparatus for receiving and transmitting signals via multiple communication channels.

1459827340-7b4b1a0c-8e61-4afb-b307-f79b52af7e8d

Earth-boring rotary drill bits may include a bit body attached to a shank assembly at a joint. According to one embodiment, a plurality of IO requests is received from clients executing as software entities on one of the hosts. The one or more tracks are written to a selected stride of the plurality of strides, based on comparing the number of operations required to destage selected tracks from the selected stride to the number of operations required to defragment the compressed data in the selected stride.

1459827340-a5151766-e44b-4a5e-afe6-c05a509e177c

A process and related structure are disclosed for using photo-definable layers that may be selectively converted to insulative materials in the manufacture of semiconductor devices, including for example dynamic random access memories, synchronous DRAMs, static RAMs, FLASH memories, and other memory devices. The silicon and insulating layers contain either or both of at least one continuous cavity filled with materials such as to constitute a photodetector zone, or at least one continuous cavity filled with materials such as to constitute a light source zone. The content delivery network communicates the non-crucial portions to the plurality of user devices and communicates the crucial portion to the plurality of user devices separately from the non-crucial portions and at each of the plurality of user devices.

1459827340-ec999310-2ed9-4da7-86c2-1add7745ae7f

A blade holder for cutting machines includes a blade head held on a raising and lowering device and having an adjustment mechanism for a circular blade that is held on the blade head. The reception apparatus includes a first wireless communication interface and a first processor. According to said invention the immunogene P36 LACK is used in combination with a leishmania infantum thiol-

specific antioxidant protein gene, leishmania infantum kinetoplastid membrane protein 11 and with a leishmania infantum GP63 antigen for producing an immune response.

1459827341-0496dffa-47ff-4808-a7c3-64551ba7a0c7

A bump is formed on a bonding pad provided on a substrate. The method comprises positioning a first fluid conduit substantially in contact with the other fluid conduits or elements wherein a bond region is created. A compensation circuit provides a measure of the IM2 distortion current independent of the radio frequency pathway to generate an IM2 calibration current. Next, the coextruded multi-layer film is cooled.

1459827341-1a53a6ff-223f-428f-a652-2e023357cd04

A tablet filling device to convey a vial to a tablet cassette for receiving tablets easily and reliably. The plurality of lens optical system rows is arranged in a second direction perpendicular to the first direction and to an optical axis direction. The protector comprises a gutter-shaped member 7 for housing the hollow needle 2, the holding cylinder 3 and the coalesced wing pieces 4, 4, and a gripper 8 protruded outward from a bottom surface of the gutter-shaped member 7. The rear lens group includes, in order from the object side, a lens subgroup which is movable normal to the optical axis of the imaging lens for vibration control, and a lens subgroup for macro-imaging adjustment and tracking adjustment, which is movable along the optical axis. The distal end of the handle portion is coupled to the head portion.

1459827341-f0881862-d5c7-42d9-8bb1-11b564dc7250

A loader assembly is provided having a left boom arm and a right boom arm. A detector module detects a power indicative of a power of the amplified signal. The liquid developer has superior fixing characteristics and is capable of forming an image at a high speed. Then, starting the blade server from a pre-boot execution environment.

1459827342-75603a7a-2a2d-4d59-a1dc-45c556d4dee5

Apparatus and methods for mounting an optical element to a mounting plate in an optical system. RAMs are provided which store data inputted thereto respectively, and the data outputted from the RAMs are alternately processed. The shield has datum features which abut complementary datum features on the shield retention stage when the shield is held in the shield retention stage. Further, the invention provides a method for preparing the compound, use of the compound as an ophthalmic monomer, a polymer having repeating units derived from the aforesaid compound and an ophthalmic device composed of the polymer. The profile generator then generates a print predicting profile for desired target densities based on the corrected corrective standard spectral reflectances and the spectral reflectance differences, and highly accurately predicts the colors of a print using the print predicting profile when the densities of desired ones of the colors are changed.

1459827342-98af1752-16d3-4921-992d-a2ade97d2492

Disclosed herein is a composite material for use as an anode for Li-ion batteries and its preparation method and use. After having sent the measurement report over a predetermined period of time, the user equipment is then configured to analyze the mobility information. The invention is also directed to pharmaceutical compositions comprising such compounds; methods of using such compounds; and a process and intermediates for preparing such compounds. To do this, an area separation processing unit separates image data into areas. Tasks having breakpoints belonging to the specified barrier synchronization point are sequentially stopped at the respective breakpoints.

1459827343-0aa7cfa6-8804-4720-aa05-3221eace07aa

A meter enabled for wireless communication and a wireless communication network are

disclosed. In response to the request, within the document a non-textual document element unrecognizable to the mobile device is identified. The barcode post-processing system during performs various functions.

1459827343-38c0c60d-6905-4daa-b20f-247a39c55fe7

Variable display lighting intensity of an information handling system, such as notebook computer, is used to achieve image lighting uniformity for document scanning with a camera that is integrated or otherwise attached or built-in to a display of the information handling system. While using the first light sensor, it is determined whether the outputs of the first light sensor, over time, are indicating movement of the navigation device with respect to the surface. The housing assembly is fitted in the exterior shield shell so that the mating connector is connected thereto. If vocoding is required, call control selects the appropriate transcoder and inserts the appropriate transcoder into the bearer traffic stream. A generation by the inventory controller of the inventory of the cartridges as stored within the cartridge storage slot involves the inventory controller simultaneously accessing cartridge identification information on two or more cartridge memories, and generating the inventory including two or more cartridges corresponding to the cartridge identification information. The method further includes generating a plan for orchestrating the shuffling of the data among the all of the memory devices associated with the threads and shuffling the data among all of the memory devices based on the plan.

1459827343-a3bbc5c2-90b2-4684-aa57-5ed083392dd1

An ejector with multi-ejection pins is used in the post-processes of the semiconductor industry and is used by a selection device to choose a predetermined quantity of ejection pins. At least a portion of the ink marking is configured such that it appears generally opaque to a viewer when a light source in the light assembly is not illuminated and does not appear opaque when the light source is illuminated. The vector field is represented by a finite Fourier series with respect to at least one direction, x, y. The second main body is formed on the first main body and partially coats the antenna radiator.

1459827343-dd6523d9-6395-4e98-bac2-9817806fe5ca

A control device for automatic water discharge installed at position where water is discharged in apparatus for automatic water discharge in a kitchen and sanitary environment is provided. A sonification engine converts the data into sound parameters based on configuration data and a sonification and mapping scheme. Moreover, the antenna may wrap-around the aperture such that it directly contacts the main pole. An appropriate response curve from a plurality of response curves for different known print media are selected. Additionally, when the application exits, a device tune state that identifies a content source to which the device was tuned prior to running the application can be retrieved and the device restored to this device tune state. The switching elements may be arranged into logic circuits and latches having differential inputs and/or non-volatile behavior.

1459827344-04113187-901b-4aa9-bf39-2d27705778b2

An inverter for converting a direct current flowing between two input lines into an alternating current flowing between two output lines includes first and second series circuits each including two switches configured to switch at a high frequency and of an inductance connected between the switches, wherein the two inductances are magnetically coupled. An optical field is modulated by an electromagnetic field. The process control system may be configured by configuring entries in the tables. The at least one support arm having a first end dynamically coupled to a fulcrum whereby the support arm is biased towards a first position and moveable towards a second position responsive to a force being applied in use to the upper surface of the platform by the feet of the user. The core member is immersed fully into the liquid mass and pressed in a direction against the mold cavity by a load means to build up pressure in the chocolate mass.

1459827344-18a1145b-20db-41ac-91e1-bad0a40f2aa1

A tube-type vortex reducer for the conduction of cooling air in a compressor of a gas turbine, having radial secondary air tubes arranged in a disk interspace and attached to a compressor disk at their radially outward end sections. The first lens is a glass lens, and the second lens is a plastic aspherical lens. Then, the high-resolution image of the subject is achieved by using the first image information and the second image information.

1459827344-b2591a5c-9e91-4fca-af40-8c12a7f2b433

The present disclosure provides hydrocarbon absorbent granules, comprising granulated particles each including a mixture of hydrophobic non-self associating raw cotton sorbent fibers and a binding agent. The central harness body may include three spaced straps connected to or extending from the central harness body. Subsequent to transmission of the one or more PDUs, the originator station device may receive one or more acknowledgment PDUs. The insulating layer covers the patterned conductive layer and separates the capacitors. Decreases in pH in the electrolyte are compensated by circulating a fraction of other electrolyte or through the positive chamber of an auxiliary cell.

1459827345-8885b017-6495-4dc6-a37b-56155d78408f

A power supply unit for use with thermostats or other like devices requiring power. An outside air suction port is provided in the case member, and first and second openings are opened in the case member at both side ends of the air passage in the vehicle width direction. A communication protocol configures the system for communication and control protocols configure the system as one of a selection of intelligent appliance controllers. A third variant prescribes that the elements of the structures be beads or corrugations, in which cuts lying in the direction of alignment of the beads or corrugations are arranged. The method includes receiving from the programming module a probe response including an indication of a match between the first device public key and a second device public key.

1459827345-a2565fb6-2e9b-4eec-ad00-216644147d50

A system for tasking, collecting, storing, and dispatching time-sensitive location-based information reports via an electronics communication network, comprising a central relational database management system, multiple computer-implemented services, and applications residing on computer-based mobile communication devices. The first amplifier subsection receives a signal to be amplified and the second amplifier subsection receives the signal to be amplified via a first delay line. A depression member actuates the actuator lever and the piezoelectric unit to open the valve mechanism and ignite the fuel gas discharged from the nozzle in response to depression of the depression controller. The semiconductor light emitting element stacks layers of AlGaAs, GaAs, GaAsP, and InGaAs, all on a GaAs substrate. Another method for verifying includes generating a pseudo-random number sequence with the first linear feedback shift register and the second linear feedback shift register using an identical first initial state, and comparing an output of the first linear feedback shift register with an output of the second linear feedback shift register and reporting a miss-compare. The tool is raised and lowered by a lifting device.

1459827345-bcdebd0e-555b-4a84-ac43-3e50bb20ef18

A method generates input text with a pointing device at a distance from a writing surface. Preferred embodiments are illustrated with respect to attribute caching in a computer database system, where the attributes or objects that need to be cached are not individual attributes, but combinations of attributes where including one object affects all combinations in which it exists. The support may include a clutch that facilitates both manual and motorized panning of the electronic display. The resonance-impedance modeling according to principles of the present invention is applicable to vertical, deviated, and horizontal boreholes.

1459827345-d54651d1-6d96-40d0-8c7a-a5fe4f05a7aa

Systems containing imidazoles or blends of imidazoles and amines are described herein. Certain exemplary stators for use in transverse and commutated flux machines may be configured with gaps therebetween, for example in order to counteract tolerance stackup. The computing devices align image frames in order to identify flows of the pixels in the set of image frames. The delta components are included in the denominator of cost function J to provide an optimal solution of the filter coefficients biased by the reflection signal and random noise is removed. When the piston moves toward the inlet air compression chamber, fluidwise, compressed gas in the crankcase causes increased pressure on the displaceable member, compressing the inlet air, and directing compressed inlet air out through a one-way outlet valve. The steel ball in the lower cavity may be pushed backward to separate from the lower side of the scaled rod when a push button located in front of the lower cavity is pushed, so that the scaled rod is allowed to move forward.

1459827346-26e9b4d3-fc82-48eb-8da4-937bc645766b

Persistent annotations are created on a scorecard that combines multi-dimensional as well as fixed value data. An electronic tripping unit initiates the disconnection of the associated contact elements in the event of an overcurrent and/or short-circuit current, and a voltage tap taps off a voltage on the conductor in order to supply power to the tripping unit. In addition, the estimate incorporates the use of table filters when indicated such that table filters are applied prior to determining the size of the tables in the operation, as well as including equivalent columns into the list of columns that are a part of the Group-By operation. The barrier can include an inclined ramp whereby the space between the floor member and the ramp is decreased as an additional animal enters the trap assembly, to push an animal beneath the tilting floor member back into the enclosure. Also, the maximum thread allocation number corresponding to a CPU serviceability ratio in the processes can be designated, and a part of the thread allocation number of the target objects with few thread number used is allotted to the maximum thread allocation number of the target objects with many thread number used. The microstructure has a preferred direction and influences the quality of the reflection action of the layer composite.

1459827346-5e2a01d7-ad51-416f-927e-afcf0974618f

In one embodiment, a liquid crystal display device includes first and second substrates, an active area to display an image, a seal material surrounding the active area, and an intermediate area between the active area and the seal area. The sleeve has a substantially cylindrical outer portion and an internal cavity. The dose setting member interfaces the driver such that the dose setting member can be rotated in one direction without rotating the driver. The system of the invention does not interfere with normal use of the telephone network, so users can interactively access services provided by the system and use the telephone at the same time. Permanent magnets in the driving disc may be rotated with the driving disc in the presence of the third rail to accelerate the upper rails with respects to the lower rails. The behavior profile may be established from a first domain, but transferred anonymously such that it is accessible by other domains.

1459827347-3d1c60be-bebb-46fd-b87f-0a8e69211562

A new class of poly has been prepared using combinatorial polymerization. The connection apparatus includes a connecting element which has a shaft, which passes through through-openings which are aligned with one another in the connection, having an insertion end and having a holding end opposite it. A signal processor generates a velocity signal corresponding to a first velocity component of movement of the object in the measurement volume in the longitudinal direction thereof based on the electronic detector element signals from each of the first detector elements.

1459827347-596bed41-798f-490f-9a5c-8af9c14dd7f2

An arrangement for separating a hydrophobic liquid phase from a gaseous stream includes a coalescer filter, a housing, a gas flow direction arrangement, and a liquid collection arrangement. One avionics device embodiment includes a processor, a memory, and a receiver. A sliding coupler engages the annular channel and extends to an attachment point. The player is allotted one or more numbers for each credit bet. Information of the geometric structure is similarly stored in depth field format at these sample points. A voltage across or a current through a pull-down switching mechanism within the modified buck regulator circuit is sensed when the pull-down switching mechanism is enabled, where the pull-down switching mechanism is coupled to an upstream end of an inductor and is coupled in parallel with a capacitor.

1459827347-71d53245-1817-4d02-94ab-c25c242c2568

A catheter has an entrance opening defined by the first end of a catheter body and non-smooth inner surface. In some embodiments, a waveform that represents data samples is received. The optical imaging system further includes foreoptics, such as a telescope, optically coupled to the integrated dewar assembly and configured to direct and focus light from an entrance pupil of the optical imaging system into an optical beam incident on at least one of the plurality of focal plane array sensors. Later, if available resources are secured, the base station resumes the suspended call. 08 and that  $390 \frac{W_A}{W_B} \frac{TA}{WA}$ , where  $W_A$  is the weight of the positive electrode layer,  $W_B$  is the weight of the negative electrode layer, and  $TA$  is the thickness of the positive electrode in which the positive electrode layer is formed. An adaptive learning unit for adaptively learning a boost characteristic of the active filter on the basis of an input and an output of the waveform equalizer so that error in the waveform equalizer is minimized.

1459827347-7f2b0202-5bb1-4d4f-9aed-ae872d8d72d5

The invention relates to a connector comprising a plug element and a socket element which can be detachably connected to the plug element for connection of a transmission line to at least one sensor. In response, a first and a second image with a detectable trait are identified for displaying on a receiver device. The linearly displaceable transfer member 42 holds the cut portion 18 of sealing material against the open top of the container 12 during induction heating. Once the flowtube reaches a resonant mode of vibration, the digital flowmeter may transition to a positive feedback mode, in which a sensor signal representing a motion of the flowtube is fed back to the flowtube as a drive signal, as part of a feedback loop. The upper and lower sheets are sealed together at their inner perimeters such that the tubes are sealed between said upper and lower sheets at the inner perimeter.

1459827347-dddfa0d5-4af8-4f2b-b0e1-4702c10a0be1

A sleeve comprising a lower portion preferably having a base portion and a skirt portion for packaging a floral grouping or plant. In operation, the threshold value is decrement as the second and third devices are operation in seriatim until the coding endpoint has been reached. The inner portion of the contact pad includes a compliant layer and a conductive layer that is disposed over the compliant layer.

1459827347-f8c15e30-4c6e-4e42-ba42-e66297d6e130

The present disclosure provides compounds and pharmaceutically acceptable salts thereof that are tyrosine kinase inhibitors, in particular BLK, BMX, EGFR, HER2, HER4, ITK, TEC, BTK, and TXK and are therefore useful for the treatment of diseases treatable by inhibition of tyrosine kinases such as cancer and inflammatory diseases such as arthritis, and the like. When passing through the initial guide channel, the strip comprises an underside which faces away from the final guide channel and has an upper side which faces toward the final guide channel. At least one inking roller of an inking group is disposed so as to cooperate directly with the plate cylinder.

1459827348-6f021c96-4d7a-4280-bbd8-95768da82af2

The present invention is a process for performing rigid-to-rigid substrate lamination implementing pressure-sensitive adhesive. The resistance structure includes an insulating dielectric material in which a confined switchable conductive region is formed between the first and second electrode. The first transceiver is coupled to a first communication line, and the second transceiver is coupled to a second communication line. The predetermined frame images are automatically set in accordance with setting rules that are different depending on whether or not there is data concerning a highlight frame whose size is larger than that of other frame images in the layout data. With this arrangement, the dishrack system occupies a full length and width of the tub, while the base portion can be removed without disturbing dishware items resting on the side portion.

1459827348-8df445c9-a680-426b-b8ff-2b26086248b4

The present invention relates to processes for the preparation of a compound of the formula wherein W is nitrogen or  $\text{C}_3\text{R}_3$ ; R1 is halogen, haloalkyl, haloalkoxy,  $\text{R}_4\text{SnC}_4$  or  $\text{SF}_5$ ; R2 is hydrogen or halogen; R3 is halogen; R4 is alkyl or haloalkyl; and n is 0, 1 or 2; and processes for using a compound of the formula in the synthesis of compounds of the formula. The plurality of chimneys are positioned inside the cabinet at different corners of the cabinet. In a TFT array substrate of a liquid crystal device, an inspection TFT is formed in one of dummy pixels disposed at the periphery of a pixel region. As the first conductor pattern and the second conductor pattern carry out inductive operation and the third conductor pattern is capacitive-coupled with these conductor patterns, resonance is made in a band lower than a frequency band prescribed by the length of the lines.

1459827348-caac2816-e599-4c5f-841d-8c081cbbb0ec

A dental appliance for maintaining a separation between the occlusal plane surfaces of the posterior teeth in order to avoid or minimize the adverse effects of bruxism, especially while sleeping. The method includes providing one or more performance objects, each object containing a predetermined set of events. The invention also relates to a headbox having such a mounting arrangement and the mounting arrangement per se in which the vane within and downstream of an inner area of the upstream end portion of the vane is arranged to move freely in the machine direction in relation to said downstream support wall during said period of time. If desired, single reflectance changes may be measured at a particular delay after heating, and the reflectance change at this delay may be used to determine the electrical conductivity. The regulating member 40 is pushed by the fixing belt 5 to move toward one side.

1459827349-1319bffb-c1a4-48e7-bc6e-6c069e4ba36b

A first actuator for controlling positions of all of a plurality of heads within a wide area and a plurality of second actuators for individually controlling the heads within small areas are provided. The shape of the outer end face of the caulked portion is devised to maximize the resistance to the coming-out by the caulked portion. According to this diagnostic apparatus and diagnostic method, an erroneous diagnosis can be prevented so the diagnostic can be performed accurately. The second bus agent has a core which operates at a core operating voltage, the core operating voltage having an amplitude less than the first voltage swing.

1459827349-7753bec2-811f-4ee9-a119-d85012979dee

A sensor in a network to which to route a packet is selected, where the sensor is selected independently of energy status of the sensors included in the network, and the sensor is selected by a source sensor. The method comprises generating a random encryption key each time the computer system is booted and storing the random encryption key in a volatile memory region of the memory controller. It is hereby achieved that the mixing-in of the solid ingredients takes place in the frozen ice-cream mass when this has a temperature between  $-23^\circ\text{C}$ . A method for

manufacturing the integrated impedance matching network comprises the steps of forming an inductor on a die, forming a capacitor on the die, coupling the capacitor to the inductor, coupling the die bottom surface and the capacitor to a conductive plate, and coupling the inductor to another inductor that bridges between the die and another die.

1459827349-9448cd58-8748-45c1-93dd-b817e7388286

Provided is a method for immobilizing a macromolecule to a solid support material using poly, and a device obtained from the method. , a molecular weight distribution is in the range of about 4. A proposed modification to the first arrangement, such as swapping logical volumes of data on one or more storage devices, is produced. The first and second ends of the rigid member are releasably coupled to the steel receptacles of the joistslab and column, respectively.

1459827350-0faa3eda-c19b-4e2a-8a7a-b13fe96b1fe1

A liquid crystal display having high luminance and color renditions is provided. A test beam is launched through the optical medium during the writing process and a particular characteristic is measured and used to generate a corrective apodization refractive index profile that can be incorporated with the grating to improve its characteristics. The processing then continues by producing a second multiplied clock signal from a second set of the plurality of delayed clock signals, where the second multiplied clock signal is delayed from the first multiplied clock signal in accordance with a delay of at least one of the delayed clock signals. Multiple embodiments of the objective lensing arrangement are disclosed, all including at least one small fold mirror and a Mangin mirror. By supplying power to the network communication module in the power-off/sleep state of the notebook computer, the computer can be in the network communication state at any time and thus will not miss any information transmitted over the network. The crown has an inside surface having at least a portion for engaging a wearer's head to maintain the headwear piece operatively situated on a wearers head and an exposed external surface.

1459827350-1009917f-7963-44e2-b98b-a8e84c2ffc75

A continuous, inline, flow rate measurement system for rapidly measuring a flow rate in an analytical instrument having a primary pump that outputs a primary fluid at the flow rate to be measured or verified. Analysis of the third and fourth beams of light is then performed, and this analysis can include using detectors in respective paths of the third and fourth beams of light to generate an arrival time differential and then comparing the differential with a reference previously generated using a nondefective die. The camera is fixed to the second housing. A number of protrusions emanate outwardly from the outer surface of the cartridge plug. Alternatively, the substrate may be a UV-transparent inorganic salt compressed to form a solid body. Alternatively, a groove or similar mechanical aligning configuration may be used in combination with the magnetic configuration.

1459827350-8b26addc-7229-4038-b52f-f4f29bb53fb2

A method for a safety system in a vehicle continuously evaluates data relating to the surroundings from a surroundings sensor system in terms of an imminent collision with an obstacle, and autonomous emergency braking is initiated in the event of an unavoidable collision. Accordingly, the exhaust from the fan portion passes through the duct and is discharged from the exhaust port, with the airflow generated inside the component able to prevent a rise in temperature inside an electronic circuit module such as a personal computer or television game device due to heat generated from the electronic components mounted on an electronic circuit module. This decoder can be memory row-oriented, and thus provide an asynchronously-resettable row decoder with row redundancy, or an asynchronously-resettable column decoder with column redundancy.

1459827350-a05e078e-78bd-4b1e-b854-9551e2954cdd

An apparatus for precoding multi-tone modulated transmissions of a plurality of

communication channels over bundled subscriber lines. In one embodiment, an open portion of a circuit is closed to enable or modify a transmitted signal. The layout of the arrays and image readout circuitry on the integrated circuit may help to reduce the size of the integrated circuit while maximizing the baseline separation between the arrays. The operator response plan prompts the operator to operating the vehicle in a desired manner for the determined future environment. The invention also relates to methods for producing other soybean cultivars, lines, or plant parts derived from soybean cultivar S100315, and to the soybean plants, varieties, and their parts derived from use of those methods. The P-P data and shear mode data were both received at a surface-based receiver configured to measure vertical movement of the Earth to generate the seismic data.

1459827350-aa73fdf8-9a18-450f-a2ed-56a320c46dca

This invention relates to galactosylceramide compounds. Conditioned air is continuously supplied to a plenum at low pressure and is applied to the space when the damper is open and blocked when the damper is closed. Normally, the stroke is spiked only when the compressor is operating at a low load condition.

1459827351-2819ace7-fe6a-4573-9aea-92e447611dbe

The wristwatch includes a case carrying at least one watch movement and at least one display for the current time and for other time related or non-time related information. Related systems and components are also disclosed. In one preferred process, the cocoa mass is the result of grinding cocoa nibs, with absence of a mechanical pressing and heating step, to advantage. Besides this protective function, when the foreign body is pinched by the window glass and a prohibit signal to invalidate the reverse rotation is output, a reversing controller is stopped and the window glass is closed continuously by a bypass switching element. At least one suture channel extends partially through the main body to a predetermined depth.

1459827351-7aeb539a-da6a-49cd-aba6-4c12e61eed2d

Shaped composite structures which are strong, stiff and hard and, at the same time, having high toughness, comprise a matrix, for example a cement or ceramics based matrix and embedded therein a plurality of plate shaped or at least 60 mm thick elongated reinforcement components, the reinforcing component having at least 1. The present invention is also directed toward field emission devices comprising a cathode of the present invention, as well as methods for making these cathodes. The second portion is offset to a zero overlap position with respect to the first portion when the switch is in open position. The invention also solves problems like low rigidity and large accumulation errors of existing serial scanning mechanisms and the effect of the electromagnetic field of the motor within the ion implant chamber on the trajectory of the ion beam. The device-specific code values are configured to produce gray levels that are specific to the imaging device.

1459827351-c98ce9a9-d52a-4f5f-bb10-492e2656028c

A method of making a flexible elongate member includes the steps of providing a core wire having a proximal region and a distal region, attaching an electrical device to the distal region of the core wire, the electrical device being electrically connected to at least one electrical conductor. If a breakage of the wall at the back of the insertion passage is detected, the card processor drives the shutter to block the insertion port. Averaging the output from the steering angle sensor on the time axis in the arithmetic circuit means enables to obtain outputs having smaller step widths than step widths of the outputs from the steering angle sensor, and controlling the deflection angle of the lamp based on the output enables to control the deflection angle of the lamp with the minute step widths.

1459827351-da4ccee-a-b9f6-431d-b385-60fb01877856

A system and method providing variable-frequency IF conversion in a multimode

communication device. The feedback path forms an error compensation loop together with a properly selected forward path. The scanned images of the text are converted in real-time to standard byte or word characters for subsequent display on the computer's viewing screen. The screed determines the thickness of the material on the subgrade as it is manipulated by adjusting the height of the tow point such that the top surface of the material follows a reference surface. Depending upon whether a channel is active or inactive, a wireless router can either passively detect interference and then switch channels to avoid it or actively detect interference and then switch channels to avoid it.

1459827352-4a8592ed-1b73-4899-b8b7-6a70fffd6301d

A lens system is presented having a diffractive optical power region. The microprocessor initially loads the first predetermined value from fuses into the control register. A paper machine clothing of this type can be used especially in through air drying techniques to produce an especially voluminous tissue paper. The latter may comprise water and detergent or a dry-cleaning solvent. Each M arbiters are coupled to the M memory blocks of each sub-memory.

1459827352-e3d4cab6-001d-4eef-9f59-e14d9e601c58

A universal document transport facility is described where, in various embodiments, the facility recognizes document requests based on a received document, interacts with document routing rules and workflow requirements with respect to the received document, and manages content flows between network nodes or devices. The tubular member is impervious to a pre-determined fluid, particularly an occluding fluid, while the outer cover is pervious to the pre-determined fluid. In turn, a heat treatment is performed at a temperature of 70°C. In another embodiment, the shoe portion has a female recess for insertion of a corresponding male extension portion in the fin portion. A base may also be provided for the Christmas tree stand including an elevated surface and a support structure for supporting the elevated surface above the ground level.

1459827353-503c99f7-3248-45f8-ba34-5e755ced5732

The value of a diffusing error for an interest pixel is added to image data of the interest pixel, and is calculated from error data occurred in quantization of pixels adjacent to the interest pixel. An ink to be used in an ink jet recording method of ejecting an ink from a recording head through action of thermal energy is characterized in that the ink comprises a pigment represented by the general formula, a dispersant and a water-soluble organic compound, and the pigment substantially shows neither an exothermic peak nor an endothermic peak in the range 25°C. The method further includes providing a coupling assembly having a thermoplastic sheet with a flexible weld rod of a thermoplastic material attached thereto and circumferentially contacting the coupling assembly with the first and second thermoplastic pipe segments. In one embodiment superoxygenation is conducted in an internal recycle stream of the mixed liquor, with oxygen content supersaturated preferably to over 300 parts per million. The NAPTR records include a plurality of ringback audio uniform resource indicators associated with the destination device.

1459827353-6de960a3-9d6c-4857-b4ce-1fa87aacda73

A method of setting up a pointing device on a portable terminal according to the present invention has a first step for moving a user icon on a display unit of the portable terminal by the pointing device to follow a target icon, and a second step for acquiring parameters associated with the pointing device based on user icon movement information generated by the first step. The epoxy compound is represented by the following Chemical Formula 1. Each segment of plug retainer threads has at least two columns of threads that are progressively stepped outward from said the periphery of said plug retainer.

1459827353-79adf4cb-4187-458a-b62a-c65e5f8305f3

A method is provided for attaching a hollow tubular member to a cast member. Adaptive network throttling may allow a device to communicate information using a shared network link without negatively impacting other devices utilizing the shared link. The device comprises a main unit and a touchscreen unit with a transparent display. In some cases, various location related mapping functions for a device are discussed. light signals and at least partially compensate for variations in detector responsivity as a function of light signal wavelength. For example, in photon energy conversion devices or in chemical energy conversion devices one or more non-electric structures which provide a gradient in dielectric constant are positioned within the cell to alter the direction and/or rate of transport of a photo-generated or chemical reaction-generated species.

1459827353-c02222eb-03fc-4464-844b-736e2188af51

A jack assembly for adjusting the height of a trailer is provided. The external logic unit is configured for receiving an expansion port frame from the expansion port via an expansion bus, generating a new expansion port frame, and outputting the new expansion port frame to the expansion port via the expansion bus. A sub-driving-wheel distribution-torque calculator is configured to calculate a sub-driving-wheel distribution torque in accordance with a rotation speed difference between the main driving wheels and the sub-driving wheels calculated based on an output from the wheel-speed detector. The hinge pin-engaging unit includes a drive pin slidably attached to the main body and a lever arm that is attached to the drive pin at a distal end of the lever arm and is also pivotally attached to the main body by a fulcrum that is attached to the lever arm between the distal end of the lever arm and a proximal end of the lever arm to form a first class lever. The one software product version is edited using the one client and a resulting new software product version is subsequently returned to the database. In a preferred embodiment, the securing mechanism is a detent device.

1459827354-5898471e-2abb-4a4d-ae40-c6fcceb03931

A cleaning tool comprises a scrubber head having an upper arm, a lower arm, and a connecting member coupling the upper and lower arms. A hollow shaft rotatably extends through an axial hole of the base and includes a fork on an end thereof. The processing electrode and/or the feeding electrode is electrically divided into a plurality of parts, and the power source applies a voltage to each of the divided electrode parts and can control voltage and/or electric current independently for each of the divided electrode parts. Extending outward from the center hub are a plurality of arms that each have an arm support structure comprising a plurality of frame members. An answer may be automatically or explicitly linked to a question.

1459827354-718e2d8a-4acb-4cc2-a3f8-0bf7bca26fd4

Provided are techniques which offer an advantage of reduced time and reduced storage capacity required to calculate the feature value of AAC-format song data. One of a savepoint statement, a rollback to savepoint statement, and a release savepoint statement is received. Also, at least a portion of the other one of the primary winding and the secondary winding is wound between said at least two portions obtained by dividing the one of the primary winding and the secondary winding, and at least a portion of the cavity of the bobbin is used as a space to dispose another member therein. A handle is attached to the holder for grasping by the player so as to launch the projectile. The inner annular passage terminates at a second outlet end.

1459827354-971c2dae-12ab-4eed-a6d0-9c46981f03aa

In a method of producing a stretchable sheet using a pair of gear rolls each having a plurality of teeth arranged on a circumference thereof, a raw sheet is drawn by passing the raw sheet through a gap between the pair of gear rolls. A terminal transmits a plurality of code words on a physical uplink shared channel and receives a plurality of acknowledgement/non-acknowledgement signals, which indicates if each of the plurality of code words has been received, on each physical hybrid-

ARQ indicator channel corresponding to the respective code words. The pressure and temperature in the flow regions are maintained at a level which is sufficient to keep the carbon dioxide in a continuous liquid state, but which does not freeze the liquid product. The manufacturers are able to increase profit from making the electronic connector sockets. The entrance portion of the first contact stud has a line width about 30-60% larger than that of the contacting portion. Obeticholic acid is useful for the treatment or prevention of a FXR mediated disease or condition, cardiovascular disease or cholestatic liver disease, and for reducing HDL cholesterol, for lowering triglycerides in a mammal, or for inhibition of fibrosis.

1459827355-2d0e775c-4b85-4c81-bd40-aeff9227d414

In order to make it possible to go to and to find a field device in a process plant in the shortest possible time, there is provided a fixed-position device and a mobile device. The acceleration sensor has a mass portion formed in a center part of a silicon semiconductor substrate, a frame formed at a perimeter portion of the substrate, thin elastic support arms, which are provided at upper part of the mass portion and the frame and connect the mass portion and the frame, and a plurality of pairs of piezoresistors disposed on top surface sides of the elastic support arms. In addition, the wireless drawing command receiving unit transmits drawing command throttle data back to the wireless drawing command transmitting unit to throttle transmission of drawing commands that are sent by the drawing command transmitting unit. An outer surface of the retention rim is at least partly spaced from and adjacent to an inner surface of the holding rim when the retention insert is arranged in the holding shell and when essentially no radial forces are acting on the holding rim and on the retention rim. The storage compartment is dimensioned for holding a box of garbage liners therein.

1459827355-2f3ade8e-9118-424c-874d-b0ba65ed7ea6

The present invention relates to a motor. The memory contains firmware which includes boot code adapted to boot the microcontroller to operate in one of a plurality of dedicated operating modes in response to a mode switch. The concentration of the solution is monitored by measuring the conductivity of the solution. Legs can extend down from some rods to the gutter's far edge to provide support. The epitaxy layer includes an N-type semiconductor layer, a light-emitting layer and a P-type semiconductor layer.

1459827355-34dfdf55-eed2-48ee-bc4e-3550759a4daa

A computer system includes a display interface, a user input device interface, and a processor cooperatively operable with the display interface and the user input device interface. The method includes requesting information about the power capabilities of the accessory by the portable media player. A convex portion or a concave portion is formed on the second face in order to correct a position difference in a transfer pattern occurring when the pattern is transferred to the transfer target substrate. The modulator also has a second transparent substrate, a second transparent electrode formed on the second transparent substrate, and a liquid crystal layer disposed between the dielectric mirror and the second transparent electrode. Further, the visibility and legibility of the e-document is highly enhanced. The conductive adhesive contains a flat conductive member and an organic solvent and is characterized in that through vaporization of the organic solvent in vacuum atmosphere, the flat conductive member has a region standing in the direction of thickness of the conductive adhesive layer.

1459827356-31f0338c-5a7d-4f30-aa51-4f9291680eb5

A III-nitride light emitting diode and method of fabricating the same, wherein at least one surface of a semipolar or nonpolar plane of a III-nitride layer of the LED is textured, thereby forming a textured surface in order to increase light extraction. An ancillary terrestrial network, that may include one or more ancillary terrestrial components, is configured to transmit wireless communications

to, and receive wireless communications from, the radiotelephones over the uplink satellite radiotelephone frequency in a time-division duplex mode. The solvent dispensing and extraction system can include a surface sampling probe. The invention further relates to other derivatives of the cultivar \u2018CL131.

1459827356-593589c6-243a-4c59-bf1d-3542dac6f494

A disclosed bus system includes multiple server agents corresponding one-to-one with server applications; and multiple user agents corresponding one-to-one with user applications. The system includes a programmable logic controller, a temperature measurement diode, an analog-to-digital converter coupled to the diode and the programmable logic controller, a current source coupled to the diode and configured to generate a first current and a second current different from said first current, and a processor coupled to the current source and to the analog-to-digital converter. The fan is externally mounted to the microprocessor and has a control input that receives the variable fan control signal. Under that state, harmonic noise causing a deterioration in detection precision will scarcely appear in the output of a magnetic sensor for detecting the rotating magnetic field of a ring magnet obtained by performing two-pole magnetization on the magnetic ring. Further, the electronic circuit constituting the motor controller may be mounted on the brush holder.

1459827356-722b8e04-3fd5-49a2-8f2e-fd5a878ac537

The present invention relates to the field of Immunology, specifically with the branch of Immuno-Allergy and in particular with the use of adjuvant or carrier compounds, capable of modulating the immune response to allergens. The printing of the shuffled data is performed simultaneously with a printing of the image of the photograph. A digital control loop coupled to the first quiet oscillator and the second noisy oscillator matches frequency of the first quiet oscillator and the second noisy oscillator.

1459827356-80c67fd2-3441-4aca-b418-6e0182689e6e

Described herein are systems and methods for managing video data. A first line-generation sequence creates a first layer of parallel lines of alternating and differing material by using double-stacked mandrels, sidewall image transfer, and novel planarization schemes. The carrier signal from the reader may then be modulated and the modulated signal transmitted from the reader during at least a portion of a response period for the wireless tag. The semiconductor light emitting element preferably has a emission wavelength near 330 nm, and preferably uses BGaN in its light emitting layer. For each trade order, one or more appropriate strategies are automatically selected and presented to the trader to assist the trader in making an informed and timely decision.

1459827356-9fecf271-dbb3-4ede-aa72-8db05dad49d4

An image pickup apparatus capable of highly efficiently realizing optical corrections of various aberrations while reducing the load imposed on a central processing unit. The polarity of the AC power of the inverter circuit is reversed in synchronism with a switching timing of the switching element immediately after the control by the PWM ON-width control circuit to increase the ON-width. The vertical central axis and the vertical axis windmill are supported by the tower frame. A cathode workpiece is positioned in the bath. The membrane consists of a polymer based on a base polymer, other than a vinyl polymer, which includes aromatic rings and also sulfonic acid groups which are bound covalently directly to the aromatic rings of the base polymer, that is, without spacer groups therebetween. The adjustment is carried out with the aid of a piezoelectric actuator to which a trigger signal is applied.

1459827357-cee51faf-63b0-48a2-a8e7-83111615a63c

An electric motorcycle comprises a motor case which is provided at a rear portion of a vehicle body frame; a swing arm which is pivotably coupled at its front end

portion to the rear portion of the vehicle body frame; and a rear suspension coupled to the vehicle body frame and the swing arm. The spatiotemporal locator information represents a spatiotemporal area which is a temporal transition of an object region over a plurality of frames. The controller is configured to determine an impending inoperability of the first thyristor based on the first current and alert a user if the first current indicates the impending inoperability. In a further embodiment, a reference voltage for reading the second plurality of MLCs is set according to the adjust code.

1459827358-17017ff1-b6e7-492e-9b0c-cf4dcfaa5360

The present disclosure relates to methods and systems for using external display devices with a mobile computing device. At least one bridge may extend across an intermediate portion of the trench, and optionally, may divide the trench into sections. The contents of the customization patch can include transforms, cabinet files, and XML content containing customization information. A rotary link is pivotally connected to the head restraint and interconnects the first and second locking plates. By storing the correspondence between the process page directory base address and the identification information of the process, the method and apparatus of the present invention enable the virtual machine monitor to locate and monitor processes executed in the GOS, thus promoting the management granularity on GOS of the virtual machine monitor to a process level.

1459827359-d1697467-4968-4554-ba50-ba73e2e8d6a9

An embodiment of the disclosure can compile source of an interactive application with debug options enabled. The method is one of estimating a time delay between when a software timestamp is generated for an active measurement protocol test packet and when the active measurement protocol test packet is transmitted from the network device onto a link. A voltage regulator and potentiometer may be used as the digital controller and coupled to the input voltage supply of the preamplifier to provide the needed adjustment in voltage. The top flange of the support may be parallel to or at an angle to the surface. Each rebar support of the present invention comprises a plurality of rebar support arms that, in concert with the other components of the foundation or concrete structure, supports one or more pieces of rebar in a desired orientation.

1459827359-d87a3eef-e01f-47c6-b63d-b583c7be2f73

Bandwidth control over users accommodated under ONU in PON is achieved. The apparatus for locating the terminal includes a candidate region determiner, a virtual location determiner, and a final location determiner. The sheath may be disposable to permit reuse of the overtube. The fluid also may be cooled by, for example, either an evaporative or an absorption chiller driven by the heat from the heat source or by a thermoelectric cooler. The cache is updated with the merged data.

1459827360-5fe16504-8995-4c1a-a81e-252f0178fd67

The present invention is a device and method that immobilizes the vertebral bodies by immobilizing the respective spinous process extending therefrom. The Group III-V semiconductor gain layer is formed on the silicon substrate. The apparatus introduces a flow of deer feed into the air flow which is in turn conveyed upwardly into the elevated deer feeder via a second opposing air duct being connected to an elongated flexible hose having an elbow portion at its upper end and retained upon an upper lip of the deer feeder. The second set of radiators faces inwardly toward an inner space of the airship, for illumination by a feed array spaced from the second set of radiators.

1459827360-9e90b1a3-b71c-439e-973c-2b7c326044e0

A system is provided that enables customers to search for event tickets for purchase. The navigation system causes the machine to follow a boundary of the area, storing path information on the path travelled by the machine as the machine

follows the boundary and compares when the machine has returned to a previously visited position in the area. The coils are magnetically coupled so that the magnetic flux is cancelled regarding the in-phase component that transmits the pair of transmission lines, and the magnetic flux is increased regarding an opposite-phase component that transmits the pair of transmission lines. The methods and systems described herein are particularly useful for insurers utilizing non-referral repair shops for servicing vehicles involved in insurance claims.

1459827360-a08b13a5-b849-4997-ad54-f8e2a07ce6c1

An asymmetric field effect transistor that has a threshold voltage that is compatible with current CMOS circuit designs and a low-resistance gate electrode is provided. The varactor diode has a capacitance that is variable in response to an applied voltage, which allows for real time impedance matching, attenuation control, and/or compensation for tolerances of other components. When the first high detection signal is not set and the second high detection signal is set, a second step decrease in at least one of the first gain control signal and the second gain control signal is taken. Moreover, a relationship  $n_1 < n_2$  holds where  $n_2$  is the refractive index of the enclosure portion, and  $n_1$  is the refractive index of the device under test. In said method, the electroconductive core element, such as a copper bar, and the joining agent element are inserted in the jacket element, and at least the juncture area of the elements to be joined is thermally treated, so that there is created a metallurgical joint between the electroconductive core element and the refined-steel jacket element.

1459827361-22738723-0810-4261-b4f2-87cb2d0f805c

A openclose device of washing tank drain comprises an openclose controller having a sliding shaft and a fixed sleeve, a drain plug mechanism with an openclose function mechanism, and a connecting cable between the openclose controller and the openclose function mechanism. A three-dimensional image space combined from two video cameras of the two or more video cameras is displayed to a user using a stereoscopic display. However, the reverse bridge tension configuration loops the tensioned strings on a path that goes around the back of the instrument, through the body of the instrument, and back to the bridge. Electrical paths connect the compliant pins to the contact elements.

1459827361-5a00eaac-a4fc-4e0d-8932-f57e37e40460

A tool holder has a carrier and a boss movable within the carrier. In conventional multi-stage electrical heaters, the resistance value of the individual heating elements scatters. A gain stage is often implemented as a variable gain amplifier, and can introduce significant nonlinearities, a problem exacerbated by signals with a large peak-to-average ratio. The drawer box stop bars are held at right angles to the rail. The accounting system includes a computer-assisted process that nets subscription and redemption orders that occurred over a particular time and records a transfer of securities into or out of the fund based on the net of the subscription and redemption orders. This invention is particularly important for the CO2 refrigerant systems operating in the transcritical cycle.

1459827361-5c25d739-ff9d-4049-b846-a32b9191957e

The present invention relates to molecules having a variant Fc region, wherein said variant Fc region comprises at least one amino acid modification relative to a wild-type Fc region. A filler support layer is added to the hollow side of the cover sheet and hardens. A floating gate oxide is then formed by thermal oxidation and/or oxide deposition techniques. A registered subscriber is able to gain access to the platform and modify the entries as need be. Polymeric leuco colorants are typically comprised of at least two components: at least one leuco chromophore component and at least one polymeric component. The resistive-switching memory elements described herein can switch even when a switching voltage less than the breakdown voltage of the diode is applied in the reverse-bias direction of the diode.

1459827361-9e443738-31a2-4dc0-b68d-156ac464013e

A drive device for a light-emitting panel that is capable of adjusting the anode power source voltage to be applied to anode leads of the light-emitting panel to a suitable voltage value with low power consumption and in a reliable fashion. The invention is characterized by the fact that the signalling contains a predetermined bit pattern that indicates whether control information in the current transmission can be used alone for decoding, or whether some part of the control information from an earlier transmission must also be used. The bin is lined with an impervious sheet of geocloth to form a containment berm for use in controlling the dispersal of hazardous material spilled from storage or work facilities. A first and last word within a selected text region is identified based on at least one active region associated with at least one word within the selected text region.

Embodiments of a hub shell and a hub cover are adapted to house components of a CVT and, in some embodiments, to cooperate with other components of the CVT to support operation and/or functionality of the CVT.

1459827362-4045a803-0899-4e7e-afc8-e0732628bbec

A processing apparatus, optionally integrated into a device having a plurality of sensors including a magnetometer, generates navigational state estimates for the device. In disclosed embodiments, the target is a cell or cellular component of a tissue section and the transfer surface is a film that can be focally altered to adhere the target to the transfer surface. The configuration, for example, the distribution of diffusion particles, the location, the shape or the thickness, of the pattern is configured to reduce the mura or affect the desired uniformity of a lighting area. In the first mode, the adjustable speed drive actuates the motor assembly to apply the first amount of torque to the strap, and in the second mode, the adjustable speed drive actuates the motor assembly to apply the second amount of torque to the strap.

1459827362-797f077b-ccf4-4ae8-a661-f53e5ab503f0

An information processing apparatus according to this invention acquires function restriction information used to restrict the use of functions of an image processing apparatus. The method of the present invention selectively adapts the system's speech engine to a speaker's voice characteristics using an N-best matching technique. The playback unit carries out playback of data at 2x speed from a tape-shaped recording medium, on which has been recorded video data with a field frequency of 59. Each of a plurality of wells in the region where the memory array is formed is formed so as to continue to a corresponding well of an adjacent memory cell in the direction of said columns. The engagement members are insertable into a recess in the implant when in the contracted position and outward biasing of the engagement members firmly secures the implant to the tool.

1459827362-85fcda2c-e033-41d7-80d9-e38c02a5f487

An improved submicron gap thermophotovoltaic structure and method comprising an emitter substrate with a first surface for receiving heat energy and a second surface for emitting infrared radiation across an evacuated submicron gap to a juxtaposed first surface of an infrared radiation-transparent window substrate having a high refractive index. The devices, trays and methods allow multiple use of non-sterile medical devices with sterile medical devices for performing medical procedures requiring sterile conditions. The card is cooled and a second image is captured and digitized. In the general formula, R1 to R4 are each any one of hydrogen, a halogen element, an acyl group, an alkyl group, an alkoxy group, an aryl group, a cyano group, and a heterocyclic group.

1459827362-e3bae494-5944-4c27-93b5-4b1f803bdf77

The described embodiment relates generally to the field of thermal management. The method includes providing a sample tube having a pellet at a bottom of the sample tube and a supernatant liquid above the pellet, visually inspecting the sample tube

to determine one or more geometric properties of the pellet, and determining an expected height of a top surface of the pellet based on the one or more geometric properties determined in the visual inspection step. A soldering device includes a tip member, a heater member, and a thermally conductive wedge that is pushed into a gap between the tip member and the heater member. In one example, the awards assigned to the unselected symbols are gaming device credits, while the converted or replaced awards assigned to selected symbols are multipliers. A recess portion is disposed on the front surface of the bypass passage forming member on a circuit housing portion side of the inflow port so as to extend at a predetermined depth over an entire region in a longitudinal direction of a short side of a rectangular cross section of the bypass passage forming member.

1459827362-f5411a58-c9ce-46c2-9d88-4c5d8b067f32

The transmitterreceiver for a convex probe and linear probe are used to drive a sector probe. The reinforcement device may include a tubular wall including a first end, a second end, a throat disposed between the first end and the second end, and a curved portion disposed between the throat and each of the first end and the second end. The invention further relates to hybrid soybean seeds and plants produced by crossing the cultivar 0053840 with another soybean cultivar. A free passage is arranged for the bark passing over the debarking shaft.

1459827363-4b664b59-d62c-40e9-93a6-f316e8935518

Disclosed herein is a method for producing a part comprising at least one layer of fiber-reinforced composite material. The method includes determining a plurality of parts to be processed, determining one or more types of the plurality of parts to be processed, and determining a quantity of the parts to be processed. The photosensitive areas of the photodetector output signals representing intensities of the light incident there through the second system.

1459827363-6db3c9bb-00a9-4d78-ae8b-d87b0f3b7fa1

The present invention relates to an ornamental design for a monolithic sink and countertop with a backsplash. Because the mode signal is not caused to interrupt halfway along the data inputoutput circuit, but supplied onto the data bus that connects the data amplifier to the data inputoutput circuit, no collision of the read data with the mode signal occurs in the data inputoutput circuit. Software facilities may instruct the peripheral management facility in different ways. A sensor detects a force exerted on the ballizing member by the workpiece at a third position, which is located between the first and second positions. Such servocontrol by a hybrid method makes it possible to perform drive control of the stage having stability of the interferometer and accuracy of the encoder together.

1459827363-aaadd467-7083-44db-830e-83e03405e407

An apparatus for use in conjunction with a metered dose inhaler which includes a novel valve system to aid in the delivery of aerosolized medicament to a subject. A low profile, multi-chambered implantable mechanism is used to collect blood from a blood vessel and re-pump the blood out with an induced pressure emanating from a fluid pressure source. The support member includes: a contact part which contacts the blade; and a pair of attachment parts which are attached to the housing. Compare circuits associated with each memory module are used to compare the data output from each memory cell to an expected value. The server compares this reference to the most recent reference it has logged and notifies the parties of a crossover if the references are not the same. After exposing the said bioaerosols with near infrared wavelength laser, the obtained fluorescence spectra has been shown to be unique and particular for each bioaerosol, thus allowing the characterization of the said particles.

1459827363-dd6cf8bb-6b0d-48e3-a4f1-141eef3a6100

A system and method for updating software in an information handling system are disclosed. The number of taps or \u201cequalizer length\u201d is adjusted based on

an estimate of the Doppler frequency between the devices communicating over a channel. A second resistance communicates with said third transconductance amplifier and said third transconductance amplifier. The joint is formed via a heat-shrink process to provide an interference fit. During the boot process, the mount manager uses the data structure entries identified by the unique volume identifiers of the arriving logical volumes to reconstruct the symbolic links so that references to the redirected name will resolve to the correct non-persistent device name.

1459827364-9488054b-a44a-4ab8-9d85-3e523368a0b9

A decking clamp for use in an underhung roof system. Devices under test are each subject to a body bias voltage. The present inventors have formulated synthetic thrombin derivatives capable of selectively stimulating or inhibiting thrombin receptor occupancy signals. When a user presses the nib against a writing surface the valve plug moves away from a raised valve seat located on the biasing element to allow ink to flow from an ink reservoir to the nib.

1459827364-e2c3b3a8-3230-4ee5-83be-6e7960f9e354

The present invention relates generally to a process for recovering copper and other metal values from metal-containing materials using controlled, super-fine grinding and medium temperature pressure leaching. In particular, in some embodiments the described network devices utilize signaling to modify previously made reservations. The silicon members may be made of monocrystalline silicon, polycrystalline silicon, or virgin polysilicon. The first data, therefore, is recorded in a manner similar to the case of a compact disc.

1459827364-faf1effa-46f3-417e-96b1-c925c5136b4b

In an interconnect system for providing access to a common IO terminal for multiple circuit devices such as drivers, receivers and electrostatic protection devices implemented on an IC, each such device is provided with a separate contact pad within the IC. The central apparatus adds, to the display screen definition data, communication control data where an exception handling procedure for communication between the portable terminal apparatus and the central apparatus is set. Using a control device of the electrical test circuit, the deviation and/or the amplitude and/or the phase of the reference signal and/or of the test signal can be varied. The trajectory may be used to estimate past and future positions of the moving object. Surrogate models should be provided for each of a plurality of pitch angles. A segment of any size up to the maximum segment size is also created and transmitted whenever any time-sensitive information is available for transmission and an acknowledgement message is received by the transmitter.

1459827365-07ae02a0-5076-43dc-9830-9f4b6319019b

An amplifier circuit with favorable linearity is provided. The telephone unit has an ON/OFF button that can be switched between an ON state and an OFF state. Since each node is starting with the same connection information and running the same priority determination, each will end up with the same result and will know where to place and find connections on protection. The exponent adjust and rounding logic is further configured to add the inverted leading zero signal to the first incremented exponent value and the second incremented exponent value, thereby producing an exponent output value, a first incremented exponent output value, and a second incremented exponent output value. A portable terminal detects the marker as depicted in a captured image that has been captured by an image capturing device and displays a screen indicating an effect of performing the image adjustment processing in accordance with a setting corresponding to the marker.

1459827365-31401255-64f3-4902-b1ca-0693b4ce5dd2

The present invention uses wire bonding technology to bond interconnect materials that oxidize easily by using a wire with stable oxidation qualities. The compact drive mechanisms presented herein, for example, have contributed to the advent of

the compact, carry-on bicycles set-forth in the teachings which include drive-and-steering units and drive-and-chassis units. As the minimum lamp voltage detected by the minimum lamp voltage detecting means is larger in a predetermined minimum lamp voltage range, any larger output power characteristic curve is reset from the plurality of output power characteristic curves W1, W2 and W3, and subsequent power control is performed.

1459827365-d853eb1b-5675-4509-9100-24aeba17861a

The invention provides compositions, methods and devices relating to a silaceous oxide that generates a reduced heat of hydration upon contact with blood. The system reads outputs of an oxygen sensor and an ammonia sensor that are installed in downstream of an NSR catalyst when the catalyst is in an activate condition. System-created events, such as recurring, minimum charge summary, and maximum charge summary events, are created by the system based on a schedule defined by a subscription to which a customer has subscribed. Pressure is provided by the static pressure plenum against the precursor web and the forming structure to conform the precursor web to the discrete protruded elements of the forming structure to form the embossed web.

1459827366-8121b303-6d25-41a9-ae52-8bd933330507

A read element includes a magnetoresistive sensor having a side and an upper surface that defines an edge. The float board includes an the inclined surface design on one side of the float board which when placed on a level surface can facilitate foot stretching for a user prior to any aquatic activities. The coil spring connected is configured for creating an elastic force to make the front cover slide relative to the rear cover. In some embodiments, the reinforcing structure extends along the side surfaces of the bladder and between upper and lower surfaces of bladder. Otherwise, the data storage device is normally unmounted so that if the peripheral device were to be removed no harm or damage to data stored therein would occur. When connectivity with a monitoring computer is available, a connection with the monitoring computer may be established, and/or the queued events may be transmitted to the monitoring computer.

1459827366-fdd5fac3-7a90-4513-b877-cdb0c984626d

An interleaved delay line for use in phase locked and delay locked loops is comprised of a first portion providing a variable amount of delay substantially independently of process, temperature and voltage variations while a second portion, in series with the first portion, provides a variable amount of delay that substantially tracks changes in process, temperature, and voltage variations. The fuel cell separator includes a fuel gas flow path containing hydrogen, an oxidant gas flow path containing mainly an oxygen component being supplied from an oxygen/nitrogen separator of a system and participating in electrochemical reactions, and a cooling gas flow path containing a nitrogen component to remove heat produced upon power generation of a fuel cell. A polyvalent metal salt is then added to stabilize the acidified activated silica. Then, a second CMP process time is determined according to the first CMP process time, the first thickness and the post-CMP thickness. The silicone oil effectively blocks the migration of the antifog composition into an adjacent nylon layer when the multilayered film is stored in roll form.

1459827367-725f9db5-0ff9-46ca-b509-b35ef679c42e

In a data processing system, a selection is made, based at least on an access type of a memory access request, between at least a first timing and a second timing of data transmission with respect to completion of error detection processing on a target memory block of the memory access request. According to the present invention, the cardiac rhythm management system includes a fixation helix for securing and stabilizing the lead at a target location in a patient's heart. When so installed, the detection unit is located in an air space adjacent to the chimney or flue.

1459827367-c0b9ae21-64c8-421b-89e0-c177bd579488

Techniques for configuration sensing for a mobile computing device are described. The architecture includes a configurable switching element, integrated optics, and a plurality of modules that allow a \u201ctype\u201d of node to be adapted and configured within the base architecture. The photodiode is an N\u2212 region formed within a P-type region. Next, a second data set, which according to at least one metadata element comprises a data unit of maximum relevance to the initial data unit, is selected for synchronization. The gate electrode layer has an oval peripheral contour around the transistor, the oval peripheral contours of the gate electrode layers of memory cells arranged in a row along a word line forming overlap regions in order to increase the packing density. At least one electrically conductive pathway is provided between the external surface and the at least one electrical conductor for detecting an attempt to drill from the external surface to the at least one electrical conductor.

1459827368-0fed4a38-5e42-4480-9550-62aefefd6488

A coating apparatus is revealed that is designed to coat substrates by means of a physical vacuum deposition process or a chemical vacuum deposition process or a combination thereof. At least two modulation electrodes are provided, at least one of which is disposed in proximity to a readout-electrode in such a manner that, depending on the polarity sign of the modulation voltage of the modulation electrode, the current flowing across the readout electrode is positive or negative. A head, the head being comprised of a second material is attached to the removed end of the shaft. The plurality of lobes allow the golf ball precursor product to be centered within a cover mold without the use of pins for centering. The ancillary information may include additional information relative to the primary information. If no control channel messages are decoded at the first frequency, then the receiving device tunes to about a second frequency.

1459827368-e2471a5f-d9f4-49f1-ac7a-866ceaa738fb

A video codec having a modular structure for encoding/decoding a digitized sequence of video frames in a multi-core system is described. Each of the first and second molding units has a mold core holder, a plurality of mold cores disposed in the mold core holder, and a plurality of fixing elements. Select individual capacitors are energized so as to blow the dielectric layer to establish a connection between the first and second electrodes such that, after blowing the dielectric layer, the second electrode is coupled to a cell plate generator establish a bias connection therebetween.

1459827369-5573098a-254b-4233-9e78-7c95315e52e3

A golf tee insertion depth measurement tool provides a gauge to facilitate marking the shaft of a golf tee to indicate a desired insertion depth that provides an optimum height for a golf ball placed on the tee, which ball is to be struck by a club face having a height H. The invention relates to the seeds of cotton cultivar PM 3535 BGRR, to the plants of cotton PM 3535 BGRR and to methods for producing a cotton plant produced by crossing the cultivar PM 3535 BGRR with itself or another cotton variety. If not, the printing system replaces with missing value with a null value and a database of the printing system updates all other necessary components within the printing system with the updated job ticket.

1459827369-5f35ea42-cfac-45c5-b46c-cf5091350759

An in-vehicle communication system includes: an in-vehicle communication apparatus equipped to a vehicle; a first mobile communication terminal connected in a communicable manner with the in-vehicle communication apparatus; and a second mobile communication terminal connected in a communicable manner with the first mobile communication terminal. A magnifying lens system is incorporated in the engagement space, and a pair of magnifying main units having an ocular tube is engaged in the ocular tube and is removably mounted on a support unit, which is

engaged at the ocular tube and engaged by a fixing mechanism. The system allows a user to identify first and second timestamp values corresponding to first and second times which identify a time interval of interest in the log file. In order to accommodate the lateral mounting of the flat-panel display, metal brackets are used.

1459827369-9ced0b2f-8d0e-4ef8-af8d-dd66586e896e

A spoolable downhole control system includes a length of one or more lines suitable for the downhole environment. Specifically, a network device may include a control unit that simultaneously executes both a first and a second maintenance session. Silicon nanoparticles efficiently produce emissions and act as a gain medium in response to excitation. A corresponding arrangement is disclosed, too. Then, only when the recording sheet has passed through the yellow color photoreceptor drum, the photoreceptor drums for cyan, magenta and yellow abut transfer and conveyance belt at the same time. The multi-cyclone separating apparatus also comprises an outer cyclone body, the upstream cyclone is located inside of the outer cyclone body and the entrance of air inlet passage is located at the outer cyclone body or extend to the outside of the outer cyclone body.

1459827369-f91d1502-12b2-415a-9676-31afc24df531

In a planar-array cell structure, an area required by interconnectors is reduced and a fuel cell is made further compact. The access is configured to maintain the low equipment costs and widespread equipment availability of standards-based communication systems. The output frequency of the ALO is controlled by a control signal superimposed on the single cable that is output by the receiver. By alternating stimulation and recording at gradually increasing levels, one can determine the minimum input that creates a neural response, thereby identifying the threshold stimulation level. The frequency response of the receiver is determined from the first combined frequency response and the second combined frequency response.

1459827370-951fc3b6-d428-4d23-b005-7214a4cce254

The examples described herein relate to methods and apparatus for cleanup prediction and monitoring. A communication session is initiated between a client and a server. The test circuitry then generates test data corresponding to the received signals. The flow of compressed gas flows from the compressor to the second tower, to the second separator, to the first tower and out the outlet when the first set of valves is closed and the second set of valves is opened.

1459827370-ac03ffa7-dce9-431a-ae88-d6c82f053879

Apparatus and related fabrication and operating methods are provided for logic circuits that include ferromagnetic elements. The insulating spacer is coupled to the header body. Furthermore, the thickness of the magnetic disc medium protective layer is set to be between 1 and 10 nm, and the hardness of the magnetic head protective layer is set to be between 1. A bolt, whose dimensions correspond to the size of the cylinder, is located in each extension.

1459827370-d772fa61-363f-476e-94f7-ad11ca8a4274

A foot peg assembly for a motorcycle includes an elongated foot rest that has an outer end and an inner end. The top unit is first unfolded from a first folded position to an attitude angle of 160 to 170 degrees, and swiveled by 180 degrees to be folded onto the bottom unit in a second folded position at an attitude angle of 180 degrees. Behavioral indexing of circuit designs allows a user to maintain an indexed behavior database, track changes in behaviors as the circuit design's executable description evolves, and figure out how the executable description can be reused in different projects. The LED lamp can achieve the focusing function by rotating the lenses assembly to make the lenses with different degrees correspond to the LED chips.

1459827371-02fe3a23-c20a-4a16-8353-9e99a4135e8e

A method of manufacturing an integrated circuit can utilize semiconductor substrate configured in accordance with a trench process. The members define a projecting annular disc that is received in an annular channel that is filled with hydraulic sealing fluid such as oil. Based on the availability of a context that should be available, one or more target actions are automatically executed and/or selectively suspended.

1459827371-52c8c057-c88e-4fc0-93e4-40aafac593f7

The transmission power of a wireless device is adapted in response to a determination that errors within a data message are above a threshold level. The self-adhesive cleaning wipe is placed on the surface of protective gloves worn by dental professionals, thereby providing a conveniently accessible absorbent cleaning surface for mirrors and instruments when they become soiled, wet, or fogged. When the frame is held in a metal mold and the stages are pressed, the interconnecting members are elastically deformed, so that the magnetic sensor chips are bonded onto the stages placed substantially in the same plane and are then wired with the leads. The conductive memory line can then be formed over the mask layer and conductive via. A window in the other connector includes an opening, channel, and/or translucent or semi-translucent material through which the indicator may be seen. The arrangement includes a removing device adapted to detach the milking member from the animal and move the detached milking member to a parking position when the milking process has been completed, and a supervision device adapted to supervise when the milking member has been detached from the animal before the milking process has been completed.

1459827371-52f9c45b-843e-47f8-9977-9ab275e03396

The invention provides, inter alia, models of bone metastasis, methods for identifying agents that modulate skeletal related events and metastasis, methods for modulating skeletal related events and metastases, and methods for detecting skeletal related events and metastases. The bioelectrical resonance response may be identified based on a parameter of oscillation of the one or more bioelectrical signals and indicative of resonance of an area of the brain to one stimulation frequency of the plurality of stimulation frequencies. The LED is disposed between the substrate and the first reflecting element, and the first and second reflecting elements are disposed on two opposite sides of the substrate, respectively. The first coaxial conductor extends between the first coaxial cable-connector and a first end of a resistor, wherein a second end of the resistor is coupled with the first access port. Selected constituent of the waste products are separated from the waste products into a waste stream.

1459827371-a0d239a6-61e5-43d4-bd1a-fef755dab813

A strain balanced active-region design is disclosed for optoelectronic devices such as light-emitting diodes and laser diodes for better device performance. distribution of the content elements can be based upon payment information or content characteristics of the content elements. Certain of the embodiments include the option to provide actuating means for positioning and/or aligning one or more urinal-related components in response to receiving a control signal. The compositions comprise cells of interest producing sialylated glycoproteins. Furthermore, the method allows a user to select the characterization attributes and to visualize the information element vectors. In one embodiment, the firing mechanism comprises a light for exposing the projectile to radiation prior to being fired from the gun.

1459827371-c0372db7-cf9c-4ee8-aeef-08935abf59f1

A no-flow underfill material and process suitable for underfilling a bumped circuit component. The system and method comprise comparing signaling messages with control data to identify one or more service enablers and application servers that are responsive to the signaling message. A RIMM module containing RDRAM devices is

coupled to each processor, each RDRAM containing a plurality of memory banks.

1459827372-664f3545-b3aa-44aa-bc08-6ad1d7921068

This invention relates to thermosetting resin compositions useful for mounting onto a circuit board semiconductor devices, such as CSPs, BGAs, LGAs and the like, each of which having a semiconductor chip, such as LSI, on a carrier substrate. When a first circuit device is connected to a second circuit device with the extended flange extending outward of the first device, the flange can extend beyond the periphery of the first device. The individual chips on the sections are then joined to corresponding antennas to form an RFID inlay stock.

1459827372-92bb0418-99cf-4833-a7a0-bdc687fd5fc7

A method is disclosed to generate and save run time data. At a second gateway connecting the second portion to the relay portion, data frames received over the relay portion are processed to determine if they are corrupted, and signals are sent back to a first gateway to resend any data frames that are corrupted. The receiver circuits are selectively activated from a dormant state in which they are not powered by a power source, to an operational state in which they are powered and able to process the collected pulses. Accordingly, chromatic dispersion compensation and dispersion slope compensation can be realized over a wide signal band. Each arithmetic circuit receives a respective first operand and a respective second operand from the first and second series respectively, when executing the SIMD instruction. After receiving acknowledgement that the deltas in the identified set of deltas have been incorporated into the second instance, the egress map is updated accordingly.

1459827372-96485545-ac95-40d1-9488-4f865c37579a

A method of biasing a nonvolatile memory array. When the vehicle roll rate and lateral acceleration are opposite in polarity, the roll rate vs. Various kinds of encrypted multimedia contents and license information are converted by the proxy managers into multimedia contents and license information having a format executable by the DRM smart clients. The nail exposure portion is provided with an automatic cover to thereby also contrive an installation-type device for removing enamel from a multiplicity of nails and a device for removing enamel from the pedicured nails. The virtual participant processor may send the resulting translation to a teleconference management processor.

1459827372-a070938f-6651-4248-9f3a-5461c07690e4

A two-dimensional circuit for a traveling-wave tube for millimeter and sub-millimeter electromagnetic waves synchronously interacts with an electron beam in a vacuum electronic microwave amplifier or oscillator. Then, a first nitride film is uniformly formed on the gate electrodes, and only the low-density region of the semiconductor device is etched. Metrics utilized in calculating the score for a test script may include those indicating the propensity of the script to result in \u201cfalse failures\u201d and/or those indicating the effectiveness of the script for finding product bugs. Thus, the viscosity of the inks is reduced, so that the inks can be easily cut into ink droplets having a substantially spherical shape.

1459827372-e0d2c5fc-470d-4e0e-8c75-e1b3b572889d

A seating assembly for a vehicle includes a stepped floor that has an upper portion and a lower portion. The pathogen-resistant fabric may optionally include one or more singlet oxygen traps. The material may be scored or cut with a laser so as to produce offset scores or cuts wherein a first cut is made through the first layer, but not past the second layer and a second cut is made through the second layer, but not past the first layer. The alcohol containing stream can be used to produce olefins in an oxygenate to olefin production process. Methods of using the compositions for both diagnostic and therapeutic utilities are provided.

1459827373-26d83313-86b4-4868-8c8e-e35ecb5f74d7

A zirconium-based alloy for the components of the active core of nuclear reactors comprises : niobium, 0. With the use of the function of detecting the position in a region outside the display screen, it becomes possible to provide virtual buttons in this region and detect dust around a light retro-reflector. The branches of the pixel electrodes are alternately disposed. Next, the intermediate holder and the double ended needle assembly are pushed into the first cylindrical part by the first syringe, and the second syringe in the second cylindrical part is unsealed by the other end of the double ended needle. The low-temperature and high-pressure refrigerant is decompressed and expanded by an expansion valve and passes through the cooler to absorb the heat in a room air, and then returns to the low-pressure compressing portion of the compressor. The method determines a set of hypotheses from a first plurality of local maxima of the first correlation and a second plurality of local maxima of the second correlation.

1459827373-3a985b8b-d961-4e84-aa68-24d6ce2276b5

A laser energy delivery system includes a relay imaging system. The first module may output a signal to a second module which may demodulate a second one or more channels of the signal output by the DBS LNB. A local unit of work is established that represents the portion of the transaction received from the initiator region. A control circuit is adapted to determine the end of dosed state based on data from the first, the second and the third sensors.

1459827373-946d49cb-5a55-4fe1-8e56-ba75036b9f3f

A medical device may include a tubular body configured to communicate gas and an inflatable cuff coupled to the tubular body at least by a collar. The additive is a compound represented by below formula :wherein R is defined as herein; n is 2, 3, or 4. A determination is made as to whether or not there is an acknowledgement from the back end storage regarding the receipt of the data associated with the IO request. It is preferred that a plurality of support posts and post clamps according to the invention be used with a molten metal pump wherein the top surface of each support post supports some of the weight of the superstructure. In one embodiment, the compute node may discover the other node using peer-to-peer platform protocols. The sheet post-processing apparatus includes the movable-table rotationally driving portion that rotates the movable table to cause the stapling unit to tilt at a position to drive the staple at the predetermined angle with respect to the sheet-conveying direction, and a tilt retention portion that mechanically holds the movable table to maintain the stapling unit tilted.

1459827374-35b0d6a7-1fc9-4820-852e-75908cd71715

A method for simultaneously sealing and creating a thermal perforation between two thermoplastic layers that comprises providing two thermoplastic layers. Automatic test equipment operates with the internal servo loop circuitry and external servo loop circuitry to test the ADC. Users may instantiate objects designed through CAD/CAM environments or attach haptic or touch attributes to subcomponents such as surfaces or solid sub-objects. The input control may remain visible with the application, for executing a new search for the same or another object type. Users may specify class versionability by specifying a list of explicitly versionable classes, specifying a list of superclasses whose extending classes should be considered to be versionable, and specifying a list of interfaces whose implementing classes should be considered to be versionable.

1459827374-57a3df3e-dc14-47fc-9c20-569ca975adb8

Non-invasive electrical nerve stimulation devices and magnetic stimulation devices are disclosed, along with methods of treating medical disorders using energy that is delivered noninvasively by such devices. To that end, an ink jet print head used has a plurality of nozzle substrates arranged that an overlapping region in which the printable areas of respective nozzle substrates partly overlap is formed. An aspirator tip is coupled to the aspirator body member at an end of the fluid

passageway and having a fluid passageway therein extending from the end of the fluid passageway of the aspirator body member when coupled to the aspirator body member, the aspirator tip being coupled to the first and second optical conductors and comprising an optically transmissive material. In addition, an attachment hook is provided for each point of the retention system extending from the edge trim through which each of the points pass through.

1459827374-60f28cd3-3d38-434f-9b33-618897977a76

The present invention discloses a composition for dermatological infections by the use of a lytic enzyme in a carrier suitable for topical application to dermal tissues. In one embodiment, the sample is heated on one side and the time-temperature characteristic is monitored as the heat travels through the sample and the spot weld. A lead server is selected, which contains a distributed consensus algorithm for selecting a host server, and which utilizes multicasting while executing rounds of the algorithm. A second set of features is selected, the intensity values of which are within a range of correspondingly located surface intensity values defined by upper and lower threshold intensities.

1459827374-65566d31-4fad-4715-95ee-26f2b67e7486

Printable packaging paper for flexible packaging. A single crystal semiconductor plug may be formed in the contact hole and on portions of the interlayer insulating layer adjacent the contact hole opposite the semiconductor substrate, and portions of the interlayer insulating layer opposite the semiconductor substrate may be free of the single crystal semiconductor plug. The system also works to monitor a change in amplitude of swing of the scanner mirror accurately to keep it constant. This transition assembly has a stiffening member within a transition tube, and provides for a flexible transition between the two components of diverse stiffness, namely the proximal cannula and the flexible distal end portion. When a failure to a primary FCoE path is detected, a standby path is promoted to become a new primary FCoE path and subsequent traffic is routed in both directions through the new primary FCoE path.

1459827375-48833ee4-2368-445b-a7aa-7c07c0a4263a

A mobile computing device, such as a mobile phone, serves as a wireless hotspot for other mobile computing devices. Thereafter, a selection of a graphical user interface element associated with one of the attribute in the first subset may be received resulting in a display of a window comprising an alphanumeric input element. The image processing apparatus may include a first calculator and a second calculator. The preferred tinting compositions are aqueous latex emulsions. A user, who has seen the reception list, instructs the POP access section to fetch an e-mail message from a panel control section.

1459827375-7d4ecfcf-0fdf-41c7-a9af-94dd70cde4fa

A fluid-collection pan configured for supporting a unit or system responsible for fluid damage risk to its surroundings. An absorbent filler unit is placed into a chamber of the hairbrush body and absorbent feed rods are mounted into bores inside the hairbrush bristles. The IC includes a variable voltage generator for generating an output voltage having a different voltage level depending on a location of an addressed memory cell within the memory group is provided. Also disclosed herein are processes for using the releasable fastener systems. The branch operand field defines conditions under which a branch is taken. The architecture is further extended to suppress leakage current between adjacent wells biased to differential potentials.

1459827375-821da1e5-f4e3-4bc0-a694-1a4c273408fd

A plastic blow molded pourable product container is constructed to support the combined weight of additional like containers stacked on top of the container, and is also constructed to efficiently use a three dimensional space occupied by a stack of containers and to resist relative movement between adjacent containers

assembled together in a three dimensionally arrayed stack of the containers. Assays for folate, theophylline, and tobramycin are described in detail. A proportion of a total number of data packets is allocated to a number of the tiers of service to allow individual packet data queues on a number of tiers to share a communication resource.

1459827375-fccdaa59-48e8-4fbf-80af-a32d98933ced

A cooling apparatus for arrangement between two surface coils of a gradient coil to dissipate the heat produced when current is supplied to the surface coils by a coolant flowing into the cooling apparatus, is formed as a flexible, mat-type surface structure, and has a coolant-holding space with at least one coolant inflow and at least one coolant outflow. The gene thus isolated shares no sequence homology with the entries deposited in the database and was strongly expressed in skeletal muscles and undifferentiated cells. The invention further relates to genetic complements of plants of variety CH794019.

1459827376-404fc4f8-22a1-439c-8a44-ed5a6cd9e6ac

A gas turbine engine according to an exemplary embodiment of this disclosure, among other possible things includes a fan. The salt of the chemical compound is the Na<sup>+</sup>, K<sup>+</sup>, Mg<sup>2+</sup>, or Ca<sup>2+</sup> salt of said chemical compound. An elongate frame member is fixed to an upper one of the elongate panels in the elongate direction thereof. After start-up, the steady driver and active drive function to maintain a steady operating voltage and current. A heat control device controls the temperature of the output of the preheating element, and a time control device is arranged to energize the preheating element prior to driving the vehicle. Image processing that is tailored for documents is then performed on the captured scene.

1459827376-86559048-4f03-47fd-8e07-6c3ad285754f

Techniques for the secure generation of a set of encryption keys to be used for communication between a wireless terminal and an assisting base station in a dual-connectivity scenario. An attenuation waveform of the single-pulse ultrasonic wave signal received by a receiving section 3 is wavelet transformed by a wavelet transform section 6 to obtain an envelope line A and a phase  $\phi$  of the attenuation waveform. The primer-coated substrate is then coated with a relatively higher gloss coating composition, and the coating compositions are cured, advantageously in a single curing step. The housing can also include a deformable member disposed within the inner lumen and having an opening formed therein for slidably receiving at least a portion of the elongate member such that the elongate member can be angularly oriented relative to a longitudinal axis of the lumen. The method includes receiving second crash reports from the first application version.

1459827377-265d0e1b-1474-4369-b3b2-20728008a7e2

A cartridge includes a printing material supply port which is configured and arranged to be connected to a printing material supply pipe provided in a printing device. A rearward portion of the stator support shaft is positioned rearward of the central engagement portion. The low frequency inductor is being disposed on a dielectric board configured to be coupled to the circuit board. The consumer separately selects and then emulates a variety of lab instruments, such as color and clarity grading, geometric measuring, and light performance and light ray tracing instruments.

1459827377-8b921a56-dc29-46a5-8aac-b0de5303c527

An apparatus and method for determining at least one downhole formation property is disclosed. This sensor detects the metal hose in position by having a coil in position over the plastic connector and at the end of the metal hose when it is in correct position. In one embodiment of the present invention, the transfer device may be rotated around or moved relative to the workpiece on a movable frame. When the first server receives data in response to the second request, it detects whether the received data includes a reference to a nested object. The connector

sleeve includes a first end, a second end, and a passageway extending between the first and second ends.

1459827377-8bcfbd7d-da1f-4575-a600-30945478a16d

A surgical instrument includes a shaft having a proximal end and a distal end with an operating device disposed at the distal end. The computing device includes a processor that is programmed to organize data representative of at least one fault within the power system and to generate a graphical representation of the organized data. A transmitter electrically energizes the transducer launching waves into the suction piping and/or drain system.

1459827377-8cff4b92-626b-49aa-990d-3bafb472ec13

A ball stud has a flange that outwardly projects in a radial direction of a stud portion. In an ON condition of the ECO switch, the stop decision reference value  $W_{stop}$  is set to a value  $W_2$ . The method may further include analyzing the gap to associate a quantity of gap points with each driver to achieve the goal. The serializer includes i) a first serial link configured to output the serial messages according to a first clock domain, and ii) a second serial link configured to output the serial messages according to a second clock domain.

1459827377-9d0b7653-f7d7-44dc-b93d-e2b778a898c3

A dual hydraulic booster assembly for a braking system of a tractor or like vehicle has a logic valve operable in a first mode to control the supply of pressure fluid for braking on one side of the vehicle to facilitate steering, and in a second mode of operation to control the supply of fluid pressure for braking on both sides of the vehicle for full vehicle retardation. A plurality of frames of representative images are extracted from each motion image in accordance with a specified frame extraction method. Different patterns, durations, and/or intensities of haptic feedback may be used in response to different events. A vacuum-off unit, used for releasing vacuum pressure from vacuum chambers of the ejector pump modules, is mounted onto the casing. Therefore, the instant disclosure can increase the bonding force between the carrier member and the annular housing and retard external moisture to permeate through slits between the carrier member and the annular housing to intrude into the chip-mounting region, thus the reliability and the usage life are increased.

1459827377-eb878853-b238-46cd-9ba8-41ea722cdb9b

A voice packet decoder has following operations. A primary lid is disposed over the storage cavity. Furthermore, the light-emitting diode comprises a support member that has a part, other than leads, that contacts the circuit substrate so that it can be positioned on the circuit substrate with stability during the reflow process.

1459827378-2b63748d-0a87-44e5-a7fa-69e693b023d9

Described is a photochromic article that includes a substrate and at least a partial coating of an at least partially cured polymerizable composition of a photochromic amount of at least one photochromic compound, at least one material having at least one carbonate group and at least one hydroxyl group, and at least one monoisocyanate containing material having at least one unsaturated group. The present invention also relates to the methods for preparing these bioactive botanical cosmetic compositions and the uses of these compositions in various cosmetic formulations and as topical skin cosmetic applications.  $K_i$  and  $\omega_{3b1}$  are derived to ensure that a slope of a Nyquist curve is approximately equal to the phase of an open loop system at a given frequency. And the control unit prohibits the recording/reading unit from recording data to the optical disk if it is judged that the account names do not match.

1459827378-6f0d13e1-d8b8-4c9e-9a6a-e0f3e72a9649

Synthetic DNA molecules encoding papillomavirus proteins are provided. A system

controller generates a timing signal for generating a pulse or modulation signal. A plurality of spaced apart parallel ribs are positioned on the base glass layer and between the first and second substrates. Other devices, such as payment terminal devices, can also interact with a payment processing system through the gateway service platform using the same network and protocol.

1459827378-fdbeee52-3ece-4834-a7f8-cf4ab328f8d3

The present invention relates to compounds of formula and processes for preparing such compounds, their use in the treatment of obesity, psychiatric and neurological disorders, to methods for their therapeutic use and to pharmaceutical compositions containing them. In one embodiment, the first wire bond region extends over a passivation layer. The menu of prompts is configured to elicit information indicative of imaging performance of the medical imager and/or equipment relative to imaging preferences of the user. A corrected rotor current signal based on the corrected current ripples and uncorrected current ripples of the rotor current signal of the motor is then generated. The keep-alive packets are sent on a variable basis that is intended to reduce bandwidth consumption while ensuring that the NAT router does not deem the connection idle and terminate the connection. Additionally, the bridge fittings may be stacked to form multiple layers where bridge fittings of one layer may be in fluid communication with bridge fittings of another layer.

1459827379-9069bfa9-1e13-4de1-a11a-4c99eeecbe0a

A solution for the treatment of human feet. The trim arrangement includes a trim panel with inner and outer portions connected by an upper portion that spans therebetween. A modular bin may be partitioned into compartments.

1459827379-c68e7454-8a83-4061-85ed-2785b5442988

A novel compound represented by the formula below which has  $\alpha$ -secretase inhibitory activity, its pharmaceutically acceptable salt or a prodrug thereof. The first protocol circuit, which implements a first communication protocol, and the second protocol circuit, which implements a second communication protocol, are coupled in parallel between the memory array and the operation interface. A transaction manager unit, which is provided to control blockings, transactions and/or users, is used to control the access via the means and via the at least one communication interface to the data of the unit for internal data organisation between the means, the at least one communication interface and the unit for internal data communication. Each of the memory devices receives at least one of the serial streams of bits from the memory controller and converts the serial stream of bits to a set of parallel bits for storage. The primer is generally designed with a continuous molded fuel path to seal any source of hydrocarbon leakage as well as being made from materials that prevent transfer of hydrocarbons to the atmosphere. To effect the attributes of the switching fabric, conditionally nonblocking components are used as building-blocks in an interconnection network which is recursively constructed.

1459827379-ef42d129-d382-4526-a3d1-ba50e0442f8d

A method for automatically creating spine image areas for book covers that were originally created for books without spines includes adding image areas between the front and back cover images to make a single image with the spine being a user-specified solid color or bitmap image. Each node maintains a routing table. An RF input signal is fed into the driver stage which is configured to provide a dynamic DC bias and an RF signal gain to a base terminal of a Bipolar Junction Transistor power device present in the output stage. The plurality of through vias are plated, and lugged with a solder mask.

1459827380-1c23cc9c-f8fe-4db4-8e45-db275339ff5d

A circuit and method for clamping a composite video component signal at the video black level by using horizontal synchronization timing information contained within

the signal and clamping the signal during a time interval in which it is at the desired black level. The particle detector is capable of detecting a particle with high signal-to-noise ratio and resolution, scanning a sample without mechanical motion of the conductive nanolayer and analyzing DNA base sequences. The final opening width is unsusceptible to variations, thus reducing the number of the steps of forming the main magnetic layer. The phase information of other signal components can be acquired by their direction information and other characteristics, such as modulation scheme, etc. The invention also relates to the new compounds of formula V wherein R1 and Ar have the meanings given in the claims.

1459827380-9114386e-6684-4cb8-82af-677569893fcb

One embodiment of the present invention discloses a method and system for implementing concurrent access of multiple bearer protocols in a M2M platform. The array having aberrated elements can be replicated for use in the manufacture of a tool, and the tool can be used in the manufacture of retroreflective products of broader divergence. This allows the voltage across the at least first portion of the digital circuit to be less than the full voltage across the positive and negative terminals. In the access router, based on the message, only one of the first or second network prefix that the MN needs to use is then determined. Each of the cable runs contains a fuse therein.

1459827380-d27ad043-8ce1-4f16-8632-c0957f7eca95

A differential amplifier circuit includes a first differential transistor pair, a second differential transistor pair, an adder section and an amplifying unit. The impeller assembly includes an upper cage forming retention tabs and coupling slots, a lower case forming coupling tabs and notches, and an impeller set rotatably supported between the upper cage and the lower case. A characteristic of the image data in the reference area is determined based on a number of characteristics of the plurality of small sections. The semiconductor device further includes pillar regions through the another sourcedrain contact, the heavily doped sourcedrain layer, and portions of the channel layer to form a vertical cell therebetween. Since boron is a Group IIIA element it does not have any adverse effect.

1459827381-132ad2e1-d244-4cb7-9bc3-475301466250

Order allocation techniques pertaining to stops that a container makes in the process of fulfilling a customer order is disclosed. The VPCN includes a communications server and at least one communications trunk connecting the communications server to a public telephone network. When the pair of collimator members are moved in directions away from each other, a beam passage is formed between them.

1459827381-3209fb92-4540-4af2-bd00-8cc81e4a655b

Systems and methods for enabling wireless devices to discover a number of other proximate wireless devices are disclosed. The synthetic resin is modified by means of high-temperature resistant, polymerizable nanoparticles having a glass transition temperature of the homopolymerizes 150 C. A location server requests mobile subscriber information from a Core Network Node that can be used in determining the Location of the MS. A GCIB step may also be incorporated in the damascene process as a final polish step to clean up surfaces that have been planarized using a CMP step. The second incremental scale pattern may be provided in a scale track which has a dual function and the readhead may be configured to decode the signal to produce an output suitable for the desired function. The upper inner surfaces of the liner are releasably sealed together after filling with product and at least one of the liner upper outer edges adhered to the closure flaps on the carton, whereby when the closure flaps are opened, the inner liner is pulled opened and when the closure flaps are closed, the inner liner is resealed to maintain product freshness.

1459827381-4443bed8-5c7c-4551-a44e-f128ac4f0a78

A controller of a storage device having a user area storing an operating system, the storage device developing the operating system stored in the user area on a host device in accordance with an access from the host device. The execution environment may be an object space. For zooming from the wide-angle end to the telephoto end, the second lens group G2 moves only toward the object side.

1459827381-d981eff0-474e-4a07-bb7d-0e3d87ebbe50

Improved p-cycle restoration techniques using a signaling protocol are disclosed. The reset circuit generates reset signals for the dividers, where the reset signals are delayed relative to one another by a selected number of reference clock cycles, such that the dividers generate output clock signals having a desired phase offset between them. The apparatus also includes a valve controller operable to regulate the flow of fluid in liquid phase at least partially through the valve. The second setting unit sets second parameters relating to a second data rate and a second communication robustness if an instruction signal is received and if the signal degradation degree is higher than the threshold value. The spacing of the irregularities may lie between twelve and fourteen centimeters. The radius of curvature along the narrowest part of the narrower mid-portion of the inner periphery of the guide recess is always larger than the radius of curvature along the end lobe portion of the outer periphery of the guide recess.

1459827382-2c367282-7799-4669-a14e-f3d81dca2e42

A format of data recorded in a DVD-Audio disc is composed of an audio manager and a plurality of audio title sets following the AMG. The virtualized environments share a single instance of the operating system image, a filter engine and a single network stack. At lower concentrations the enzyme requires up to a few days of reacting to reach the full reduction in viscosity. The emitter layer may include a graded portion. A second sorting algorithm may include sorting according to hardware performance measurements. The processor is programmed to receive information outputted from the people counting system and information outputted from the metal detector to determine whether to generate an alarm signal based on the presence of EAS marker shielding.

1459827382-a80ad872-3551-4d18-94a1-8aefb754c49c

A subterranean reservoir where the pore space of media or formation rock is multimodal, and the media may have imbedded multiple scales of fracture networks, is simulated. More particularly, this invention pertains to a novel design of floating wave attenuator which has a curved vertical wave alternating wall section, a bottom vertical motion braking flange, and an air chamber for adjusting buoyancy. The buoyancy adjusting material is sufficient to give the article overall a positive buoyancy so that it will not sink to the seabed, and is distributed unevenly along the length of the article so as to create regions of negative buoyancy. The gradations of the image for the left eye and the image for the right eye are corrected using the gradation correction parameter. The optical signals in each of the arms are then recombined to form the interferometer output, which is the desired optical RZ data signal. The cards each include at least one alignment guide to restrict the motion of adjacent cards relative to one another when cards are stored in the cavity of the receiver.

1459827382-f1d0ccab-952d-4a32-8520-ccaaebf4290e

Improved shaving preparations for the prevention and treatment of pseudofolliculitis barbae and ingrown hair containing glucocorticoid and an antibacterial agent. The base has a plurality of elastic claws and the elastic claws vertically extend from the base. The present invention provides methods for diagnosing diseases or disorders related to vasodilation and changes in blood flow, such as, sexual dysfunction, Raynaud's syndrome, inflammation, hypertension, gastrointestinal disorders and central nervous system disorders. Forward-most portions of the frame structure, immediately adjacent to the bumper beam, may take the form of deformation elements or crush cans that are designed to yield in a

manner to absorb crash energy.

1459827383-148ff5ea-0918-4f13-a576-702d0a80bde6

Embodiments relate to systems and methods for touch-based two-stage text input. Processing the packet comprises receiving the packet; translating the packet from a first protocol-specific format to a canonical packet format; translating the packet from the canonical packet format to a second protocol-specific format; and forwarding the packet. In the computer system in the image receiver apparatus, a display controller causes the contents of the preview data to be displayed on the screen of a monitor. In addition, the invention includes a device that can be used for generating a mist that can be administered to patients.

1459827383-53a68df7-505f-4d5c-b98c-484db6e4a732

An intervertebral implant for insertion between two vertebrae is disclosed. The stereo camera photographs the examination screen to obtain two original images. One of the plurality of gamma curves is stored as a reference gamma curve in a gamma table included in the display device. If necessary, annealing is conducted in vacuum after the growth. The anti-herpetic compounds may be administered alone or in combination with a compound that reduces the rate of renal excretion of the anti-herpetic compound. The secret code represents second positional information.

1459827383-5ab74375-542e-45a6-a345-8d31cd851899

A passive secondary air muffler for a small internal combustion engine. The mirror lock data structures are being maintained during various scenarios including volume move and aggregate relocation, in order to preserve the non-disruptive persistent operation on storage initiated by clients. Those images are transferred by the hub to a host over an isochronous communications medium. The plate has a plurality of apertures and a plurality of radially oriented closed slots formed therein. The luggage structure is securely protected by the plate member and the transfer mechanism. This is accomplished by either locking the A-ring chair conformation in a geometry having an axially orientated 1\u03b1-hydroxyl, or by the addition of one or more substituents to the A-ring which interact with other substituents in the molecule or on the A-ring to provide a driving force to the A-ring to adopt a chair conformation which presents the 1\u03b1-hydroxyl in the axial orientation.

1459827384-15f8980d-05af-4351-b2d9-f1c63256b73d

An apparatus comprising a first circuit, a second circuit and a third circuit. The system receives and stores initial convention data, and control parameter rules from meeting planner clients. A plurality of first concaves and a plurality of second concaves are formed on the substrate, wherein a volume of each first concave is different from a volume of each second concave. If the first NFC apparatus cannot properly acquire the IDs of the second and third NFC apparatuses, then it sends the data for requesting their IDs again. The launch pressure must overcome the sphere's pressure seal with the barrel and propel the sphere with a kinetic energy of between approximately 135-220 Joules/cm<sup>2</sup> for distances up to approximately 30 meters.

1459827384-814b469d-7d14-4b8c-a271-da8ee43a9855

This invention is directed to reducing the effect of shocks on electronic device components. The communication channel selecting circuit selects a communication channel in accordance with radio signal intensity, the selecting circuit transmitting and receiving radio signals in a plurality of channels. Then, a Polyphonic Aftertouch signal is immediately sent to shift the pitch of the standard note to transform it into a non-standard note. The method also includes determining an updated viewing orientation of the user and updating the portion of the content based on the updated viewing orientation.

1459827384-eea0d164-88ea-443f-9238-da93b9de0632

The present invention relates to assembling identification documents in an over-

the-counter issuing environment. The candidate words would otherwise be mapped to a series of general phones. Subsequently, the exemplary method uses the identifier to select a second node, by performing an operation with the identifier and an ID for a node in the internet. The fixed output signal relates to the input signal loaded on the rising edge of signal Q1 or signal Q2 as determined by signal Q3. A product comprising the composition marketed in a porous dome applicator. Free electrons produced by illuminating the photosensitive units are blocked by the first and the second blocking regions.

1459827385-206f33d5-85bc-4025-bb75-e1ffa8102a6d

The invention relates to the use of cyclic carbene--ligand complexes for catalysis of olefin polymerization. Periodic or occasional replenishment of the power source is accomplished, for example, by inductive coupling with an external device. 5 policy-based secure routing, and open system interconnection layer 2 policy-based mandatory access control address filtering to provide secure communication and computing for layers 4, 5, 6, and 7. The pressure chamber, the piston and at least a part of the conduit is arranged as a unit, wherein said unit and the housing have corresponding fitting parts allowing releasable attachment of the unit to the housing in a position permitting fluid connection between storage chamber and pressure chamber through the conduit and permitting the pressurizing mechanism to act on the piston. The microneedles can be fabricated on a substrate which can remain attached to the microneedles or be subsequently removed.

1459827385-c2e8a50c-b86a-44bc-9f80-9aefa5981a70

A device for applying a histological section to a slide is described. Simple methods are described for the production of well-ordered arrays of nanopores, nanowires, and other materials. After that, the transition metal layer is subjected to a plasma oxidation step to form a transition metal oxide layer as a precursor of a data storage layer, and a second electrode layer is formed on the transition metal oxide layer. In this configuration, ions and electrons may have adequate density and temperature so that upon collisions they are fused together by nuclear force, thus releasing fusion energy. When the main disk valve opens, the backpressure chamber inlet passage opens simultaneously.

1459827385-fa04e125-06fc-440c-b9e4-dfd76b449a68

A vehicle body structure with a floor panel having rigidity to withstand an impact energy at an offset collision of the vehicle is provided. The STO includes: a spin polarization layer, a field generation layer positioned adjacent the SPL, and one or more interlayers positioned between the SPL and the FGL, and a magnetization easy axis of the SPL is positioned in an in-plane direction such that the SPL has no perpendicular magnetic anisotropy. A set of source cells is selected from the set of cells of the distance field to enable the rendering of the region.

1459827386-25dc036d-a8a9-4454-a671-8a8ab04dcda4

A soybean cultivar designated 00174033 is disclosed. By controlling the excitation produced by the bias winding, the speed of the machine or the DC link, a power converter using only diodes can supply power to a DC bus. A back panel is attached to the front panel and sufficiently long to hang from the mattress frame to the ground. The temperature sensing switch can switch the first electrode foil and the second electrode foil between electrically conductive status and current-restriction status, e.

1459827386-2a4a34f9-2826-46b7-a864-55b49d64370c

An apparatus that introduces rapidly spinning vortices in a fluid with a vortex cration device and a frequency generation device. Thus, itching when the adhesive is placed on the skin and a light reddening after removal is avoided. The method also includes a signal processing step of calculating the wavefront aberration of the projection optical system on the basis of a measurement result of the measurement step. The locking device may comprise an insert having a body portion,

a first end that is configured to be secured within a recess formed in a rear facing surface of the clutch, and a second end that is configured to remain extending at least partially beyond the rear surface of the clutch and to be secured by engagement with a slot formed in the bracket.

1459827386-c7b7a166-a799-432c-8c19-016e267d72da

The present invention is directed to support members for assemblies of conductors, conduits, or other means of conveying energy, gases, or liquids. A recovery tank is removably mounted to the handle and has a front end. A method of molding over a PCBA is utilized, contrary to a conventional method of having two or more pieces of package components to tape together. A second clock is swept through other phase positions with respect to the first phase position such that a transition from the given unit interval to another unit interval in the received data is determined. The liquid retarding member has a hydrohead that is less than about 0. The displays provide both depictions of the data elements and the relationships between the data elements in accordance with a pre-defined data element display scheme including both element template and relationship view definitions.

1459827386-fc4353b2-7439-4b54-8393-96adde411746

An organizer for fiber cable management comprises a generally planar base having a splitter holding section, a slack and unterminated fiber storage section, and a splice and splice tray holding section. The multilayer coating film has a coating surface state of high quality with coating thickness deviation of 3% or less. 1 to 10% in total of one or more elements selected from the group consisting of P, Zr, Si and B; and balance Ni. The instantaneous leak flow is then the conductance multiplied by the square root of the instantaneous pressure, and the respiratory airflow is calculated as being the instantaneous airflow minus the instantaneous leak flow. A substantially electrically non-conductive cooling fluid for introduction into the enclosure and into the channel and expulsion from the enclosure and for extracting heat from and thereby cooling the heat-generating device and the carrier.

1459827387-5578cc55-6b70-4a4e-a2fb-cca35d7450b8

Embodiments describe determining position by selecting a set of digital pseudorandom sequences. The earpieces are arranged on the fork in a manner allowing them to face each other while articulating from a folded position adjacent the headband, to an unfolded position for listening. The counter increments from a preset value when a data packet is received at an egress queue and decrements when the data packet is output from the egress queue.

1459827387-f8792a56-562d-4fee-896d-5c5cc75c914c

An elastic wave device includes a piezoelectric substrate, a pair of reflectors disposed on the piezoelectric substrate along the propagation direction of an elastic wave, and first to fifth comb electrode pairs disposed in this order between the pair of reflectors. In one embodiment, a network device includes a designated router and a non-designated router. The conductive layer is composed of a material having a specific resistance lower than the specific resistance of the auxiliary resilient layer. Messages can be made available to network subscribers when their interface devices come within an area centered about a physical coordinate location. An antenna may be coupled to the output of the RF amplifier to operate over the at least one RF frequency band.

1459827388-4a807644-72c7-4fb3-a988-6ed9a73c371d

Range finder for determining the distance between the user and an object of known height or width, such as a golf flagstick, structure, etc. From the low band signals, low band beamformed signals are generated, and the low band beamformed signals are combined with the high band signals to generate modified wideband audio signals. A ball plug weld is on the outer surface of the leg. When the software management unit detects an increase or decrease of the resource allocated to the

virtual machine, it changes allocation of the resource to the plurality of pieces of business application software according to the change in resources. A display module includes a display port and a metering display driven from the display port. 5 mol % or higher but 5 mol % or lower with respect to the amount of perovskite type compound.

1459827388-56b9ebe6-916f-40c5-966f-3e4999e72d8c

Systems and methods are provided for detecting objects of an object class, such as faces, in an image sensor. Broadcast reception recorders receive broadcast content broadcast by a broadcasting apparatus and record it in built-in hard disk drives. The monophonic input signal is applied to a perspective filter that produces a differential-mode signal and to an equalizer filter that produces a common-mode signal. At least one of the second semiconductor layer and the third semiconductor layer has a portion with its sheet dopant concentration varying along a depth direction of the semiconductor substrate.

1459827388-6b2ae184-00cd-4900-bc80-b0cd7141c07a

A surgical suture material with an antimicrobial surface is described, the surface exhibiting a coating containing a) at least one fatty acid, b) octenidine dichloride and/or dequalinium chloride and c) optionally oligomeric lactic acid esters. The variable speed drive also includes an inverter. Aminoplasts, especially melamine-based aminoplasts, are particularly suitable curing agents. Alternatively, a jumper template includes a jumper for each pin pair of a jumper block. In addition, a process is provided for catalytically producing hydrogen peroxide from hydrogen and oxygen feeds by contacting them with the catalysts of the invention and a suitable organic liquid solvent having a Solvent Selection Parameter between 0. By these function switching means KK1 and KK2, moreover, the function switching signals are arbitrarily switched from any of no connection, a supply voltage Vcc and a ground potential Vss.

1459827388-d3f10404-17e1-49db-806f-9f775136122c

A transistor includes a base, a collector, and an emitter comprising a group III-V semiconductor. to a subcritical water or supercritical water condition of a pressure of 50 to 40 atm by using a continuously functionalizing apparatus to obtain the functionalized products, such that the functional group of the functional compound can be easily introduced to the carbon nanotube, thereby increasing the functionalized effect of the carbon nanotube and increasing the dispersibility accordingly. The releasing element includes a mechanical mechanism, which releases the supporting arm from the fixing action of the fixing element upon taking out the container, and enables the supporting arm to come outward out of the holder opening. In one aspect of the present invention, the process provides for: the preparation and isolation of a novel crystalline form of anhydrous 1,2-benzisoxazole-3-methanesulfonic acid of formula 1; the direct chlorination of the acid of formula 1 into its acid chloride of formula 2; and the in situ conversion of the intermediate acid chloride of formula 2 into Zonisamide.

1459827388-f90f8c7b-9791-45a0-a6cb-2079768d4d01

Embodiments of the present disclosure provide methods, devices, modules, and systems for non-volatile multilevel memory cell data retrieval with data read of reference cells. The in-cylinder injector is positioned below the intake port, when seen from an axial direction of a crank shaft, and attached to the cylinder head. The impeller at least has a hub, a plurality of blades and a driver. The segments incorporate structure for retaining cups and beverage coolers therein.

1459827389-3a74c409-fc3b-4d53-8360-4af63b2b6ea2

A piezoelectricelectrostrictive device is provided, including a pair of mutually opposing thin plate sections and a fixation section for supporting the thin plate sections. The device includes a carrier tube having an immersion end, a lateral circumferential surface, and a measuring head arranged on the immersion end. A

method monitoring a count of people traversing at least first and second passageways is also provided. The landing zone may be associated with the outer cover in the front waist region between the front ear regions. Bubbles are prevented from mixed in the liquid through the ejection port upon retraction of the plunger rod by controlling a retraction speed of the plunger rod in accordance with an air flow rate.

1459827389-962bd755-bb5c-443e-8228-ca93d1e917a6

A body motion controlled audio playing device is disposed with a sensing switch that can be covered in a non-contact way to selectively enable such functions as startup, shutdown, mute, and volume adjustment. Further, changes in the filling ratio in a buffer memory 21b are monitored and when the filling ratio exceeds h %, a decision is made that congestion has occurred in the first PPG 21 and the response to the push transfer request in the input interface 21a is delayed. The first supporting seat is disengagably attachable to the second supporting seat according to either of two selectable arrangements. Based on dynamic profiles and the grouping information, the operating system or other software may allocate a task to those cores that are most suitable for the task. In one of the separators of one of the stacked fuel cell units that is located at the end in a direction of stacking, through paths are formed.

1459827389-aee27c3f-ce85-46a1-921f-df3fbabc72fc

A data storage system has a memory circuit that comprises memory cells and a control circuit that receives data bits provided for storage in the memory cells. The nano-particles have a mean average diameter less than about 100 nm and are substantially free of chain ends. To ensure proper operation, a transistor disposed between the first and second input stages is always maintained active to provide a conduction path between the ground terminal and the nodes that may be charged from the supply voltage.

1459827391-2da82546-9357-4e4b-99b2-fd427e0d09ec

A DA conversion circuit in accordance with the present invention, which is provided with a switch swD, allows a writing operation of a voltage to be performed at a higher speed by first applying a first voltage, which is supplied without passing through a resistor element, to an output line and then applying a second voltage, which is supplied via the resistor element, to the output line. More specifically, the support system not only creates a dry area under a deck but is also a load bearing component of the deck. A wireless device that has both cellular and 802. The radio link stage has allocated to it radio link resources. In other embodiments, the received data includes time stamps with encoded sampling time instant information. Such apparatus comprises a non-circular substrate support configured to support a substrate with a planar surface and non-circular periphery.

1459827391-748619b6-e599-4c32-9d10-6b14c98e7398

A wagering gaming device that physically stimulates an input device of the gaming device to stimulate a player. Further a method for mounting the electronic module on the heat conducting mounting comprising the step of adjoining an attachment means with a fixing means and the fixing means with the electronic module to obtain at least one immediate connection pressure area between the first surface area of a wall and the second surface area of the electronic module. A method for operating an SOI integrated circuit containing a matched transistor pair with a matching resistance heater coupled to each transistor of the matched transistor pair. The metal strip preheated by the plasma descaling is guided, without exposure to air, from the plasma descaling into a protective gas atmosphere of a continuous furnace necessary for the coating.

1459827392-4fee4023-626f-41dd-82de-f2388740e8ef

In an air conditioner, a target compressor rotation speed is determined based on a target air temperature, which represents an air conditioning load, when an electric

compressor is started from a stop state. The friction torque generated in one direction of joint rotation is greater than the friction torque generated in the opposite direction of rotation. A shield device is set on the jig or among jig arrays themselves for preventing from being disturbed.

1459827393-38d7a955-dfcf-4b7c-a11a-81a3fdad4017

A method of producing substantially spherical lyogels in water insoluble silylating agents is provided. In the finder device 15, an image in which an OVF optical image formed by an objective optical system 65 and an image displayed on a display portion 61 are superimposed on each other can be observed through an eyepiece window 17. Preferably the end effector is independently movable about at least two axes. For each unit road included in the route, a third processing unit 130 searches for a \u201cresembling pattern\u201d that resembles a \u201creference pattern\u201d from a \u201cpast pattern\u201d. Additionally, or alternatively, the stator segment can include one or more alignment tabs configured to engage a surface of an adjacent stator segment to inhibit relative axial movement between adjacent stator segments.

1459827393-3963136e-1aa0-4b86-a24b-8700009c01d0

An improved User Plane location based service architecture and message flow, enabling seamless User Plane location based services even when a mobile or wireless device has roamed among different carrier networks. An input pixel value is thresholded using a corrected threshold value  $T_h$ , and a binarized pixel value is output. The outer sheet has the elastic members intermittently bonded under tension thereto, and is formed in a region thereof facing the absorbent structure with an opening. Additionally, since the bosses are fixed to grease reservoirs arranged at an equal spacing therebetween on the circumference of the retainer, the strength and rigidity of the retainer can be equally improved over the entire circumference thereof.

1459827393-43d13add-db43-4c88-ae51-cc6fe1a5ec0b

Several tools are included in an object processing system that also includes a common object model containing a data structure and an administrative program for the data structure. A drive wheel, disposed in the front of the power unit, is connected to the power source. Minimum hounding areas are generated, whereby the plurality of the minimum hounding areas cover the search trajectory or at least one of the search segments.

1459827393-6fffc5987-b8ea-4809-b746-e15a79cc8c1d

Methods and systems for managing the communications and information resources of a user. The information medium includes: an information layer on which user data is written; and a recording layer on which visible information, which is directly visible to a user, is recorded. The stubbing service may send the request onto the second service and may, in response, receive a reply to the request from the second service. The extending roller unit 13 includes dust sealing mechanisms provided between ends of the extending rollers 79 and a pair of endless members 75, the dust sealing mechanism inhibiting circulation of air between rotation regions of extending rollers 79 and traveling regions of the pair of endless members 75. The process comprises an isomerization step from cis 1233zd to trans 1233zd. The logic correction circuit executes a parity bit rewrite operation.

1459827393-e9389b83-8613-4a14-9c38-89d14280374a

A pneumatic chest compression vest is disclosed for the purposes of clearing the lungs of mucus and producing quality sputum samples for analysis. In particular, methods for determining a potency and/or diffusion of a neurotoxin based on a nuclear index and/or an amount of muscle atrophy are disclosed. The lateral surface of each of the grooves is separated from the light emitting diode layer and used as a reflecting mirror. The results of the test are provided to the central map server, which may integrate the results into the global connectivity map. The first

set of measurement data indicates a minimum gap between the first set of sensors and the wafer.

1459827394-1333e682-038c-4c56-aa63-70cef97749a9

Disclosed herein is a mass spectrometer having an atmospheric pressure photoionization source that comprises a discharge lamp coupled to a nebulizer, wherein the nebulizer is at, or near, atmospheric pressure. The formulation may be used in the preparation of a tissue-adhesive sheet, by applying the formulation to at least one side of a core of a naturally occurring or synthetic polymeric material. An optical sheet is arranged between the liquid crystal display panel and the back light unit. The mobile communication terminal includes a body part having a plurality of chips, a folder part hingedly coupled to the body part, and a slide part coupled to the folder part such that the slide part is moved relative to the folder part in a sliding manner, and therefore, the multiple opening and closing type mobile communication terminal is opened or closed. It has been found that crystalline forms of EtO<sub>2</sub>C-CH<sub>2</sub>-Cgl-Aze-Pab-OH have a high chemical and solid state stability when compared to amorphous forms of the compound. The device allows one wearing a protective suit in a contaminated environment to obtain drinking fluid from a standard, commercially-available container.

1459827394-21a4ec46-a809-474f-8bf4-0f4b3f68b774

A new and distinct cultivar of Petunia plant named \u0018KLEPH05111\u0019, characterized by its compact and outwardly spreading growth habit; mounded plant habit; freely branching habit; freely flowering habit; relatively large dark violet blue-colored flowers; and good garden performance. Most of the components and devices are particularly adapted for use in wavelength division multiplexing systems and in particular for use in switchable adddrop filtering and wavelength selective crossconnect. The first nitrogen rich region is disposed adjacent an interface between the oxide layer and the semiconductor substrate. At least one result of the search may then be displayed to the user. The store comprises at least two rows of collection boxes disposed along at least one side of the feed belt, and a movement unit associated with the collection boxes to discharge the filled collection boxes and to position new collection boxes to be filled.

1459827394-2c6154af-9fc7-4e90-89f2-09ab23d2201d

A method of producing a carbon fiber composite material includes: a first mixing step of mixing an elastomer and carbon nanofibers at a first temperature; and a second mixing step of mixing a mixture obtained by the first mixing step at a second temperature, and the first temperature is 50 to 100\u00b0 C. The electronic endoscope further has a first color filter that has spectral transmitting characteristics, such that light having a first wavelength range corresponding to blue color is transmitted, and a second color filter that has spectral transmitting characteristics, such that light having a second wavelength range corresponding to green and red colors is transmitted. The data set is supplied to a relaying device, in which it is compared with stored comparison data sets.

1459827394-34f3aa17-28f0-494f-966f-d38add2e9834

Embodiments of the present invention provide an edge adaptive spatial temporal deinterlacing filter that evaluates multiple edge angles and groups them into left-edge and right-edge groups for reconstructing desired pixel values. A gain of the air-fuel ratio feedback correction coefficient \u00b1 in respect to a detection result of the air-fuel ratio sensor is decreased as a delay in a transient response of the air-fuel ratio sensor occurs. If the packet is a packet of the specific types of communication, the packet is passed to the protocol processing process and added to a virtual queue created in its shared memory. The switching fabric also includes a processor interface associated with the host processor.

1459827394-d977542a-4baa-4e90-9d39-5875b5b68552

A camera includes a lens barrel capable of extending and collapsing in which when

the lens barrel is extended, exposures are possible. The system includes a signal supply component that provides electrical and/or data signals to a signal consumption component that utilizes the signal to provide an output. The invention relates to a method and a device for transferring hollow-profile blanks, characterized in that during transfer the positioned fusion faces of the blanks are pressed against each other at least in the area of the weld.

1459827395-1652eab1-1bd0-4567-9968-0db6db984c3a

A multichip assembly includes semiconductor devices or semiconductor device components with outer connectors on peripheral edges thereof. The centralized monitoring system obtains the device identifier communicated from the device. First and second bristle holders are associated with the head. The indication is used to prioritize the allocation of the channels. A portable power source is connected to the air intake and the collection electrode.

1459827395-9f773483-56db-4f29-a705-7f7131cc0fb3

An imaging module includes a mounting frame, a scanning module, a lens, a number of illumination lights, a first circuit board and a second circuit board. An encapsulation is formed to cover a wafer using a wafer level molding process. The RF electrical interference shield can be mounted to circuit boards to prevent electrical components from causing RF interference.

1459827395-e0a10e29-286a-4d09-b412-7dc4a6a36e9c

A tire working tool is presented which comprises a lever arm including a first working end adapted to work a clevis and a second working end adapted to work a second tire bead. The component test apparatus includes a component loading device, a transport hand, and a component unloading device. In response to the entry of residuals, a pre-ignition mitigating action, such as fuel enrichment or deactivation, is performed in the neighboring cylinder. The transmission sections are equipped with a constant current transmission section that transmits with a constant value of current; and a current detection section that can detect the value of the constant current. The thermocouple module includes thermocouples monitoring first stage temperatures within and between pressure vessels.

1459827395-f8125736-6f5a-498a-a6d1-0a851263743d

A solvent that reversibly converts from a nonionic liquid mixture to an ionic liquid upon contact with a selected trigger, e. A plurality of contact modules are coupled to the front housing. By making this silicon oxynitride film laminate structure, contamination by alkaline metallic elements from the substrate can be prevented, and influence by stresses, caused by internal stress, imparted to the TFT can be relieved. The logic also may be used to determine whether the battery is of a marginal quality in which the capability of the battery to power operation of the automatic circuit recloser is compromised, and to issue an alarm to indicate that the battery is of the marginal quality.

1459827396-1eb2859c-21f9-4fb2-be88-ecbc0a1f4487

The disclosure is directed to a semiconductor wafer, integrated circuit product, and method of making same, having multiple non-singulated chips separated by scribe lines, comprising a plurality of seal rings, each seal ring surrounding a corresponding chip and disposed between the corresponding chip and adjacent scribe lines. The rate of change is set such that motion invariant imaging is achievable for practical speed ranges, i. The bit line connector and the lower electrode connector are respectively formed by one-time mask processes. The categories are used to provide a raw score to items in various groupings of a site's content.

1459827396-6185aac7-bb8d-4871-9cd7-dca556e66804

The present invention provides copper capillary alginate gels stabilized with barium, chitosan, its derivatives, or a combination thereof. One macro block is subdivided into sub blocks each of which is composed of four pixels by four lines.

In this side airbag apparatus, a controller predicts a side collision of the vehicle, and makes the inflator start an actuation in advance of the side collision in response to the prediction. After the extraction step, the metal is separated from the solvent, the complexing agent and/or other metals by exposing the extract to a stripping agent in a countercurrent stripping column. An example method includes determining a first virtual machine within an application definition, automatically identifying a property for the first virtual machine, and generating an application blueprint based on the identified property of the virtual machine.

1459827396-6c44017f-0391-43d4-901c-f3ea01b475e9

The invention provides bioactive compositions and methods of delivery for ameliorating a vascular diseased state, particularly for the management of stenosis or restenosis following a vascular trauma or disease. Each hybrid diode has two diodes: one is a poly-bounded diode formed as a junction between a substrate and a diffusion region thereon, the other is a poly diode formed as a poly gate having two regions with different conductivity. The gain control circuit is used for receiving a gain adjusting voltage, thereby generating a resistance adjusting signal and a current steering control signal. An analytical gas flow is established orthogonal to the axis. The distal end of the collection fiber arrangement has a re-director light receiver thereon for receiving light reflected from the mammalian tissue by the light emitter. A central guide pin provides guided movement for axial translation.

1459827396-b3377ac9-014e-425f-b072-f33f13a89ce5

Technology for network security is disclosed. In use, operation of hardware is controlled utilizing a push buffer. The radially outer shroud has a circumferentially continuous cylindrical wall extending axially from a leading edge to a trailing edge.

1459827397-47520937-445e-47bb-807c-fd4d08388f2c

An apparatus and method for efficiently performing a query sort on a data set with duplicate key values is disclosed. The mobile source generates time of arrival estimates from data bursts received from base sites operating within the network. An example of such a need occurs with mobile workover rigs used in well maintenance. A liquid transporting apparatus having a high reliability of electrical connections can be provided. In this manner, test pattern selection processing with high efficiency can be achieved.

1459827397-94c27201-167c-48c0-96fa-2f3da7b44336

An industrial truck, such as a fork-lift truck, has an electrical drive system and an energy supply based on gaseous media. One-dimensional input signals are detected in a symbol decoder, implemented using look-up tables, to produce a pair of 1D errors, with each representing a distance metric between the input signal and a symbol in one of two disjoint symbol-subsets. Also provided by the invention are methods of using the Endokine alpha protein and/or homomultimeric and/or heteromultimeric polypeptide complexes containing Endokine alpha, in the diagnosis, prognosis and treatment of diseases and/or disorders associated with aberrant osteoclast development and/or activity. By dispensing with complex digital/analog converters, the principle described allows markedly reduced power consumption in transmitters which use code multiple access methods.

1459827397-9bb82be9-aa68-4b41-83da-225734b28c00

An automated banking machine is operative to conduct transactions in response to HTML documents and TCPIP messages exchanged with a local computer system through an intranet, as well as in response to messages exchanged with foreign servers in a wide area network. A movable contact having a semicircular sectional shape is mounted on the second fixed contact, and terminal electrodes are provided on an underside of the circuit substrate and connected to the first and second fixed contacts respectively. The screen is placed on the front mask.

1459827398-77b63eb2-062a-47b1-8ef2-619879dc8567

A movable display apparatus, a robot having the movable display apparatus, and a display method thereof, and, more particularly, a display method of a robot having an apparatus to display an image according to a visual point of a user are provided. The park transformer is connected between a first node and a second node which is connected to a utility grid to which electric energy produced by the wind turbines is to be delivered. The anode contains an anode active material containing Sn or Si as an element. According to the reasons of communication failure, the automatic frequency hopping method discriminates whether a frequency hopping procedure is performed.

1459827398-ce406cce-8a11-4f77-a13e-abe61d13d561

A semiconductor device is described that comprises a gate dielectric and a metal gate electrode that comprises an aluminide. A first diode, a second diode, a first inductor, a second inductor, a first switch, and a second switch convert the AC input voltage, rectify the AC input voltage, and output an intermediate DC voltage. In step A optionally carbon nanotubes in an aqueous medium are preferably added to the latex containing conductive polymer. By using pairs of control cables, the proximal yaw, pitch and distal yaw sections of the manipulator arm can be moved to weave the cleaning head past the multiple stages of blading to locate the cleaning head adjacent a selected blade. A method for manufacturing the organic electroluminescence device is also provided.

1459827399-11ebd904-e0ff-4f2d-84b6-84794d0326ea

A power transformer and electrical current distribution device has a 480 V power inlet receptacle, at least one 120 V or 240 V power outlet receptacle, a transformer for transforming 480 V current to at least one of 120 V and 240 V current, and a first housing and a second housing each containing at least some of the 480 V inlet receptacle, the outlet receptacle and the transformer. In combination these traits set Brass apart from all other existing varieties of Ceanothus known to the inventor. After a code wheel is attached and fixed to the motor shaft along the axial direction of the motor shaft, a generally L-shaped module holder, which accommodates the other of the paired light-receiving element module and light-emitting element module, is mounted to the board unit. A filtered edge appears as a spike that goes either positive or negative depending on whether the edge is a rising or falling edge. The pickup includes light sources corresponding to the record media, a drive circuit for driving one of the light sources, a switch for switching a connection between the drive circuit and one of the light sources, and a control circuit for controlling the drive circuit and the switch. Ones of the first and second sub-pixels are alternately arranged in a first column, and ones of the third sub-pixels are arranged in a second column adjacent to the first column.

1459827399-b04cab9d-d418-40a1-aff7-3fd386f2b774

An insulated glass window with an integral blind assembly. The device comprises inflation and deflation valves and a push-button for operating the valves that can be controlled by the diver. The present variety's abundance of blossoms and pollen entices strong bee activity to facilitate pollination. The first and second insulation displacement contacts of each contact-pair are substantially equidistant from the untwisting point and are proximate to the untwisting point. Additionally, the medical condition tabs may also be bar coded so that the patient's ID and medical condition may both be \u201cswiped\u201d into a data base using bar code information. This assembly is attached to a protective structure and is encapsulated.

1459827399-c118e49f-9fa7-4fdc-92da-eeee3e5aeb4e

A mixer comprises a differential input circuit that is configured to receive an input signal. The covering includes an elongated containment portion having at

least one compartment, wherein the covering retains the first substance for mixing with a second substance prior to delivery at a surgical site. It further relates to corresponding tobacco materials and smoking products. In a case where a newly connected sheet processing apparatus is a sheet processing apparatus of a different type, the printing apparatus updates the information stored in the storage unit. The appliance extends the life of a shoeing, prevents loose and thrown shoes and is useful in repairing cracked hooves. The connection is identified by using IP addresses, subnet masks and virtual circuit identifier values of ATM interfaces on the routers.

1459827399-fd5bfbd5-3a96-46f9-94a4-cb8fda7f93f1

A cargo bed storage structure is provided for a vehicle. The transmitter and the receiver are suitable for operation with a plurality of frequencies on the part of the emitted signal and the echo. Automated decision processes based on customized business rules can operate on asset positions at various defined landmark locations and customized geographical areas. Software is stored on a non-transitory storage associated with the controller. The heating element includes a pair of conductive terminals that extend proximally along a longitudinal length thereof. The air purifier effectively removes dust particles and bacteria in the air, measures and controls the carbon dioxide content in the air, displays the content of carbon dioxide to users and helps to protect human health.

1459827400-3fb0efa9-fb1f-4106-83be-ded007dc632f

A 3-D modeling system is provided for reducing design costs an efficient drawing checking operation. Processes for the preparation of the final products and for the conversion of the compounds of formula to amino acids are included. Multiple printed outcomes are assembled into books, wrapped, and sold to consumers. The spring and spring seats are disposed about the central rod, such that the spring biases the control member into a predetermined position relative to the regulator casing.

1459827400-496d25a5-f6dc-498c-b516-e0e61433d815

A covering of a convertible top compartment of a convertible which has a convertible top which can be deposited in a convertible top compartment, the covering having at least one first cover part and one second cover part which are supported to be able to pivot relative to one another. By the contacting and separating operation of the transfer member, the image bearing member located out of a normal position is pressed to the normal position by the transfer member. Optional gel promoting additives include betaines and amine oxides. Conductive pathways can be formed in the fabric of the patch. As the edge attachment is mounted on the edge of a cap or visor the flared edges are deformed outward creating a spring force that firmly holds the edge attachment on the brim. Another embodiment includes providing adjustable fin positions relative to the side force stabilizer.

1459827400-b2869361-188b-4756-a6a1-d7402f7fbcd5

A valve for controlling gas flow to ventilator or physiotherapy apparatus, has a body having first and second inlet ports and an outlet port. The leaky wave antennas may include a balun that may be integrated on the chip, on a package to which the chip may be affixed, and/or integrated on a printed circuit board to which the chip may be affixed. The voter function block may be integrated into a process control or safety system by being communicatively connected to other function blocks, such as to analog or digital input function blocks, analog or digital output function blocks, control function blocks, cause and effect function blocks which implement cause and effect logic, etc. The lower shield has a center portion and a lip. This ratio can vary in alternative embodiments, and includes 5050, 6040, 7030, and 8020, respectively. According to the present invention, the SRAM section can be reduced in size.

1459827401-2984b70c-ef48-456a-857d-d62566f0672b

A device for mapping and demapping cells in an orderly manner is provided. While the energy delivered to an output terminal with its load remaining the same does not change, the energy delivered to an output terminal with its load changing is adjusted accordingly. The spindle is coupled via a nut element to a second part. The present invention hence enables aspects of the logical computation to be performed simultaneously with the application of the filtering computation, and for the logical and filtering computations for a plurality of data samples to be performed simultaneously, which significantly improves the efficiency of the adaptive filter operation. Optionally, the camera gathers information from frames used to construct the video mosaic and uses the information to select settings for focus, exposure, or both to be used during the taking of the component photographs. The clamp system has a first and a second jaw and a first and a second link attached to the first and second jaws that are configured to control the motion of the jaws.

1459827401-3ed2afc7-af32-43f5-a767-4b9afee34996

A game call having a box piece and a striker piece that contacts and vibrates an exposed edge of at least one box wall to produce sound. The external adaptive control system determines a plan identifying a guaranteed green light time and a minimum green duration and a period for the plan. Each layer is sleeved within the preceding layer forming a sleeved assembly.

1459827401-4404c5bf-0a95-4cd3-b5cd-ae0a91fd9ff8

The present invention features a portable suitcase tabletop system having a suitcase with a generally u-shaped telescopic handle and a plurality of wheels located on the suitcase bottom surface. A method for reading RFID tags is also provided. An illumination reduction algorithm is implemented to determine the highest RGB components from any of the pixels of the displayable image. Also, the present invention reduces the conversion time by structuring the bit streams into a GOP. Corrugated plate having vertically formed corrugations is secured to each structural member below the corresponding arm and its associated base. Catalyst comprising this bidentate ligand and carbonylation process in which this catalyst is used.

1459827401-b5b4b4f9-c88e-45d4-b47b-787c52b3e519

A tube fitting for a tube end has a female threaded member that cooperates with a male threaded member. The walls of the shell are filled with an insulating material. In transposed access mode, a data operand is accessed in a given partition of each of n registers.

1459827402-06428cd1-99d9-42bf-91af-9e3349df014f

A driver assistance system for monitoring driving safety has a mobile electronic unit including a video sensor, a computer unit for image data processing, and an acoustic output unit, which detects the immediate surroundings of the vehicle from the data of the video sensor and outputs a warning or information via an output unit when the computer unit detects a dangerous situation. The inverting cone has an inlet separated from an outlet by a length. 11ag modem using a programmable FFT based on a half length FFT core, modifies data in a reception chain implemented in a IEEE 802. A portion of the HSQ layer that surround the nanowires are cross-linked, wherein the cross-linking causes the portion of the HSQ layer to shrink thereby inducing strain in the nanowires. The file categorization module analyzes the uncategorized files in priority order to categorize the files as \u201cexpected executable file creators\u201d or \u201cexecutable file creators of interest. When an object so allocated is no longer needed, the shared external storage breaks the object down to a set of one or more fixed sized allocation units.

1459827402-3dc82d0a-9e2e-4cb8-a9be-c5dee939a43e

A mechanical seal for providing a seal around the drive shaft of a variable

displacement swash plate type compressor used in an air conditioning system for a vehicle comprising a rotating bearing surface, an associated stationary bearing surface and a lubricant embedded in the stationary bearing surface. The game device 1 is a game for competing for game scores in accordance with the superiority of the state of arrival upon the taxi, which is the moving object, reaching a goal. Methods for representing taste perception of a particular tastant in a mammal are also described, as are methods for generating novel molecules or combinations of molecules that elicit a predetermined taste perception in a mammal, and methods for simulating one or more tastes. The invention further relates to screening methods for identifying agonists and antagonists of huXAG-1, huXAG-2 or huXAG-3 activity. Each pocket includes an internal passageway that leads to an interior side of the vest. More specifically, an apparatus and method for demolding a golf ball from a mold cavity subsequent to forming a cover layer without the use of ejector or knockout pins are disclosed.

1459827403-0bee2afd-77c7-4e68-a3db-cfc631a42764

The invention relates to the field of transplantation medicine and to the prevention and treatment of rejection, in particular of chronic rejection, of a transplant by a recipient of the transplant. The method and apparatus further utilize this database as a backbone for an internet portal, providing for automated contact of interested parties, automated e-commerce for replacement of assets, and immediate distribution of published information. In assembly, a protruding unit is connected with the circular indented region. Further, the image-memory access control section and the image processor share jobs of performing image processing on the image data. Finally, the utility of a general approach for determining the molecular bases for lysosomal disorders of unknown etiology has been demonstrated. When a cup completes its journey beneath the drug tubes, it contains the drugs needed by the patient to which it is assigned.

1459827403-3b507d41-02b6-4b59-b011-2c07f6880b06

A material bender for bending a stock material into a desired shape. Each of the first crank and the second crank has an end adapted to engage a pedal. Delivery polymers provide membrane penetration function for movement of the RNAi polynucleotides from outside the cell to inside the cell. The sleeve has one end formed with a radially outwardly directed flange which embraces the adjacent one of the outer running disks, wherein the other outer running disk is securely connected to the sleeve to thereby form a unitary bearing structure. In addition, access to the input data in the physical cache is facilitated.

1459827403-f583dcf8-cc44-4276-bd81-5961fc31014d

The invention includes a device displaying differential negative resistance characterized by a current-versus-voltage profile having a peak-to-valley ratio of at least about 9. The first tier is a universal graphical user interface which can operate on any inexpensive computer as well as on an expensive workstation, i. The memory cells include inverters in which capacitors for backing up data are provided. When delivered, the proximal segment and intermediate segment form a first clip-shaped portion sized and configured to be positioned over a septum secundum of the patent foramen ovale, and the intermediate segment and distal segment form a second clip-shaped portion sized and configured to be positioned over a septum primum of the patent foramen ovale. An exemplary embodiment of the circuit includes a first programmable differential driver circuit receiving a differential input; a programmable delay circuit receiving the differential input and coupled to a second programmable differential driver circuit; and a summation circuit coupled to the first and second differential driver circuits.

1459827404-6d51169b-7220-4644-a8fd-59cf28a1cb8c

An article of footwear is disclosed that includes a fluid-filled chamber with one or more flexion zones. The driving device comprises a plurality of first charge sharing switches and a plurality of second charge sharing switches. The image

sensor includes an effective image sensing area having a plurality of pixels at the center portion of the image sensor, and a light-shielded pixel area having a plurality of light-shielded pixels at the peripheral portion of the image sensor. The display device displays a display color in accordance with a ratio between the light intensity, which has been detected by the light intensity detecting device for the entire measurement wavelength region, and the light intensity, which has been detected by the light intensity detecting device for the partial measurement wavelength region. A variety of signal formats of the output signal are described.

1459827404-c437b582-8ba9-4f4c-bad5-86a927129299

A nonvolatile semiconductor memory device includes a memory cell array having a plurality of cell units each including a preset number of memory cells and select gate transistors on drain and source sides. Drive circuitry is positioned on the wafer substrate. The user may select a program listing of interest. The signal detection element includes a capacitance detecting electrode and a capacitance detecting dielectric layer. As such, the cover is loaded and opened automatically, as well as in closed, which can be a part of automation and prevents wafers from contamination. Among other potential uses, the present invention may be useful as a vascular stent for treating abdominal aortic aneurysms.

1459827404-d6f33127-b4a7-4eec-8e18-206bcd3c0ab3

A seal with anti-theft device for items having rod-like portions, particularly for eyeglasses. The gate electrode provided over an active layer and a gate insulating film is constituted by a lamination film of a tantalum layer and an aluminum layer. In one embodiment, the decorative covering assembly is delivered to a customer for use by the customer in covering floral groupings. The two filters may also be separated by a groove in the substrate. From this, the pylon is capable of stably displaying the logo indicia in an upright configuration above the tabletop.

1459827404-d78c2f59-03ae-4a73-97c6-768ec067ce2f

The contents of a small image displayed on the back side can be made easy to understand. According to one or more exemplary aspects, there is provided a wireless audio receiver for receiving a plurality of packets of encoded audio data. The present invention also provides substantially pure eprosartan free base and a process for its preparation.

1459827404-df376c84-04b8-4d96-83f5-779191d7c432

In an active matrix display device, a circuit including at least five thin film transistors which are provided with an approximately M-shaped semiconductor region for a single pixel electrode and gate lines and a capacitances line which cross the M-shaped semiconductor region, is used as a switching element. The trench etch process is adapted to include a forward micro-loading etching process and a reverse micro-loading etching process using two etch chemistries together with the inclusion of a dopant material layer or an organic fill material layer during the deposition of the dielectric film stack. The second signal is processed by a second analog-to-digital channel to produce a second set of in-phase and quadrature signals.

1459827405-141e8295-7f4c-4546-9dbe-f9383fa356dd

Disclosed herein are compositions comprising polycarbonate-polysiloxane copolymer, polycarbonate, flame retardant additive, and an anti-static agent. A mobile radio receives a communication signal from the repeater on the first frequency hopping hopset and transmits a communication signal to the repeater on the second frequency hopping hopset. The security feature is uniquely keyed to disengaged when mated with a corresponding uniquely keyed connector. A supply voltage VDD is adapted to be electrically coupled to the second side of the first chip.

1459827405-c609f889-eb55-4eb2-81a1-a35e0df5c901

A pivotal handle for a food service table is disclosed. An eNB transmits a

plurality of sets of UE-specific SRS parameters to a UE via upper layer messaging in a multi-carrier wireless communication system. At least one motion measuring direction extends transversely to the longitudinal direction of the housing. The handle can actuate the pump either using a piston or a lever motion. In one embodiment, the pincher includes a spring loaded mechanism for pinching the bag proximal to the sealing zone. The apparatus further includes a dichroic mirror in the resonator that reflects excitation light inputted from a direction crossing the optical axis of the resonator toward the solid-state laser medium and transmits oscillation light.

1459827406-8d5cd3d1-249e-4121-9efc-a8f7d25e1519

Methods and devices are provided for providing direction to surgical tools. The invention also relates to methods for producing a modified PH87P maize plant that comprises in its genetic material one or more transgenes or backcross conversion genes and to the transgenic and backcross conversion maize plants produced by these methods. A number of thin regions are formed in the drawn carbon nanotube film along the aligned direction by reducing density of carbon nanotubes in each of the plurality of thin regions. The inflatable article or bladder of the present invention may be used as or in athletic equipment, for example, including footwear. The wardrobe closet may determine the user's clothing needs and find clothing offered for sale at one or more web sites. In some examples, this distributional information is used for a classification task.

1459827406-a9c1c5ad-b66b-4bb6-8f75-b374cb6cb2a6

A tax event system is configured to evaluate a taxable event that gives rise to tax liability in multiple jurisdictions. A microprocessor is provided local to the interface device and reads sensor data from sensors that describes the position and/or other information about an object grasped and moved by the user, such as a joystick. The second connecting member includes a coupling portion removably coupled with the accessory, and a second engaging portion extending upwardly from an upper side of the coupling portion to releasably engage with the first engaging portion. The plurality of streams of shot may be directed out of a plurality of outputs of the nozzle. A method of forming such a self-aligned interconnect structure is also provided. The lower and upper cladding layers are opposed to each other and sandwich the light-emitting layer to form, in cooperation with the light-emitting layer, a light-emitting portion of a pn-heterojunction structure.

1459827406-be2df0b2-0536-4e63-becc-cc5ec35e7394

A chip stacking structure including a carrier, a first redistribution layer, a second redistribution layer, at least one first chip, at least one second chip, and at least one conductor is provided. Each participant is surrounded by at least two video cameras. The apparatus includes register marks to be measured by the apparatus.

1459827407-158ce3d2-e5c7-4af2-81a7-c8a73891e3b5

A method and apparatus for converting DC input power to AC output power. The circuit board includes a plurality of electrical contacts. The candidate document is evaluated to determine whether the one or more terms indicated by the expression occur within the span in the candidate document so as to satisfy the annotation operator. The authentication apparatus includes certificate transmitting means transmitting, to the service providing apparatus, the second certificate generated based on the first certificate in response to the request of the second certificate by the certificate requesting means.

1459827407-620af465-6ba6-4610-bbe8-ed9d2589d132

The present invention relates to a mobile communication terminal for Push To Talk and a method for processing missed call information thereof, which allows a receiver to check why an originator requested the PTT telephone call during the absence of the receiver through missed call information. Location information from

the network can be combined with computerized street maps to measure the time it takes to get from one geographic area to another. The extendable pressurized fluid coupler further has a piston having a central fluid channel, the guiding portion and the piston having a common central axis. According to further aspects, estimated altitude is integrated with other types of dead reckoning data to provide user context detection pertaining to changes of altitude. Preferably, the fiber is extracted while molten material is being urged into the fiber.

1459827407-d7026c41-c2cd-4088-a7ce-5da01b09146e

An apparatus and method for consolidating a composite workpiece are provided. The method can include maintaining the sample chamber in an open configuration or decompressing the gas capturing chamber by closing off one or more sample inlets and sample outlets and exhausting portions of the liberated fluid that do not flow to the gas analyzer. Each block has a label that determines its correlative order in the set. This allows both the newly recorded and previously recorded media segments to be evaluated both individually and in context with other segments.

1459827408-3c0faed1-6565-49ad-add2-d04f4053bbdc

A data processor acquires video data and audio data and, after processing them appropriately, stores them on an optical disc and/or an HDD. Two pieces of information about the print size, one inputted by an operator and the other detected by a paper detector, are stored in a print size memory. A shaft is provided having a first end and a second end. The lighting balloon apparatus is further configured to accommodate multiple lighting sources, as well as applicable mixtures thereof.

1459827408-7aadfb2d-66f6-40c9-85ec-7837cb653e6c

A cleaning mechanism for a wire electrode of an air purifier device includes a base, a post having a first end attached to the base and a second end accessible from a location external the housing, a cleaning plate assembly attached to the base, wherein the cleaning plate assembly frictionally contacts the wire electrode when moved relative to the wire electrode. If the count exceeds a threshold, then a warning is sent to the clients. The control elements controls the write elements to write the first boundary information at the end if the empty capacity is equal to or greater than a first threshold value and the second boundary information at the end if the detected empty capacity is smaller than the first threshold value. When a user switches from the current task to a new task, by selecting a minimized window, the windows associated with the current task are automatically minimized as the window pertaining to the new task is displayed at its normal size.

1459827408-a2c89e81-324b-4769-87b6-548d59442c6d

A stray-light-coupled biometrics sensing module includes a light-transparent body, a display unit and an optical module. Two-dimensional images, representing a physical property associated with the radiolabelled thrombus, are acquired and assembled into a three-dimensional matrix of data. The anchor seat has a groove profile thereon which will mate with a groove profile on the mandrel in an anchoring position. The inventive system and process allow a gasification to be carried out under higher slurry feeding rate and lower temperature with the provision to manage the tar being produced, therefore to increase the conversion efficiency of the overall gasification. The tradable commodity can be purchased or sold for use in managing CO<sub>2</sub> emissions. The annular body includes a fluid inlet and a plurality of circumferentially spaced apart fluid outlets in fluid communication with the interior flow passage.

1459827408-fdc15c40-931d-4f10-8750-8bc4e576a129

In a multiport SRAM memory cell of the present invention, an access transistor of a first port is disposed in a p-type well, and an access transistor of a second port is disposed in a p-type well. A primary portion of the cementitious composition has a particle size distribution such that substantially all of its particles are of a

size of about 10 microns or smaller. The locking module locks with the main plate and the slide plate. According to various embodiments, a computer-implemented method for resetting a secure element within a network device may include receiving an encrypted reset request message at the secure element, decrypting the encrypted reset request message using a communication key, verifying authorization for the reset request message, and atomically clearing parameters associated with the secure element.

1459827409-01f8bc17-afb5-49d5-9473-779362ec19b7

An electronic candle which simulates a flickering flame is provided. Each of the dome patella components and the anatomic patella components is interchangeable with a plurality of femoral components. The implant also has a plurality of particles dispersed in the structure that are adapted to convert incident radiation into heat energy when irradiated with electromagnetic radiation. Collar-engaging loop portions attached to the dog collar flashlight case allows a collar to engage the dog collar flashlight and fix the dog collar flashlight to the dog or other animal.

1459827409-0b66b4cd-45e1-4909-b809-431a57a84413

A method, apparatus, and computer implemented instructions for restricting a fan-out type search of a distributed database. The second rack components are movable via contacting against a first matched key which is inserted in a first direction. The aerogel precursor is frozen so that the dispersion is solidified, and freeze dried to sublime the dispersion medium and form the porous material. The current driving unit generates a deep power down exit mode reference voltage in response to the deep power down exit mode bias signal and a reference signal.

1459827409-34748782-2e07-40d8-85e9-e4760560167c

A shock mount device for a container includes a variable spring rate assembly coupled to a shock retainer. The present technique provides an internally mountable fluid nozzle having a fluid inlet, a fluid exit, and a converging central passageway extending substantially between the fluid inlet and the fluid exit. This method is an improvement over the current methods of drug discovery which often employs a random search through a large library of synthesized chemical compounds or biological samples for bioactivity related to a specific therapeutic use.

1459827409-5120eb95-1336-425b-bd37-17f58001e37b

Drug delivery devices, and methods of delivering pharmaceutically active agents to a target tissue within a body using such devices, are disclosed. The data communications cable also includes a jacket assembly enclosing the plurality of twisted pairs of insulated conductors and the substantially flat dielectric pair separator. The method includes needle-less injection and visualizing the ethanol injection by delivering both an echogenic agent and ethanol either by needle or needle-less injection or by providing an ultrasonically visible marker near the tip of the ethanol delivery cannula. N type diffusion rings are embedded in the inner side of the P+ type diffusion rings and are fully depleted at zero bias voltage. An average of peak-to-peak distance, an average of center line surface roughness, and an average of ten-point surface roughness on the surface with fine concavo-convex structure satisfy specified equations, and the optical diffusing layer is capable of maintaining antiglare property and screen glare simultaneously controlled, when applied to an LCD in which high definition is required.

1459827409-6b12acdf-1664-4625-affa-8ebbc80d6060

A data recovery circuit for use in a data receiving system to recover an m-bit data stream from an n-bit data stream. A porous protein matrix is at least partially anchored in the textured foreign structure, with the porous protein matrix possessing a directional pore structure. The aforementioned allows either the new storage system or the old storage system, depending on configuration, to maintain an operational remote copy function with another storage system during the online data migration.

1459827410-1ea2e6ec-bf89-4ca3-974c-1054fbf6988b

A method for manufacturing boxes made of paper or cardboard, whereby the boxes have a base or a lid with a glued-on sidewall and the sidewalls are formed from a strip with a beginning, an end, and connecting tabs on a long side. The catalyst is useful for cracking heavier hydrocarbons into lighter useful products. The blade is attached to a movable body that is coupled to a base with a resilient coupler. Internal nodes of the tree are assigned operators. Each solenoid and individual gallery is provided with a low pressure relief valve leading back to the crankcase when the solenoid supply valve is closed.

1459827410-752b8a96-9d26-4479-b7b3-2590d3cee203

A permanent magnet machine includes a plurality of reconfigurable fault condition mechanisms disposed within a stator core portion, the plurality of reconfigurable fault condition mechanisms together automatically reconfigurable to reduce fault currents and internal heat associated with the PM machine during a fault condition. The vanadium redox battery absorbs excess energy to ensure that the rating limit is not exceeded, provide system stability, and improve power generation availability. Such a mirror arrangement having a retardation effect varying as a function of location can be used to compensate undesired fluctuations in the polarization state over the cross section of an input radiation beam and/or to set specific output polarization states, for example in order to set radial or tangential polarization.

1459827410-9cc0864c-6905-4316-aaa0-a203db90b20c

A packaging system for CDs, DVDs, software disks and the like is provided which allows for media items to be displayed yet which is durable and can therefore be shipped. In a GaN semiconductor laser as one version thereof, the p-type cladding layer is made of two or more semiconductor layers different in band gap, and a part of the p-type cladding layer near one of its boundaries nearer to the active layer is made of a semiconductor layer having a large band gap than that of the remainder part. The proposed segmentation configuration outperforms existing spatial noise reducers in term of subjective and objective performances, in term of edge preservation, noise reduction in both homogenous regions or picture edges and Peak Signal to noise Ratio. The stop device may include two independently triggered, mechanical stop devices.

1459827410-ccef1b5d-9cf6-411e-bb95-4fd6b960a133

A personal alarm system can be worn or carried by the user, may be activated at any time by the user and/or may be automatically activated to send a signal to any remote monitoring station on the network. The method involves constructing compressed surrogates for documents, such that various operations may be performed without the need to retrieve a copy of the document from the Web. By contrast, when the voltage  $\sim 6$  VPS applied to the source of the MOS transistor T1 is kept approximately equal to a direct-current voltage VPD, the voltage at the node  $\sim 1$  varies on a linear basis with respect to the photoelectric current. Valuable system memory space is consequently conserved. The addition of butanol into the feed solution increases membrane selectivity. A priority factor is determined that is based on one of, for example, aircraft type, speed, and altitude, and a plurality of display state is prioritized for each of the plurality of photo realistic features in accordance with the priority factor.

1459827410-e89c580f-b1b8-4c4d-b900-8a31684bd11e

Disclosed is an instrument for use in a procedure to effect anastomosis of a patient's bladder and urethra following a prostatectomy having a tube assembly, and an end effector assembly operably supported by the tube assembly, where the end effector assembly includes an anchor for insertion into and through the patient's bladder wall and pelvic floor and an anchor guide associated therewith. The pedal body is rotatably mounted on the pedal spindle. The module has an adjustment-start-signal terminal for receiving the adjustment start signal externally supplied and

supplying the adjustment start signal to the semiconductor devices, and an adjustment-end-signal terminal for outputting a module adjustment end signal in response to adjustment end signals from the semiconductor devices.

1459827411-5f089aeb-7870-486f-a465-71a77afaf61f

This document discloses a solution where a network element of a cellular communication system detects appearance of a terminal device in the cellular communication system. In the case where the ground consists primarily of clay, it is heated to a temperature above a level where the ground is baked into a brick-like consistency, wherein the structural water of crystallisation is removed and any carbonaceous material and Fe is oxidised. If the actual link attenuation exceeds the precalculated value, the actual link attenuation is compared with the calculated attenuation in the presence of multiple missile plumes. The materials and methods are useful in the treatment of, inter alia, fibroproliferative disorders of the kidney, liver, and bone.

1459827411-6158cd66-fc7b-470b-bc4e-883a9fc0ad96

When a redundancy circuit is provided to relieve the inferiority of a semiconductor storage device, and then, the semiconductor storage device has no defect, power is inconveniently supplied even to the unused redundancy circuit to generate unnecessary leakage current. This results in a uniform lesion with a size defined by the span of the electrode array. The determination portion determines whether the driver is in a absentminded state based on the data input into the input portion.

1459827411-a63d87cb-a3d2-472b-a499-329a396743a4

In a cooling channel piston for a diesel engine with direct injection, a reduction in the compression height is achieved while keeping the output the same or increasing it. The position acquisition and/or monitoring can be performed with improved intelligence so that data acquisition, transmission and/or processing is reduced. The apparatus also includes a controller coupled to the sensor, the controller configured to determine a zero vector modulation based on the sensed frequency and torque.

1459827411-b305e888-7ae4-46c2-a9af-55bd2c0355c8

A method of making an electrically operated programmable resistance memory element. The active agents can be a peptide, mucopolysaccharide, carbohydrate, or lipid. If the measured blood sugar level is larger than a warning value, a warning is issued. The program code may attach a color designator or other assignment indicative of the assessed risk level to the data. A drain of the field-effect transistor is connected to the VCC via the second resistor. The surface roughness Ra of at least a portion of the separator contacting with an electrode is set to a range of 0.

1459827411-c3c478bf-366d-4b81-ba2a-28d5aa30a7b9

A method of hydrogenating alkyl anthraquinones and/or alkyl hydroanthraquinones to alkyl anthrahydroquinones and/or alkyl hydroanthrahydroquinones is disclosed. That database system includes a database appliance that executes a database server on a platform that includes a special purpose operating system specifically tailored to the services required by the database server. A light guide plate is disposed on the support main. The other end of the line segment either terminates in the interior of the circle or terminates on another portion of the perimeter. According to the present invention, a process for producing a dialkyl tin compound is provided that subjects a composition of the deactivated forms of the dialkyl tin catalyst, formed when producing an ester compound, to an alkyl group redistribution reaction and/or dealkylation reaction. The damper further includes filtering elements mounted in parallel with the valve, adapted to generate a filtering control pressure acting on the check valve, the control pressure depending on the pressure differential at the inlet and the outlet of the valve.

1459827412-56d51acf-5a52-43a7-bdc4-6c1067abe269

A mist generating apparatus having a casing that is divided into a storage chamber, a pump chamber, a waterwheel chamber and a mist chamber. The invention provides sellers with an irrevocable method of receiving funds from a purchaser and for improving purchaser willingness to transact with an unknown party. As a result, the mechanical actuator, which is used to actuate the valves, is thermally coupled to the heatingcooling element in order to carry out the thermocyclization. More specifically, the semantic bypassing mechanism implements a constant-voltage-keeping policy and a dynamic-voltage-allowing policy.

1459827412-8d2daf7e-0921-4a98-9e33-352ad092be1e

A bearing for storing a lubricant and supplying the lubricant to a shaft is provided. Cold water enters a copper coil immersed in the heat transfer liquid. The anode can include a first mixture having a first plurality of electrically conductive carbon-comprising particles having a first average porosity. The colorants used to form the transparent or semitransparent wood stain do not include a white colorant or black-and-white masstone.

1459827412-a32f549f-b899-44e7-bed6-bb406927f882

A particulate filter can be prevented from being damaged. The ink passage includes a narrow passage and a wide passage. After then, and the controller controls the moving speed ratio change section to return the circumferential speed ratio to the circumferential speed ratio prior to the change. A blur is applied to the low contrast areas, which stops abruptly at the edges. If the change request is not inputted prior to the user operation, the job list screen in the first array is redisplayed.

1459827413-58eb55a2-006d-453d-bed8-f0e5103ff028

A system and method for the simplification of data structures, particularly those used for wireless communications, encodes data structures for efficient storage and access. The host system configures the emulator to emulate a design under test and the emulator emulates the DUT accordingly. In a resulting chemical or physical reaction, fine pores and cavities are formed in and on the polymer coating. The DCI controllers may then correctly configure the impedance magnitude of the respective IO buffers under test, so as to test the functionality of the controlled impedance buffers for IO standards that require controlled impedance. The first set of vias are produced prior to circuitry on the die, and the second set of vias are produced after circuitry on the die.

1459827413-7df85ad1-2807-43f3-95b1-60b5cc4ab5b3

An information handling system is disclosed that retires events upon device replacement. Deletion mutants of the gp130 protein of the IL-3 receptor are presented which inhibit the binding of Hck tyrosine kinase and the growth of tumor cells, particularly of myeloma cells. The Decision Makers may assert routes and prefixes to the routers under their control.

1459827413-835ebce3-4fa3-44d5-921f-386fbc8f0ee7

A ball throwing machine for throwing projectiles, such as tennis balls or baseballs, includes a yoke assembly for projecting balls and a motor assembly for providing both nominal vertical throwing as well as oscillating vertical movement of the yoke assembly. The suction cavity includes first and second suction channels bounded on both sides by respective working edges. The volumetric diffuser contains one or more regions of volumetric light scattering particles. The platform also causes, at least in part, an association of one or more recommendations models with the user identity, the at least one communication account, the at least one device, or a combination thereof. While in the hybrid graphics mode, the DGPU performs the graphics processing, and the graphics driver transmits the rendered images from the DGPU to the IGPU local memory and, then, to the IGPU DAC. The barrier layer resides between the specular oxide layer and the capping layer.

1459827413-8c9e4bc1-c3f1-43eb-964b-c458f1c5626d

A combustor for a gas turbine engine comprises an inner annular liner and an outer annular liner. The blanket includes one or more temperature sensors and a shut-off timer to prevent prolonged exposure of excessive heat to a patient. The array antenna arrangement further comprises at least one switch, where the number of switches corresponds to the number of antenna elements in each antenna sub-array.

1459827413-ba1128ff-1a31-440c-8231-d684a4be7863

The present invention provides an adhesive tape 10 for electrically connecting a plurality of solar battery cells, which adhesive tape has a metal foil 1 and an adhesive layer 2 composed of an adhesive provided on at least one surface of the metal foil 1, and a solar battery module using the adhesive tape. The cyclophanes are able to form electron donor-acceptor complexes with a variety of polyaromatic hydrocarbons ranging in size, shape, and electron density. Bi-level or full-color video is then transmitted over the network at transmission bit rates that are controlled as a function of the estimated bandwidth conditions. The at least one protective wafer is configured to be located in the contact locating area and includes opposite end portions adapted to be matingly slid into a pair of the slots. Rings are optionally disposed between the cover layer and the body structure and circumferentially around pairs of aligned apertures and ports.

1459827414-f94d0684-5a46-4867-a185-d59250772e84

An optical signal alternately traverses a total of  $n$  couplers and  $n1$  DGD units, arranged therebetween, with a differential group delay between two signal modes. The delivery system may be used in an intravascular procedure to implant a self-expandable stent. The radio station has a control signal TXRX unit 42 which transmits/receives the control signal, and an information signal TXRX unit 43 which transmits/receives the information signal. This strategy, compared to current approaches, improves the address utilization sixfold without considerably increasing DHCP overhead. The coating comprises a mixture of chemical compounds where each constituent falls into one of six functional groups, being: 1) catalyst/initiator; 2) expandable graphite; 3) carbonific, or source of carbon which additionally forms water; 4) blowing agent; 5) cement; and, 6) ceramic. Methods for making the devices herein are disclosed.

1459827415-07a2825a-b0c9-4c4a-bebc-dc2e64191728

A planarized conductive material is formed over a substrate including narrow and wide features. According to the invention, at least one measure of the spatial size of the cell is reported to a receiver communicating with a base station, for use in location specific applications. The method exploits the fact that the processor provides enough register space to store  $N=4 \times 74$  set of 8 bits data. A corresponding apparatus is also disclosed herein. Control parameters are determined according to control characteristic parameters set in a function calculation section 6, inertia moments  $J1$ ,  $J2$  of the engine and the dynamometer, and spring rigidity  $K12$  of the coupling shaft. The sensor support structures are designed to monitor structure conditions, including strain, temperature, and in the instance of pipelines, the existence of production slugs.

1459827415-0cbf15c2-0985-4d9e-8efc-9de5d0bf7e0e

The cell-delivery unit of a high-throughput electrophysiological testing system is implemented as a reusable movable unit suitable for repetitive delivery of cells to a disposable, multi-aperture patch-clamp tray. A character discrimination section executes character recognition such that a condition for character discrimination is relaxed when the white background determination section determines that a pixel of interest belongs to a white background, and the condition for character discrimination is made stricter in other cases. The apparatus includes a serial-to-parallel converter, a Fast Fourier transformer, a parallel-to-serial converter, a despreading processor, a channel estimator, a signal combiner and a decoder. To

generate the phase matched signal, PR may use a clock signal provided by a single side band oscillator, CMU, or a clock signal having substantially the same level of jitter as that of the input signal to generate the phase matched signal. According to one embodiment, a method comprises determining performance data for at least one aborted client access of information from a server in a client-server network, and using the performance data to determine whether the aborted client access relate to the quality of service provided to a client by the server. Filters are provided for pre-filtering the amplifier input signals in such a way that the signals meeting at the output of the main amplifier have essentially the same frequency dependence.

1459827415-4166d0d5-40ef-41cc-85be-55298c9c9698

A liquid discharging apparatus includes a head that discharges a liquid onto a medium, a medium supporting portion that supports the medium, a heater that heats the medium supported by the medium supporting portion, and a detecting unit that performs sensing and detects energy. The swinging member can comprise a molding surface defining an undercut portion of a molded item. Thus, it is possible to easily and promptly extract, from image data, a feature point that allows specifying the image data appropriately.

1459827415-425e24ad-8989-4b30-8f9d-9c42295043f4

The present invention enables a home network operator to control roaming of its subscribers. The spray arms are mounted pendulum-type from an overhead pivotal support to move in unison between angular displacement positions thereby to follow the wheels of the vehicle being washed for a considerable linear distance to increase the effectiveness of the wheel cleaning operation. Those compounds which are agonists are additionally useful for treating pain. A section of the workload is identified and marked for static analysis.

1459827415-db56723b-73c7-49db-b3b5-413155679cd2

A method of making a composite article includes providing an elastomeric composition with a blowing agent having an activation temperature and providing at least one structural member defining a fixed gap. Each fire suppression unit includes an identifier so that each unit is identified and correlated with its container. A list is accessed, comprising the identification and a string in the second language.

1459827416-a0778b0f-9af7-47e8-95a5-c1225434545b

A drilling apparatus comprised of a multiplicity of subassemblies for drilling an open-hole extension from within an existing cased borehole located in a geological formation for the production of oil and gas. A key request including at least one of a drive serial number and a world wide node name is received from a data storage drive. Real time nucleic acid detection allows for the qualitative or quantitative detection or determination of single-stranded or double-stranded nucleic acids of interest in a sample.

1459827417-034329b9-5c5c-4495-be1c-e1cbbfc80df5

The present disclosure includes memory devices and methods of operating the same. The needleless injection device and method of the present invention utilizes rapid, high pressure injection bursts to completely and uniformly inject the food subject, allowing different food subjects or different food additives to be sequentially injected in an efficient and instant manner. In general, the system includes a catheter member having a proximal end, a distal end, and an inner lumen extending therethrough, and a structural support adapted to fit within an interstitial space in load bearing portion of a patient's body and having an internal space for removably receiving the distal end of the catheter member. The server in the server farm authenticates the requesting server responsive to the received Kerberos service ticket and the Kerberos authenticator and a generated hash.

1459827417-96a70552-9064-4f9d-be8a-17e680bfaef8

A hybrid gearsprocket-based transmission is provided for driving a pair of coaxial, counter-rotating propellers in aircraft and airboats. At least one handle is provided for guiding the power tool in operation. The chemesthetic agent is disposed within the porous medium and activates a TRP channel. An insulative barrier layer is disposed between the laminated free layer and the magnetic reference layer structure. The invention also relates to utilization of steroids based on the gonatriene molecular skeleton in order to treat estrogen deficiency-induced diseases and disorders, in addition to the use of said gonatriene structural component in the total structure of compounds which dissociate to produce enhanced estrogen activity in bone as compared to the uterus. The protrusion, the recess, and the first supply port are disposed along a virtual curve between the pair of guiding members.

1459827417-992b3d2b-3ae1-4753-958b-0d9518789d54

A flexible wiring cable 60 connects a recording head 7 and a relay board, and includes COF 62 for connecting an output side wiring pattern of an IC chip 61 to the recording head 7, and general purpose FFC 63 formed with a parallel wiring pattern. In another aspect, the first pump is coupled to a first probe for extracting fluid from the formation and the second pump is coupled to a second probe for extracting the fluid from the formation. Translating the tissue expansion device through the expansible sheath expands the dimension of the shells to provide even dilation of surrounding tissue. Its novelty consist of the following combination of desirable features: It provides and uses a precursor polymer of formula below: in which n is a whole number, R1 and R2, identical or different, represent independently an alkyl group, and R3 represents an amino group, a hydrogen atom, an alkyl, a cycloalkyl or a boryl.

1459827418-56ec8d4a-5ca4-4458-b3f7-1c8b0550cd32

The invention described herein relates to certain pyrimidinetrione N-substituted glycine derivatives of formula which are antagonists of HIF prolyl hydroxylases and are useful for treating diseases benefiting from the inhibition of this enzyme, anemia being one example. One method includes sending video data corresponding to a video test pattern to an input port of a video data path; receiving video data at an output port of the video data path; and calculating a function of at least the active part of the received video data. The receiver further includes a tube section coupled to a second end of the body.

1459827418-58e09d58-8373-4423-804e-427ed777cb80

A pixel cell having a substrate, photo-conversion device, and at least one dielectric layer over the photo-conversion device. A cloud controller receives a request from a user to configure a virtual machine with a designated CPU capacity. The image signals outputted from the image pickup device and the image signals stored in a first memory are synthesized depending on the flicker detection result. A second throwing ring is also projected from behind the throwing line toward the playing field and into one of the playing zones.

1459827419-2804247e-5b10-4d4a-aa99-90f2cc782852

A method and device for marking trim miters for a bull-nose corner is provided. The pixel data is received in a data stream and compressed into a compressed data format by identifying a run of consecutive bytes of the data stream based on the similarity of the consecutive data bytes in the data stream. Before lowering a voltage applied to the unselected word line from the second voltage to a third voltage smaller than the second voltage, it lowers a voltage applied to the selected word line from the first voltage to a fourth voltage smaller than the first voltage.

1459827419-61142b4d-aa99-43c7-bd05-c7df65e93240

Provided is an HPA apparatus for a TDD wireless communication system. The first layer comprises a power line, a first transistor coupled to the power line, a

second transistor coupled to the power line, and a first line coupling the first transistor and the second transistor. The signal element can be activated so as to assist an operator in following a predefinable processing sequence including a second specimen slide unit when the RFID tag is in a range of action of the readwrite device.

1459827420-9cc01637-5ca5-4cab-b511-998bc50917f1

The present disclosure relates to a mobile terminal, a server and a calling method based on a cloud contact list. The apparatus includes a buffer store for buffer-storing a sequence of n sequentially received data symbols. This high-purity gas for plasma reaction can be produced by a process of distilling crude octafluorocyclopentene in an inert gas of group 0, or a process of distilling crude octafluorocyclopentene into a purity of at least 99. With linearization, it is possible to expand the measurement range of the gas flow in one duct.

1459827420-fcdd45ec-40cf-4569-bf7f-ed6f64129a6b

Methods and systems for use in connection with an asymmetrical digital subscriber line system being available to provide voice service and data service to the customer's premises. A crawler system processes multiple jobs that each correspond to crawling documents in the data storage system. The coupling further comprises an external ring having an internal thread for threading the external ring onto the externally threaded portion of the collar.

1459827421-047a5ab7-dfae-4a19-b144-7744e70452e2

A method and apparatus intuitively to administer all components of a networked computer system by use of real multi-dimensional views of any component or any set of components, including components related to a specific business interest, and with customizable and fully extensible functionality, across heterogenous platforms and applications. Control circuitry, and a position sensing device configured to determine the distance between the focal spot and a reference point related to the x-ray device, are coupled with a control module. Furthermore, the detection of the state of a 10 kV power line may realize real-time monitoring of the temperature, insulating level and change of voltage and current of a 10 kV aerial line and cable line, and realize alarm for an abnormal state and fault information report, so as to rapidly identify, position, isolate and recover the fault. Furthermore, at least one beta aperture weighting value for the at least one beta detection value of a group is approximately determined using the at least one alpha aperture weighting value of the group. Two such LED arrays are connected to electrodes in inverse parallel. A modular system can be readily adapted to different foodstuffs.

1459827421-0dac9070-b0d9-4c41-84d6-1f0fb92670c4

An x-ray film holder is provided to attach to a dental simulation model and to support an x-ray film. The downloadable pluggable services may correspond to communication services that can be downloaded to upgrade a communication system. In one embodiment, a common voltage offset may be applied to the second common voltage such that the magnitude of the voltage kickback error is approximately equalized at the maximum and minimum pixel voltages for pixels coupled to the second common voltage. However, other embodiments in which a control process controls a plurality of components are also contemplated. Other embodiments are disclosed.

1459827422-00055775-075d-449c-b149-4c36288cce7c

A counterpoise device for cantilevering at least one cylinder of a printing press has a movable counterpoise element for selectively contacting the cylinder and a stationary mount. Peripheral seats in the form of grooves, are provided in register in peripheral slide surfaces of respectively the cover portion and the body forming the spigot-socket combination. The seat back is rotatable relative to the frame between a back support position and a travel seat support position where the seat back is substantially parallel to and above the seat base when the stroller is in an operating position. The cooling tubule is connected to a cooling tubing of the

cooling system and a fluid driven by a pump circulates in the cooling tubing and the cooling tubule for heat dissipation. The controller provides the control signal based on the relative values of the reference voltage and the measurement voltage.

1459827422-36c7281f-c887-4c6d-ae10-4f7b681c3c3d

This process substantially reduces the time and effort required in analysis of recorded cardioangiograms. The mobile communications system also predicts the movement of users and provides seamless services based on the predictions. To do this, the stub length of each CRLH unit cell can be varied. The structural support members may include frame members and walls interchangeable with one another. A yoke can have an inferior portion and superior portion, the superior portion having an axle that comprises a second hinge portion.

1459827422-5bb61b55-e26f-417f-8c07-cd495f88f04f

A semiconductor integrated circuit device includes a semiconductor chip, a memory cell array arranged on the semiconductor chip and first and second decoder strings arranged along both ends of the memory cell array. The method comprises the steps of: providing an elastically deformable pad having a contact surface for sealing engagement with an ink ejection face of the printhead; and moving the pad from a first position in which the contact surface is sealingly engaged with the face to a second position in which the contact surface is disengaged from the face. The device comprises at least one sensor for measuring the displacement. The support member has a recess formed along one side and is configured to receive a bottom tab of the beverage container holders. A duct portion, that communicates an interior of the heat insulator and a space between the cooling unit and the cooling fan, is provided at this heat insulator.

1459827423-2d6322c3-60cd-4ff8-87ce-4755f78c9b84

In a variable compression ratio mechanism that serves to change the compression ratio of an internal combustion engine by rotating camshafts so as to cause relative movement between a cylinder block and a crankcase, an oil film forming device forms oil films on the sliding portions of camshafts. The second substrate includes only a single well in the second memory cell region, the single well of the second memory cell region comprising a semiconducting material doped with impurity of one of a first type and second type. Each of the most populous colors of each partition of the target image is associated with a color in a corresponding partition of the reference image that is closest to the target image color. The system selects the preferred translation and transmits at least the preferred translation to the recipient via the recipient's preferred mode of communication.

1459827423-62378268-14fe-4ebd-a08f-c490b761bd22

A highly portable solar UV disinfection and water storage container with a uniquely traceable security seal that passively indicates by means of a permanent photochromic color change the efficacy of the UV disinfection process performed upon the drinking water within the sealed container. Customer demand information and management parameters are entered into a software system. To provide an even stiffer mirror with minimum weight, either or both of the hinge plate and balancing plate may also include perimeter ridges that align with the perimeter ridges of the mirror layer. The patient end is exteriorly lined with a layer of soft cushioning material such as a soft thermoplastic elastomers, styrene based polymers, rubber or a porous polymer foam material to define an aspirator tip that protects the soft tissues in and around the mouth of a patient.

1459827423-62d71f50-53ac-4a09-8977-3ceae1aebfe4

A manually controlled sensor for authenticity identification of luminescent identification features on documents is described, in which the identification feature is illuminated with an excitation wavelength and may respond at a different wavelength, with the response wavelength being detected and evaluated by a radiation receiver. A dielectric is disposed between the electrodes. The coupling

ring is arranged so as to be rotatable with limited travel about the base of the shaft between a first angle  $\alpha_1$ , which corresponds to a folded-out position, and a second angle  $\alpha_2$ . A flexible cable extends from the back side of the mirror to the front side of the mirror and provides electronic communication from the electronic housing to the digital display. The facility identifies as most relevant those items having the highest ranking values. The mechanical securing means applies clamping force that acts between the first and second opposing socket portions and secures the coupler therebetween in fixed orientation with one of the faceted socket portion.

1459827423-bb446370-a684-440a-9282-bbb9076636d2

Embodiments of the invention relate to integrated chemiluminescence devices and methods for monitoring molecular binding utilizing these devices and methods. The profile contains a software development history of the software developer. The present invention has backward compatibility and can obtain frequency diversity again.

1459827424-065bd47b-fc06-419d-89a3-6bbc300e9915

Microbe-resistant medical devices and methods of making these medical devices are provided. The aim of concealment is to find the most suitable parameters for the bad frame so that subjective quality of the synthesized speech is as high as possible. A voltage difference across the first and second electrodes alters a geometric dimension of the piezoelectric layer such that physical force is applied to the core and a resonant optical frequency of the resonator is changed.

1459827424-3e351edc-df33-4306-8e45-3336809dc45c

Process for the preparation of a catalytic specie consisting essentially of a metallic support, which is coated with a ceramic active phase layer, mainly compound of the general formula  $R_xNiyMg_lAl_m2z+kH_2O$ , wherein  $An$  is mainly a silicate or a polysilicate anion;  $0 \leq x \leq 2$ . A lid assembly is positioned to contact each dough portion. Physical data comprises auditory data, language data, visual data, motion data, and sensory data, and each element of the at least one first memory segment is identified as auditory data, language data, visual data, motion data, or sensory data. Some embodiments provide functionality, including generation and handling of clone controls, use of virtual sequencer controls as slave and/or translation controls, and handling of after-click control information through a virtual synthesizers and the like.

1459827424-929fe7ee-627b-4d54-892c-2fee9aa0630b

A method and apparatus for ameliorating high-field image distortion in magnetic resonance imaging of tissue. The light projecting means includes a substantially dome-shaped structure incorporating a plurality of light elements for producing and projecting the light. In some embodiments, the constraints include mathematical expressions that express timing requirements. Because the chemistry does not attack the bond pad layer, the bond pad layer's thickness is not decreased and thus, reliability of the bond pad is maintained. The protection element is configured to disconnect power to the contact detector when a current to the contact detector is detected above a threshold. The method includes executing a circuit simulator for designing an integrated circuit that contains at least one of a plurality of DRAM cells.

1459827424-ca7e8afe-644b-498b-b703-664b697eb08e

This invention provides polymer filaments having a multilobal cross-section. The panel mount features a generally rigid panel that is attachable to the building. The first phosphor may be an orange emitting  $\text{Eu}^{2+}$ ,  $\text{Mn}^{2+}$  activated strontium pyrophosphate,  $\text{Sr}_2\text{P}_2\text{O}_7:\text{Eu}^{2+}$ ,  $\text{Mn}^{2+}$ . The capacitor is mounted on the inner surface of the circuit board and has two leads.

1459827425-13c887da-e4c2-4582-9259-54c73ec3d72f

The present invention relates to novel derivatives, processes for preparing them, pharmaceutical compositions containing them and their use as pharmaceuticals as modulators of sphingosine-1-phosphate receptors. The swirler features 40, 50 are located within stationary housing components 34, 44 such that the coolant air is propelled at substantially the same rotational speed as the disc 32, 42 whilst presentation of the coolant air flow A, C, E is such that hot air displacement is achieved at least adjacent front faces 36, 46 of blade roots 33, 43. The sheaths provide acoustic enhancing and aspiration enhancing properties, and/or can be used as surgical tools or as medical access devices, protecting tissue from physical contact with the probe. The calculations of a) and b) are repeated to obtain multiple arrays.

1459827425-35f02faa-0cc9-482f-801f-24f47390359f

A toner system according to one example includes a developer unit and a toner cartridge. Treated water may be provided for domestic use wherein the water may be treated by removing selected dissolved species while retaining properties that may improve the properties or aesthetics of the water. The database includes records arranged in a predetermined manner. The second two-link hinge unit is provided between the base unit and the supporting unit for allowing revolution of the display device around an imaginary axis defined in a horizontal direction of display device. The functionality can then allow the candidate device to communicate with the communication system, via the master device, using the master account.

1459827425-7aff6edc-5e60-4de0-8534-d95d61204b5a

Spinal implants and methods of extending pre-existing spinal implant constructs. The managing platform uses the transaction data contained in the transaction message and other information to determine whether the transaction satisfies one or more payment rules previously established by the cardholder. In another embodiment, the assembly further includes a control system that controls the backwash system and the agitation system. The configuration is such that the shortest track travel time using the fine actuator is larger than the inverse number of the local maximum of a flying-height fluctuation frequency of the suspension by the fine actuator.

1459827426-0553a334-0af9-4b8e-9c3b-ccd23a8e4342

The present invention relates to novel carboxamide compounds and their use for the manufacture of a medicament. The system acquires a mapping data and a current location of the bipedal robot via a Global Positioning System, determines a route on the mapping data, and directs movement of the bipedal robot until it reaches a preset destination. The provider generates a token unlock key based at least in part on the derived key and sends it to the token. Furthermore, according to the present invention, the controller which controls the mobile communication function need not control the multimedia processor which controls the multimedia function. The first signal trace includes a number of wave crests and wave troughs.

1459827426-9b5f2d93-9181-42f3-b78c-32b6f2cd79df

Between network node apparatuses that operate as a duplex system, when a failure occurs in an information processing unit of one system, the service is maintained and continued in an information processing unit of the other system without interruption of the service. If the security system is authorized to send an encrypted copy of the decryption key, it encrypts the decryption key and propagates the encrypted copy of the decryption key. The widths of the first and/or last pulses of the write pulse waveform are varied in accordance with the magnitude of the present mark of input NRZI data and the magnitude of the leading and/or trailing spaces, thereby minimizing jitter to enhance system reliability and performance. The apparatus further comprises a channel region formed on a surface of the diffusion barrier.

1459827426-bf149cad-6da6-4cfc-851e-540514de1806

There is disclosed a notification method in a communication system of notifying specific multifunctionality information between terminal stations. The wireless device includes a short-range transceiver for communicating with an auxiliary device; a signal module for providing a mode control signal; and, a control module for controllably shifting a short-range transceiver between a power saver mode and a search mode based on the mode control signal received from the signal module. Another aspect includes determining that the first callee function of the first function call does not require a TOC pointer based on the first TOC register usage indicator that is associated with the first callee function in the symbol table. Communication nodes comprise all-optical devices for inserting, into the core fiber, optical signals sent by a sending access node connected to the communication nodes. This has the effect of minimizing non-linearity and hysteresis in these devices during their subsequent operation. The method includes driving the energy generation unit, and then connecting a tip portion of the liquid discharged from the discharge port to the liquid at the discharge port via at least two liquid columns, and cutting the at least two liquid columns to separate the tip portion of the liquid from the liquid at the discharge port.

1459827426-d36de566-6644-4b82-ab91-1793ea5f3818

An arrangement of a disk spring at a piston of a shifting element in which the fingers of the disk spring protrude through crests in the housing and abut against a sheet metal sleeve which is held in the housing of the shifting element. The computing device includes a connector port and a near field communication transceiver to identify a connector approaching the connector port. The floating bracket is rigidly fixed to a point on the vehicle. The stop element bears against a side of the support wall when the fixing element is locked to the support wall. A disclosed system to install a disposable curtain includes: a washable mesh upper curtain; an installation bag structured to be suspended from an installer during installation; a disposable curtain located in the installation bag; and a plurality of connectors to removably suspend the disposable curtain from the upper curtain.

1459827427-227f4a06-44c5-4513-b88b-bc97648fb94a

A method for operating a railroad engine, comprising: using a lubricating oil in the railroad engine, wherein the lubricating oil has: a) less than 100 ppm zinc; b) a cold cranking simulator viscosity at  $-22^{\circ}\text{C}$ . An external shape of each of structures is acquired from already acquired two-dimensional map data and a height is acquired using a photograph in which structures described in the two-dimensional map data are imaged. Additionally, features described herein relate to customized and/or dynamic generation of a 3D stream based on a user device and/or user preferences. The sensor is coupled to the switchable polarizer and senses the images on the projection screen. The device comprises a vacuum blood-drawing tube accommodating a blood-filtering unit, wherein the vacuum tube contains a space above the blood-filtering unit to preserve blood to be filtered and a partition wall under the blood-filtering unit to keep a backspace at reduced pressure, and the blood-filtering unit contains a communicating needle to break the partition wall at the bottom. A write protect controller controls the multiplexer to output the write protect signal when an address of a write protect area in the cell array matches an address of the write data.

1459827427-b51c7cb0-e7bd-4227-b6b2-aeb8e04110e5

A tool to hold objects by suction includes a glue free gasket structure on its handling surface. The non volatile memory stores an error handling routine. When the magnitude of the potential of all Coulomb islands is decreased, the separation decreases from the second distance to the first distance. A plurality of thin semiconductor channel elements are formed by etching a plurality of spaced gate slots to a first predetermined depth into the substrate. Furthermore, any such off-gassing under load will not increase the gas pressure in the first chamber containing the flywheel as it is separate from the secondary chamber containing the

bearings. The memory circuit is configured to be read and written responsive to the logic circuit even if the first supply voltage is less than the second supply voltage during use.

1459827428-2826e091-8e0d-4751-9fa0-aab3a8e75d36

An electronic component can package structure with a can case having an elliptically-shaped cavity in a state before it is fitted with a supporting base portion of a stem. In typical embodiments, mapping a domain name to a network address for a preferred DNS server is carried out by storing, through the data communication application, the domain name in association with the network address for a preferred DNS server in a data structure in computer memory. In another particular embodiment, the method may further include sending display data to the display device, where the display data indicates that the call has been placed to the contact.

1459827428-5dea9cee-f4d9-449b-b72e-ccc2f2986d9d

A roller frame including at least two rollers mounted in a housing between which a nip can be formed. The introduced meshing is then pressed against the inner wall of the pipe by altering the geometrical arrangement of the high performance fibers with relation to each other and then fixed by the mutual arrangement of the high performance fibers adopted after the laying thereof. A measurement read circuit is connected to the stator coil for determining one or both of the frequency of the induced signal and the amplitude of the induced signal. The power system includes at least one power generating device stored in the body and removable from the body.

1459827428-633bf543-3344-4b98-ba7d-4289a31bfc17

A tool for removing plugs from recesses obviates the need for a twist of the wrist in engaging a plug for removal. A frequency measuring device is also provided for constantly measuring the frequency of the mechanical output of the transducer. A printed circuit board subassembly includes first and second printed circuit boards with an interconnection therebetween to couple to an electrical connector on the first. The pretreatment process preferably includes a copper strike applied from a copper cyanide strike bath at a pH in the range of 8. A separate plate 5 is disposed between the interconnect plate 2 and the control valve 6. The voltage drive profile is arranged to comprise an activating voltage component to initiate an injection event and a deactivating voltage component to terminate the injection event, the activating and deactivating voltage components being separated by a time interval TON.

1459827428-81e5860b-d0c7-4502-b6cc-b2ca8111c7a0

A system suited to self-troubleshooting includes a processor which identifies normalized forms of at least some of the words of a natural language user query input by a user. The method includes generating a two bit sequences from separate bit sequence generators using the same controlling pattern. The number of wedges required for the slot is displayed on a display device. Because the chemistry does not attack the bond pad layer, the bond pad layer's thickness is not decreased and thus, reliability of the bond pad is maintained.

1459827428-cf10515b-3920-4132-9c6c-f946b8a964c0

A phase-change memory cell may be formed with a carbon-containing interfacial layer that heats a phase-change material. The high-pass filter includes M taps to filter precursor intersymbol interference, one main tap and N taps to filter postcursor ISI. Furthermore, a passivation layer is provided, which covers the top side and the edge sides of the intermediate layer whilst leaving the chip contact area free. When encrypting a new data piece that is smaller than the unit length, the encryption apparatus generates encrypted data by adding the new data piece to an unused area within the encryption area with reference to the management information.

1459827428-d939d06b-2ee6-46c5-a66d-c42351068358

A cellular telephone casing, for enclosing and protecting a cellular telephone without interfering with the normal functionality of the cellular telephone, the casing having walls made of vinyl covered foam which define an interior volume for fully enclosing the cellular telephone in a substantially waterproof protective covering. The two ends of the belt are respectively connected to the first housing and the third housing, which can be buckled together quickly. In the table magnifier, the focus length of the lens unit is adjustable by controlling the length of the arm unit.

1459827429-0d6a2ba7-505d-4c27-b563-8a89b6959d62

A handle assembly for a network protector where the network protector includes a circuit breaker and a housing assembly, the circuit breaker having a trip bar structured to move between a first position and a second position corresponding to an open and closed position of the circuit breaker, respectively, the housing assembly having a sidewall with an opening. More particularly, the invention is directed to a co-fire process for fabricating, or laminating, thick film structures to one another by printing a conductor layer between two thick film circuits, drying the layer, and co-firing the combined structure. A target electrode placed apart from the substrate, the target electrode being biased relative to the substrate with a first bias voltage to ionize the atomic species in proximity to the free-standing tips and attract the ionized atomic species from the substrate in the direction of the target electrode. A priority selector generates assignment signal to assign the at least one resource unit to the at least one of the P threads according to the P priority codes.

1459827429-5b3d6280-41f7-4723-b9d1-62fe403f2bca

A memo block base and container is composed by a memo block base and a container. When a change occurs in a storage device that configures the system, setting of the threshold suited to the change of the system configuration as well as selection and allocation of the volume based on a newly set threshold are enabled by automatically updating the volume management table. Further, the demand control unit is connected to the multiple air conditioners and communicates with the multiple air conditioners using a serial data communication protocol. The system generally comprises a remote PPP server, a CPE including a management port adapted to send requests for connection to the PPP server and to receive data downloaded from the PPP server, and a temporary management ATM virtual circuit between the PPP server and the management port of the CPE. A method includes: determining a weight for each of a plurality of duplicate files based on parameters associated with a respective storage device of each of the plurality of duplicate files; and designating one of the plurality of duplicate files as a master copy based on the determined weight. The opposing channel guides are secured about an opening in the kennel wall, and at least one cable is used to pull the sliding door between open and closed positions.

1459827429-5d95b809-367b-4e40-af28-b3936cfe5c2a

A plating apparatus and a plating liquid removing method removes a plating liquid remaining on a substrate-contacting portion, or portions in its vicinity, of a substrate holding member. The tether has a given length such that, during a practice stroke, the user's elbow is bent at a substantially 90° angle and the user's wrist is fixed in an upwardly-extending, wrist-locked position. The through silicon vias may be located in the edges and/or corners of the semiconductor die.

1459827429-72f3d2a9-7f64-4eb9-9725-e8306777a801

A fluid delivery system includes a flow control device and a Coriolis mass flowmeter in fluid communication with the flow control device. The method includes issuing an instruction into a first instance and a second instance of a vector execution unit. A spectrum certificate may be issued to the spectrum user system,

where the spectrum certificate contains at least one spectrum-related variable under which the spectrum user system is to engage in wireless communications.

1459827429-d6717e18-e00c-4505-b4c8-cab2cb6f80ee

A golf club head having a hollow portion is partly or entirely provided with a PCCP structure excluding its face portion. A digital signal processor interface to the drive electronics of the CD drive, a dynamic random access memory controller, an error correction code data corrector, an error detection and correction device employing cyclical redundancy checking techniques, and a host computer interface are described. The apices of the three loops define a plane. The present invention also teaches methods for the synthesis, characterization and application of the disclosed copolymers.

1459827430-60b1528a-05a0-457f-9867-0f3836237e84

A resonant converter comprises first and second input terminals to connect a voltage source. The resulting masonry block has features that provide the masonry block with a weathered appearance. Subsequent to the flip-chip bonding, a growth substrate is removed. The beam assembly can be used as a bed divider, to provide two-tier loading, and as a ladder rack.

1459827430-61323ff5-47e9-432a-9b1e-6ae3f244e46c

Disclosed herein are representative embodiments of methods, apparatus, and systems for distributing a resource using a resource allocation system. First and second PCIe connectors output a first detection signal when each of the first and second PCIe connectors receives a PCIe card. The keyboard further comprises of a set of keys attached to one of the plurality of surfaces of the platform. Airbags may be adjusted beneath the transfer sheet to form channels.

1459827430-c6734da3-d8e9-45cd-a29b-15279bd63e04

Methods and apparatus are provided for an energy attenuating seat assembly with multi-axis energy attenuation. The first directions are different from the second directions. A vehicle headlamp lighting system is provided with an array of LEDs with rows and columns, and each LED positioned at a row and column intersection. Successive browse commands causes this behavior to repeat allowing a user to cycle through each of the open windows. The plurality of stacked flexible members are configured to bend when a threshold force is applied to the beam, provided the plurality of stacked flexible members are in an unlocked relationship. The capacitor may be coupled to an RF ground connection, and the value of the capacitor may be selected to resonate with the value of the RF ground connection inductance in order to provide gain enhancement at a selected operating frequency range.

1459827430-e3986ea6-0a3d-40cb-8b3d-0b2927d8e5d7

A method and apparatus for steering saw blades which includes an arbor rotatable about a rotation axis. The end-nozzles may thus be positioned adjacent to the walls of the cavity. The failure domain of the first front end LUN is determined. The model information includes model ID for identifying models and user interface information for describing models. A molded product prepared using the polypropylene resin composition of the present invention has matt properties, do not cause odor due to their excellent VOC adsorption capabilities, and have excellent properties such as low temperature impact resistance, scratch resistance, etc.

1459827431-04175ba4-cc96-4755-b6ed-3eb2768366a9

One aspect according to the present invention includes a battery pack and a shock absorbing device interposed between a battery cell holder and a case body and capable of keeping the battery cell holder and the battery cells not to directly contact with an inner surface of the case body. Upon engagement of the start clutch, the rotation of the drive member is accelerated by the speed-increasing planetary gear and then transmitted to an input shaft that is directly connected to

a ring gear. Natural bone offers significantly better image contrast over radiopaque replicas. When the bezel engages the housing, the wall of the bezel is inserted in the slot of the brace and releasably held by a spring that engages both the brace and the wall. EMIP is utilized as a backbone network to provide mobility and service management and interconnection to external networks.

1459827431-2ab11ede-0085-469d-a66d-ee9f852a3d2d

A take off ground effects compensated angle of attack system includes a radio altimeter and/or timer, a pitch angle system and a flight control computer. Specifically, the method involves administering to an individual a composition comprising carotenoids, vitamin E, vitamin D, vitamin C, thiamine, riboflavin, niacin, folic acid, pyridoxine, biotin, pantothenic acid, cobalamin, magnesium, manganese, zinc, selenium, chromium, copper, alpha lipoic acid, and lutein, wherein the composition is free of added iron. The micro-lens holder is initially to the light source to substantially optimize coupling of light into the input aperture of the optical fiber.

1459827431-2bff00d8-58bb-4ee4-9746-19d223742f62

One or more sensors mounted on a railcar sense the effect of weight of the railcar and transmit the data, for example via a communication link, to a user for storage and feedback where needed. The syringe carrier includes at least one rearward facing abutment member to abut at least one forward facing surface on a syringe. A registration device executes a validation testing of a calibration matrix associated with a spatial relationship between the image volumes and the position sensor. The notification can be sent automatically and/or sent a period of time after the e-mail is sent if an acknowledgment or reply is not received.

1459827431-331ccc4e-89c5-4c99-8fad-4997c2d5736b

A regular edition video of a video title is split into shots or scenes with time codes, and provided information, which is the semantic evaluation of the story, is added to the respective scenes to organize the scene score. The monitoring device adapted to handle a series of phase angle differences between a monitored current and a monitored voltage and establish a baseline phase angle difference after the network protector closes to connect the monitored transformer to a distribution network. A seal sub having metal-to-metal and/or elastomeric seals engages the top end of the production tubing and protects the tubing hanger body from contact with production fluid flowing from the production tubing below to a Christmas tree tubing above. Ranking mechanism facilitates in determining the quality of wireless channels, and the Acknowledgement mechanism facilitates in coordination of the transmissions in the system. Lb represents a single bond or the like, R1 and R2 each represent an alkyl group or the like, o and p each represent 0 to 3 or the like, X represents an oxygen atom or the like, and R3, R4 and R5 each represent an alkyl group or the like.

1459827431-6d60c6f8-3281-4d8c-b3d2-7ce61153d7d1

A transmitting apparatus includes a rate adjusting unit, a changing unit, a buffer control unit, and a transmitting unit. The tubing hanger has a side stem port formed through its body intermediate its upper and lower ends providing access to the central bore of the hanger and being aligned with the housing stem port. The storage device is nonvolatile.

1459827431-6e033213-0405-432a-b4e8-bcaa6f17cc1a

A control apparatus is provided for use in an electric vehicle having a throttle input device. The method further includes interpreting environmental variables, and interpreting probability distributions for each of the environmental variables that is uncertain. Sheet discharge roller pairs are disposed generally downstream from the grooves.

1459827432-02544c0c-77cb-42d0-8b14-e94236c435bf

Systems and methods of providing error tolerant robust simplex wireless data for systems employing time correlated data transfer are provided. 1 standard test access port interface and an additional Off-Chip TAP interface. The is stored by storing portions of the file each on a different storage node.

1459827432-86d4f0c5-18a5-4c22-ade3-a18b16b7fb01

A composite electrical connector assembly includes a housing, a shield, and an electrical contact. The submerging member can include an extension communicating with the intake. The codec may include circuits for partitioning the image data into fixed-size blocks of image data and compressing the image data in each fixed-size block based on the image content in that block using a logarithm-based quantization of selected transform coefficients.

1459827432-b164e9f9-0629-417f-a7c4-9d8ac953eb46

A vibration sounder includes an enclosure having a receiving space, a stator received in the receiving space and a conductive terminal. The simulation system simulates reservoir storages of consecutive time units of hydrological years based on initially assigned reservoir storages and corresponding reservoir hydrological data, and makes statistical data sets of corresponding relationship among the reservoir storages, water shortage parameters and probabilities. In locations for shielding TFTs, a high pixel aperture ratio is realized by forming a color filter, formed on an opposing substrate.

1459827432-c9cf5a50-04e5-40d1-b464-288b977b2e29

A medical instrument, or collection instrument, for collecting foreign material, such as calculuses and clips that have fallen in the abdominal cavity, is disclosed. The ferromagnetic semiconductor layers form heterojunctions directly on the source and drain of a regular field effect transistor. The second substrate includes a common electrode having a main common electrode arranged above the gate line and extending in the first direction. In particular system comprising directed control net comprising data containers and functionality codes search module for searching functionalities within directed control net by identifying input, and matching identified input with functionality code according to the directed control net structure for generating a group of identified functionalities. Other aspects of the invention provide a compression ignition engine for use in the method, and method of using the engine to combust fuels.

1459827432-ed296826-7a46-48fb-854a-769eded87a54

A method and apparatus for identifying a component failure within a thermal regenerator operates as follows. The photo detection unit is configured to generate a light current based on a received light reflected from a subject, the received light including an ambient light component. A second permeation unit is supplied by the non-permeate produced by the first unit.

1459827433-4cf88c10-6945-4f8c-87bb-6812a7d7f3d7

A method and system are disclosed for refreshing a memory module. Programmable correction values are employed to increase the accuracy of each binary-weighted planar electrode. The pressure-sensitive adhesive force of each pressure-sensitive adhesive material 8 is weak to such a degree that the pressure-sensitive adhesive material 8 becomes detached by a contraction force of each buffer material 7. A language interpretation telephone call is received at the language interpretation service provider from a caller speaking a first language.

1459827433-5483b0a4-4cf8-452a-9aa4-6e37540b22b4

The invention relates to a system which allows information to be transmitted from one or a number of utility providers to one of a number of customers, and vice versa. The laminated structure includes at least two wiring layers and an insulating layer interposed between them. A translation between these character sets and/or languages can be performed by examining the use of terms in aligned

text.

1459827433-bd36ec58-18e7-4dfa-967b-dc911ee026ab

Peptides have been discovered which are capable of binding to and internalizing with the human transferrin receptor. Provided is a nonlead glass for covering an electrode, which comprises, in mol %, B<sub>2</sub>O<sub>3</sub> 25-65%, SiO<sub>2</sub> 2-38%, MgO 2-30%, MgO+CaO+SrO+BaO 5-45%, Li<sub>2</sub>O+Na<sub>2</sub>O+K<sub>2</sub>O 2-25%, Al<sub>2</sub>O<sub>3</sub> 0-30, TiO 0-10% and ZnO 0-15%. The synchronization is carried out by first using a coarse synchronization which takes less power, and subsequently carrying out a fine synchronization to make a fine sync of all the pods on the Web. A merged document object model built from the refined merged node list is transformed into a hypertext mark-up language document. More specifically, for CAM-based search engines configured according to present embodiments, the CAM array includes state information gating circuits that selectively allow state information stored in the CAM array's match latches to be transposed onto the array's bit lines and then read from the array using the array's sense amplifiers. A head mounted display device and a method for realizing the focus adjustable head mounted display system are also disclosed.

1459827433-cb706785-b8f8-4a4a-9fc5-d5aa5a5b9d6f

An eating utensil has first and second elongated stick members extending parallel to each other and a U-shaped connector attaching the stick members together. The method receives the telecommunications signal and contemporaneously evaluates the telecommunications signal for compliance with at least two signal modes. The second lens unit comprises a plastic positive lens, wherein the second lens unit has a positive diopter. A biometric comparator compares the biometric digital representation representative of the individual with the biometric data gathered from the first biometric database and at least the second different biometric database, the biometric comparator utilizing a predefined match percentage threshold to determine a match.

1459827434-1237b22b-d69b-4ebe-a691-b5be2fe6ef4b

In the embodiments of the present invention, proposed is a method in which a COMP enabled UE chooses the BSs to be in its cooperating set and a BS partitions its bandwidth to serve its own UEs and UEs from other cells that have requested it to be in its cooperating set. The first oblong opening and the second oblong opening are oriented orthogonally with respect to each other. Using first gate signals based on reference gate signals for PWM control, the control unit calculates values of the individual phase currents from the first gate signals and the detected currents during the current detection period. The optical signals may be coupled to the optical couplers via a light path etched in the chips, which may be refilled with silicon dioxide. And when the current broadcasting station provides a digital broadcasting channel and an analog broadcasting channel across which the same program is currently being transmitted, the MPU alternately switches between a predetermined digital broadcasting channel and a predetermined analog broadcasting channel.

1459827434-17684ea7-7aa7-41c2-83af-badfc161e670

A system operable to determine a future point of time, at which the alcohol concentration in blood of a user is less than a threshold value. Each of a plurality of measurement ranges is set so that one measurement range overlaps a portion of at least another measurement range to form an overlap region, each measurement range being a portion of the test surface. This application also provides a cloud storage data access apparatus and system based on OTP. The guide causes the rear portion of the pedal bracket to be displaced backwards and downwards when the pedal bracket is displaced backwards as a result of application of a frontal external force to create a rotational displacement of the rear portion of the pedal bracket relative to the front portion.

1459827434-1cc82389-cfc5-44f3-84b0-3b0ee4839b38

A fixing device including a heating element and a pressure element, for fixing a developer image transferred onto a recording sheet is provided. Users may pay for online software and services with prepaid scratchcards. Each electrical consumer of the wind turbines is assigned to one of at least two groups and according to the group assignment is always switched on by an operation control unit when required, or only switched on if there is a sufficient power reserve. The connector includes a housing and terminal members disposed in the housing, with the terminal member having a U-shaped cross-sectional shape, so that a first portion as one leg of the U contacts the terminal of the electrode and a second portion as another leg of the U contacts the conductor of the flexible connecting member. The invention further relates to the role of thrombin and signaling via Notch proteins and the effect on thrombosis, angiogenesis, and/or differentiation, among other processes.

1459827435-7c0a5d2c-0c7c-4092-8a6b-5247752cde76

A hinge with a hinge cup can be inserted into a boring in a furniture part. In one aspect of the invention, a bi-modal slurry is fabricated by removing a first type of selected abrasive particles from a first abrasive particle solution to form a treated flow of the first solution. The waterproof roofing membrane has a release strip overlaying the adhesive strip which is removed immediately prior to applying and bonding the lowermost course of shingles to the waterproof roofing membrane. The decoder and/or encoder may be implemented on the wireless device. The second electrode includes a plurality of layers, and an insulating layer between the plurality of layers, overlapping the light emitting layer, and exposing a layer among the plurality of layers in an area corresponding to the pixel defining layer.

1459827435-9d4146a0-05e7-469d-81f7-e364df24cd96

Electronic apparatus and methods of forming the electronic apparatus include a lanthanide yttrium aluminum oxide dielectric film on a substrate for use in a variety of electronic systems. The airflow-guiding device includes a bracket and a plurality of shielding plates. The base includes a substantially cylindrical ring portion extending in a direction substantially perpendicular to the standing surface. This relative movement reduces the stiffness of the diaphragmliner assembly. The damping insert sheet has a plurality of elastomeric cushions, for example with a cushion thickness in the range 0. One or more elongated incising elements are mounted longitudinally on the balloon.

1459827435-a6a25992-bd37-42d0-a268-94ac6e44abbe

Provided are, among other things, systems, methods and techniques for providing resources to participants over an electronic network. Particularly, various embodiments of the present invention provide for a bio-oil composition that has chemical and physical properties that make it more cost effective and useful as a fuel without having to undergo deoxygenating processes such as hydrotreating. A gas motion control valve is arranged to open and close an upstream end of the second passage section. The surface segments are separated by at least one transparent surface boundary segment whose phase is situated between the phases of the adjacent surface segments. Additionally, the area of release is wider than the front and shield portions to allow for a better sliding of the material during unloading. At least one of the legs can be moved along the support towards and away from the other leg.

1459827436-150e9d5a-34fd-4113-9e0f-d0c14fffb016a

A method of manufacturing a golf club head with a variable thickness face having a central thickened region surrounded by a transition region tapering from the central thickened region to a thinner peripheral region. Each picture processing system includes an identical picture processing IC and a plurality of memories each capable of memorizing a picture frame and including at least two memories operating at different timings. The flooring is then laid and consists of a floor foundation, a decorative finishing coat, a transparent resin topping with anti-slip characteristics and an anti-scratch and anti-wear blanket. the sleeve is inserted

into the receiving holes of the top article and the bottom article until the outer flange of the top end rests on the top plate, the rod is then pressed to move to drive at least one spring tab to deflect outwardly until the outer flange of at least one spring tab is held in contact with the bottom plate. The loop heat pipe circulates heat emitted from the image display unit to equalize the temperature of the image display unit. The method further includes subsequently performing the epoxidation reaction at a preferred operating condition.

1459827436-2100a017-1c06-4a5f-badf-bd7fca503ece

A feature in a layer is provided. Thermal resistance of a first area is made almost equal to thermal resistance of a second area, first area is defined by the side of the heat-generating resistor closer to the electrodes and by the side of the hollow space closer to the electrodes, and the second area is defined by the opposite side of the heat-generating resistor and by the opposite side of the hollow space. Upon detection of a predetermined charge level of one of the rechargeable power supplies, a third charging current is provided to the first rechargeable power supply and a fourth charging current is provided to the second rechargeable power supply. The light-emitting body therefore extends the life of a light-emitting device and therefore the life of a light-emitting display. The deformable seal does not need to separate from the seal surface to allow fluid flow. The density of the glass fibers needle-punched into the substrate is gradually decreased in the direction from the above mentioned surface to the other surface of the substrate, and the deepest portions of the needle-punched glass fibers reach the depths of 85 to 100% of the substrate thickness.

1459827436-4ab1e821-315a-4437-b35d-8cc7a24661f7

A compliant swage has the ability to change shape to allow clearance of an obstruction while permitting expansion to go on in other areas removed from the obstruction. The method includes determining an amount by which a memory capacity of a DIMM can be reduced, and reducing the memory capacity of the DIMM in accordance with the determined amount to produce a DIMM having a reduced memory capacity which is available for use and a dormant memory capacity which is not available for use. The at least two frames comprise a set of point coordinates in a three dimensional coordinate system providing differing information of the surface of the object. Carotenoid analogs or derivatives may include acyclic end groups.

1459827436-e3f50d0d-0b97-4d24-970c-e8028a180c39

An organic electroluminescent includes an organic layer with a total thickness of 150 nm or over is included between an anode and a cathode. In an illustrative implementation, the data communications architecture communicates data across communications links. A determination can be whether the storage location is associated with a third party system. Thereafter, when fine detail request data including resolution data are received over the telephone line, the data are converted to the desired resolution, and sent to the network communication unit. These embodiments enable a network to have additional security while consuming low amounts of power. Coated seeds exhibit enhanced growth due to depression or elimination of undesirable fungi coupled with either enhanced growth of VAM fungus or lack of detrimental fungicide effect on VAM fungus.

1459827437-9b35edf1-c0c1-4aca-a363-280891f92eb7

An animal trap designed to restrain a raccoon. The semiconductor wafer has a saw street between each die. In either example, the top side of the handle of the shaving unit provides a surface for the affixing of a timed water soluble encapsulated material which includes; varying quantities of scent emitting substances. Thus, pitch and roll guidance information is simply communicated to the pilot of an aircraft. Each interlocking wall strip having multiple apertures defined within to allow for free airflow around, through and between each compartment. The hinge includes a column-side hinge part and a door-side hinge part, which can be pivoted about a hinge pillar relative to each other, and with an

integrated door retaining device, which includes a retaining element arranged on the side of the one hinge part, which cooperates with a retaining contour on the side of the other hinge part.

1459827437-a97cb5f3-24bb-4986-9ac5-85588df2a71b

Garments are convertible between multiple configurations so as to have an alternate appearance and/or be wearable as a different type of garment. The device consists of means for pre-defining at least one related area in a representation space comprising positions that can receive elements that are representative of the data, said space including at least one complementary area having no data representation. The main part defines an opening which comprises a ball lens receiving hole and a sprue. The injection of economizer fluid occurs only during a portion of the orbiting cycle when the injection port and corresponding grooves are aligned with each other. A first component at least has a universal contextual interface. A liquid crystalline compound represented by the general formula is provided.

1459827437-dc2d1e06-c196-448f-b656-6f3cc703c4b8

Back pressure is mapped within a network, and primary bottlenecks are distinguished from dependent bottlenecks. A current-constricting portion of the light emitting device structure is formed above a region more than 1  $\mu\text{m}$  away from the center of the groove in the width direction and more than 1  $\mu\text{m}$  away from the center of the hill in the width direction. The housing of each laser module is mounted in a holder. A generally central binder attachment fitting is positioned atop the load, with each of the lines then being removably and adjustably attached to the fitting.

1459827438-5985ffbd-0b91-4814-818a-3137df39e7b1

Provided are plate designs that enable a user to hold a plate in one hand, together with a drinking cup in the same hand. The method, in one embodiment, broadcasts or floods restore path requests in the network to expedite the identification of an alternate route and minimize the service disruption for failed virtual path. An antigen is covalently bonded to a glycolipid analog to provide a discrete molecule which exhibits an enhanced adjuvanting effect on the antigen which is greater than the adjuvanting effect attainable in the absence of such covalent bonding. During normal, non-accidental circumstances, the sector gear is in a rest position in which the engaging element is free from the sector gear.

1459827438-9090adf1-407a-45b7-a2c5-38df67e498a0

A method for scheduling tasks from a program executed by a multi-processor core system is disclosed. In some embodiments, the light-emitting devices include of multi-stack materials. A chamber in the drill bit houses a valve assembly for selectively diverting fluid between use in drilling and for use in fracturing. Withdrawal of the actuation member allows the restraint member to release the medical device which may then return to a deployed state.

1459827438-9ae60bba-1f35-4e42-a223-6deafe232822

A micro-lens module including a plurality of lens groups is provided. The expansion occurs from an external catalyst such as heat or releases the internal catalyst and allows the expanded tubular to become rigid. Each of the plurality of plates defines a plurality of rectangular holes.

1459827438-fa3f33e3-0c0e-4d93-9ca1-21130238297d

On-premises pager loss is reduced by alerting patrons they are out of range. The front group includes at least: a first lens having a negative meniscus shape; a negative second lens formed from a plastic and having an aspherical surface; and a positive third lens, in order from the object side toward the image side. Minimum and maximum output rates for each MPEG-2 bit stream are determined such that neither a queue for the bit stream in the multiplexer nor the bit stream's decoder will underflow or overflow. In the preferred embodiment, the garbage collection

routines are contained in separate mobile code module that can be changed dynamically interchanged to provide different garbage collection algorithms. Color schemes and font schemes for the document may also be separated controlled. If the event is not specific to a cluster node, but indicates an impending or actual failure of the cluster software, the method identifies and initiates an appropriate action to fix the condition or provide a workaround that will preempt an impending failure of the cluster system or would enable a restarting of a failed cluster software.

1459827439-18136b85-41ba-43b9-87b1-9b0bd9d5bdb0

The invention relates to a transistor that includes an ultra-thin body epitaxial layer that forms an embedded junction with a channel that has a length dictated by an undercut under the gate stack for the transistor. The auxiliary oil filtration system consists of an auxiliary filtration device, an integral oil transfer pump controlled by an electric motor and that is in electrical communication with an electrical control unit, an electronic pressure sensor, fluid conductors, and means for connecting hardware. The first set of colors and the first color mapping are used to construct a third color mapping that can be represented as a concatenation of an injective second color mapping with the first color mapping.

1459827439-960b0c3e-53b0-4352-aab6-e414e4232d68

A speaker driver surround has tapered thickness to provide improved linearity of the force versus displacement response. High molecular alcohols are produced from ethanol by using calcium phosphate-based compounds such as hydroxyapatite  $\text{Ca}_{10}\text{P}_6\text{O}_{28}$ , tricalcium phosphate  $\text{Ca}_3\text{P}_2\text{O}_8$ , calcium monohydrogen phosphate  $\text{CaHPO}_4$ . Subsequent to other processing treatments, a portion of the sacrificial dielectric layer is decomposed and removed through a portion of the porous matrix using supercritical carbon dioxide leaving voids in positions previously occupied by portions of the sacrificial dielectric layer. The secondary circuit has a timing generating circuit generating timing signals for generating the transmit signals. Only the forward end of the probe is introduced into the liquid having the sample submerged therein, while the other portion of the probe is covered with the insulative liquid. In this way, growth of odor-causing fungus and bacteria is inhibited.

1459827439-d603edaa-965d-4154-b0dc-9b91dba87cd0

The present invention concerns an adherence gene from *Helicobacter pylori*, a polypeptide coded thereby and antibodies against the polypeptide. The upper surface of the aircraft has a known elevational relationship relative to the doorway of the aircraft, which is used along with the sensed position to align an aircraft engaging portion of the movable bridge with the doorway. The mounting plate is mounted prior to installation of the electrical receptacle in the electrical box. The reinforcement member is coupled between the sprockets. The invention further relates to electronic devices in which there is at least one active layer comprising such charge transport compositions.  $1 \text{ nmolcm}^{-2}$ ; the phosphorus-based coating has a thickness of less than about 10 nm; or the surface phosphorus-containing group density of the coated regions of the substrate is equal to or greater than the surface hydroxyl group density of the oxide surface of the substrate.

1459827440-296b4589-94de-488f-9647-8f090c604633

In a vehicle differential unit according to an embodiment of the invention, a planetary carrier that is a rotatable member that rotatably supports planetary gears is formed of cylindrical members that are unable to rotate relative to each other on the rotational axis of a pair of output shafts. The clock preferably has an oscillator for generating an oscillating waveform signal at a preselected frequency and a frequency divider responsive to the oscillator for dividing the frequency of the oscillating waveform signal. A local data structure is maintained within the switching element wherein the local data structure contains data used by the switching element in its operation in the communications system. The force

transfer device serves as an integral part of a level indicator for both viscous fluids and lower viscosity liquids. After the user rotates a jogshuttle knob, the list rolls down a low rate.

1459827440-91785b13-1e93-4227-9089-1e0900529120

Apparatus and process for the manufacture of articles to be worn on the lower torso of a wearer, such as disposable absorbent article like diapers, training pants, adult incontinence articles, feminine care articles and the like. According to one aspect of the present invention, a method for processing a transaction in an enterprise environment includes receiving a request to start the transaction, storing information which indicates that the request to start the transaction was received, and accessing a first resource manager associated with the transaction. A flexible member is provided in the transmission located between the massage member and the motor that drives the massage member, and a pressure sensing mechanism monitors the pressure applied to the massage recipient through the flexible displacement of the flexible member. The structure of the inductor constructed such that electrical resistance is reduced therewithin, thus increasing the efficiency of the inductor.

1459827440-b473f9ca-06e5-42b5-95d7-494c17d4aa18

Provided is a method of treating or ameliorating a number of indications in an animal, including a human, comprising administering an effective amount of a compound of the formula I or IA, . A fiber bonding device feeds an optical fiber through a supportive sheath having a ceramic tip at its end. An outer communication portion of each of the upper airflow passages and an outer communication portion of each of the side airflow passages are exposed inside holes formed in a second frame body disposed in front of the first frame body. In one embodiment, the return signals are imaged onto an intensified CCD or APA array that capture two successive laser pulses through the utilization of dual pixel registered cameras. The carbonaceous deposits are incinerated and then the catalyst is recirculated to the reactor.

1459827441-c073f4e2-8eb6-428e-8ff7-8f8ea51b3153

A system for determining a position of a catheter is provided. A set of rendering intents, and a colored document or image is received. The spaced apart baffle walls increase a viscous resistance to the buoyancy driven convective flow inside the manifold. For each comparison, one of the encrypted biometric entries is subtracted from the scrambled encrypted biometric to get a calculated noise.

1459827442-2c77cdd6-20b1-40a0-b34c-a56e14e8a3ad

The present invention is directed to different methods used in the formation of an ink, as well as being directed to the formation of layers used in the fabrication of a solar cell, particularly the absorber layer. A receiving device receives the communication. When the web server associated with the host website receives a request for a digital image embedded within a webpage of the external website, the web server analyzes metadata associated with the digital image to produce selection criteria and selects additional content to add to the digital image based on the selection criteria. The inventive plastic sheet is preferably used as a core layer in sandwich composites. The ferroelectric liquid crystal panel includes a backlight, which is turned off during the reset period and turned on during the remaining period.

1459827442-8aaf664b-e9d3-48c4-8770-46635f35f1c2

Systems and methods for determining a position of a mobile device including a magnetic signal source deployed at a predetermined location. Furthermore, the present invention provides a reliable method to determine whether a subject with a cancer of epithelial origin who has been determined to be c-erbB2 positive by IHC and by FISH should be excluded from c-erbB2-direct treatment because of a non-significant level of phosphorylated c-erbB2 in epithelial tumor tissue. Thus, a

surface electrode structure on a ceramic multi-layer substrate is suitable for both mounting of SAW devices by gold-gold bonding and mounting of other parts by soldering and which enable consistent mounting of individual parts using a ceramic multi-layer substrate to provide higher reliability.

1459827442-b3ec6b81-9624-43a9-aa5b-6ddc09e86e8c

A toner process comprising mixing an acidified dispersion of an acicular magnetite with an anionic latex, an anionic carbon black dispersion, and an anionic wax dispersion. The first transistors are MOS transistors, and each first output terminal is associated with a current mirror formed of MOS transistors, the current mirror providing to the first output terminal a current depending on the current flowing through the first transistor. Interference fringes of object light are found on each computation point within a first area on a recording surface, and interference fringes of object light are found on each computation point within a second area on the recording surface.

1459827442-bc6916ae-8c18-491b-b8d2-d2d88a034088

According to different embodiments of the present invention, various methods, devices and systems are described for managing power in charge pumps in a non-volatile memory system having a high voltage charge pump and associated regulator. The game-piece loaded into the toy body is launched from the toy body using a restriction force acting on the flipping member. The logical state of a center bit triplet of the byte is detected.

1459827442-f940a1bb-7522-4e7e-9db1-31d5ac7cf4f8

Techniques for improved semiconductor device performance are provided. Execution of an execution tree for the data repository generates a final evaluation result. Furthermore, a method for assessing previous absolute ethanol consumption can be accomplished by correlating the ratios of PEth precursor and PEth homologue levels in subjects to ratios obtained from reference subjects with known previous ethanol consumption.

1459827442-fcbb59ec-09c1-4ac5-ada4-cdc74422f5e5

An integrated circuit packaging system is provided including forming an interposer having a coupling slot, securing an upper die on the interposer, mounting the interposer over an integrated circuit, and coupling the integrated circuit to the upper die through the coupling slot. These micropumps are fabricated with materials and structures that improve performance, efficiency, and reduce weight and manufacturing cost relative to presently available micropumps. The hierarchy is utilized for one or more of bandwidth reservation, bandwidth sharing, and/or bandwidth allocation within the hybrid LAN. The spacing between the electrodes exerts a capillary force on biological fluid present at the open distal end of the outer electrode.

1459827443-2e3d569d-df53-47bc-8165-63b9b3637643

A radial top cover gasket is used for sealing a disk drive assembly. The connector includes a block, a connector body formed on a front surface of the block, a protrusion extending from a top of the block. The TPA device is loaded on the housing to engage the bar and is moveable between a staged position and a locked position with respect to the bar.

1459827443-92a369a9-0ac0-4a14-aed8-c2dbf1a995c2

A liquid crystal display device and an electronic apparatus have superior visibility. The system further includes a movement member configured to perform a movement or assume a certain physical posture, based on the result of content analysis of the information signal. Such census information is made available to emergency workers and is of significant value in rescue efforts following facility evacuations. The computing arrangement receives data from the projectile indicative of a start and end time of a trajectory of the projectile, the first distance

travelled by the projectile as sensed by the sensing arrangement and processes the data as a function of the start and end time to determine the position of the player within the playing area.

1459827443-a69c071a-9c6c-4ea5-814f-4afb7f11289f

The present example provides a device for capturing insects from a distance with adhesive pads. The invention also relates to immunoassays or oligonucleotide assays which utilize soybean peroxidase as a marker. The apparatus includes insulated electrodes to be coupled to a generator for subjecting the living tissue to electric field conditions sufficient to cause movement of the polarizable intracellular members toward the cleavage furrow in response to a non-homogeneous electric field being induced in the dividing cells. obtained by polymerization of a monomer starting material containing 60 wt % or more of an alkyl acrylate with a C8-12 alkyl group and 5 wt % or less of a radical polymerizable monomer with a carboxyl group.

1459827443-d07f0683-2823-4df5-8c4b-0f8d01b12936

A grey cast iron alloy for producing cylinder block and/or cylinder head castings including iron, carbon, silicon, manganese, phosphorus, sulphur, tin, copper, chromium, molybdenum and nitrogen. an organic substituent and at least one zinc binding group covalently attached thereto; or b. The amorphous carbon barrier layer is conditioned by providing a flow of a conditioning gas comprising H<sub>2</sub> and a diluent, forming a plasma from the conditioning gas, which conditions a top surface of the amorphous carbon barrier layer, and stopping the flow of the conditioning gas.

1459827444-48fd6b6c-868b-45c7-a1ae-ba173fa26d8c

A compact and easy-to-use walking assisting device capable of reducing constrained feeling given to a user and allowing a free swing of the arms of the user in walking. Each group of wafers is allocated to a respective one of plural manufacturing devices in a state in which each group is housed in a respective one of plural division carriers and one sheet processing is applied to the wafer groups in the plural manufacturing devices in parallel. The currency processing machine also includes an information collection system collects identifying information about the documents, sorting bins for receiving the documents, a sorter; and a data processing system. The lower heel plate is associated with a cantilever portion that supports the upper heel plate laterally. In a preferred embodiment, the second component includes a leaving group, and the method further includes first thermal processing the film to cause a solvent but not the leaving group to be removed from the film, after which second thermal processing is performed to at least substantially remove the leaving group from the film. The gear detection unit includes: a plurality of voltage detection circuits, and a plurality of thermal resistors.

1459827444-6da2922c-9ac4-420e-8eec-03bccbef97ab

A method and system provide for sensing multiple wavelengths simultaneously in a single wavelength sensing device. The foam generated in the mixing manifold is discharged through a hose and nozzle connected to the mixing manifold. Accordingly, the invention provides a downhole motor assembly comprising a motor, at least one thrust bearing and a bent portion, the assembly having a first end and a second end, the first end being closer to surface than the second end, in use, wherein the bent portion is closer to the second end than is the at least one thrust bearing.

1459827444-9b3690cb-255e-4551-84b2-5c9478163cba

A voltage-controlled oscillator includes a bias circuit and a delay circuit. The data transfer device is configured to transfer data between a plurality of data transceivers and at least one memory having a first memory area. The heavier compounds can be recycled to an FCC unit or delivered to a separate FCC unit. An array of pins is substantially perpendicular to the major surface of the processor.

1459827444-f90c3e4f-91e2-498b-9b3e-a7037fb328e6

Devices, systems and methods for retracting, lifting, compressing, supporting or repositioning tissues, organs, anatomical structures, grafts or other structures within the body of human or animal subjects for the purpose of treating a diseases or disorders and/or for cosmetic or reconstructive purposes and/or for research and development purposes or other purposes. Such layer is coupled to a planar element consisting of a cloth or a flattened stocking formed by weaving of a single metal wire. The two spotter arms extend out so as to be able to support a barbell. In a last step, the received information is stored as metadata together with the data of the picture in a memory 5.

1459827445-5384908f-1c01-44c5-b849-ecf63feaf9af

An object of the present invention is to provide a method for purifying a highly pure niobium compound and/or tantalum compound, the method enabling the purification of a highly pure niobium compound and tantalum compound in a simplified manner at a low cost. Specifically, the input digital signal is first interpolated by a factor of eight and lowpass filtered to form an intermediate signal. On actuation of the lift mechanism the coiled-strip springs are untensioned by coiling up along the guides, thereby lifting the chassis plate.

1459827445-5a12532f-ee47-4cc9-9b02-c827f3ea1a36

Various embodiments of a system and method for managing shipment release from a storage area in a materials handling facility are described. A first support device at a distal end of the arm is adapted for suspending a portion of the wire. When a fading condition is detected, the radio receiver reduces the large phase variation associated with the received signal to eliminate the audio clicks. If the measured temperature is within a threshold temperature range, the memory device is prevented from being placed in the clocked standby mode. The electric field shield transmits a magnetic field generated by the magnetic force generator to make it arrive at the magnetic force receiver but shields the detecting electrode from an electric field generated by the magnetic force generator to interrupt arrival to the detecting electrode and not to substantially obstruct the detection by the detector.

1459827445-9808700c-413d-46a2-bd1a-754491106e75

A method of manufacturing a device includes forming a covering layer having affinity for a filler to be injected into a space between a first base and a second base, on at least one of the opposing surfaces of the first base and the second base, and then injecting the filler into the space between the first base and the second base. A PCB connector is structured by a terminal plate 3 provided with an insulating plate body 4 which can be cut at any portion and a terminal 5 placed in the plate body to project both electric contacts 6, 6' of the terminal from front side and rear side of the plate body, and an insulation cover 38 for mounting the terminal plate therein. An additional code signal generated in the navigation system platform can be measured where the additional code signal is designated as a timing reference signal. A retractable hollow needle member or other specimen collection device is coupled to the distal end of the first spring section.

1459827445-badff319-e903-4cfd-a1ff-995590e25f8c

A mounting bracket is defined by three pairs of parallel planes. The main body includes a plurality of first-type layer portions each including a first-type semiconductor chip; and a second-type layer portion including a second-type semiconductor chip. The shell and liner of the exhaust manifold include first and second composition formed from ferrous and non-ferrous metal powders, ceramic powder, and a binder added thereto to form the manifold. If certain thresholds, such as predetermined number of teats on a cow, have not been met a cow is not counted as having been properly prepped. The liquid crystal layer proximal each pixel unit is divided into a first domain set and a second domain set, wherein the first alignment pattern and the third alignment pattern correspond to the first

domain set, and the second alignment pattern and the fourth alignment pattern correspond to the second domain set.

1459827445-f08787c8-69ed-4f4d-bb34-5520af029220

An orthodontic appliance and system are provided for adjusting the relative positions of mandibular and maxillary arches. The extension skirt includes a plurality of circumferential segments. The default quote identifies default values for a number of variables defining a default barcode printing supply product; at least one default quantity value and a price for the specified quantity of the default product. The interior of the housing includes a reflective surface for maximal illumination of the object. The agents may be independently released from reset by the separate reset signals.

1459827446-8e03cdc6-02f9-4541-837a-18c737289d91

A mounting apparatus is provided for mounting a data storage device. The soft magnetic laminate layer comprises a soft magnetic layer having a thickness not larger than 500 and a nonmagnetic layer, comprises a first soft magnetic layer and a second soft magnetic layer differing from the first soft magnetic layer in the crystal structure, or comprises a layer of a granular structure consisting of magnetic particles and a nonmagnetic matrix and a soft magnetic layer. Averaging of at least some of the image pixels of the luma component is done over a plurality of image pixels to provide a plurality of surround function values.

1459827446-940e582c-c585-4c18-a742-071732bace95

A method and system for responding to a request to establish a dial-up data session from a user terminal to a remote destination. A direction microporous diffuser includes a holder member having plural compartments and plural hollow, elongated members having porous sidewalls, the plural hollow, elongated members supported in the plural compartments of the holder member with each hollow, elongated member including an inlet port at a first end of the elongated member and second end of the elongated member being sealed. When the shutter button is full-depressed, an image signal of an object is recorded in a recording medium. A drying method includes: immersing a substrate into a fluid contained in a bath; removing the substrate from the fluid into a chamber; and supplying isopropyl alcohol vapor into an interface between the substrate and the fluid perpendicularly to a vertical axis of the substrate.

1459827446-cbd8c5a0-96a2-4045-8df4-68c6784350ef

A food chafer with a releasably lockable rolltop is provided. A device for support on the ground is arranged at the lower end of the lower V. The seating layout on the deck provides the amenities of an extremely comfortable watercraft capable of seating multiple passengers while providing sufficient storage space for all necessary items for such a voyage. The forwarding data structure can be a hash table, a direct mapped table or other structure.

1459827447-19574e72-8c10-43cb-b1f0-45306b6a3530

A data protection system selectively deletes data from an electronic device when the device is reported as lost or stolen, or when another data protection triggering event occurs. The invention is characterized in that a first perfusion index is defined as a reference value and the subsequent perfusion indices are determined as relative deviations with respect to the reference value, said relative deviations being presented in the form of analog, graphic elements on the user surface as information concerning the 10 variations of the perfusion. The separating device is in an inactive position when the pressure in the first pressure chamber is equal to the pressure in the second pressure chamber. Guide wall is disposed downstream of lift plate in sheet conveyance direction and spaced from lift plate with predetermined gap, to guide the conveyed sheet in diagonally upward direction intersecting placing surface of sheet tray. The data stored in each of the performance counters associated with the subset of events selected is

periodically read during the collection session. The first frequency signal generator is coupled to the second frequency signal generator to supply the reception frequency signal to the second frequency signal generator as a reference frequency signal.

1459827447-1a6fc033-c44f-4a39-9baa-17dd38820ae4

Microelectronics have now developed to the point where radiation within the terahertz frequency range can be generated and used. The first developer holder is disposed so as to face an image holding member and rotates so as to move in a direction opposite to a direction of movement of the image holding member at a first facing portion. The method comprises the steps of aspirating the cellular material into a fluid delivery device which incorporates a syringe arrangement. The gum arabic modified by the method of the present invention can be used as an emulsifier for use with beverages, confectioneries, chewing gums, oil-soluble flavors, oil-soluble colors, oil-soluble vitamins, etc.

1459827447-4aaf4572-eb1a-4471-807d-37b56cbf3910

The present invention relates to novel triazole compounds of formula, their derivatives, their analogs, their tautomeric forms, their regioisomers, their rotamers, their stereoisomers, their polymorphs, their pharmaceutically acceptable salts, their pharmaceutically acceptable solvates and pharmaceutical compositions containing them. According to the invention, a support is integrated into the brush support, with de-tensioning for the electrical connecting cables of the machine, which means that a secure fastening, de-tensioning, and insulation of the connecting cables is achieved without additional components and without additional expense in the assembly of the machine. The system also includes a data management system and an outbound web server.

1459827447-504186aa-af09-4824-8e1a-c4ff24c57112

An improved catalyst activation process for olefinic naphtha hydrodesulfurization. The present invention also provide methods of making the liposome compositions provided by the present invention. Brake signals generated in the towing vehicle are transmitted between the towing vehicle and the trailer. The color printer includes a cache memory, each cache address including first and second entries. An attenuation normalized peak of the harmonic spectral component is reduced at a region spaced from the transducer as compared to the peak at a region adjacent to the transducer.

1459827447-68b2832f-83d4-4b7d-873c-d30f5639dc67

A liquid dispensing device including a body generally having an air passage and a liquid passage. The lamp casing is screwed to the front panel, or is hinged to the front panel to allow rotation of the lamp casing. A gaseous fuel path is connected to the path at an intermediate location thereof.

1459827447-de158e0a-d6e6-4a9c-9052-a03abb5d83b1

A separation column and a method of preparing the separation column are provided. The multiple display devices include a master device with a master display and at least one slave device with a slave display. Side frame members of the panel define interlocking protrusions and channels for making interlocking joints between panels. In one example of the invention, the frame section comprises a rigid frame section of the personal mobility vehicle.

1459827448-17afc1f9-470d-47ac-9bc9-05e5a2783568

A substrate includes fine lines. An upper, a lower, a right and a left sideboard are respectively provided with two dovetail-shaped projections spaced apart by a same shaped groove or two same-shaped grooves spaced apart with a dovetail-shaped projection, and an L-shaped groove respectively formed at two rear corners of the upper, the lower, the right and the left sideboard. Once the pattern is correctly captured and stored, the test pattern is transmitted to the logic device at the

normal operating data rate to perform timing calibration. When the cellular phone is in an unfolded state in which the angle formed between the front surface of upper casing 2 and the front surface of the lower casing 3 is maximum, first control plate 10 and second control plate 11 have a maximum projected area on the surfaces of upper and lower casings 2, 3. , and Z is a phenyl group which may be unsubstituted or substituted, the substituent on said phenyl group is amino, or an amino nitrogen-containing group; or a pharmaceutically acceptable salt thereof, possesses excellent PDE IV inhibition and is useful as a pharmaceutical drug, preferably an anti-asthmatic, etc.

1459827448-771359cc-9654-4e36-b912-769227a9d797

Embodiments of an encoder are disclosed. The first heat shield plate covers all around a curved section of the U-shaped exhaust pipe in the vicinity of the exhaust port. The method is particularly well suited to sealing in faulty formations or sealing sites and may be used in sealing within salt mines which contain brines. A program guide generator 24 produces a program guide from the content descriptions and from the dynamic information, and outputs the program guide. When an NSE is removed from the BSS, the BSS automatically sends a modified NS\u2032-Reset message to the SGSN to free an NSEI. Such enriched populations are useful for studies of the molecular events that occur during differentiation and for generating cells for cell replacement therapy.

1459827449-75957325-87a5-4ff3-aacc-22b14b81c5ed

An AC plasma display panel has a pair of panels disposed in spaced opposed relation, and each having a plurality of electrodes formed on an opposed surface thereof and mostly covered with a dielectric layer; and a sealing member which seals the periphery of the pair of panels. This has been shown to hamper the performance of a communication system resulting in incorrect symbol decisions, particularly at low SNR. Power transmitted within the frequency passband of a circuit is filtered through that circuit to power a corresponding remote device. A disconnection circuit is connected between the nodes N1 and N2 and between the nodes bN1 and bN2. If the result of the test is fail, only the first bare chip is removed and replaced with a new bare chip. This circuit causes the pixel cells in each of the neighboring display lines in the respective display line groups to emit light at different brightness levels based on weighting values assigned to the display lines.

1459827449-77dc2139-7324-436a-91b0-0712fff83221

The present invention relates to a method for forming self-aligned metal silicide contacts over at least two silicon-containing semiconductor regions that are spaced apart from each other by an exposed dielectric region. A rundeck is edited to include IC layers and device structures of interest that may require validation. The authentication server performs authentication of the user based on the user credential information transmitted from the image forming apparatus.

1459827449-79d45893-2d52-4afb-abc5-323f1e5a2d0c

A method for winding a skein-shaped windable product onto a spool formed of two spool halves which converge conically towards a middle radial plane with two flange discs at the outer ends, includes the steps of rotating the spool about its central axis during the winding process, and feeding the windable product by a guide that moves along the length of the spool. The user interface is configured to allow the user to define the input in a graphic form, or a textprogramming form, or a combination of both. A capillary-acting epoxy resin is filled into the assembled housing assembly via a filling-in opening and, on account of its capillary action, closes the interspaces between the semiconductor chip and the housing frame. More particularly, the present invention relates to the synergistic enhancement of activity of a combination by menthyl acetate or Geraniol.

1459827449-7ac66ce6-319a-4b4f-a737-8dfbff8a5937

The invention provides isolated nucleic acids molecules, designated 57658 nucleic acid molecules, which encode novel uridine kinase family members. The upper electrode comprises a first under-layer, a second under-layer, an intermediate layer and a surface layer laminated from the insulation layer side. The gelled liquid hydrocarbon treatment fluids of the present invention are suitable for use in subterranean treatment operations, such as subterranean stimulation and sand control treatments like fracturing and gravel packing, that may be carried out in subterranean formations for the production of hydrocarbons. Thus the synchronous motor operates efficiently, heat generation of the synchronous motor is prevented and power factor is improved. In addition, the reactor generates said divergent flows without need of an RF or AC generator. The conditioner cleaning device of the present invention is capable of increasing cleaning efficiency by uniformly spraying a cleaning solution on upper and side faces of a diamond disk.

1459827450-0cbc2cd4-bf9c-4e3a-ae57-b653864417e5

A luggage case may include opposing sidewalls forming minor faces, opposing sidewalls forming major faces, and opposing end walls together forming an article defining an enclosed space. Variable resistors are placed in the PLL in places that facilitate tuning. Path expressions can be more easily created than by creating the path expressions directly in SQL. The gate of NMOS transistor is connected to the output end of the NPN Darlington circuit.

1459827450-ca839a1b-9e3c-4ddb-90f5-56257937469a

A papermaker's fabric, usable in the forming section of a paper machine, has three layers of cross-machine-direction wefts. In aspects, the users are placed into common virtual rooms or virtual interactive environments to permit sharing of content and chat between the individuals in a same virtual interactive environment. The first aspect, designated as \u201clatent masking\u201d, defines a mask in a persistent material like silicon oxide that is held abeyant after definition while intervening processing operations are performed.

1459827450-e0e8e7e3-91c2-4631-a844-bf29f8311107

A skywatcher's tripod has a seat mounted on a rider support that swivels 360 degrees on a base having upwardly foldable tripod legs. Also described are polycarbonates produced by these methods. The variable inductor comprises a primary inductor coupled to the VCO to produce a magnetic field based upon a current flowing through the primary inductor and a secondary inductor magnetically coupled to the primary inductor, the secondary inductor to affect the magnitude of the effective inductance of the primary inductor. The invention also includes an elastomeric nitrile rubber product made by the process, such as examination, surgical, or work gloves.

1459827450-ecfc8218-12f4-468c-b0f0-73ab36e805d9

The present invention implements an auction in which multiple types of goods may be auctioned in a dynamic process. When an object is moved on a client terminal, a message indicating the movement of the object is transmitted to a server terminal. Also disclosed are transgenic seeds for growing a transgenic plant having the recombinant DNA in its genome and exhibiting the screened enhance trait. Each SIW may be fetched and executed as an independent instruction by one of the available execution units. The load management system monitors the heat buildup in a coiled portion of the charging cord and issues a corresponding signal to control the current flowing through the cord. The method further includes determining that the frame was sent by the second node based on an extracted first label value and that the frame is associated with a first service based on the extracted second label value.

1459827451-1423966b-fbec-4196-a287-f94375ea03ff

Disclosed herein is a semiconductor device having a power cutoff transistor including a semiconductor substrate of a first conductivity type; and first and

second wells of the first conductivity type formed to be spaced from each other in the semiconductor substrate. The method in part prevents an excessively high pressure in case of an unintended stenosis, e. The gap between the second radiating conductor plate and the first radiating conductor plate can be changed. If a first cache partition satisfying a first predetermined cache partition condition and a second cache partition satisfying a second predetermined cache partition condition are detected, then the size of the first cache partition is increased by a predetermined segment and the size of the second cache partition is decreased by the predetermined segment. The spherical beads are 1 m or less in half bandwidth of the distribution of particle diameters and are made uniform in height projecting from the coating layer 18.

1459827451-2ad95439-672c-4835-a564-5d90cff4d7a8

The core layer of a core substrate is made of carbon fibers impregnated with resin. A stirrup, tab and tunnel are disclosed. Secondly, placing the growing substrate and a quantity of catalyst separately into the reacting room. A cutting mechanism having at least one blade is provided for contacting the substrate and inducing a cleaving wave therein.

1459827451-339dbe65-756d-4ee3-8d03-beebd774a117

Disclosed is a sports training glasses for assisting a person training in a sporting endeavor requiring handeye coordination to focus on a specific object, such as a baseball or golf ball. One aspect provides a technique to generate fingerprint of computer and its user based on the information collected through the actions a user conducts on internet. The door handle assembly also comprises a bolt moveable from a first bolt position where at least a portion of the bolt is inside a wall aperture, thereby engaging the door into the wall aperture, to a second bolt position where the portion of the bolt is outside the wall aperture, thereby disengaging the door from the wall aperture. The local memory of the idling SPE stores data stored in the global memory and used by the processor core of the running SPE, before the data is used by the processor core of the running SPE. The electronic ballast system includes a circuit that allows for a fluorescent lamp to be energized without the preheating of it cathodes, as well as includes a circuit for power factor correction that uses of an average current mode implemented by a pulse-width modulator to derive a power factor for the electronic power circuit that approaches unity.

1459827451-880097c7-d79f-4df7-a937-343b38b30e90

An original feeding device for feeding a sheet-shaped original comprises an original loading tray for loading the original, a width direction aligning plates and for aligning the width direction of the original loaded on the original loading tray, and an original size indicator. A theoretical approach based on a carefully developed model could shed light on its likely general structure, thereby providing guidance to experimenters. Having latched an indication that the microprocessor has been removed and replaced, the detection circuit asserts appropriate signals to start the microprocessor in a safe mode.

1459827452-044d8e81-63c5-4cb7-8fdb-6451da231393

Methods and systems are provided for controlling SCR performance in a boiler. Also disclosed are a contraceptive kit or hormone-replacement therapy kit comprising the drug delivery system, and a combination preparation that simultaneously provides contraception and treatment of a sexually transmitted disease comprising the drug delivery system. The PLL behavior is based on actual circuit parameters and produces accurate behavior in a fraction of the time required using an analog simulator. The first, second, and third pulses are combined to synthesize a driving pulse, and the driving pulse is supplied to a laser unit. These rules are part of a charging policy, which may optionally be determined by the content provider. The electrical current generated from each cell is drawn away with an interconnect and support structure integrated with the gas manifold.

1459827453-4ec2c725-ea0e-4622-ac4c-147f946ab464

A semiconductor module and a data memory module having the same are provided. A control part obtains gradient vectors of the substrate in a plurality of gradient vector measurement areas and surface form of the substrate on the basis of outputs of the light shielding pattern imaging part, to obtain a stress in a film formed on the substrate. Each signal conditioning circuit has an output that is electrically connected to an associated control device. The second catalytic composition includes at least one of a zeolite or a second catalytic material disposed on a second substrate. Therefore the production cost of the winding base is reduced. The base unit has a base unit-gear segment portion and the transfer unit has a transfer unit-gear segment portion.

1459827453-5da1d98c-4975-41fd-a1d9-06c0d799face

Disclosed herein are systems and methods for reducing power plant CO<sub>2</sub> emissions. The integrated warning and vehicle lamp includes first and second arrays of LEDs arranged on a support projecting from the base. It also relates to devices containing such structures. The resulting polyMADAME is converted to hydrochloride and then blended/ reacted in an aqueous medium with tannin to obtain a homogenous poly-tannin composition. The method includes stabilizing the spacecraft, initializing the attitude of the spacecraft using star tracker data, and estimating the attitude of the spacecraft. The patch is attached to the cushion portion and is constructed such that when the airbag is in the inflated configuration, the airbag retains a depression between the cushion portion and the throat.

1459827454-225b8fba-1ce3-44c1-b89c-22a651d202b8

A backlight of an LCD device includes a protection circuit that permits leakage of a high voltage to a ground terminal. The handle has a blade seat, a cover, a cavity, a slide slot, a passage and a pivot slot. Responsive to a user selecting multiple install and configuration templates, the user is enabled to apply a relative weight for each of the selected install and configuration templates, wherein the relative weight is applied to each selectable software component included in the weighted template. The resilient core has an upper surface affixed to the inner surface of the upper retaining member. In particular, the present invention relates to photochromic compounds derived from benzofchromenes, which in the open form have especially long-wave absorption maxima making it possible to obtain violet to blue tints when used in phototropic glasses. Also provided are compositions comprising compounds of formula I and a carrier, diluent or excipient as well as methods of treating a disease or condition mediated by the binding interaction of alpha-4 integrins to its ligands such as inflammatory diseases.

1459827454-7d0f7935-2b5f-4894-acc3-d000fd0c4161

Embodiments of the invention are directed to systems and method for providing predictable timing for read operations in a multiport memory device. A blade is attached to the shaft. The server customizer module is installed on each of the plurality of servers for subsequent execution as part of the server build/customization process. Next, the support node of the legacy wireless network interacts with the packet switched wireless network to receive the mobile terminal's subscriber data.

1459827454-be74022d-8246-410f-b2e4-1c4fd8eecd1a

The invention is a communications system that provides communications services to an end-user. In some embodiments very high resolution and high color fidelity image display is possible. The binder comprises from 55 to 99.

1459827454-c6f8ea32-4d54-478b-baea-f1821f6bccd9

A method is disclosed wherein a server receives and stores report definitions. The speaker cabinet is acoustically coupled to the hollow member by a press-fit coupling having a press-fit direction and mounted on the body part by at least one

fastener having a fastening direction substantially perpendicular to the press-fit direction. Specifically, the instruction set simulator acts as a master to the simulator circuit, thus providing a faster simulation environment. The shift adding-and-subtracting means also execute shift addition-and-subtraction processing of butterfly operations that process shift addition-and-subtraction for one stage or more. When the load of coil is placed onto the liner of the present invention, the fingers thereof serve as the load-bearing surface, and bend or deflect in accordance with the weight of the load, to thereby support the load of coil. The other element sets may be controlled by respective output signals of the hybrid matrix.

1459827455-3f9a5d24-bebb-4ebd-bfac-3daca74d9c34

A device for cutting a sheet rock panel. Also described are irreversible inhibitors of Btk. The knock reset signal holds the knock detector in reset, thus disallowing or masking the processing of signals by the knock detector that may be mistaken for knock. Once the custom media channel is defined, an Internet search is performed based on the user preferences in order to identify media presentations for the custom media channel. A second cable is inserted through the opening of the stator slot and secured between this first cable and an opposing securing shoulder in the wall of the slot, after which a third cable is inserted through the opening in the stator slot and secured between the second cable and a securing shoulder in the slot wall opposite the second cable, and so on. The rod moves rapidly from the home position to the intermediate position.

1459827455-75992156-ea8d-4197-995f-fe4ecd349d44

A storage server for efficiently retrieving data from a plurality of disks in response to user access requests. In one embodiment, the magnitude of the ambient light is measured and an offset proportional to that magnitude is fed to the obstruction detection system such that the data indicative of an obstacle are not obscured. The tube has a bend adjacent the second end. A distal end of each extension arm has an axle non-rotatably engaged with a follower rotatably engaged in a vertical plane.

1459827455-8d4274b0-b0ce-4589-a92c-963ed157ec0b

One aspect of the present invention relates to a system and method for improving memory retention in flash memory devices. The flow of the fluid is further controlled by detecting sound within the environment at a second time and generating a second profile based upon the content of the sound detected at the second time. Data is recorded in the order of recording layers from closest to farthest from the pickup, and a recordable region in a user data area of a recording layer on which data is to be recorded is smaller than that in a recording layer between the pickup and the recording layer on which data is to be recorded. The embedded graphic may obscure some background data. If short selling of stocks and securities is not allowed in a portfolio, then stock selection becomes important so as to maintain the desired fractions to be positive. The actuating bow has two legs protruding from an upper web, which are displaceable along the side walls of the frame and coupled with a type unit arranged to be upwardly and downwardly displaceable and turnable within the frame.

1459827456-035755a7-50f2-4d64-88b1-d59e67523a45

The present invention provides a process for producing -mercaptoalkylpyridine of the formula . The centerbody of the inlet system is further provided with indexing segments which circumferentially rotate to provide longitudinal grooves or channels located on the outer periphery of the centerbody and which increase the effective flow area of the inlet. One of the slider and the supporting member defines a locking slot, in which the fastener is locked. There is a drive arrangement associated with an accident sensor to drive the moveable floor element rearwardly to a predetermined position. With this configuration, optical coupling between the optical waveguide and the light reception/emission device can be conducted

precisely.

1459827456-a26cf22c-0b27-413e-a7d4-aa5eb1d3e29e

The present invention relates to an electrically heatable glazing panel comprising a substantially transparent, electrically conductive coating layer which is adapted to be electrically heatable and is divided into a plurality of zones, some heatable and some non-heatable. The composition may be used in making a crosslinked, foamed gypsum product. Also an adhesive layer is made of the same inorganic material as that of the coating layers. In conjunction with the use of non-caching stores of processed results back into main memory, this technique completely avoids cache thrashing within the framework of a conventional microprocessor architecture. The unit has a gear change lever that controls the rotation of the shaft in a direction that winds the cable onto the pulley and a cable release button.

1459827456-d96d6163-beae-4ac9-8400-ce7c5e6c8dee

A new and distinct cultivar of Regal Geranium plant named \u2018Pacapur\u2019, characterized by its upright plant habit; vigorous growth habit; freely basal branching habit; and large red purple-colored flowers. The loop-shaped radiation element is configured to resonate in a plurality of resonance modes including an even mode and an odd mode. Compactor signatures can be read from a compactor on a per-pattern basis, and an expected signature can be loaded into a compactor while an actual signature is being read from the compactor. The system and method measures the presence of elements present in the sample being analyzed. An adapter is attached to the metallic hoop.

1459827457-31452b13-5a20-4117-91e9-d6d18b1994ea

Access point pictures designated as randomly accessible positions are I pictures or P pictures. 0; a magenta color having a\* and b\* values of +50 to +65 and \u2212230 to 0, respectively, at a green density of 1. If the identification information is determined to be local identification information, the processing previously registered for each terminal is locally executed.

1459827457-6461f5ef-9b54-4c54-8faa-ba0b24bb1bc2

The invention relates to various substituted isoquinoline-1,3,4-trione, the synthetic method thereof and the use for treating neurodegenerative diseases, especially as the medicine for Alzheimer's disease, apoplexy and brain ischemic injuries. Since the electrode surfaces are formed from the titanium oxide layers, organic substances contained in a measuring system are decomposed and prevented automatically from adhering or being adsorbed to the electrode surfaces. The Schottky metal-semiconductor barrier is formed on the emitter electrode and electrically couples with the extractor electrode such that when an electric potential is placed between the emitter electrode and the extractor electrode, a field emission of electrons is generated from an exposed surface of the semiconductor layer.

1459827457-a50330f3-75a7-44a6-b0e8-529d03eda276

A method and a device for monitoring an exhaust gas aftertreatment system, in particular an oxidation catalytic converter, are described. The oriented films may be manufactured by double bubble, LISIM, tape bubble, trapped bubble or tenter framing processes. Besides, the size of the outer ring corresponds to its location on the upper surface of the reflecting plate, and there is a predetermined ratio between the diameter of the outer ring and the diameter of the inner ring, and both of the outer ring and the inner ring respectively have at least one slot. The circumferential stress of the shell material,  $\sigma_{\theta}$ , at the core-shell interface and at the shell surface, is greater than 0 or can be compressive of a lower magnitude than a catalyst made of the shell material alone. The detecting unit includes a sensor unit including a first licensor and a second licensor; a setting unit that sets detection sections having the same section length in the first and second licensors; a focus detecting unit; and a section length

controlling unit. Additionally, the power conversion system also includes a controller that provides a self-adjusting set-point control scheme for the power converter.

1459827457-fe3948b8-1fef-455c-ba52-dd4d3c6f38ab

An integrated circuit having a plurality of devices. An imaging unit 15 is provided on a substrate 19 and has an optical axis in a direction perpendicular to the substrate surface. The transmit loop segments are disposed in a transmit zigzag configuration. The cutting edge is formed at a crossed ridge part between the wall surface of the chip discharging groove and the outer peripheral surface of the edge part. The porous matrix material has a lower dielectric constant than the corresponding non-porous matrix material, making the porous matrix material particularly attractive for a variety of electronic applications including integrated circuits, multichip modules, and flat panel display devices.

1459827458-3aae6ebf-625a-43f3-93f9-baa96dfd5705

Methods for analyzing, evaluating, and controlling risk of errors in language translation of medical device labeling are disclosed. The pictures preferably represent segments of the program which are spaced apart in time, enabling a relatively small number of such pictures to characterize a lengthy program, and are presented in separate windows on the screen of the same device used to display the video program. The mill is positioned adjacent a kick-off point and operated to form an open hole section. A sensor unit is provided for determining a position of the throttle flap shaft. Other embodiments are described and claimed.

1459827458-5c5bd44a-7934-4e18-8eda-fa7916be57b8

A floating harvesting header apparatus comprises a float pan pivotally attached at a front end thereof to the header at a front attachment location in proximity to the crop intake. The tube is provided with a feed element for introducing a fluid, with whose aid the tube is filled and thereby increased in its volume. In this zoom lens, the fourth lens unit has a positive lens element and a negative lens element, and satisfies the following conditional expression:  $\frac{1}{\text{Abbe number of the negative lens element of the fourth lens unit}} + \frac{1}{\text{Abbe number of the positive lens element of the fourth lens unit}} \geq 0$  ; and/or contacting the complex mixture with a carbon dioxide source; and recovering the cephalosporanic acid compound of formula from the mixture obtained after steps and/or. Each module may be powered by a separate power supply.

1459827458-8929b728-d395-4f84-b492-8774958a9497

A cup holder for an automobile, which includes a housing inserted and fit into a central housing, a body sliding on a housing and a holder combined to the body to support a cup so that various parts are installed parallel to the central panel, and the cup holder can be vertically mounted to a narrow space formed at one side of the central panel. The system includes a source of liquid and or ice which is adapted to be delivered to a dispensing outlet. A network device for deleting MME information is also provided. A hologram printer 5 receives the composite image file Fs generated in the image processing section 4 and prints a holographic stereogram based on this composite image file Fs.

1459827458-a644f96c-19a2-429f-991c-771bf5b5628c

A battery includes a cathode having an oxide containing one or more metals and pentavalent bismuth, an anode, a separator between the cathode and the anode, and an alkaline electrolyte. A plurality of thin, preferably resin-impregnated, flexible graphite sheets are arranged to form zones in a composite material having a graded density or other characteristic. In some embodiments of the external nasal dilator, the resilient sheet defines a groove for reducing the peel force that results from bending the dilator over the bridge of the nose. The deployment description represents the set of components and their interrelationships.

1459827458-a81c04df-8ea8-4796-b661-fbb91b6525dd

An image forming device includes a housing; a conveying belt, and a retaining member. Each fairing has two halves, with each half having a recess, or groove, to accommodate the cable. The data manipulation device is arranged to carry out the conversion by applying a pseudo-inverted form of a point-spread function matrix to a column vector representing the requested pattern. In the past, it has been somewhat difficult to control the shape of the entry ports when the manifold was molded of a single part. Then, the surface of the film is attached onto a surface of a substrate. Weight ratio of flow rate of primary recirculating exhaust gas tonh to amount of pulverized coal from a mill tonh is defined as GC, and the flow rate of primary recirculating exhaust gas is controlled so that the GC falls within a given range.

1459827458-d6587cda-1973-4566-95c9-784c89ed620b

Process for the regeneration of exhausted catalysts, containing one or more calcium aluminates, for steam cracking reactions, comprising treating said exhausted catalysts in a stream of water vapour at a temperature ranging from 700 to 950\xb0 C. In one aspect, a method is provided for determining before storing data to a cache-line if the storing of data will replace earlier data already stored in cache. Also disclosed are devices for carrying out these methods.

1459827459-02ce48e0-adb5-4a4c-a00d-1da21573ea03

Nanostructured non-stoichiometric materials are disclosed. An important aspect of the present invention is the provision of an ECC engine that responds to a specialized ECC instruction set having a plurality of instructions, such as a convolutional encoding instruction, a convolutional decoding instruction, and a cyclic redundancy code instruction. This is by combining the individual cams even before they are mounted on a shaft and joining them to this shaft to form a machining module, such that the individual cams are combined in their mutual arrangement in relation to one another in which the cams are to be mounted on the finished camshaft. Allocation of transceiver processing between high-latency processing and low-latency processing is based at least in part on the link parameter. The control unit maps the filtered information on a hash-tag according to a hash-function. The device receives the transmitting audio signal addressed thereto through a communication interface, plays back the signal, and uses a speaker of the device to generate sound.

1459827459-27a8435f-530b-4036-81b1-4df72b0557f4

Processing functions in a communication device are partitioned into a sequence of operational levels having corresponding status indications which are captured prior to a fault or other abnormal condition and retained during re-cycling of the sequence of operations for use in status monitoring or fault diagnosis. Each cell comprises two consecutive roller-counter-roller pairs, spaced by a distance smaller than a longitudinal extension of the piles, motorized in synchrony, suitable for adheringly gripping and drawing a pile; a sensor designed to detect whether each parking cell is free or occupied by a pile. The receiver and transmitter of each node can be an optical receiver and transmitter. At least one portion of the golf ball comprises a composition that enhances physical properties and/or performance characteristics of the golf ball. The grounding point is arranged below the first rectangular portion and near the power feed portion.

1459827459-f9b2ed82-cb47-449b-b46b-e59d9cebc867

Provided is a liquid ejection head for electrostatic ink jet capable of ejecting ink droplets at a low voltage and at high speed. The method includes the following steps. The indentation is formed in the shape of a recess or a valley to form the airbag into a heart-like shape. Electrical isolation is provided, at least in part, by air gaps that are formed in the row direction and/or air gaps that are formed in the column direction. The invention further relates to a diagnostic device and kit for carrying out the method. The present invention provides a tip containing the

solid phase capturing a nucleic acid characterized in that washing solution is fed into said tip unidirectionally from head to end.

1459827460-07a3fe81-384e-43be-aeaa-5b40a542fee1

Additional clock-outs are included on DRAMs in a multiple Dual In-Line Module Memory system having DRAMs of different data widths. A multi-layer display unit includes multiple stacked or overlapped display layers each adapted to render display elements thereon for viewing through the uppermost display layer. An input 28 and a display screen 32 are mounted on the housing 12.

1459827460-0a8dd81f-c9f4-4fd7-80ca-b95e599a5d52

Light sources are disclosed utilizing LED dies having at least one emitting surface. A plastic deformation pulse detection section and an elastic deformation pulse detection section of the determination circuit detect a plastic deformation pulse and an elastic deformation pulse, respectively, from a waveform of measured accelerations. A multi-layered structure can include at least a first single-ion conductive material layer, and at least a first polymeric layer positioned between the anode and the single-ion conductive material. The preset invention enables sample preparation and handling for diagnostic assays and biochemical analysis in an array format, and the functional integration of these operations. The window stays onscreen as long as no other windows are selected. The adjustable stud adapter includes a front surface, a side surface substantially perpendicular to the front surface, and a first positioning slot and a second positioning slot formed on the side surface.

1459827460-89977de2-da3f-4564-8271-3f5dc952e4

There is disclosed a liquid crystal display device that is adaptive for preventing the driving device defect of a driving circuit part and a method of fabricating the same. The sensors may include a lateral acceleration sensor and another sensor or combination of sensors that gives an indication to another lateral condition of the vehicle. In instances that the IC may process signals of a first frequency, the IC may be configured such that a loop communicatively coupled to the integrated circuit may function as an inductor. The elastically deformable casing part is a part of the lid member or of the outer member of the housing and is made of a thermoplastic synthetic material. Accordingly, the control unit can be shared among a plurality of types of uninterruptible power supply devices.

1459827460-a502e5ed-d8a0-48ef-8287-f5c51b439a6f

A vertical blind cut down apparatus has a head rail holding plate with a head rail opening for receiving the head rail. A control element is configured as a pump wheel controls the fluid connection between the inlets and the outlets. In this sense, the traditional RFID technology is in lack of security and an RFID can be tampered with in an arbitrary manner not to cause an alert. The invention outlines various pixels and weights saturation of anti-aliasing pixels to improve a user's viewing experience.

1459827461-b5a46a1d-529a-4623-9488-bed8339286ae

A method of measuring a parameter of a device in a circuit includes providing a device under test. In one embodiment, the valid updates to cells and the update times are stored with the cell positions as the primary index, and the valid updates to the same cell are arranged in the order of time. A motor is provided and has a motor case disposed opposite to the combustion chamber with respect to the head portion, a buffer member is provided which supports the motor and has a part located between the motor case and the head portion. The image of an initial state variable is found and then divided into a frontier of new states and a set of previously reached states.

1459827462-78584992-1243-4627-af76-74e8bc3c78e7

A method for determining the presence of slipping of a driven nip roller relative

to the web in a web printing press includes systematically changing the speed of the nip driver while monitoring the corresponding change in web tension difference across the nip. The satellite also transmits a loopback signal representing the received uplink signal back to the uplink station. Methods of employing topical oral dosage forms for treating bacterial infections that cause gastrointestinal disorders and halitosis, and for treating ocular and dermal wounds, are also described. It is possible to measure the blood pressure precisely even when the cuff is fitted onto a finger, thereby improving the reliability of the blood pressure measurement. The rotating member has a driving portion connected to the groove.

1459827462-fef76c10-468a-4dbc-9085-12e8207161aa

A fitting to prevent movement during seismic activity between a building structure or the like and a rod and channel support or the like connected to said building which may include anti-torque means between the anchor and the channel for preventing rotation of the anchor about the rod. The material is formed of a pigmented castable liquid vehicle having dispersed therein a quantity of discrete particles of higher specific gravity than the liquid vehicle. The engagement member is free to rotate and move within an area defined by the delivery system, allowing the implant to react to forces imparted to the implant by the movement of the delivery system and implant through a delivery catheter. The predetermined angle compensates for a line of sight angle of a user into the container. Various embodiments provide for multiple products and multiple bottleneck workstations.

1459827463-9fdcdf97-a564-4815-b1eb-60dd9818da60

Methods and systems are provided for communicating with a technician at a customer service location in a telecommunications system. The self-learning tool receives input files from legacy data systems. The first and the second output terminals provide a differential output signal. In assembly, the mask plate covers upon the button panel so that the button holes are aligned to the buttons on the button sets.

1459827464-5affff20f-06cf-46e6-8e86-609393acbcd5

The present invention relates to separator-electrode units for lithium batteries and also to a process for their production. In the device, the pump source is placed at the side of the incident end surface of the laser crystal; the laser cavity includes a plane reflective mirror and a first plano-concave mirror, the reflective mirror is placed opposite to the concave surface of the plano-concave mirror and located on the position of the focal radius of the plano-concave mirror. At the start of the drive unit, these two components are activated one after the other. Then, the removable layer with base film attached thereto is removed, so the underfill layer well encloses the bumps of the wafer and is easily separated from the base film layer and the removable layer without damaging the bumps formed on the wafer. The reseller is not required to answer numerous and often repetitive prompts for each application, but merely the location of the desired application.

1459827464-b2ffcb52-3ae3-4734-8c17-3267ea30662b

A wrist implant requires minimal resection of the distal radius and preserves the sigmoid notch and articulation with the head of the distal ulna. This invention also relates to inbred maize lines derived from inbred maize line PH876, to methods for producing other inbred maize lines derived from inbred maize line PH876 and to the inbred maize lines derived by the use of those methods. The patterned mask includes a substrate including a first region and a second region, a multilayer mirror above the first and second regions, an absorption layer above the multilayer mirror in the second region, and a defect in the first region.

1459827464-c75cb43b-eb3c-42dd-885b-7dcd797ab35b

A process cartridge includes a toner unit including a toner containing space and a toner supply space. It includes a housing, of a light socket, into which a single

or double threaded plug may locate, and which provides an upward orientation of the upper threaded plug with a light socket for threading directly into the recessed lighting fixture, for installation. The thermal interface material can have one of several cross-sectional profiles to facilitate reflow thereof against a die during a method of assembling a packaged microelectronic device. The controller is responsive to operating parameters to configure the adaptable data path to align a logical clock pulse on the signal received from the first clock domain with the same logical clock pulse in the second clock domain based on a measured delay between the first and second clock domains. In this case, the divided lamination iron core is held by the insulating bodies and the concentrated winding.

1459827464-da104241-31aa-42d8-98a7-fae01fbcb59a

A method of controlling a clutch-to-clutch transmission. The filter member forming an enclosure about the backflush discharge tube and having a surface area of sufficient size to allow water to pass through the filter member at a flow rate at least equal to the flow rate of the water entering the opening of the filter member. A delivery catheter 2 is advanceable over the guidewire 99 for delivery of the embolic protection filter 1; the delivery catheter 2 having a proximal end and a distal end. Once the blocks have been stacked in place in a wall, grout or other suitable filling material is poured into the cross-linked structure of channels. Otherwise, a thin film layer containing the material having superelasticity or shape-memory effect is formed on the anode active material layer.

1459827464-e8d41d34-9939-401d-a21e-64bd268d7802

Methods and systems for blocking unwanted software downloads within a network. By interposing a second urging member between the driven member and the coupling member, the driven member is urged in a longitudinal direction. It is possible to register arbitrary plural points as a recoverable point by setting a recovery flag included in journal data. More particularly, an interlayer comprising the second catalyst and the third solid electrolyte, which shows oxide ion conductivity of more than 0.

1459827465-460660b1-7d80-4975-b4eb-34790629242a

A method for ionizing and desorbing a sample for analysis includes energizing a first and second electrode to produce a glow discharge at atmospheric pressure. Local entanglements are created on an on-going basis between qubits in neighboring pairs in the chain through interaction of the qubits with light fields transmitted between the nodes. The amount of light reflected onto the photosensor is thus a measure of the amount of moisture at the surface of the sensor. The headlift tab includes a convex headlift region formed out of one of the two metal layers. The impeller and rotor assembly includes an interconnecting arrangement and a locking arrangement that permit continuous rotation in a first direction and prevent continuous rotation in a second opposite direction. Placement of seed and fertilizer is achievable in a single pass over the area to be seeded without need for a second opening implement rearward of the disc and without being limited to the use of liquid fertilizer.

1459827465-90916775-f90e-41d4-85d4-b919ad153ba3

A system that visualizes a clock tree for an integrated circuit receives an extracted cell library, an extracted clock netlist including clock headers and interconnects, and simulation results. The basket is moveable in response to downward and/or lateral forces applied against the basket. The method includes the step of determining a physical state of the insulation fluid by measuring at least three measurement variables with sensors. In its preferred embodiments, the third member comprises a telescoping shaft, which is adjustable to a plurality of potentially desirable lengths. The selected delivery server can then serve the content item to the end user system.

1459827465-dd2eded7-b2cf-47ae-aa6a-fa333207b3ce

A gas supply system for a cooking appliance includes a burner valve operatively coupled to each surface burner, and a lockout valve configured to control gas flow to a manifold. Single step reforming combines the steam methane reforming, water gas shift, and carbon dioxide removal in a single step process of hydrogen generation. The processor is used to randomly assign a plurality of attributes across the plurality of plays.

1459827466-056a7ddd-5ada-4699-b5f5-c4426ffbd268

In a method for deriving information about a selected monosaccharide or polysaccharide such as glucose or glycogen, a selected modification such as saturation is made of magnetic resonance at a magnetic resonance frequency of protons of hydroxyl groups of the selected monosaccharide or polysaccharide. The corrugation structure of the RF slug of this invention provides the slide-screw tuner, with a single RF slug, the same electromagnetic performances than double slugs slide-screw tuner, i. Each output medium identifier specifies at least one of a plurality of recording media that can be used to store coupon information.

1459827466-286447e1-9bad-422c-a900-5b40cc17295c

Wireless devices, systems and approaches or methods having the capability of determining the location of a given wireless device. Service options and terminal capabilities for PoC Clients are stored in the network, preferably in a PoC Server. At least a portion of the feature delivery settings is specified by an end user of the computer system. The system also comprises a media adapter. The attributes can then be used to detect one or more defects in the wheel. The system security architecture installs and associates private keys with the nonvolatile memory to create a secure execution environment resistant to virus attack.

1459827466-3da0cf28-bfb1-40b4-9ffe-ffdb247416b5

Method of automatically producing a defined face opening, in underground coal mining, during longwall mining operations having a face conveyor, a disk shearer loader and a hydraulic shield support. The barrel surface of the housing includes a key recess whose width exceeds its depth, and a plurality of code pin channels are preferably disposed in several rows. A heating device heats the gas in the introduction channel to substantially the temperature of the human body.

1459827466-834589fb-3040-487d-8445-45fd41e73051

Memory devices and methods are presented for selectively reading or writing rows or columns of memory cells in a ferroelectric memory array, wherein sense amps are selectively coupled with row lines or column lines and decoder outputs are coupled with column lines or row lines for row or column memory access operations, respectively. The docking station has a first electrical connector that fits into the first port when the portable electronic device is coupled to the docking station and a second electrical connector that is adapted to be electrically coupled to the second port or the jack when the portable electronic device is coupled to the docking station. The device may additionally include a preamble synchronization unit to detect a preamble of the received baseband signal, and to measure a chip phase offset and a baseband Doppler frequency shift associated with the received baseband signal. A macrocell excluding the non-circuit areas be used efficiently so that reduction in chip area can be realized by using the integrated circuit including the macrocell according to this invention. If the received message includes the encoded envelope, the defined parameters are transformed to coded parameters in a common format.

1459827466-a1634318-f6d9-4ca9-ab1a-a49d64fbef2c

A printing system, available to a population of users on a network, checks whether files in recently-received print jobs are identical to files which have been previously decomposed or rasterized within a particular time frame prior to the submission of the job. The integrated pair of transistors includes a semi-insulating substrate of a compound semiconductor III-V material, a first epitaxial

structure disposed on top of the substrate, a second epitaxial structure on top of the first epitaxial structure, and a third epitaxial structure disposed on top of the second epitaxial structure. The sealing member is slidably coupled to the tube proximate the second end and is sealed about the tube.

1459827466-a3f45509-960b-42fb-8b53-2690012344fb

The invention provides a portable telephone apparatus wherein, when a necessary voltage is not obtained from a cell because the cell is removed or consumed, data can be backed up with a simple configuration and at a low cost. A dither amplitude of one or more MEMS mirrors may be adjusted in an optical switch having an input port, and an array of one or more MEMS mirrors that can be selectively optically coupled to one or more of N\22673 optical inputoutput ports. The power application monitors the usage sensor for a signal indicating movement of the device from a resting location when the device is in a low power mode and upon detection of the signal for provides power to at least one additional element in the device.

1459827466-fffae370-1a1d-4087-8b5a-d6614a4957d9

Hot-electron injection driven by hole impact ionization in the channel-to-drain junction of a p-channel MOSFET provides a new mechanism for writing a floating-gate memory. When the squeezable container is squeezed, it delivers liquid from the squeezable container to the pouf to apply the liquid to the skin of the bather. Upper and lower heating platens are mounted to the frame and are in thermal contact with the bottom and top run, wherein the food to be cooked is initially exposed to heat from the lower platen conducted through the dispensing platform portion. With the above arrangement, the user can read on the table while easily scan the contents of the book without damaging the book.

1459827467-1f4b6ea7-1a6c-4157-93e9-034eef33807f

The present application relates to the fabrication of an electronic component. The wireless communication network comprises a call processing system, a translator system, a first base station system, and a second base station system. The polarizer is configured to transmit light of a specified polarization and to reflect light having other than the specified polarization. An on-going drug therapy may be determined, taking into account post-implantation hemodynamic function. In other industries the uses maybe represented by measuring and controlling of highly transient flows with a need to accurately perform quantitative flow data in wide range of timing and dosing.

1459827467-4bc392fc-0a04-4f56-9caf-51c69af294f7

A train control system includes positioning systems at the end of the train and at the front of the train, allowing the conductor or engineer to unambiguously determine that no cars of the train have become detached. The master document can specify element names which correspond to fields of the data object. Co-precipitation of the oxides and/or oxides and phosphates is then accomplished by an adjustment of the pH, to provide a surface treated pigment with excellent homogeneity of the deposited mixed oxides and/or oxides and phosphates.

1459827467-6a15bf25-f59f-4b24-9d40-6eddc5b4271

A pontoon provides buoyancy for a protection barrier to be provided in a body of water. The single processor is used for receiving an inputted electric current and a control signal. The tether may also be threaded through openings in the curved partially tubular body of the float-free link. The conversion portion receives a scan conversion instruction from a central processing unit, sequentially selects the input channels in a specified selection order, and successively performs AD conversion. A top plate being foldable along a folding line relative to the side plate has protrusions which are engaged with the receiving portions when the top plate is folded the folding line toward the side plate. The system collects and stores information about a user as the information is needed to accomplish a function, shielding the user from burdensome data entry.

1459827467-d196f756-b03e-45b9-b918-fdec90099a44

In various embodiments, a water inlet of a toilet fill valve receives water from a water supply. One of the methods includes receiving a snapshot S of a code base of source code and a different snapshot T of the code base. The NCI channel is transmitted over a first frequency channel and the CSI channel is transmitted over a second frequency channel. The programmable filtering criteria is implemented by a filter table that stores a flag associated with each tag type.

1459827468-a01ea8b7-b608-4ab5-ab22-78321c8b1d23

A composition for sunscreen or sunscreen enhancer is disclosed. The shelves each include a portion of a piece of visual art, such that when each of the shelves is positioned approximately vertically, the portion of the visual art is displayed and further such that when all of the plurality of shelves are positioned in the approximately vertical position, the entirety of the visual art is displayed. After components in the air maintained at a predetermined temperature are analyzed, the sealing member is detached from the cylindrical member and the cylindrical member from which the sealing member is detached is then brought into intimate contact with skin of a subject to collect the skin permeable gas. A knob is rotatably coupled to the cam pin.

1459827468-e881d93b-d2f2-4688-8300-2ba8a4543f59

The claimed subject matter provides a system and/or a method that facilitates configuring at least one radio frequency identification device. The request attribute list associates the data value name with an attribute name and with a schema name. The spindle member extends through an opening in the drum so that the drum is rotatable about a spindle axis defined by the spindle member.

1459827469-109dbe8e-b153-472f-9c73-73220a9edc67

A method for performing a shuttle shift with a continuously variable transmission of a work machine is disclosed. The plug includes a first portion defining a cylindrical hole about the axis. Thread operations are queued to the work queue when the work queue is in a running or suspended state, and when the work queue is in a stopped state requests to queue thread operations are denied. Accordingly, the quantity of key strokes required for connecting to a web site is reduced and user convenience is improved. If a PVL gets congested, then a state machine adjusts priority of R\_RDY distribution scheme of other PVLs to transmit frames. The mask is movable between an engaged position wherein the mask obscures a portion of the workpiece and a disengaged position wherein the mask is disposed away from the workpiece.

1459827469-11167454-ba41-4d41-8350-db15f9b6ea4e

Methods and apparatuses for transmitting and receiving enhance the performance of a system utilizing interleaving and transmit diversity by reordering the sequence of symbols transmitted along the different transmission channels. A supply regulator is connected to the positive high-voltage supply. Also provided is a method for the identification of polymorphic markers in a bacterial population. An image connection section 26 connects the sub-images together and thereby obtains a high resolution image of the structural element. An atomic layer deposition apparatus is disclosed. The motor gives the cutting disk a rotational speed sufficient to both remove the husk of a garlic clove which comes in contact therewith, and mash the garlic clove and fling particles thereof outwardly onto the inside surface of the cover.

1459827469-24403270-b291-41f7-be6e-cdb99e0e17de

Systems, methods, and apparatus are described that employ specially designed interference patterns to build an in-band side channel without degrading the effective throughput of the main channel. The paper-breaker touching safety protector with this structure could effect a protective rule from the accident harm

and a real-time monitor; the controlling is safe and sensitive with a simple circuit structure and reliable operation performance, it functions a convenient manipulation and wide usability with the safety. The duration of the pulse and/or space is selected from a list of predetermined durations, each corresponding to a different base 10 number. This facilitates a wireless communication using a remote control as a relay station and without the influence of background noise. Moreover, the multimedia queue manager updates the queues in response to actions of the subscribers and/or actions of the recording devices of the subscribers.

1459827469-59840f0d-5745-4999-9f50-8307d115c9d3

The present invention is related to a method of producing polycarbosilane by heating polydimethylsilane at low pressure within the range of 320 to 450 °C. A discharge device is adapted to discharge the capacitor if the voltage across the capacitor reaches a threshold voltage, at which point the next value in the sequence is selected to determine the next charging time. LDD regions and at least part of which overlaps a gate electrode are provided in a second n-channel type TFT of the control circuit. 2, and wherein the volume ratio of large and small beads in the column: Total volume of large beads/Total volume beads is in the range 0. The first CDF is configured for propagating CDRs toward the CGF.

1459827469-a24ad0ea-3d2e-4743-8fb4-bcd520999746

A cache region can be created in a cache in response to receiving a cache region creation request from an application. By monitoring call associated information, speech, and voice characteristics of the call interaction, the system and method determine whether calls are being handled properly. By immersing the terminal portion of the electronic component in the viscous fluid transfer surface, the viscous fluid is transferred to the electronic component and the electronic component is then mounted in a predetermined mounting position.

1459827469-fcfdda92-b3fa-4358-919e-bcb620fd5767

A touch panel and a method for fabricating the same are presented. The gimbal mechanism is configured to rotate about a first rotational axis and a second rotational axis that is perpendicular to the first rotational axis. A plurality of cables are at least partially supported on the moveable portion of the nacelle, the plurality of cables being selectively electrically coupled with the generator.

1459827470-0a295a02-0fad-485c-bde7-d26b4a687b2c

A luminescent particle includes an interior portion of the luminescent particle comprising a luminescent compound that reacts with atmospherically present components and a passivating layer on an outer surface of the luminescent particle that is operable to inhibit the reaction between the luminescent compound and the atmospherically present components. An air-tight housing prevents odors from leaking out. The first locking piece elastically engages first appliance side locking portions, and release an elastic engagement by receiving an external force to an engagement releasing position.

1459827470-1be5f325-b262-4d54-a802-bb3820f9580f

The invention includes cohort analysis as an element of an in-vehicle navigation system. One such compiler parses a human readable expression into a syntax tree and converts the syntax tree into an automaton having in-transitions and out-transitions. The controller then identifies a digital video effect to be run by the driver.

1459827470-2d36e2bc-d8d6-4a8c-8c1f-04238a4fd002

A method of providing navigational information includes processing destination information spoken by a vehicle occupant on-board. The apparatus detects a layer structure in the retina from image information of respective lines of the tomograms along the thickness direction, and appends structure information to the respective lines based on the layer structures detected for the respective lines. The

processing system may be configured to determine a position of the input object in the sensing region, and determine force information for the input object based upon the position of the input object, the force applied to the input surface, and a location of the force sensor relative to the first axis.

1459827471-19baa320-670c-454e-a136-076b37a4c7d4

An optical communication system includes a plurality of optical adddrop multiplexers. Next forming step forms electrodes at predetermined positions on the substrate. The accessing is implemented as a set of calls to CRUD methods accessing the entities composing the virtual entity.

1459827471-2dbd6f7c-97c1-48f5-95cb-9f24acbe44a6

A process and apparatus for the recovery of ethane and heavier components from a hydrocarbon feed gas stream. The control circuit carries out a sustain discharge to decrease the volume of wall charges, accumulated on a display cell in which a sustain discharge is not intended, to a level which cannot generate a sustain discharge. The actuating piston is structurally separate from the control valve and the actuating piston is connected to the valve piston of the control valve by a readjusting spring that opposes the control force. A switching control circuit selects the analog driver circuit and the PWM control circuit when the motor is to be rotated at speeds lower and higher than a predetermined speed, respectively.

1459827471-3885f399-a912-4e07-a6e8-7441109227ac

An image contrast correct system and method thereof is provided. In general, the wriggler may include a base surface, at least one interface wall, and at least one guide wall. The track has interchanges whereby the moveable member can be moved in one of different directions. The user is able to use the single, secure medium to conduct many transactions. Therefore, the circuit is interrupted by the over-current protection element to show a broken circuit status in order to stop heating up. A machine screw is turned to pull the retainer to pull the arms towards the base and force the cam surfaces against the base.

1459827471-5995d7ec-137d-4005-824f-1c7dfab4ab13

Kits including novel fluorescent derivitization reagents for labeling an aldehyde-and/or ketone-containing target substance in a sample are described. An apparatus for modulating an intensity of a radiation beam generated by a radiation source includes a filter, and a positioner secured to the filter, the positioner configured to move the filter relative to the radiation source. The trunk loop includes a back strap which in use of the harness lies across the back of the animal affixed to a lower strap which in use of the harness passes under the animal behind the forelegs. The combining logic combines a current picture with a prediction picture to produce a combined picture.

1459827471-b60e0947-c129-4696-a3c3-1cb736ff27fa

A method and a system of maintaining a rechargeable battery for an electronic device capable of utilizing the battery as a power source are disclosed. Each of the controllers comprises means for sending its own operational information towards other ones of the controllers via the internal communication path. The processor may be configured to access flow records for data flows associated with the mobile devices during a predetermined time interval. For example, more detailed metadata can include song lyrics and album art when the main program is a song, while if the main program is an advertisement, the additional information can comprise information for furthering completion of a transaction. At least one non-electrical temperature sensor is mounted in fluid communication with the vent line. The DFE may be extended to multiple taps by including additional flip-flops.

1459827471-fa3d4e53-6c72-4b3d-b399-a47f14037a88

The present invention provides compounds of general formula as useful potential antitumour agents against human cancer cell lines. The controller performs logical

to physical address translation, and includes a Write Pointer for pointing to the physical sector address to which data is to be written from a host processor. Mating surfaces of the bearing inner race and the bearing outer races are configured and are coated with a lubricant to provide bearing surfaces for the wheel. The light emitting module is disposed at one side of the light guiding core.

1459827472-bc453c60-ce7d-436a-934c-cf4c91bb156c

A system for encouraging the use of renewable energy sources and suitable for the conservation of energy resources through the efficient management of energy storage and delivery includes connections to a power source, an energy storage subsystem, and a power grid. The rack comprises an elongated push-pull member which is connected to the patient table and which has a length that exceeds the length of the patient table. The architecture also has plugin modules for allowing a user to customize the policies. The bridge maintains a pair of counters for each source in a SoC to track the numbers of outstanding read and write transactions. When the fine delay of the selected phase-shifting path circuit has a threshold value, the control circuit develops the selection signal to select the other phase-shifting circuit. The hash table may be used to provide a reverse obfuscation method by which original data can be restored to an obfuscated document.

1459827472-e3f21af0-099d-4448-9fec-3f72717a0cfc

A waveguide structure according to the invention comprises a core layer, a cladding layer and a buffer layer. Example embodiments provide a dynamic GPU allocation system, which enables the efficient allocation of physical GPU resources to one or more virtual machines. The diagnostic information transmission mode is initiated by transmitting an initiate diagnostic link mode message to a receiving modem accompanied by a cyclic redundancy check. The maximum field height  $Y_{\text{imax}}$  within the image field is at least 40 mm; the image-side numerical aperture is at least 0. Allocation may be performed only if there are sufficient available resources and deletion may be performed only if there are no active IO transactions on the allocation being deleted. In one example, data received across the logical interface is tagged with an associated VLAN ID by the unit.

1459827472-ee4de410-f8a9-4cbe-9617-1437063bc913

A safety discharge valve includes a siphon-type open/close device, a valve cover assembly, a valve rod, a valve body, an extensible side-sealing top-pressing assembly, side rotary sealing plates, a tapered bottom valve plug and a side water inlet emergency plug. The supply voltage modulation types include ET, APT, DC-DC, dual, multi-state or fixed voltage supply voltages. The soldier restraint system includes a seat assembly comprising a seat and straps. Prior to normal operation of the first product, a first code is set in the first part, and this first code causes the first part to provide a first programmable function during normal operation of the first product.

1459827472-fcd7c089-846b-465d-bb9d-d83e4704953f

System and method for presenting items and obtaining user selections of those items. The crown portion includes a main portion made of a fiber reinforced resin, and a front edge portion made of the metal. The image processing apparatus has an image acquiring section which acquires the image information and an edge processing section which conducts edge processing with respect to the image information to distinguish the second image component with respect to the first image component.

1459827473-791f235d-e651-46dd-9611-a9332d19419f

A low-temperature fuel cell assembly including of a low-temperature fuel cell in combination with a sweeping gas circuit for at least the anode part thereof. A spring and cams are arranged to hold each of a pair of handles either extended or folded with respect to the tangs of a pair of pliers jaws or the like. A polarizing rotator is disposed between the first polarizer and the second polarizer. The lure can be repeatedly and selectively activated by the angler to impart a sustained

oscillating motion to the external appendage.

1459827473-cd331624-77e3-4210-93a1-255a332ccd2f

A wafer comprises a transducer having an air-bearing surface and including a magnetic structure characterized by a desired thickness, and having a bevel and a flare point a first distance from the ABS. The agent has the following formula:  $X_nH_w$  wherein X is a C6 to C16 group selected from the group of linear, chains, branched chains, aromatic rings, and combinations thereof, A0 is an alkyleneoxy group selected from the group of ethyleneoxy groups, 1,2-propyleneoxy groups, 1,2-butyleneoxy groups, and combinations thereof, and n is from 3 to 14. Regeneration tower refluxed water is supplied as washing water to the second-stage water washing section 65.

1459827473-d298c084-630b-4388-a6f6-f7ea9314e4d6

Provided herein are compounds of the formula :as well as pharmaceutically acceptable salts thereof, wherein the substituents are as those disclosed in the specification. The method further includes, subsequent to the initialization process, processing subsequent force data signals according to the identification of each of the plural force platforms. A loop gain measuring unit measures the loop gain of the spindle motor control unit during a test in the manufacturing process, adjusts it into an optimum loop gain, and stores it as a default lop gain in the apparatus. Under ESD-zapping conditions, the ESD detection circuit will provide some trigger voltage or current to bias the ESD protection device.

1459827474-46510cbf-9fe1-4509-8c9a-b99a8ada34df

A process of forming a two-piece pole for an inductive write head involves first forming a first pole piece having a width between opposite side surfaces defining a gap width of a transducing gap at an air bearing surface of the head. As such, the transmitting device may then transmit a data frame on one or more of the unutilized subcarriers to a receiving device while transmission activity is present on one or more utilized subcarriers within the network. The insulating film which has been exposed to the atmosphere of the mixed gas is heated to a predetermined temperature. The liquid state of the dispersed phase allows one to manufacture extremely stable, pharmaceutically acceptable emulsions with particle sizes typically below 1000 nm.

1459827474-5e6049b0-43f9-4cc5-b439-2d54920e812d

A process for recovering crude 1,3-butadiene from a C4 fraction by extractive distillation using a selective solvent in a dividing wall column in which a dividing wall is arranged in the longitudinal direction of the column to form a first subregion, a second subregion and a lower common column region and which is preceded by an extractive scrubbing column is proposed. A preferred embodiment includes a water tank with two water nozzles mounted in front of each gutter broom to lower amount of airborne dust. A control device is provided for operating the permanent-magnet-type generator as a motor at a time of starting the gas turbine, and supplying alternating-current power from a direct-current power supply through the inverter device or another inverter device in addition to the inverter device to the generator for increasing a rotational speed smoothly from zero. A second two-dimensional lensing surface is provided by introducing a defined curvature to a turning mirror in the system. The method may also include extracting a recirculation portion of the compressed air and directing the recirculation portion into the inlet of the compressor.

1459827474-b839f42f-82d5-4a8b-94f3-307b2db574cf

Provided are target detection substrate for target detecting apparatuses capable of detecting various targets such as pathogens, biological substances and toxic substances without using a costly measuring apparatus; which can detect these targets with a low measurement error, high efficiency, simplicity, speed and sensitivity; and which can make a quantitative detection thereof. The one or more

criteria may be based at least in part on an input provided from a designer. Time filtering is utilized to combat excess delay spread effects in channel estimation.

1459827474-ea9f52f2-3c87-4284-886b-7457814b71e1

A multi-capillary inlet to focus ions and other charged particles generated at or near atmospheric pressure into a relatively low pressure region, which allows increased conductance of ions and other charged particles. The aft and forward gripper assemblies are adapted for selective engagement with the inner surface of the borehole. The master disks can be aligned while the alignment marks are externally observed. Methods of making and using these genes and proteins are disclosed as well as methods for the recombinant expression, and transformation of suitable host cells. The method includes a step of diluting a concentrate located in the metering apparatus by taking up a diluting agent from the extracorporeal circuit.

1459827474-f1dbaded-ec55-40fb-9dae-7e7fb514149b

A method and an apparatus that enables converting a high voltage lighting fixture for use with a low voltage lighting system are disclosed. The differential axle has a differential gear housing, which utilizes a sealed housing on the outside thereof and a bleed flow path for pressurized liquid lubricant actuating a differential lock feature to provide adequate cooling flow for the differential gear set and differential lock mechanism under heavy duty circumstances. In the deposition position, the wafer carrier is detachably mounted on an upper end of a rotatable spindle without an intermediate susceptor. The metal foil is wound or stacked to form first and second channels in opposite directions. High permeate flow can be maintained for long periods of time between shutdowns for intensive cleaning.

1459827475-4bf0d688-3c4f-4734-bc3f-84a1bc035fdb

The present invention relates to a game wherein the objective is to retrieve a special die from a specific location and return with it to the starting point on the playing surface. In a preferred embodiment, the LCD comprises a liquid crystal display panel, the liquid crystal display panel comprising a pair of transparent substrates, liquid crystal material sandwiched between the transparent substrates and transparent electrodes positioned between the liquid crystal material and the transparent substrates. An array of optical sensors positioned on one side of the disk can read reflective and absorptive patches attached to the disk's surface to identify disk position and disk rotation.

1459827475-76a031e6-6860-494f-8232-578a563e482b

To provide a method for manufacturing a color selection electrode structure easily capable of measuring a tension amount of the color selection electrode in the process for manufacturing the color selection electrode structure and a color cathode ray tube using the color selection electrode structure. The assembly also includes two sets of rolling elements between the rings and in angular contact with tracks defined by the rings. The encoding apparatus also includes a memory for storing a number of first order Reed-Muller codes. Protective garments constructed in the past typically lost most of their water repellency after being laundered as little as five cycles. Thus, the storage system realizes its scalability. The tubular piece on which the spring is mounted has faced lateral end borings on which several balls are positioned in the interior tubular piece with the balls remaining in the flaring area of this piece.

1459827475-9e3f6f3f-2870-42fd-be9f-55da63f9e6b3

A door and/or window stopper includes two branches each having a contour tapering toward a tip and further includes a coupling body, which is at least partially made of rubber or a flexible, rubber-like thermoplastic material or elastomer, wherein at least outer surfaces of the branches have a relatively high friction coefficient. An asymmetric multiprocessor includes a hardware resource mediator that mediates request signals requesting permission to use arbitrary hardware

accelerators from CPU cores. A target current needed to achieve a desired fuse blow time for the identified fuse type is obtained from a lookup table.

1459827475-b5012892-48ef-4bf8-9524-3ddfd42467e9

The invention concerns a device for creating a vacuum in, and sealing containers for the preservation of vacuum packed products. The link has another end connected to the swing rod and the swing rod has two limbs on two opposite ends thereof. The cage includes relatively flat portions on an outer face the cage surrounding window areas that hold the rolling elements in place.

1459827475-bed7a186-986c-4f71-9116-4a5fbbc581b4

A gate driving circuit includes cascaded stages, each including a pull-up part, a carry part, a pull-up driving part, a holding part and an inverter. The shoulder guide is connected to a rotatable bearing positioned perpendicular to the ground, whereby the golfer's shoulders may only move in a vertical plane, ensuring that a pendulum stroke is achieved. These compounds are useful in the control or treatment of diseases mediated by this receptor.

1459827475-c99a2889-8bbc-4e7c-b52d-e41df747fb4e

The invention relates to a communications manager for receiving publications and forwarding these publications on to parties who have subscribed to receive such publications. The debarking shaft has its teeth designed as a number of annular tooth rims, each of said tooth rims comprising two or more releasably connected elements, having the outer periphery provided with the teeth and said elements being adapted to be fitted around a body member of the debarking shaft by way of press clamping. Extendible members with multiple interfitting stages permit a relatively large range of distraction capability in a compact package. Ink jet inks containing these self-dispersing pigments, are also provided.

1459827475-f8e5c6b9-08df-41a2-9c82-c512b18a8c3f

A method and apparatus for determining the cause of degradation in a product or device. In particular, the present approach is directed to methods of manufacturing magnetic fluid that is resistant to aggregation and clumping, and is more stable over time. In a particular embodiment, the display control system is a windowing system such as is known in the art. There is a multiplier connected between the input and the shifter. The components are suitably formed from standard sheet metal and metal plate stock with minimal machining and welding required to form and assemble the economical jack stand.

1459827476-6127dd16-be56-4ac3-9fe7-f6fd47885de4

The present disclosure relates to a method of forming a capacitor structure, including depositing a plurality of first polysilicon layers of uniform thickness separated by a plurality of oxidenitrideoxide layers over a bottom and sidewalls of a recess and substrate surface. The device comprises an adaptor of iCAP type data flows into files adapted to be used directly by said server or by said client device ; the adaptor comprises means for communicating with the client device and the server and configuration file wherein isare stated the transformation service. The guiding frame is set over the circuit board for guiding and accommodating a card. The position information of the second modality is associated with the navigation unit. One or more structures anchoring anchor the connectors of the invention to layers of structural material placed on opposing sides of an insulation layer of the composite wall. A deactivation circuit is designed to deactivate the first regulating circuit depending on a current flowing through the measuring transistor.

1459827476-b4423a9d-338a-46eb-bdac-4cfe2708b112

Lithography masks and methods of manufacture thereof are disclosed. The NDT probe includes a testing sensor and a motion sensor. Moisture is removed using a condenser and knock out tank while a boiler provides heat to treat the dewatered

sludge. In another embodiment, a dielectric layer is deposited onto the first conductive layer, and the plasma treatment lessens if not eliminates the ability of the first conductive layer to incorporate oxygen from the dielectric. A metal organic sulfonate of a specified type is contained at least as a part of the functional improvement agent at a specified mass % of the total.

1459827476-f0bfa82f-1837-4518-873d-5f2b324d66ee

A liquid sample analyzer includes a flow cell, a light source, and a lamp temperature management system. By controlling radius ratio and the number of coupling aperture of each coaxial waveguide, high power and high purity of operating mode of electromagnetic wave can be obtained and the major parasitic mode of electromagnetic wave can be suppressed, so as to avoid crosstalk between coaxial waveguides. A magnetic material is provided between the integrated circuit and the package cover.

1459827477-332e776c-cefd-4463-9183-8a9f2415f168

A skate brake particularly suited for an inline skate includes a braking carriage formed of left and right plates spaced apart by axles that support rollers thereon. The top elements can have a  $\text{U}$  shape with raised edges. The present application contemplates a lighting ballast circuit that is able to power a primary high intensity discharge lamp and is also able to power an auxiliary lamp in the event of temporary or permanent failure of the HID lamp. During the operation of the IC, each particular time-extending reconfigurable circuit maintains at least one of its configurations over at least two contiguous cycles, in order to allow a signal to propagate through a signal path, which contains the particular time-extending circuit, within a desired amount of time.

1459827477-4490e4e2-9f79-426b-b7ee-40fb4b5e5de7

A handheld bubble making device includes a reservoir of bubble making solution that is drawn by a motorized pumping assembly and distributed over a dispensing surface. A first output gain stage receives the output transimpedance gain signal and responsively generates an FE core output signal. Version vector data may be transmitted between nodes of the circle share via a presence service in the form of short notification messages. Assemblies and articles with such preformed sheet offer a substantially higher ballistic protection level at a certain weight. Preferably, the wheels associated with a mechanical drive axle, particularly a rear axle of the utility vehicle, can be driven by a mechanical drive of the utility vehicle. A DFF is added to the header section H0 of each DIF block when transmitting DV data reproduced in the SDL mode of the DV format by way of an IEEE 1394 bus.

1459827477-c2810ecf-f17c-4371-9a9b-c3e60194a16b

A sling chair having side rails which connect to a cross member spanning the side rails. Methods of making the composite particles, as well as methods of using such particles as a proppant in oil and gas well hydraulic fracturing are also described. The compression chamber side opening is opened and closed by an end-plate of the fixed scroll according as the orbiting motion of the orbiting scroll to perform connection and blockage of the back pressure port. The portable lighting device has a housing, a charging circuit, a battery unit, a push-button unit, an LED driving circuit, an LED unit, and a controller. The second switch is coupled to a second input terminal. Next, a dielectric layer is formed on the top side of the conductive plug, and then a top plate is formed on the dielectric layer.

1459827477-deeb2e85-54a9-4ff8-927b-eac1963db0e4

A method and apparatus for improving the accuracy of in-band OSNR measurements using a conventional polarization extinction or polarization-nulling method. The wiring electrode is formed on the wiring substrate. The anode hub is at least partially surrounding the head of the shaft.

1459827478-06d0d1eb-a282-474d-b3c0-b4bda057caa0

A gun mount which includes a cradle for holding at least two weapons, a carriage for holding the cradle such that the cradle may pivot left and right, and depress and elevate, at least two ammunition trays able to supply ammunition to the at least two weapons, a pintle, and a link deflector. Therefore, a yield rate or a percentage of the weight of the ring-shaped member with respect to the weight of the raw material and the yield rate or the percentage of the ring-shaped member with respect to the blank can be improved, and the cost can be reduced. Samples received RF signals are stored in a sample buffer. A subtracter circuit subtracts an output of the DA converter circuit amplified by a factor of  $\sqrt{2}$  from an output of the amplifier circuit. The recording is achieved such that DCPI values are recorded in user-unrewritable areas of the recording medium as long as possible.

1459827478-28ba0851-5bc6-481b-ac47-5818eb8363bf

A low-profile multilayer cushion assembly which can be used to support the human body under various conditions. The center for the center infix run is determined, and the characters of each character type are encoded into binary encoded substrings. The device includes a circuit card assembly, which is a multi-layered printed wiring board with pass-through electrical connections and an embedded ground plane electrically coupled to the housing to shield the electronics assembly from electromagnetic interference and to provide environmental protection to the electronics assembly. Context circuitry tracks the shift amount used for normalization.

1459827478-3b78f05c-25a5-4b38-a259-58ef9dbfbb38

The invention relates to dental radiological image sensors for intraoral use. The decompressorPRPG has two phases of operation. A source of first fluid is provided at a first pressure greater than the ambient pressure.

1459827478-3f202e0a-9da2-4c46-9de5-8b47de0c1636

A method and system to facilitate searching a data collection, such as the World Wide Web, that takes advantage of the collective ability of all users to create queries to the data collection. A mobile station transmits a security value to obtain access to the network. The electron-emitting element and the image-forming member can be placed in juxtaposition on the same substrate, an electro-conductive substrate can be additionally provided in opposition to the face of the substrate, and the supporting member can be connected electrically to one of the electrodes and also to the electro-conductive substrate.

1459827479-4638af6d-65c6-4531-92c7-2689cb8a6d02

A programmable metallization cell that includes an active electrode; a nanoporous layer disposed on the active electrode, the nanoporous layer comprising a plurality of nanopores and a dielectric material; and an inert electrode disposed on the nanoporous layer. A fan assembly is operable to provide a suction airstream for drawing seashells into the hollow body. The ink input is used with various machine learning methods and/or other algorithmic methods to generate a teaching ink data set. The roller, when used to press and laminate a polarization film to a substrate, is kept at a temperature of 35°C. If a test order was received for at least one of the biological samples, the test order being indicative of one or more first processing steps, the workcell can automatically execute the one or more first processing steps. In accordance with another representative embodiment, a method of fabricating a bulk acoustic wave resonator comprises: forming a first electrode over a substrate; forming a seed layer over the substrate; and depositing a piezoelectric material having a compression-negative polarity.

1459827479-5a943216-ec2b-40f7-bbed-386bfc5d1068

A golf club head is described which has a hitting face for golf balls, the hitting face being formed at least partially by a metallic material satisfying the

following relationship:  $y = 22660$ . A difference circuit coupled to the differential pressure sensor has a difference output representing the sensed differential pressure minus a moving average. The second circuit pattern may be configured to discharge static electricity introduced to the memory module from outside the memory module. Additionally, or alternatively, the assembly detects abnormal operating conditions as the closure condition. A routine is provided for monitoring the messages and profiling each peer, building a local peer profile for each node exchanging messages in the peer-to-peer network based on messages passing through the node.

1459827479-8297c869-ef24-46cf-8a6b-50efca44c695

An invention is provided for building configurable designs synthesizable to gates. The projection at the first position abuts on the frame such that the plurality of ink ejection surfaces are respectively surrounded by the plurality of recessed portions. Each non-global partition may have one or more projects executing therein, and each project may comprise one or more processes.

1459827479-ebf6ad1c-4ad5-4eff-8751-ccf90d56e554

A heel cup formed from a flexible material is located under the heel region of an upper portion of an article of footwear. Connector assemblies include openings that facilitate interaction between plugs and cables, particularly foil-shielded twisted pair cables. The mounting apparatus further includes a vehicle connecting member for attachment to the vehicle; the vehicle connecting member including a mechanism that allows the mounting frame to swivel in a generally horizontal plane when interconnected with the vehicle. Proximal portions of the hub are configured for connection to a medical apparatus. The two phase signals have a different phase difference at a different position of the spindle.

1459827480-361e0f58-5a07-41c3-8b7d-a312f66c602a

A flexible light-guiding module with waterproof function includes a flexible light-guiding film, a light-reflecting element and a light-generating element. Said device comprises an adapter-supporting piece that is provided with the adapter for the add-on piece. The arcuate-shaped lines on one surface, the front surface, generally replicate the path of the recording head as it is moved across the data tracks by a rotary actuator, so that there is a constant sampling rate of the servo sectors on the front surface regardless of radial position of the head. Chemotherapy regimens may also be used as adjuvant therapy. The first mechanical rotation axis and the third mechanical translating axis are radially oriented to the arc.

1459827480-493c3112-aa0e-43a9-9c03-1e8392ac6fe8

Systems and methods for accessing common registers in a multi-core processor are disclosed. A supplementary module different from the display unit is integrally mounted on a frame constituting a display assembly, so handling and assembling can be facilitated and production cost can be reduced. The fixing member includes a retaining part which retains the transducer. A jaw comprising an elongated member disposed in the elongated interior opening and a second transverse opening in the jaw.

1459827480-4fc52a40-5796-4ff9-8d65-e32e43ed1f7e

In order to provide a semiconductor IC unit such as a microprocessor, etc. The adhesive sheet further includes a plurality of microscopic holes connecting the opposing surfaces of the sheet and being generally perpendicular to them. The card data may be linked in a data store to both a customer's financial account and a cell phone assigned to that customer. Also provided are transgenic non-human mammals that express the invention protein.

1459827481-4e763ea7-9585-4808-ab17-a057d7e70794

A system for incremental backup comprises a storage device and a processor. The

tied server also includes a second storage unit that stores messages executed on the transaction DB server having the transaction ID by the application server and communicated between an application server and a DB server. At least one dielectric layer is deposited over the top semiconductor layer and the bulk semiconductor portions, and is patterned to form openings over selected areas of the top semiconductor layer and the bulk semiconductor portions. Packets are received by the first device that are associated with a flow sent by a source network device.

1459827481-63a5304c-5ce4-41cb-a170-3e33909e8962

A data acquisition system for sampling a temperature signal from a temperature sensor includes: a programmable current source, a buffer with a constant offset, and an analog-to-digital converter. The device is constrained in an unstable martensite state while being introduced through a catheter that passes through the venous system and into the coronary sinus of the heart. A plurality of contexts indicative of the level-run value pairs are conveyed to a decoder for allowing the decoder to reconstruct the image based on the contexts. The UV rays-curable type sealing agent is placed to the outer peripheral portion of the UV rays-curable type water-capturing agent to be cured. A method aspect of the invention includes the steps of transporting the grates along a grate path the begins with a receiving portion and a delivery portion; first subjecting a first side of each grate to a stream of pressurized cleaning fluid; and second subjecting a second side of each grate to a further stream of pressurized cleaning fluid. Thus, the axle is stamped and formed directly by the stamping die so that the axle is produced easily and quickly.

1459827481-8f8cf511-b20d-4fcd-9f62-10001e441c44

A communication system for communicating on a network that includes communication devices performs communications in a connected mode or a non-connected mode. Only a certain number of labels or tags have electromagnetically active or activatable security elements. With this configuration, an end user can easily upgrade the device driver. An interpolator is adapted to receive an output thus produced from an analog to digital converter and produce a digital output with a second specific bit resolution. In another embodiment, the conveyor includes rollers in alternating directions for selectively switching conveyor objects in a plurality of directions. A spring piece 30 having an anvil 31 bulged out therefrom is securely held on the inner side edge 16 of the aforementioned plate 15, and an ultrasonic hammer 32 is located face to face with said anvil 31, so that both side edges of the belt-like film 18 formed into a tube are placed on the anvil 31 to be melded by the ultrasonic vibration of the hammer 32.

1459827481-98dc66d4-ecb4-4676-a46e-0a15c08b210c

A method for reducing the loss of magnesium during the sintering of aluminum oxide articles, such as ceramic discharge vessels for lighting applications. The structural component is composed of plastic and is manufactured as a moulded part, and which includes in at least partial regions thereof two or more fabric layers which are overmoulded with a thermoplastic polymer. An electrophotographic printer which can realize a high speed of the operation and contribute to the improvement of the reliability is provided. A piston is located within the second chamber and movable between first and second positions. The O-ring can be hollow so that it will more easily deform and can be made from an elastomeric material in easily viewable colors. The shielding arrangement including at least one shielding component.

1459827481-ad80b546-decc-438e-ac02-5bd85e9edb8a

A method includes providing a substrate including a non-insulative, silicon-including region for silicidation, the substrate including one or more contaminants at a top surface thereof. The cold gas, and its application, covers both coated and non-coated part. The system is also capable of supporting, without failure, its own weight and at least four times the maximum intended load applied to it.

1459827482-09a9df8d-205a-4051-9360-05bbc481d3eb

In a networked storage system in which at least one primary data storage device is mirrored by a secondary data storage device, the primary device maintains data indicative of IO response rate of the secondary and capacity of a network via which the primary device is in communication with the secondary device. Such an MPEG transcoder has cascaded decoding and encoding sections. A dedicated scan cell has a functional data output separate from a test data output. The animal litter is in the form of discrete plural particles which tend to agglomerate when wetted.

1459827482-277fc9f0-4285-4fe9-ae91-771cd3a37303

In an image processing device such as an electronic camera having a detecting section which detects blurring of an image picked up by an imaging element, a part of evaluation or calculation required for controls is performed in parallel with the detection of the blurring of the image in order to speed up the controls. During operation, the system receives a noise-free database-image and a scanned-image that is generated by an imaging process. Staples can be incorporated into the fusion cage to assist in securing the cage in position in the spine.

1459827482-b69327bc-7e0d-4ea3-a828-5ee267bef6a0

A sheet cutting table 13, after sticking an adhesive sheet S to a semiconductor wafer W, for cutting the area outside the semiconductor wafer W as an unnecessary adhesive sheet S1 with a cutting device 15. The access terminal is authorized, and a serving-CSCF is assigned to the access terminal. An edge forming an insertion port of the bonder cap accommodating part includes a low profile portion with the same height as that of an edge of the terminal-attached wire accommodating part and a projecting portion projecting beyond the low profile portion.

1459827482-bec6333a-9182-4c34-a2e7-7a26d810bc58

An apparatus and method for increasing and regulating temperature, pressure and fluid viscosities of fluid streams found in oil and gas production. An initial, unstrained, semiconductor-on-insulator substrate may be processed to form the differently-strained regions in the original semiconductor layer. The data model can include objects representative of physical data in separate domains and relationships of non-data types between the objects.

1459827483-0d9e7220-1539-47ca-bc3e-fdfee064e809

A dynamic profiling system provides dynamic access session configuration for telecommunications subscribers, and provides subscriber session information to application platforms. The aperture ratio of the perforated holes to the plate is not greater than five percent. A switch connects a group of the horizontal power supply lines to a first power supply line or a second power supply line disposed outside a pixel region in a switchable manner. After being briefed on race procedures and rules, the entrants undertake a practice driving session on the track course. The overlays can be used as an aid in composing a live image for digital capture, either as a constant or intermittent presence on the view-screen of the camera. This moves the range of intersection between emission and reception characteristic closer to the cover, so that the signal-to-noise ratio of the optical sensor is reduced.

1459827483-b8c3e869-408d-4de0-838a-6fbb2187dcb3

A ball and sleeve joint for a motor vehicle has a housing and a ball sleeve which extends out of the housing on both sides. The bandage includes an SIS layer to be placed on the wound surface and a cover to placed over the wound. The interactive ID server determines and communicates the content provided to the mobile device.

1459827483-ee62b3b5-98e2-41a9-8062-2461e9ff8514

A preventive treatment method for a multilayer semiconductor wafer is described. In some embodiments, this may include dividing an object stored in the source tier

into a plurality of segments, determining if the target tier is missing at least one of the segments, writing the missing segments to the target tier, and deleting the object from the source tier. This successfully saves the band width necessary for transfer of the draw data from a main processor to a graphic processor, and relieve the main processor from the process load. Finally, a stacked gate structure is constructed by the third conductive layer, the second dielectric layer, the first conductive layer, the conductive spacer and the first dielectric layer, in which a floating gate of the stacked gate structure is constructed by a remainder portion of the first conductive layer and the conductive spacer. The magnetocaloric elements are connected thermally two by two at their consecutive ends through the intermediary of a heat exchange mechanism in thermal contact respectively with the heat transfer fluid circulating in the first of the magnetocaloric elements and with the heat transfer fluid circulating in the second of the magnetocaloric elements.

1459827484-1a8269b5-db8c-4743-84b6-a750548a7019

A board for connecting a bare semiconductor die with a bond pad arrangement which does not conform to a master printed circuit board with a specific or standardized pin out, connector pad, or lead placement arrangement. This invention also relates to these kesterite compositions and their use in preparing CZTS films. Calls identified to be from an undesired terminal also are recognized and screened. The invention can be utilized for forming 4F2 DRAM devices. In some embodiments, the chair frame includes a front support assembly.

1459827485-20e8e001-f978-456e-882e-99cd4155f3b5

A computer system includes a processor, a cache, a system bus, a memory-control subsystem, an external memory bus, RAM memory, and flash memory. At least one multifunctional holder is placed or attached in the motor vehicle and at least one device, on which at least one additional function can be mounted detachably, is placed or attached over the individual multifunctional holder. A conversation path is generated from the transcript by labeling each transcript line with an identifier identifying the speaker of the corresponding utterance in the audio source data. A processor is configured to automatically monitor the loading contact surface's position as adjusted by the user in the first exercise session, and to automatically control the actuator to move the loading contact surface in a subsequent session to the same or a different position as in the previous session. The radiation reflected from the object is analyzed for arrival time, pulse shape, and intensity to determine a comprehensive set of distance and intensity profile of the object to compute a 3-D image. The simplest construction is obtained by using the knowledge representation of a query as the top of the hierarchy.

1459827485-c06fe760-b917-4137-b169-a8699f85d9ce

Dividing a set of leaf objects having the same path of a directory namespace allows the divided path data sets to be distributed over separate physical stores. The trapezoidal shaped spinal implant includes an opening that allows the surgical team to view the dura mater prior to packing the implant with osteogenic substances. In operation, when the system is in a vacation mode the processor issues a pattern of commands to the devices to provide the illusion of ongoing occupancy. A tubing annulus port extends from an opening in the tree below the tubing annulus seal and the tubing annulus port and workover port being arranged to be in fluid communication externally of the internal bore.

1459827485-e687468e-8e4f-4207-bc0d-d4179ae20a44

A golf club head according to one or more aspects of the present invention may include a main cavity having at least one auxiliary cavity and a base surface. The photodetector and a concave portion are formed on a semiconductor substrate, the light source is disposed at the concave portion on the semiconductor substrate, a slit is also disposed on the concave portion, and the light beam emitted from the light source irradiates the scale after passing through the slit. The flat portion

has a plurality of slots formed therein and is divided into several sections by the slots.

1459827486-3e66ddfa-b912-4b07-94e1-efdbfd5ec408

A plurality of wireless communication methods are combined, networks to be used are dynamically selected by evaluating each network quality, and a packet format is changed adaptively to realize necessary reliability. At least one support bracket includes a U-shaped mounting flange having an upwardly extending connecting wall that includes a spacer wall portion having a predetermined width and an engagement wall portion that is connected to the spacer wall portion and that extends beyond the predetermined width of the spacer wall portion. In one implementation, the threaded message visualization represents each post with a generally one-dimensional or narrow entry line. Photodiodes detect the individual beams of collimated light emitted from the collimating lens, and output signals corresponding to the intensities of the individual beams of collimated light. The workpiece is machined by setting one of the pallet mounting surfaces in a horizontal state to mount a pallet thereon and then by positioning the pallet in a vertical state by rotational indexing means.

1459827486-fbf879fd-12fb-4ddd-8ff5-69746954dea0

Methods are disclosed for system scenario-based design for an embedded platform whereon a dynamic application is implemented. Signals produced by the leading and trailing sensors are sampled and stored over a defined interval of time for processing. A central end of the braking device expands toward one side of a slide rest so as to allow the control end to extend outwardly of the slide rest. The sloped face is formed on an elongated member and is configured and arranged to receive the liquid ejected downward from the nozzles. The defect concentration of the surface of the phosphor is reduced. The method may include determining whether the machine is traveling approximately straight forward or backward, and determining whether a load exerted on the implement is less than a threshold load value.

1459827487-49a96c4b-c0cd-430e-8ca4-0fa7cf61b8f6

A standoff attachment for bonded fixation to a substrate includes a standoff post with internal nut for engaging a mating fastener used to mount a support element such as a line clamp substantially at a distal end thereof. The cartridge includes two lateral members and a lower member extending between the lateral members. Previously the passage has been cylindrical, with or without a conical entrance, or of randomly smoothed profile produced by melting the probe material. The system uses the interrupt vector to access a stored tag from a tracking mechanism that associates source devices with their assigned interrupt vector.

1459827487-5d0fd709-fc57-4b74-aea4-cdccc6f6ea35d

A method and system for increasing flexibility, IO accessibility, and reliability of multicore, multiprocessor architecture, a first inputoutput controller and a second IO controller are coupled by an IO controller link card. The electron beam is magnetically deflected to scan across the faceplate to impinge upon phosphors thereon to produce light depicting an image or information. The bottom cushioning portions and the top cushioning portions are surface contacted with each other for reinforcing the strength of the container in height direction. The method comprises embedding, by the sending user, a predetermined code in a predetermined location in the message and/or in the number of the recipient communication-device, before sending the message to the recipient communication-device. One embodiment of an optical imaging system includes an optical coherence tomography-near infrared probe.

1459827487-f88983dc-5e80-43ef-82c7-2d47b2170d84

A gas turbine engine provides mechanical shaft power. The extender includes a first side wall, a second side wall, a connecting wall, a first mount, a second mount, a

first mounting station, and a second mounting station. The server system includes a communication component configured to receive the sent front-end processed user voice input, and a processor configured to complete voice recognition processing of the sent front-end processed user voice input. The coating layer at least partially covers the nanomaterial networked layer, thereby forming the device as a double-layer structure. The luminance component can be configured to generate luminance output pixels, where the luminance output pixels can each include a group of luminance input pixels. The outlet is formed in the housing assembly for communication with an external circuit.

1459827488-8b6365a2-fe9c-4cf4-8564-a575b83ae81f

The invention relates to the field of antennas and relates in particular to an generator of a laser radiation and means for coupling an electrical signal to this laser radiation, said antenna being characterized in that the generator of a laser radiation is a femtosecond laser. The invention interposes a file access object between the client and the platform that is both scalable and interoperable. These scripts may be executed in a predetermined manner to increase efficiency. Individual images from the cameras are composed to form an overall development of the inner surface of the furnace walls. Each of the light diffusion layer is disposed in the corresponding aperture and contacts the corresponding reflection layer exposed via the corresponding aperture. The beltway mechanisms described herein can be used to control access to software and hardware facilities in an efficient manner.

1459827488-9197347e-1e59-48af-9e28-75f933daed6f

A shift pressure control apparatus for an automatic transmission is arranged to hold the shift pressure during a shift at a starting input-torque-dependent pressure determined from a transmission input torque at a start of a shift. A mechanism by which in the event the hook or leader line become snagged, the leader line would be lost but the casting float enclosure separately attached to the fishing line will be retrieved. Electrode material is deposited into the pore, and a layer of structure changing material, such as chalcogenide, is deposited onto the lower electrode, thus creating a memory element having an extremely small and reproducible active area. The peripheral lip forms a receptacle in the shelf for accommodating four support posts in a collapsed condition. Thus, a polarization condition of the light for illuminating the DMD can be prevented from falling into disorder at a reflecting surface in the optical path, so that a light amount of the projection image can be prevented from reducing. A fluid filling method for a vacuum container is also provided.

1459827488-94dbbd30-b248-4640-92d2-2d704f909e57

A method and system are disclosed enabling configuration of a control system for an electrosurgical generator system for creating new surgical applications without changing the underlying software system. Based on the compositions of the educts, the composition of the product produced by the combustion chamber can be determined. An interpreter module may be configured to access individual ones of the symbols of the input data and upon accessing each symbol and compare a thread against the symbol. The threaded stud includes a flat head adjustable in a plurality of positions which, in turn, enables positioning of the threshold. The wall of the handle is separable at the annular weakened wall line to permit withdrawal of the applicator tip and transfer of the dental material to a surface. A cover can be securely attached to the sheet bundle.

1459827488-b14aa382-cb64-47f1-96a1-a4d8e71dc51d

A stacking apparatus and method of multi-layer stacking of objects of different sizes on a support to form a stacked support includes providing a support handler. One embodiment of the invention relates to random access storage media such as a DVD used to distribute motion pictures and other audiovideo programs or works. The feedback can enable playlist curators to better tailor playlist content and

sequence, potentially reducing a perceived need to skip around inside a playlist and making for a more enjoyable experience for playlist users.

1459827489-7cfdc675-8d36-40a8-8b8c-e0aa3aff1f96

A method for controlling admissions of data packets across a packet network comprising the steps of establishing a communication route along a plurality of interconnected secondary nodes, determining an amount of available network and determining whether to admit the data packets to the communication route based on the determined amount of available network bandwidth. , heating of the mixture to a temperature in the range from 500\xb0 C. The invention also features methods of targeting a protein to a cell, methods of protein therapy and methods of treating diseases or disorders using a TUS protein, a NLS or NES identified from full length TUS. Additional aspects provide a phosphate-containing fertilizer comprising struvite, and methods for making same. The actuator moves the control gate to control flow through the orifice.

1459827489-a9be0c21-ffcb-447d-8384-b420612d42a4

A floorboard and an openable locking system therefor comprise an undercut groove on one long side of the floorboard and a projecting tongue on the opposite long side of the floorboard. proprietary inbred maize varieties. The film is sealed by heat to form a permanent dual inner pouch structure containing two pockets each having an opening at the bottom side. In one embodiment, the rotatable member may be a component of a micro-turbine generator. 0 dlq or more in an amount of 5% by weight to 40% by weight to produce an article precursor, and a step of heating the article precursor at 150\xb0 C. External reference frequencies can be injected for voltage-controlled oscillator and phase-locked loop testing, chip characterization, and automatic compensation modeling.

1459827489-ae75266a-6d58-4bd6-8e46-fafe1d7ad52a

In a system and method for testing and displaying the abnormalities, includes opens, shorts, bridged-taps and wet sections, of a copper pair line for xDSL service use, the abnormalities are amplified and normalized so as to be displayed within a predetermined observation range. A top electrode is defined on the top surface and a first aperture is defined in the top electrode. The size of the primary crystallites may be at most about 0. The received plurality of bits may be exclusive ORed with the generated corresponding output samples of data. This new variety has white flowers with red margins.

1459827489-bc994faf-d51e-48ad-9c46-2449dbd86686

Test structures and methods for measuring contact and via parasitic capacitance in an integrated circuit are provided. The time-varying detected optical power is used to adjust the source intensity. Also, a distance between a surface of the carbon material component and the electrically conductive section is less than or equal to a value determined by \u03bb. A telemetry signal receiver is disposed on said lower module, which also includes a tractor assembly for moving the lower module through the drillstring. The allotted numbers represent a subset of the predetermined fixed range of numbers.

1459827490-a7b9b14f-3f84-4076-9735-af4a7cc0ad8f

Provided are a temperature sensor using a ring oscillator and temperature detection method using the same. A first solder ball is produced on a main surface of a first element. Each of the multiple project areas is assigned to a different physical test environment. As the cell discharges, anode active material is physically moved from the anode to intercalate with the cathode active material. The switch also has an impact threshold for moving the switch from the second condition to the first condition.

1459827490-b828b47d-167a-46e3-9f5b-253c3aeb6fc8

A new and distinct cultivar of Rose plant named \u2018Hormeteoric\u2019,

characterized by its upright, low spreading and mounding plant habit; dense and glossy dark green-colored foliage; freely branching growth habit; freely flowering habit; large light red, pink and yellow-colored flowers; resistance to Black Spot; and good garden performance. The multimodal source has radioactive material permanently incorporated into a matrix of material, at least one of a material that is a target for CT, MRI and optical scanning, and a container which holds the radioactive material and the CT, MRI and/or optical target material. This key management facility, in turn, provides the rekey request to the key management facility for the roaming communication unit's home system. A channel structure member is fixed to the nozzle plate and is formed with the at least one liquid channel. The black-cell monitoring system also includes a fiber optic cable that is disposed within the lumen of the tubing.

1459827490-d1fb55de-064c-4019-99b9-3b468907dc66

Novel plant polysaccharide synthesis genes and polypeptides encoded by such genes are provided. In addition to a central spine to prevent or reduce flexing of the tips, the mirror layer also includes perimeter ridges to reduce or prevent flexing or warping of the mirror edges. Arcuate walls surround the knob to define gaps corresponding to alternative rotational periods for the knob. The channel encoder encodes the information vector into an intermediate codeword using a first code and shapes the intermediate codeword into the output codeword having a desired distribution. In addition, the thermal distribution within the hoods can be controlled precisely.

1459827491-2f3cc92c-e291-4f1c-80e4-db381925657c

Climbing products containing rails decorated using veil products colored, patterned, painted or in combination with marking methods such as company names and logos and resin formulation designed to withstand exposure to UV radiation with minimal change in appearance which create specific appearances for applications, enhance weathering performance, and facilitate processing efficiency. A scintillator converts X-Ray radiation generated by an X-Ray source into detectable radiation. MIM devices as two-terminal nonlinear devices are formed between each pixel electrode and the signal lines. The droplet has a periphery in contact with the first surface, the periphery having a shape determined by a predefined feature on the first surface and the surface tension of the liquid precursor material. For example, the server might look at the first five hops from the client to the server. In a case where a plurality of R are present, each of the plurality of R is either identical or different.

1459827491-5f23b4cd-f9c4-4cbd-8540-e62bbdf773b9

A forklift truck includes a truck body, a fork, a mast, tilting and lifting mechanisms, tilt and lift levers, tilting and lifting operation detectors, an auxiliary switch, a tilt angle detector and a controller. The portion of the suture is retrieved through the tissue layer from the opposite side whereby the suture is drawn from one side to the opposite side. This coating is made of a coating material, which consists of specific materials in indicated amounts of substances of one binding agent, insulator, dispersing agent and distilled water. When the touch sensor senses a user's touch thereon, and the push switch is depressed, the portable transmitter transmits the operating instruction to the controlled device and continues such transmission as long as the touch sensor senses the touch thereon regardless of the depression of the push switch. The first bristle holder is located at the second end of said head. Two respective joining surfaces, which belong to two respective different parts, are joined to one another by laser-welding.

1459827491-f0fea6ac-5b29-4088-95ae-59e190ac3e66

The invention relates to method characterized in that said method comprises steps of acquiring movements, calculating the mean position, calculating position predictions, and calculating minimum grid movement speeds, and a step of acquiring

the position of the drone so that, if the drone cannot follow the movements of the grid and the movements of the grid are small, i. The equalized signal may be phase averaged to provide a signal that is at least partially phase stabilized. Plural conductive tracks 5 are provided, each corresponding to a respective intermediate or ejection electrode 3 and supplying a voltage to an electrode in use. For example, this mode provides higher gain in the GPS space vehicle side-lobe signal regions for improved acquisition and tracking performance and lower gain at Nadir, providing reduced noise temperature and higher signal to noise ratio.

1459827492-27d1f18f-fd77-43f4-942b-3de461589392

A bearing retainer for a valve having an internally mounted stem and valve member with a trunnion and a bearing positioned thereabout is disclosed. The wheel has a radius and an exposed surface that can be rolled against a surface on which a distance measurement is to be taken. Additionally or alternatively, the control parameters may relate to a design canvas or other depiction of the document, such as allowing rotation, position, or magnification of the canvas while the document is edited.

1459827492-2868ee8a-8edc-4e74-9e60-a657dc9f65e3

Disclosed is a method for processing the service connection between a user terminal and a Wireless Local Area Network applicable to a WLAN interactive network that at least comprises: a WLAN user terminal, a WLAN access unit, a service control unit and a user information storage unit. The shaft module is inserted through the hubs and has a shaft body. The compounds of formula I are antagonists or partial agonists at the CRTH2 receptor and may be useful in treating diseases and disorders associated with that receptor such as asthma. A quantity of a low melting temperature, thermally conductive material, such as solder, or a thermally conductive liquid, is placed over each plug and a heat sink body is placed over the assembly. Consequently, regardless of whether group management is in place at the second image forming apparatus, the number of pages printed may be centrally maintained by the first image forming apparatus.

1459827492-b5e3db01-36e8-467d-bb40-63b64748c230

A re-timer system that may include a phase recoverer, first-in-first-out device and retiming clock multiplication unit. The semiconductor material forms an active area of the device. It makes also easy stator blade wheel assembling of the pump, as it is allowable to arrange half stator blade wheels with some eccentricity.

1459827492-b8324a59-4046-4248-bd10-f624a7e2735f

Methods and apparatus, including computer program products, implement techniques for modifying an image. Imagery of a scene is received from at least one image capturing device. The torque transmitting devices include clutches and brakes arranged within a transmission housing. The protocol may include culturing blood cells in the presence of a cytokine and an ionophore. If the determined identity matches a predetermined identity, then, based at least on the identity of the first user matching the predetermined identity, the first user is logged in to the computing device.

1459827493-0dd7e9a2-5da4-4e17-bfae-f373b34560ce

A reflective road marker to be mounted on a road surface to indicate the position of traffic control lines on that surface. The ejection mechanism includes at least one ejection port configured to eject a medicament-containing fluid. The optical fiber is mounted in tension inside the hollow structure through longitudinal fiber-receiving bores in both members, and has an anchor point affixed to each member with the grating therebetween. The cleaning apparatus further comprises an air regulator capable of regulating pressure of the air delivered to the system. A position correction unit corrects error of relative position information on the first defects group and the second defects group, and the first and second defects groups are checked. The list structure allows for access to a relatively small

store of data to determine whether or not a cache entry needs to be written to the main memory.

1459827493-3a98f900-e7f2-4f17-9b24-953cc5ef708e

The light emitting element of the embodiment includes an anode; a cathode; a visible light emitting layer provided between the anode and the cathode and emitting visible light; and a carrier trapping layer containing a thiadiazole based compound represented by the following formula. The weighing system has two guide members, which connect a load support to a base region fixed to the housing. The components of the EESU are manufactured with the use of classical ceramic fabrication techniques which include screen printing alternating multilayers of nickel electrodes and high-permittivity composition-modified barium titanate powder, sintering to a closed-pore porous body, followed by hot-isostatic pressing to a void-free body.

1459827493-5821ac47-e1b6-49c5-b24d-42d292c43af0

A system and method for automated design deployment for distributed applications includes providing a node with at least one requirement attribute in an application description. The first and second arms include respective terminal ends of the U-shaped body and lie in a common plane with the central body region. One memory controller is then provided to have a core logic circuit, a plurality of input/output devices, and a reorderer. One software product comprises security software and middleware software stored on a software storage medium. When the lens and backing plate are positioned in the recess of the faceplate, the one or more magnets exert a force on the backing plate to secure the faceplate and lens to the backing plate. The compounds of the formula I are capable of modulating the body's production of cyclic guanosine monophosphate (cGMP) and are generally suitable for the therapy and prophylaxis of illnesses which are associated with a disturbed cGMP balance.

1459827493-6e2d3e05-dddf-438a-bfd2-3ad2326baa58

The invention can provide a method of etch processing a wafer using a Real-Time Parameter Tuning procedure to receive an input message that can include a pass-through message, a real-time feedforward message, or a real-time optimization message, or any combination thereof. In the servo writing method, at the time of perpendicular magnetic recording of the servo data on a disk, a servo writing operation is executed including an offset process set based on the hard-easy transition shift phenomenon. The through bore has first diameter and second diameters, wherein the first diameter is less than the second diameter. A search for content may be limited to one or more of the groups, thereby increasing the relevance of the results returned to a user. The system, as described herein, may be applied to several mechanical devices or systems. In the filter, the first recess diameter is not equal to the second recess diameter and the first recess center-to-center spacing is not equal to the second recess center-to-center spacing.

1459827494-3839f9cc-a8f6-4737-b53b-7240ecbde2c7

A method of forming carbon nanotubes includes incorporating phosphors in the form of quantum dots, along with the beads of ZnO on carbon nanotubes to generate white light. The support column has a spin joint and an invert joint. The alloy has the following composition : Al<sub>4</sub>Si<sub>0</sub>. A control unit causes afterimage reduction patterns selected by a user from the storage unit to be input to the composition unit, and a final image in which only pixels corresponding to opaque areas and/or semi-transparent areas in the main image are replaced by color of the opaque areas and/or semi-transparent areas in the afterimage reduction patterns to be output from the composition unit. At least one connecting member couples at least one of the upper and lower rings of the primary stabilizer assembly to a corresponding annular ring of the secondary stabilizer assembly. The shadow table may be configured as an Index Ordered Table to eliminate a query chop

from the index table to the shadow table.

1459827494-40c392c9-aa9f-4bcc-9c09-8f43c18d97d3

In one aspect, the present invention provides a composition of a covalent conjugate of a GABA analog with a drug. The first member has a first end and a second end. Bit stuffing is a technique that is commonly used when encoding to resolve buffer underrun problems. The first portion is disposed within the channel, and the second portion is exposed from the channel.

1459827494-6fa56201-c91e-4c17-9569-8594ce5ab990

An organic light emitting display keeps a constant grayscale in an organic light emitting display panel even if power supplied by a power supply is changed. In said implant, a metallic, nonmetallic or ceramic hollow body is coated with an active substance complex or comprises said active substance complex. The mixture is initially pressed to form a loose mat. The glue piece is adhered to the fixing portion. The CompactPCI backplane incorporates a different type connector at its P4 location, in conjunction with a standard family of IEC 61074 connectors at its P1, P2, P3, and P5 locations, to provide high speed data transfer with additional shielding and noise control. Alternatively, the internal bolster may be deployed by the constraining member being dissolved by the patient's bodily fluids located inside the patient's stomach.

1459827494-9cddc09d-399d-46a5-a8ae-8d047e89189f

Disclosed are systems and methods that facilitate securing communication channels used in a challenge-response system to mitigate spammer intrusion or deception. An ergonomic handle having at least one protuberance enables a person to firmly grip the handle with less muscle strength than is required to grip a straight handle. In particular, the rows can be widened so that there is spacing of about 30 microns between adjacent row traces. Each trace includes a spiral conductor. According to one embodiment, coordinates of points identifying a shape in a fetal image are received, coefficients of one or more mathematical functions that describe the identified shape are determined, and the determined coefficients are utilized as markers to assess fetal abnormality. The bezel with integrated speakers does not increase the lateral footprint of the monitor.

1459827494-da50d27b-d4ca-46be-b687-f9c8b6b9edb9

A sacrificial layer is formed in a recess of a substrate, and leads extending from the substrate into an area of the sacrificial layer are formed. A lower conveyor tube has an open upper discharge end telescopically engaged with the upper conveyor tube, and an intake hopper mounted on a lower intake end. A gas analytic chamber stores the gas to be analyzed taken out through the duct.

1459827495-050f523f-6ae9-42d9-ab6e-ce5a04a331a0

A method of correcting an infrared image is provided. One such a method includes distinguishing at least one particular structural feature associated with the exterior of the particular portion from at least one particular structural feature associated with the interior of the particular portion. The device has a first portion having an end configured to engage the hub assembly and unlock and lock the hub assembly. A transmission antenna is connected to the pulse phase modulator for transmitting the broad band spread spectrum antenna test signal to a test antenna. The voicemail system can send the requested voicemail message header information to the mobile device and, in response, receive a second request for at least one voicemail message.

1459827495-c59f5f82-2811-4e36-8e89-a6fb182c627b

A method for scaling traffic engineering, TE, routing in a network, having a plurality of network elements connected in a given layer to each other via links TE domain segments of a TE domain of said network are collapsed into a virtual TE nodes. A special purpose computational resource is coupled to the general purpose

computational resource. Support models are generated from domain models. A method for constructing a nanoflat resistor is also provided.

1459827495-da008c16-a18b-4615-9db6-f1eef71e050d

An improved canopy assembly for a rearwardly extending protective canopy for a motorized golf cart of the type having a top covering the passenger seating area and an uncovered bag storage area located rearward of the seating area. Multiple features of the gauge are integrated with each other within a common reference coordinate system to precisely locate the features relative to each other. A fluorescence channel is selected so that the desired sensitivity and specificity are achieved.

1459827495-e61c9366-0c1f-4d97-8559-a69b9bdb81ca

A job separator has a first roller unit and a second roller unit adjacent to the first roller unit. With this configuration, the present invention provides a reaction apparatus, with a lid that is opened and closed readily, and in which the lid parallelly contacts a sealing member, and thereby creating a vacuum in the reaction chamber with ease. The composite API may be designed to provide a simpler way to consume information from multiple datasets in response to a particular scenario or problem.

1459827496-310b4ba3-83f7-4b56-b54a-441a15810a17

In a packet switch for communicating packet switched data to and from a plurality of wireless mobile stations, a method and apparatus for automatically releasing resources tied up for communicating with dormant mobile stations. Separate pairs of tensioning springs attach the spring support bracket to the bed support frame and to the mattress support frame. The system may be used to exercise complementary muscle groups. The support may be a U-shaped support having a pair of arms extending from a base, where the base is mounted to the substantially vertical brace so as to extend the arms substantially horizontally from the brace. Methods that utilize the bioreactors are provided, involving placing a microorganism or cells and a fluid medium in the bioreactor.

1459827496-6c8aaeb1-2ae4-4535-8dea-65c8d9e3f379

A power unit, a fuel cartridge, and a fuel cell system having the power unit and the fuel cartridge. The method includes using a first physical deposition process in the first process station to cause formation of a first conductor layer overlying the surface region of the substrate. The formation of the  $\text{Al}_{0.4}\text{O}_{1.4}\text{N}$  grain boundary phase is believed to facilitate the transport of nitrogen from entrapped pores during sintering. Further, the exposure apparatus includes a reticle stage on the second position for loading a cylindrical reticle and causing the cylindrical reticle to rotate around the center axis of the reticle stage and an optical projection unit between the reticle stage and the base for projecting light passing through the cylindrical reticle onto exposure regions on a wafer on the wafer stage. Use of the flow modulator assembly also lessens the chance that beneficial agent will be wasted during assembly of the osmotic delivery system.

1459827496-70c7bb30-7c80-4caf-a6fa-b728baea6243

A voltage converter includes an output circuit having a high side device and a low side device which can be formed on a single die and connected to each other through a semiconductor substrate. The syslog messages are received from a plurality of components. Obstacle, helper, guide, and hope playing cards are provided in various decks.

1459827497-79991d05-6614-424a-9fe8-c147a0a8c757

A programmable lookup table for an integrated circuit optionally provides two input signals and two output signals to an interconnect structure of the programmable IC when programmed to function as shift register logic. The load forecasting

application may include a database for storing information and a report module for generating energy usage load forecast profiles. These electrodes are formed of palladium, titanium, or zirconium. The NMS retrieves the message digest of a device that is submitted for management. The configuration of the fitting advantageously simplifies the assembly process and preserves the integrity of the adhesive to form a strong joint. The second operation code may represent an instruction to the memory device to perform a read operation.

1459827497-8064caf6-06b4-47c5-a4f6-396104955ca2

A system for cooling charge air from a turbo- or supercharger and exhaust gas recirculated from an exhaust gas recirculation valve in an internal combustion engine. Cache elements in the cache are associated with a time attribute and historical data. A driving device is located between the stationary frame and the movable frame and rotationally or linearly moves the movable frame. The packets, when they were sent, are assigned sequence numbers based on the first ordering. Intravascular indicators are stimulated, and emissions patterns detected for computation of cardiac output, cardiac index, blood volume and other indicators of cardiovascular health before and during hemodialysis. The refueling drone may be rearwardly deployable from the tanker aircraft such that the refueling drone is towed by the refueling hose behind the tanker aircraft.

1459827497-8c95cd4c-0c8e-4394-af28-50efd8917a46

Several synchronization circuits, a computer, a method of adjusting the operation of an oscillator, and method of operating a power converter are disclosed. 5 to 90\xb15 s\u22121 and at 23\xb112 C. Further, the metal wiring film laminated on a surface area outside the recess in the insulating film is selectively removed.

1459827497-fab9c145-1bb2-44ef-8bdd-39a7e39a127e

Apparatus and associated systems for transmission of signals within a wide bandwidth include a conduction path and ground structures in an arrangement to provide a smooth transition between propagation in a coplanar waveguide mode and propagation in a microstrip waveguide mode. The thin plate sections include movable sections having end surfaces in an opposed relation. Then, the sheets stacked on the sheet process tray in a state of being offset are aligned by an aligning member. Inner portions of the walls provide a peripheral region of an aperture within such fixture. The data transfer between individual program sections is thus synchronized by the buffer synchronization class only, which consists of the buffer, internal variables and the buffer utilities, is configured in a very simple manner and can thus be tested in operation in a relatively simple manner by means of a computer comprising several processors.

1459827498-17596479-7df4-4673-8852-0e7cc838d7cf

An automatic mouse charging system includes a charger plate and an automatically chargeable mouse. A coil assembly is mounted within the roller body and has an induction coil, and an inside and outside thereof are coated with insulators. A conductive shaft is provided with a pair of annular concave portions formed on an outer circumferential surface at both ends thereof. Thus, an error when the gain of the variable gain amplifier is suppressed. The search unit performs the searching until an undefined variable node no longer exists in the graph to be designed, and performs backtracking on condition that no variable node is found.

1459827498-380945bc-d801-4660-a3aa-1cbc11fb5b4f

A carpet-stretching device for stretching a carpet laid over a floor onto a fixing strip. An image-recording device is disposed adjacent the thick end of the waveguide, the image-recording device being capable of recording a two-dimensional image. In addition, the present invention provides a method for partitioning an IMB. The antenna structures may have a tunable circuit that allows the antenna to be tuned.

1459827498-66bbbed7a-74a1-47f9-80b6-f00a241057cb

Various embodiments include apparatuses including optical and optoelectronic devices and methods of making same. A capillary is associated with the housing and the window. A hub is attached to a shaft that connects two recliners on opposite sides of the seat.

1459827498-fc1d16c7-e75b-4819-b982-7bacfb10c9db

The present invention is a semiconductor structure for light emitting devices that can emit in the red to ultraviolet portion of the electromagnetic spectrum. When data frames carrying voice, video, or other multimedia traffic are received at the client station via a wireless link, a frame rate of the received data frames is measured for a period of time. The system includes electronics adapted to produce millimeter wave radiation scanned over a frequency range of a few gigahertz. An information bundle is created for the first event scenario, including one or more documents accessed through the scenario desktop during the first event scenario. In some implementations, the reading device can be configured to operate in at least two modes: a continuous reading mode and an enhanced reading mode.

1459827499-4f9b87de-e80f-4626-a609-ef73cb2c379a

A data storage device includes a memory and a controller. In the coagulation apparatus, the cold plasma is generated by a microwave resonator with low power consumption in the atmosphere, and the cold plasma is vented on a bleeding portion of a wound. A group of media content items associated with the user is then analyzed with respect to the criteria to provide results such as a number or percentage of media content items from the group of media content items that satisfy each of the scoring criteria. The layers include superposed longitudinal lines of weakness disposed generally transversely midway between the side edges. The telepresence system also comprises a means for allocating one of the remotely controlled systems to the specified venue.

1459827499-9b18cf31-2870-427f-a131-073e5684b9be

The invention provides a dispensing valve or fuel nozzle having an earth cable and/or a safety cap for covering the discharge opening, the safety cap connected by a cord to the dispensing valve, wherein the dispensing valve has an automatic retraction system for the earth cable and/or the cord of said safety cap. The different subsets include candidate face regions of different sizes and/or locations within the images. The distance between the end portions of the p+ type buried layers and the n+ type region is 7  $\mu\text{m}$  or more. The height of the ring is equivalent to the desired height of the cell. Positioning of the door is under the control of a temperature sensor for the rearward zone.

1459827499-cf86d539-9fe7-4375-a51f-7b8f847622aa

The present invention relates to a method of manufacturing a nano transistor. In an example, an un-bumped substrate is obtained having a pattern of bond pads configured to support bumped contacts and a plurality of test pads. In doing so, one frame is divided into subframes corresponding to the number of bit for the time ratio gray scale.

1459827499-f87386ac-da86-4d46-94ea-42f9b09553c2

A co-extruded tubing for the administration of intravenous fluids has an outer layer of a polyester. The production method is advantageous in that a potassium organotrifluoroborate compound can be produced in a single reaction without recourse to a process of isolating and purifying an intermediate. The connecting screw is dimensioned such that it passes through the threaded sleeve and with part of its shaft, by way of the sleeve, can be engaged with a thrust bearing piece in the profile groove of the second profiled rod. The activated ribosome-inactivating protein then kills the cell by inactivating cellular ribosomes. The processor is programmed to cause the actuator to cause movement of the different portions toward the washing area for different wash cycles.

1459827500-53f6fc08-40c1-4bed-b146-7a9507cedfdd

A data optimization engine for optimizing selected frames of a first stream of data. Each data element includes a gain. In response to operation of the toggle switch, a selected one of a pair of attribute control files associated with the particular task will be utilized during object construction. In addition, caulking operation of the joint to the adapter can be performed by pressing a caulking portion formed in advance in the joint against the outer peripheral edge of the flange, so that a wide space is unnecessary for caulking. A plurality of posts each has a first end and a second end and a bend positioned between the first and second ends.

1459827500-944aa6c6-8154-40df-bc2b-8394e15dd3fd

A method for evaluating portions of a reservoir includes classifying producing reservoir portions in the reservoir into multiple classifications based on production data associated with the producing reservoir portions. A controller monitors the status of the FIFOs, retrieves the stored data in a predetermined order, and multiplexes the data, together with timing data indicating the presence or absence of the data, into a serial signal having a frame structure in which time slots are fixedly assigned to the respective channels. The contact pad, which is actuated downward by piezoelectricity, is fabricated as it shares a layer with a RF signal line, after the RF signal line is fabricated. The charge region is located at a position distanced from the head element.

1459827500-ccd03485-2cc3-4e76-90fd-15ef19551099

This invention relates to pyrrolocarbazole derivatives according formula I wherein R1, R2, R7, R8, R9, X and Y are as defined in the specification wherein said derivatives specifically inhibit one or both of the checkpoint kinases Wee1 and Chk1. If the current information does not correspond to the reference information, then a robot is stopped and/or the safety measures of the enclosure are applied. Within data storage in the data processing system, a data structure indicates a duration of a protection window extension for each of the plurality of agents. Any technique for sending a video data file to the financial institution may be used.

1459827501-3cbf5268-3060-47d2-8548-bf370b21f883

A drive combination for generation of electrical power and heat includes a piston engine coupled to a generator. The thermal shield has a first receptacle adapted to receive a first portion of the lamp. The server digitally signs a portion of a ticket that is returned to the client, which includes the nonce, a time stamp, and the ID. A portion of the transceiver attributes are selected in response to session information from the auto negotiation. The steps are repeated at any subsequent catalyst carrier and then product is removed from the reactor outlet.

1459827501-4707242e-2f0a-47b4-949b-0afe7782cd3d

A condensate trap upstream of an engine cylinder is provided. The principal first loan may be a mortgage. The determined parking availability is based on historic parking availability information and real time parking availability data. The disclosed device includes a first laser emitter, a second laser emitter, and a laser receiver. Such oligomeric compounds are useful for diagnostics and other research purposes, for modulating the expression of a protein in organisms, and for the diagnosis, detection and treatment of other conditions susceptible to oligonucleotide therapeutics.

1459827501-52d8876e-38c7-4d6a-9d5b-5f84030dc4f4

The invention relates to a force sensor for measuring a bearing force of a roller deviating a web of material. An oil production system to produce oil from a viscous reservoir is provided including at least one production well, a fluid injection well, and a heating system functionally associated with the at least one production well, the heating system having at least one electrical heating well adapted to

direct power from a power supply at surface to the reservoir to heat the reservoir. Error data and sample data taken from an assay of a quality control substance are transmitted from the control device to the analyzer.

1459827502-0f9ddda1-3062-4bfc-8b4c-a4181e44a455

The invention includes a method and apparatus for synchronizing a first processor with a second processor. The method is performed at a server, the server including a plurality of processors and storage and having access to a database of television program related information. A pair of electrical switches, for controlling gear change, are carried by the supporting body on a supporting plate which is mounted on the supporting body. The energy storage capacitor and the serially connected inductor provide an impedance match to the plasma, limits the current rate of rise and peak magnitude in the event of an arc, and shapes the voltage pulses to the plasma.

1459827502-ce17f36a-6ddc-494e-972a-18d12948fcab

The present invention relates to a method for manufacturing nonwoven and nonwoven obtainable by said method. An electroluminescent wire light can be embedded into a curable polymer or adhesive composition and used for curing in circumstances in which UV or visible light from conventional lamps cannot reach the polymer or adhesive to be cured. Methods for making the composite materials are also provided. The force causes the cells to cut into the end of the prepared bone. The fibers abrade and loosen potential irritants in the root canal architecture, including the recessed regions and the accessory canals, without requiring unnecessary reshaping and removal of dentin from the root canal.

1459827502-f5995d6c-b9f9-4e96-be05-aef4f4f15754

A dispenser for delivering a suppository within a body cavity. The belt drive device further includes a roller-shaft shifting member that shifts at least one end of a shaft of at least one roller of the above described rollers in accordance with the movement of the endless belt in the axial direction of the roller. The inner side surface includes: a perpendicular surface standing upright from the inner end of the seal surface in parallel with the outer side surface; and a conical surface inclined toward the outer side surface extending outward in a radial direction from an outer peripheral end of the perpendicular surface. The leading side of the stirring elements has a flat surface whereas the trailing side is curved. Putting the column ID or identifier is inserted into the record during particlization between each column variable. The target speed is a function of the image density.

1459827503-317d452d-b508-44ca-8990-07ed61e1ca47

Gaming devices comprising a standard gaming unit, e g. Specifically to a mobile terminal including a display including a touchscreen, a sensing unit for sensing an object in near-proximity to the touchscreen, a controller for altering an image appearing on the display according to at least one of a duration of the object near the touchscreen and a distance of the object away from the touchscreen. In addition, the first node can transfer the certain packet to the second node to process the certain packet by using the algorithm. Additionally, the selected pattern of micro-features may be reproduced from a master pattern of micro-features to duplicate the selected pattern on several sections of film so that a consistent planarizing surface may be provided for a large number of substrates.

1459827503-3358e48a-705b-45b2-a0bb-c4636e7017a8

The switching network serves for the transmission of digital data signals within a broadband communication system. A wireless communication system can use a common pilot channel configuration to aid channel estimation in one or more receivers in communication with the system. The rotor is disposed on the rotating shaft with part of the rotating shaft protruding from the rotor. The backplane assembly is mounted on the communication equipment shelf at a position between the first face and the second face of the communication equipment shelf. The incident ray that

strikes the surface of the object at the point being imaged by the pixel is then determined using the determined pattern displacement.

1459827503-42eeaf0d-4e90-4a85-8e0a-2511f63f565f

A system to coordinate a wagering event using a virtual Web server with an administration application and a server database. A copolymer solution-polymerized from a conjugated diene-based monomer and a vinyl aromatic monomer is mixed in solution with organically modified silica having the silica modified with a specific aliphatic hydrocarbon to prepare the organically modified silica master batch elastomer. Further, the thickness of each of the vanes that constitute the impeller is made maximum where they join to the impeller ring section. A shoulder in the internal bore supports a sealing ring. The first and the second radial direction ribs are formed thinner than the web and the ring-shaped rim-shaped section.

1459827503-89986e91-57d1-44b5-95ff-b032b0cb6123

An exemplary apparatus for digital coherent detection of a multi-wavelength signal includes a polarization-diversity optical hybrid, at least four Wavelength De-Multiplexing filters, 4M detectors, and 4M analog-to-digital converters, with M an integer greater than one. The connection between each cell site switch and the respective cluster is formed by a common bus to which each base station transceiver in the cluster and the pertaining cell site switch is directly connected. The logging software is configurable such that most current and future logging specifications may be fulfilled without any code changes to the logging software. A facility management unit is in communication with the processor. The extensibleretractable assemblies are formed with slide guide sections in which the fixed support sections are fitted.

1459827503-f730dc87-a8d8-48f1-a0f2-94937d737b60

Method and system for encrypting streamed data employing fast set-up single use keys and self-synchronization. Each filter is formed by applying a DC electric field to the gas stream which causes the ions to move in a direction opposite to the gas flow. The invention can be implemented to expand a narrow-neck preform or container finish to a wide-mouth preform or container finish. The invention can effectively avoid the problem of electric discharge when RF signals transmit in a vacuum chamber, resulting in more security and less transmission power loss.

1459827504-1a66e0d9-409b-4c60-b47b-0db1d0d397ee

A leverage handle tool includes a handle and a seat block. The invention also provides a catalyst support, an adsorbent material and a catalyst constituted by said agglomerates. The wiring substrate includes divided-substrate-unit regions, in each of which the first interconnection, the via, and the second interconnection are formed. The control system yet further includes a processor adapted to receive the serial data and generate control signals that controls a number of electric devices on the vacuum cleaner. More specifically, deoxycholic acid and related compositions, said compositions being free of all moieties of animal origin and free of pyrogenic moieties.

1459827504-b8d10d9b-b00e-4277-992d-ff24b4f60526

A mathematical calculator where when a mixed fraction key is depressed, an integer part input area, a numerator input area, a denominator input area and a vinculum for a mixed fraction are displayed on a display screen. A radio network controller may pre-load a wireless transmitreceive unit with HS-DSCH configuration for the target cell. An electrode is positioned within the housing so as to be electrically coupled to the colorant in the reservoir and is configured to be coupled to a current source and return electrode. A tag circuit that may generate a tag value for each of the control commands prior to the control commands being stored. User vectors in  $U_{2032}$  and  $V$  are initialized and then iteratively updated to arrive at an optimal solution.

1459827504-f509f70f-43a9-42c4-83f4-d0868ba1ee2b

A drawer assembly with an interchangeable lock for mounting on a furniture piece. The circuit marker comprises a body adapted to attach to the access cover, means for attaching the body to the access cover, where the means includes at least one projection extending from the body and is adapted to engage with a recess formed in the access cover. The therapeutic agent can be selectively mixed with the lavage solution to form a blended solution. The system and the scorecard may utilize fewer data elements than a complete credit-worthiness scorecard and may instead focus on the key elements affecting a consumer's credit score. Each element in the array comprises frequency resource parameters for a set of resource blocks.

1459827505-23e5c13e-be77-42e8-8731-15a3d2c03ef9

A presentation system comprises a display for setting a virtual screen, a pointing mark for operating a point on the display, a photographing device for photographing the pointing mark and the display, a displaying device for displaying a predetermined image or the photographed image photographed by the photographing device, and a control device. The mill includes a device for positioning the rotor that includes indexing elements for positioning the end of one of the hammers as close as possible to the screen for adjusting the spacing. In certain embodiments, the optical filter and the diffraction grating can be used to diffract and direct a first portion of electromagnetic radiation incident upon the grating and filter toward a receiver while filtering a second portion of the electromagnetic radiation incident upon the grating and filter. , a driven ring, connected directly or indirectly to a substrate support member for supporting a substrate; and a driving rotary member, e. The bottom end thereof is pivotably connected at a first pivoting point of the base while the top end thereof is pivotably supported by a resilient cylinder which is pivotably secured to the base at a second pivoting point. Preferably, the transmitter sends the processing signal to a robot, which responds accordingly to the received processing signal.

1459827505-393e6f2a-59f8-4317-b8cb-ce004d938c2a

An optical transceiver assembly comprises a transmission system, a reception system and a coupling system which directs a part of the signals produced by the transmission system to the reception system. The first rear leg includes an upper member having a first end a second end and a lower member having a first end and a second end. The living hinge has a pivot axis and mechanically couples the first segment and the second segment. In general, users with higher power requirements, such as those near cell boundaries, will be assigned subcarriers from a group having a higher power level. Generating the connection associated information includes generating an index and a way.

1459827505-7bd51e92-648b-4638-9319-36edf82fd304

Provided is a hard handover method in a wireless communication system. The clamp advantageously applies a clamping force to the cable without direct contact with the cable, thereby reducing abrasion and shear forces applied to the cable. The transmission casing defines a first cavity between the walls and includes a platform disposed between the walls. Also attached is application identification information that identifies an original host application corresponding to the macro. The apparatus further includes a sealing gasket proximate an intersection of the rim and the flange, extending completely around the perimeter.

1459827505-dc51ab20-7ce6-47c4-bf28-72a6efce0555

A toy throwing disc that is tossed between players has a unique feature of having the compartment in the center filled with a liquid or gel that creates a stabilizing effect. In order to convert an interlaced video signal having 525 scanning lines into another progressive video signal having 525 scanning lines while maintaining the image size, in an odd-numbered field, a line after conversion is offset by 0. Various prior art mechanical control linkages between a driver and

controlled systems are replaced with non-mechanical control signal transmission components.

1459827507-0146bd6e-a916-4aa3-858c-7c346cf8a207

The present invention provides compounds useful as inhibitors of Tec family kinases, compositions thereof, and methods of using the same. Phase change is gradually introduced into the acoustic feedback canceller loop to avoid entrainment of the feedback canceller filter. The controller produces a first signal representing the pulsating vacuum level. , wherein RE is one or two or more selected from Ce, Pr, Nd, Eu, Tb, Ho, Er, Tm, or Yb, RE<sub>2</sub> is one or two or more selected from La, Sm, Gd, Dy, Lu, Y, and Sc, and M is one or more of Mg, Ca, Sr, and Ba. This invention yields alternative concepts related to a first, official or \u201cnormative\u201d concept for each entity associated with the enterprise in all forms, e. By means of a coupling module, the internal wires can be used for cascading or isolating the positive and the negative terminals of the two fuel cells.

1459827507-c5bed0e2-3705-474f-9c78-7da8d3555548

The present invention provides methods and devices for enabling communication between a mobile device and Universal Plug and Play devices. The photodetector portion includes a p-type first impurity region formed in the semiconductor substrate and an n-type second impurity region formed below the surface inversion layer. The first output of electrons can be contacted with a target to provide a first beam of x-rays. The first conductive layer is transparent.

1459827507-e00ae0fe-0fb6-41d4-a6f6-151194480d10

A novel maize variety designated PHW6G and seed, plants and plant parts thereof. It is judged whether or not there is a fluctuating factor concerning color reproduction characteristics between a print medium that is used at present in the calibration and a print medium that was used in the past. The jamb and sill members have outer walls for the rough window opening and laterally spaced inner sloping walls which mate at the bottom corner joints. These plants may be engineered for resistance to protox inhibitors via mutation of the native protox gene to a resistant form or they may be transformed with a gene encoding an herbicide tolerant form of a plant protox enzyme. A reflective band near the aperture to increases the illumination of the surface.

1459827508-1a8421c5-412c-4b50-9146-0a3dfac87bc2

This invention provides the genes encoding the RNA triphosphatase and RNA guanylyltransferase of the malaria parasite Plasmodium falciparum and the catalytically active recombinant RNA triphosphatase and RNA guanylyltransferase enzymes. An actuator system includes a housing and a cap. The computation of the weight is based on the number of times the resource referenced by the reference has been fetched previously, and on the number of times one or more further resources have been fetched previously from a server that serves the resource referenced by the reference. The first valve member and second valve member connect through a extensible portion. A non-conducting short-circuit part movably arranged in the current supply device between two short-circuit line parts, holds the safety magnet a distance from the short-circuit line under normal conditions.

1459827508-c2105e1b-40da-434b-99aa-5c8818c0f585

Process for preparing compounds of the diaminophenothiazinium type of formula below. The database is assembled to contain product information, pricing information, organization-specific configurations defining approved suppliers and other similar items and views which are defined by organization. The base station may include an impedance matching circuit configured to match an impedance of the power line of the structure, and a receiver coupled to the impedance matching circuit. The signed dialog system can respond to input such that only the designer of the dialog system knows the signature is embedded in the dialog system.

1459827508-ce32d450-5074-4675-b696-38018e81815b

A method for managing a data stream encoded according to a digital transmission protocol and configured for broadcasting to a consumer network device within a broadband communications network. The 3D data comprises 2D images. The processing mode may be established by placing an enable indication in a control register into an enabled state and by setting a first operating mode indication and a second operating mode indication in a segment descriptor to predefined states.

1459827508-dc9b1d4f-6ba5-445f-baa7-2e348ede0d99

A magnetic memory device includes bottom electrodes disposed on an interlayer dielectric on a substrate. The compounds of the invention may be used as inhibitors of the papilloma virus E1-E2-DNA complex. The first port is in fluid communication with the lumen of the outer tubular element when the outer tubular element is secured to the receiving element; and the second port is in fluid communication with the lumen of the inner tubular element when the inner tubular element is secured to the connector.

1459827508-f430c72a-57ba-4727-bcc5-52a455ff2752

Flash devices and methods of manufacturing the same are provided. The adapter may include a discharging circuit for discharging the rechargeable batteries. Furthermore, according to requirement, an inorganic powder filler }) may be added to the resin composition.

1459827509-257c7f3d-2bac-4f57-8936-9b9b75a7a6af

A relay device for supporting uplink communication between a terminal device and a base station is described. The cascode common source LNA is simulated to arrive at an optimum ratio of upper device width to the lower device width. The inter-head guide roller is rotatably supported by a pair of support portions fixedly arranged on the head holder on one end side and the other end side of the inter-head guide roller.

1459827509-3a014f77-7e07-4541-b7a5-e30495216f68

System and methods for printer suggested upgrades using fuzzy logic analysis. When the access position is designated to one of the groups decodable without use of information on a closest past group in reproduction order, the mark information generator generates the mark information indicating a position of a top of the decodable group. The electronic means include means for individually adjusting the ratio of airborne sound signals to body sound signals. The detector helps to quickly determine whether hazardous materials are present in the mail stream. The ink jet recording head enables the buffer chamber allowing to gas to exist to be sufficiently cleaned, and requires no additional process for the formation of the buffer chamber thereof.

1459827509-b8dd7ca2-d996-4c7e-bb50-16bd0abb6b13

An axial flow fan includes a hub rotatable about a central axis. The bent tubular part is mounted with the possibility of rotation on the outlet of a laser generator secured to the third arm of the robot. In this way, the mystery-bingo jackpot provides payouts relatively often while preserving the value of the jackpot. The second drive assembly is connectable to the second branch. The spring slide is preferably a spring steel slide.

1459827509-caf0fd09-fa2b-440d-b210-2e8f7c09fb99

The present invention is directed to a method for extracting textual as well as tabular data material from financial documents. The composition comprises an alginate, a di- and/or trivalent ion source, water, a retarder and a filler. Another end of the conduit is fixed with respect to the vehicle and is in communication with a fluid source. The systems are applicable to portable sensors for identifying DNA sequence hybridization for clinical examination and disease diagnosis.

1459827509-fb52f8ca-3daa-477a-a2bd-810f397dd452

A Japanese Zelkova tree named \u2018ZSFKF\u2019 having a broad-spreading habit, fibrous root system, a more rapid growth rate, and heat tolerance and also capable of being reproduced reliably from vegetative cuttings. In particular, the present invention relates to the diagnosis, prediction and monitoring of kidney disorders by detection of cytokines, cytokine-related compounds and chemokines in urine. The spring member is manufactured from a cast blade alloy, thereby allowing the spring member to maintain its spring back characteristics at relatively high temperatures of about 1300\xb0 F. In embodiments, the system is configured to transpose portions of a musical score into a range suitable for a substitute instrument or a player of limited skill. For example, gestures that can be interpreted to mimic computerized touchscreen operation. The negative active mass includes a negative active material including a lithium vanadium composite oxide and a crystalline structure aid for inhibiting deterioration of a crystalline structure.

1459827510-0a12fc1c-f628-47d6-877b-8535d4663121

An output stage and method for a charge pump circuit which substantially reduces the degradation of the output voltage. A second inter-layer insulation film is removed to form an aperture by substantially using a first hard mask film as a mask in accordance with the method of fabricating a semiconductor device having a multi-layer wiring structure using a dual-damascene method. The cutting shoe has a leading cutting edge arranged for movement through soil in a horizontal direction to cut a cylindrical core sample.

1459827510-4bb81041-1ac7-4802-b625-a848f9370fdf

A vertical NPNP structure fabricated using a triple well CMOS process, as well as methods of making the vertical NPNP structure, methods of providing electrostatic discharge protection, and design structures for a BiCMOS integrated circuit. The chlorhexidine acetate acts as a highly effective biocide. The encryption module uses the state vector to sequentially encrypt the data frames. A target information flow rate for the route that is less than or equal to the bottleneck information flow rate for the route is determined.

1459827511-018ae051-ca08-46eb-8420-f899b298f056

A receiver, implemented with low noise and low distortion, to process an input signal containing signals of interest and unwanted interference signal. The method includes encapsulating alarm tokens constituent of a reported alarm in eXtensible Markup Language tags at communication network equipment reporting alarms. The first edge judgment circuit retrieves the edge data of the pixel in a first direction to output a first edge value. The extended contact lead frame portion is in direct electrical contact with the second semiconductor device without using a bond wire.

1459827511-a2b0a9b4-e665-41be-b41c-b2e2c13dcba6

Embodiments for managing read-only memory. The wheel pivoting units are connected by means of kinematisms to a single control plate mounted articulated around a vertical axis. Whenever a smaller output power is desired in response to reduction in the input signal to the amplifier, the load is further tuned, such that the dynamic or static RF load line has a slope that causes the power amplifier to essentially remain in saturation at the smaller output power. In addition, the use of modulators of cellular activation allows for characterization of pathways and cell populations. A second portion of the transaction associated with end-to-end communications is encrypted using an end-to-end encryption key.

1459827511-b80d14a4-1bdf-485c-b11a-b1ee4fe45070

The present invention discloses a transmit-receive front end. The endoscope includes a heater and a temperature sensor. The hub portion includes a lateral hub extension extending toward a distal end of the needle cannula, and the shield portion includes a lateral shield extension extending toward a proximal end of said

needle cannula. The shoes have replaceable wear-strips. They can be used to produce coating colors, especially for inkjet papers or inkjet foils or other inkjet materials.

1459827511-c1997f07-2221-47c1-bf4c-9bb8aebcac1e

An icemaking compartment is provided in the refrigerator compartment of a bottom mount refrigerator. The system comprising a boost converter coupled between a low-voltage bus and a high voltage bus, and a buck converter coupled between the high-voltage bus and the coil. A locking device is coupled to the shank with the locking device having an unlocked position loosely connected to the shank and a locked position with at least a portion of the locking device wedged between the flange and the shank for fixedly securing the filling valve apparatus to the beverage filling machine. A method includes a first mask design processing and a second mask design processing. As a mating pin is inserted through the front aperture of the mating portion, the mating pin engages the first finger contact point causing the first contact beam to deflect. This screen has improved transparency while maintaining the definition of an image.

1459827512-d258baf2-7815-45de-bfb3-477b4294fbe9

A ventilation system for a fuel cell power module is provided. The method uses specially designed clips and obviates the need to use a ladder when attaching the linear systems to hard to reach locations. doors, pieces of furniture, and windows that can be moved vertically, to allow their easy movement and balanced positioning at any point of their vertical travel. A cross-channel injector injects a nanoliterpicoliter-volume sample plug at the column inlet. By this, the image of the measurement object can be captured during the time when the X-ray fluorescence image is standing still, so sensitivity can be secured while increasing the resolution. Tris DBA inhibits several signaling pathways including activation of MAP kinase, Akt, stat-3 and S6 kinase activation.

1459827512-f55b69bb-38b7-42a0-b29a-0b46f249e52f

Disclosed are a display device and a front cover thereof. The cross support includes a cross bar having a plurality of holes extending through at least a top of the cross bar. The identified segments of content are duplicated and then encrypted using a first encryption method associated with a first DRM to produce first encrypted segments. The third step of the process comprises isomerization of cis 1233zd to trans 1233zd. In particular, the present disclosure relates to nanocomposites comprising magnetic nanoparticles surrounded by a polymer, which is bonded to a biodegradable polymer.

1459827512-fb59eeed-d131-44a9-a5c7-4f287256cda8

A semiconductor component includes a stiffener, a circuit decal attached to the stiffener, and a semiconductor die attached to the stiffener. The blocking temperature of the magnetisation of the storage layer is less than that of the reference layer. The invention also concerns a natural, synthetic or semi-synthetic harringtonines including their tautomeric forms and their salts of the following formula: wherein  $n=2$  or  $n=3$ , in which the total content of impurities, possibly including enantiomeric forms, is lower than 1%, and/or the content of the major impurity is lower than 0.0%, while the profile bearing length of the unevenness, under 50% cutting level, is set in a range of 25%-70%. The electrical tape has a flexible insulator portion substantially surrounding the flexible conductor strip, the flexible insulator portion being arranged to expose the conductor strip contact surface along the length of the tape. Each detector module includes a module frame, a plurality of tileable sub-modules on the module frame aligned along a Z-axis thereof to receive the x-rays attenuated by the object and convert the x-rays to digital signals, and an electronics board connected to the plurality of sub-modules to receive the digital signals.

1459827513-1855a5f3-2c72-4d01-bdcb-ce9884abc541

The invention relates to a device for demonstrating an effect of a selected signal-processing operation. Tire retread strips are placed side-by-side on the radially inner surface of the drum and extend along its length. The color data is further transmitted to a formulation computer that determines the formulation for a coating composition exhibiting the color data. Methods of using the Btk inhibitors are disclosed, alone or in combination with other therapeutic agents, for the treatment of autoimmune diseases or conditions, heteroimmune diseases or conditions, cancer, including lymphoma, and inflammatory diseases or conditions. An enclosure surrounds the main body, the electric blower, the dust receiver, the power source, and the sensors, wherein the enclosure is transparent or semi-transparent, and the sensors transmit and receive light through the enclosure.

1459827513-1b64959d-03ea-4e46-b8ce-36e8e7a1a305

This invention relates to a composition including a dopant, a first host having at least one unit of Formula I, and a second host compound. The container includes one or more rings disposed on top for hanging purposes. The control unit controls the emission of light performed by the light source on the basis of a signal output from the flat panel detector.

1459827513-2fd8f08e-4a8d-4654-83ec-bdfcba2f24f1

An automated sewing device capable of neatly feeding a material of easily contractible property to a sewing machine, without the material being curled. The intensity of the illumination from the light-emitting elements is controlled by a dimming signal such as a pulse width modulation signal or a pulse code modulation signal, for example. The data are encoded at the transmitter using a rate-adaptive code to produce encoded data, and scrambled using the first key before broadcasting. In the present system, the network elements are able to derive a local time based on timing information recorded at the network element. In addition, the storage apparatus 10 can be combined with a card type supporting means 21 that supports detachably with the flat type external connection terminal 12a exposed to one of the surfaces so as to be used as a card type storage apparatus 20 having bigger size.

1459827513-86719377-6458-48b1-9e6a-9885f97029a7

When a unit lock member is engaged with a SIM card mounted in a unit retention mechanism, a battery pack can be mounted or removed. 3X and which is selected from a group consisting of LiNiO<sub>2</sub>, Li<sub>2</sub>NiO<sub>2</sub>, LiNi<sub>2</sub>O<sub>4</sub>, Li<sub>2</sub>Ni<sub>2</sub>O<sub>4</sub> and LiNi<sub>1-x</sub>MxO<sub>2</sub>, whereby it is possible to obtain a nonaqueous electrolyte solution secondary battery which is superior in battery properties, especially charge and discharge cycle properties, retention properties and safety. Converter fU1, analogue block, detecting oscillator and converter fU2 are connected to a digital block for recording, controlling, surveillance and regulating the respective operations and evaluating operation of the respective blocks. Based on operation suitability parameters selected for each variable, the method predicts remote sensing operation suitability for different points in time.

1459827514-96f16e63-709c-4c32-a8c9-d38a3a8d6528

The present invention relates, in general, to a method of modulating physiological and pathological processes and, in particular, to a method of modulating cellular levels of oxidants and thereby processes in which such oxidants are a participant. The antenna apparatus includes a plurality of antenna paths and the length of the antenna path is changed via the soldering pads. A toothed wheel is fixedly disposed on the conveying shaft, whereby this toothed wheel is enclosed by an outer ring that supports the friction coating and has an inner toothing constantly meshes with the outer toothing. The control portion sets an air-fuel ratio of the mixture in the reformer such that a reforming efficiency of the reformer is held within a predetermined range, and sets an amount of the mixture supplied to the reformer such that an actual output torque of the internal combustion engine coincides with a target torque. The spray conditions are controlled in such a manner that the

individual metal droplets forming the metal streams remain substantially segregate. The sensors of this embodiment are configured to detect the motion of at least one of the two or more reference indicators relative to the sensors as the reader unit is moved along the reference surface.

1459827514-ac85ee6a-523f-4b65-b4e3-a95fcb6eb63a

A time of flight spectrometer and a method for operating the same is disclosed. First and second pluralities of permanent-magnets are respectively mounted in first and second circles, radially outwardly in first and second transverse planes extending from first and second sections of the central axis adjacent to an inner surface of the outer rotor. The saw blade guides respectively have contact surfaces, which abut on the respective side surfaces of the saw blade.

1459827514-bdbce47a-f901-4c87-9b02-0d673c7f2a7d

A system and method for measuring ground penetrating radar data is described which includes controlling the timing for generating stimulus electromagnetic waves and the sampling rate of reflected electromagnetic waves in response to the stimulus electromagnetic waves. The electrostatic capacity change sensing method and apparatus are capable of sensing the change in the electrostatic capacity without using the sensing frequency. This pressure approximates the pressure of the on-coming clutch when a disengage command with respect to the off-going clutch is reached. In addition, the provider of the private network can query the wireless device when updates to the information are desired.

1459827514-e2d0ba78-b027-429b-abdf-8813e1295267

Content identifiers are associated with respective metadata. Further, a method and a purification system for removing tar components from a combustible gas having a temperature above its dew-point are disclosed. Upon powering up, the PSE controller keeps the two FETs open and performs a detection routine on any devices connected to the data pairs and spare pairs. A flag is provided with each file set of the program indicating one of a first and second value. The drive unit is rotatably mounted to the frame to allow the operator to rotate the drive unit 180 degrees relative to the frame so that the hand pedals and crank arms are reversed when the drive unit is rotated.

1459827515-1c654861-feaa-4790-9908-e03772a8be6e

A system interface having a plurality of first directors and a crossbar switch having inputoutput ports coupled to the first directors on such one of the first director boards and a pair of outputinput ports. The circuit substrate comprises a base layer, a grounded circuit layer, and a connecting pad formed on the grounded circuit layer. The method further includes selectably communicating the variety of user information in a manner detectable external to the card. An output clock signal with an adjustable phase and a dummy data reference clock signal on the input of the clock channel are generated. For example, the first groundplane layer may include a plurality of conductive patches, some of which have a via connection to the second groundplane layer conductive trace.

1459827515-47138a64-3a9d-49c9-8ebe-9b979fbd7648

A plasma display panel has a first substrate, plural pairs of display electrodes, a second substrate, and plural data electrodes. The sub-assembly comprises a plurality of concentric jackets surrounding an inner bore tube having first and second opposed ends. The entire weigh batch blend plant can be disassembled and moved.

1459827515-821d0414-dd5f-4e1a-837f-700acb2ecf6b

The present invention presents a method and system for providing an intelligent data concentrator communicatively coupled to a network by a wireless mode. The fuser member includes a substrate layer comprising a thermoplastic polyimidepolybenzimidazole blend. The invention further relates to ethylene

polymerization wherein the catalyst is metered in a catalyst metering device with a iron-based alloy steel hardened valve, as well as to a ethylene polymerization reactor comprising such a catalyst metering device.

1459827515-d01365ac-4e10-43d8-84ec-30b6343ec54c

To improve reliability of a liquid crystal display apparatus using an upper substrate, the upper substrate to be combined with a lower substrate includes a transparent electrode and a first spacer. The network has a control means to control the wavelength to be transmitted on the network ring in a burst transmit mode from each node over a scheduling interval. Each of the bi-directional nodes is in bi-directional wireless communication with the central node and has a wireless communication path to the central node that is either a direct path or an indirect path through one or more intermediate bi-directional nodes serving as relay nodes. Once the sensor wafer is attached to the handle wafer, the sensor wafer is backside thinned to a given thickness. The formation may also be configured to allow a second communications asset having a dish antenna with a second configuration to communicate simultaneously with the two or more COMSATS in a second scenario.

1459827515-f42b831d-8f3a-4421-92ae-346b12f173f1

Disclosed is a novel high 1,4-cis polybutadiene-polyurethane copolymer and a preparation method thereof. In addition, a process for coating surgical suture material is described which is characterized by the fact that the thread material is wetted with a homogeneous methanolic solution of octenidine dichloride and/or dequalinium chloride and subsequently the methanol is evaporated, a coating forming on the thread surface. The method and apparatus may further include utilizing a user client portal to gain access to a media policy database, the media policy database providing storage for user client media policy preferences. A charging transistor is a N-channel Metal Oxide Semiconductor Field Effect Transistor disposed between the high voltage terminal and the power supply terminal and applied with a bias so that the charging transistor is normally on. Some embodiments include memory cells that contain a plurality of nanosized islands of charge trapping material over a channel region, with adjacent islands being spaced from one another by gaps. The seal unit is then positioned in the pipe downstream of the penetration.

1459827516-263902f8-4912-4e2a-848d-81f0c0ea660b

The present invention relates to a sterilization unit consisting of a cubical enclosure which uses a sequenced supply of ozone and ultraviolet radiation in the C band wave length to sterilize. In correspondence with a command, a CPU inside the tamper-resistant module judges the security of data received from the outside, then recording the data as follows: High-security and small-capacity data is recorded into a memory inside the tamper-resistant module. Thus, when a signal is transmitted to the state machine, the state manager can initially receive the signal rather than the state machine. Pure gas permeation test results demonstrate that the UV-cross-linked membranes from PIMs exhibit CO<sub>2</sub>/CH<sub>4</sub> performance well above the Robeson's polymer upper bound trade-off curve for CO<sub>2</sub>/CH<sub>4</sub> separation. The invention captures the volume of the occupant from an image, and uses volume to calculate the mass of the occupant. The application is presented with a mutualized interface substantially independent of the cryptographic sources and of their respective access interfaces.

1459827516-c9a7c07c-e732-4c62-be47-bc5bccbc1cc4

Devices and methods generally provide enhanced stabilization, exposure and/or treatment of a cardiac valve annulus. The X-ray spectrometer comprises at least one dispersing prism element, means of translation of the dispersing element relative to an X-ray beam, a refracted radiation detector and measuring tools for angle positioning of the dispersing element and the refracted radiation detector. In a port injection lean burn engine, an adhesion to the wall face according to the fuel spray can be reduced, and a quality and a formation state of an air-fuel mixture in

a cylinder can be improved. A hub defines a central aperture for receiving the annular projection collar, a shaft and a pair of openings for receiving the bendable prongs, which are caused to pass through their respective openings and extend outwardly as the distal end of each prong engages an appendage.

1459827516-d7c624c3-e118-4913-afd6-7bda65e6cf63

An integrated circuit module includes a ground plane having adjoining cutouts. The method is different from other similar methods in that it involves the use of space velocities of between 5. The controller may be configured to communicate with a remote server opportunistically via the wireless communications interface and an available personal computing communications device external to the electric vehicle charging station. The conducting layer is etched to form the gate electrode.

1459827516-f9561baf-2368-4c92-82b6-a7edbd973ef9

In a light emitting component, a resistor element is formed on the back surface of a substrate and its resistance value is adjusted to make the light intensity of a light emitting element in a predetermined range. The group of electrodes includes a positive electrode plate, a negative electrode plate and a separator. The fluid supply is adapted to be in selective communication with either or both the fixed and removable fluid dispensing units, such as through the provision of a fluid diverter element located at an inlet of the fixed unit and from which extends a conduit in separate communication with the removable unit. Portions respectively having different secondary electron emission efficiencies are provided on peripheral portions of the at least two apertures on a side opposed to the sample.

1459827517-192e4da8-0605-4601-a354-c87523a57cb9

A new cultivar of Clematis named Zoin that is characterized by an upright scandent habit, low to medium height and pink flowers that are suitable for use as cut flowers. The system comprises an input, a processing unit and an output. A determination is made in the computing devices as to whether an optional stop can be inserted between a pair of the stops in at least one of the delivery routes without violating a predefined set of criteria.

1459827517-26df4f21-0169-42e4-9ac2-5845e0871046

A method, system and article of manufacture for managing relationships in a data abstraction model abstractly describing data in a database. The decompression block is configured as a pipeline that may include a length module and a distance module. When soldering the silicon chip to the planar light circuit, the recessed moat is filled with solder. The smaller drop ball can then obstruct the radial port and by the increased pressure the deformable drop ball is extruded through the tool.

1459827517-41df5657-8327-4436-8ef4-7ec6a1aff7f1

A pharmaceutical package assembly includes a tether having a fold-over card mating feature, and a fold-over card configured to house one or more pharmaceutical blisters, wherein the fold-over card includes a tether mating feature. The present invention further relates to a method of inhibiting the formation of sulfur containing anions and preventing a reduction in the Eh of the oral cavity. This has created a need to maximize the area available for ad viewing. A control circuit is provided for pulsing the solenoid at a controlled rate to alternately allow oil flow and halt oil flow to the bearings for a time insufficient to cause oil starvation of the bearings. The raw material is spray-dried to obtain precursor powder, which is calcined to form ultra fine Titransition metal complex oxide and is then mixed with nano-sized carbon particles and subjected to reduction and carburization in a non-oxidizing atmosphere.

1459827517-b860e740-b6ee-4631-a13c-8947876698ff

This invention provides a polyolefin-based molded article containing microfibrillated plant fibers having high strength and high elastic modulus. Methods of synthesizing labeled compounds useful as PET tracers from labeled

phosgen are also provided. The process further includes etching the substrate in accordance with the transformed feature, wherein an etch stability of the feature is increased by the hardened surface. The first cladding includes a first coupling facet to which ends of the second optical fibers are coupled. A plurality of upwardly biased popup blocks are disposed below said cross-bar within the tailgate so exert pressure upwardly against cargo extending between the cross-bar and the popup block.

1459827518-0f011453-ef1b-4487-a434-4408a82920b3

A heat dissipating structure of an LED circuit board includes an LED circuit board having a plurality of soldering points. An extremely wide tracking range is realized in the projection system for simultaneous viewing of the reconstruction by multiple observers, which are situated beside one another. A latch system is configured to releasably retain the deployable member in its retracted position. The liner hanger can include a plurality of formations extending outward along an outer surface of the liner hanger to form interspaces for longitudinal fluid flow between the formations. The NIR includes a unified management module operable to receive and route a local management packet, sent from the host, to the first management controller via a first unified management bus and further operable to receive and route a remote management packet, sent from a remote resource via the external network, to the first management controller via the first UMB. The articulated arm includes a plurality of bearing arrangements comprising at least a pair of spaced bearings, the spaced bearings being pre-stressed such that, under an applied load, any motion of the arm is limited to axial motion and wherein the mechanical stability of the arm is increased.

1459827518-5f3073af-4347-463d-a067-f73d0e6cc041

An antibacterial liquid dish cleaning composition with desirable cleansing and stain removal properties comprising a C8-18 ethoxylated alkyl ether sulfate, two anionic surfactant, a betaine surfactant, a hydroxy containing organic acid, hydrogen peroxide, an alkyl polyglucoside surfactant, a preservative, at least one solubilizer and water. The first information includes location information and size information of a first slice of system memory where first tracing data is to be stored. The graphical user interface has an area for displaying a rendering of the design according to a first dimension specification. Further provided are methods of generating an immune response against cancer expressing a tumor antigen in an individual by administering an effective amount of the invention vector. Resources may then be provisioned according to the request.

1459827518-66be9d38-68f5-4d9b-bbf3-6e6a8546ff5b

In one example, this disclosure describes video encoding and decoding techniques applicable to bi-directional prediction. The apparatus includes a targeting device, adapted to aid in fixation of the bone fixation device to a bone of a subject. 0 or more, reacting the reaction mixture with the following compound at a halogenmagnesium molar ratio of 0. An abradable seal is also provided having an adhesive composition deposited over at least a portion of a substrate surface with an abradable sheet piece bonded to the substrate by the adhesive composition.

1459827518-b2adc8e2-e077-4b6d-a814-b02d88489e91

Color adjusting apparatus and method for a light source. A tensile specimen measuring method is also disclosed. According to the invention, the electrode path is coated with catalytic activating particles made from one or more non-oxidic inorganic metal compounds, which are reacted to form the corresponding metal oxides under gas development. The progressive separation of the load flanks is achieved by progressively changing the pitch of the load flank of the pin and/or box thread to vary the thread width. The controller dynamically connects a plurality of telephone terminals using the same codec to a media server via the distribution server.

1459827519-97244cf2-c4aa-4d65-9354-6a8b5ad9c10a

An apparatus for selective fiber optical channel monitoring and channel replication of wavelength division multiplexed signals is constructed by combining a dispersive element, such as an arrayed waveguide grating, with a multiplicity of simple 1\xd71 optical switches and either an optical splitter/combiner or a second AWG. The method comprises computing a link proximity value between any two mutually connected nodes in the network. A method for manufacturing an electro-optic device and a method for manufacturing electronic equipment that utilize the method for manufacturing an organic thin film element are described. The computer system for this system may include a PBX system and computers capable of managing phone calls to and from the PBX system to accommodate both two party and multiple party calls. The NetRAP apparatus uses the network topology, a traffic matrix, and the reliability parameters of a network as inputs and calculates the network packet loss ratio and sigma score, and provides a list of heavily congested links under non-failure or different single failure conditions. A recording of good die, partial die, mirror die, and partial mirror die information about the neighboring dies about the reference die is formed by recording step is performed by starting at the reference die and moving clockwise about the reference die one die at a time to form a stored neighborhood matrix.

1459827519-d45bb2bd-1850-43af-80f0-0970295caad4

A goniometer for use in measuring the range of motion of a patient is provided. The polyacrylamide gel for electrophoresis to be used in the method of the invention is characterized in that at least a part of the structure thereof has a structure represented by the following formula ; wherein M<sup>2+</sup> represents a transition metal ion; and X represents a linker group. The noise detector detects a wind buffet and a continuous noise by modeling the wind buffet.

1459827519-f2961871-588b-42b2-a0fb-dc447c0e75f7

An inventive system and method for collaborative commerce is presented. The battery electrolyte according to the present invention can achieve improved high-temperature storage characteristics and the life characteristics of the battery, by using a compound decreasing a concentration of HX through a chemical reaction with HX which is present in the battery and therefore causes deterioration of the battery performance. A heat spreader has a recessed inner wall and a peripheral edge which is adhered to or engaged with the mounting board in such a manner that the second surfaces of the semiconductor elements face a bottom interior surface of the recessed inner wall.

1459827520-1ffff48db-2aa2-46e6-b8e6-7cdafb8c29af

Disclosed is an image display device comprising: a pair of substrates facing each other, provided that one of the substrates is transparent; and charged particles placed in a gap between the substrates, wherein each of the substrates has a layer containing a compound having a silicone structure in the molecule on a surface of the substrates faced with another electrode. The printing control apparatus spools the print data in a memory. The soft mold may be photo-curable and formed of a material with a hydrophobic property similar to heat-curable molds.

1459827520-568f7365-48c3-4b7c-b9d0-c621ac9c5b65

A method of increasing linearity of an RF signal receive path includes measuring a signal amplified by the receive path. The system includes at least sensors for monitoring and measuring the pressure and temperature of the tire. The open/close mechanism controls flow through the outlet port. The routing communication protocol decoding module may identify incoming routing control communications and determine the quality of service level attribute of the incoming routing control communications. The present invention relates to a resin composition for forming a receiving layer, the resin composition containing a urethane resin, a vinyl polymer, and an aqueous medium, in which the urethane resin has an alicyclic structure in an amount of 2,000 to 5,500 mmol/kg relative to the total amount of the urethane resin, and a hydrophilic group.

1459827520-a2c40f0d-d072-44c8-bb49-b587718612dd

A device and methods are described for a non-invasive transnasal and transocular drug delivery to the central nervous system using iontophoresis technology. A service provider in communication with the property management system receives the tenant data from the property management system via a network such as the Internet, where the tenant data identifies a tenant responsible for payment of a utility service associated with a utility service account. Individual component maintenance times are retrieved associated with individual components of the integrated component.

1459827520-c6c7f7f9-94fb-4db6-9714-f248b4ac5113

A mounting structure is provided for an air-fuel ratio sensor on an exhaust pipe in a motorcycle in which a concentration of oxygen in an exhaust gas can be detected efficiently and accurately by the air-fuel ratio sensor. An switch system includes a plurality of switch modules each essentially including a pair of R-channel input collimators on one side and a pair of R-channel output collimators on the other side with a switching prism moveably positioned therebetween in an existenceactive or non-existenceinactive manner. The synchronization operation is performed wirelessly with the mobile device. The heater layer can be made of alternating insulating and conducting layers with heater elements formed on the conducting layers in predetermined pattern. The method is employed on individual networking devices in a distributed manner or is used by a centralized network management system to allocate protection paths.

1459827520-e3597f12-ce5b-46bd-86fc-276a4f315c79

A system and method are provided for biasing transistor switches in a semiconductor based high power switch. A stereo image pair is generated based on the depth map and an anaglyph image of the stereo image pair is displayed. The dehumidifier automatically drains condensed water in the container according to the quantity of the condensed water, does not have to be cleared frequently and is convenient. Each successive synapse has successively more post synaptic receptors according to a fixed ratio. The transistor includes a plurality of source regions of the first type of conductivity, each one of them extending from the second main surface in a body region; a plurality of channel areas are defined, each one in a body region between a source region of the body region and each drain channel adjacent to the body region.

1459827521-20a103e3-7a2b-4275-83f4-1a680de19f37

This disclosure relates generally to methods and devices for modifying biological tissue. The transform of that contour is then used to identify one or more source syllable transforms in a codebook. It has showy, pink flowers, and leaves with globose glands.

1459827521-852a925c-a2e4-40f2-b02c-c5d849392960

The invention provides a method and apparatus for transmitting signalling information to a receiver using a plurality of transmission antennas in a time switching configuration. The steps involve depositing a layer of a ceramic material on a porous or dense substrate. The housing includes an intake opening and an exhaust opening.

1459827521-858dda4c-6a7d-411a-9894-288494fdb703

\u2018SAVasalute\u2019 is a new and distinct variety of miniature rose plant primarily identified by its dark red, non fading flowers of exhibition, hybrid tea form on straight stems held above the plant making them ideal for cutting. A tubing swivel, an extension tool with protective sleeve, and an anchor may also be used. Variability in tissue absorption results in C-scan image contrast. The polyester polymer is dyeable with cationic dye while having excellent flame retardancy, and can be melt-spun like other polymers capable of being melt-spun.

1459827522-4036b2a3-a2c2-40b3-a533-172858e8756d

A contact pin comprises a plunger contacting an electric part, a bottom contact portion electrically connected to a printed circuit board, and a spring urging the plunger and the bottom contact portion so as to separate from each other, in which at least one of the plunger and the bottom contact portion is formed by press-working a plate member. 905 gcm<sup>3</sup>, a melt flow rate of 60 g/10 min, a Rockwell hardness of 107, a Durometer hardness of 84, and a melting point of 330 F. A peak detection module identifies a plurality of peak samples from the plurality of interpolated read samples. Possible other inputs to the signal processing apparatus include the input optical power, test optical power, etc. A second implementation, error corrective training, can be used to estimate option weight when a sufficiently large number of utterances are available. In this way, when radio communication is performed by using beam forming, the time necessary for finding and setting a beam direction is reduced, thereby reducing the transmission-disconnected time.

1459827522-89f60bbe-d2ac-4aa1-8f4e-fc2aa5f12b38

A wireless communication system includes using multiple antennas for simultaneous transmissions to multiple mobile stations. The body defines a lead receiving passageway extending between a proximal inlet and a distal outlet for receiving a lead therethrough for contact with the heart surface. When the electromagnetic countermeasure launcher electromagnetically generates propulsive force to propel a payload to its deployment position, inductive coupling between one or more propulsion coils of the launcher and the initiator coil induces current to flow in the initiator coil, which thereby initiates the deployment sequence. The internet protocol multi-media system then transfers call control to a voicemail screening server which plays subscriber the beginning of the voicemail message being left by subscriber and offers to route the call back to the called subscriber. CCT devices can also detect intrusions and/or tampering with cargo containers, and store a variety of collected data for later retrieval.

1459827522-9865eac5-a3b9-4aee-8037-f6cc0cd21967

A method is provided of establishing a communications session between first and second devices associated with first and second parties respectively. In the transmission power control system the base station comprises control means for controlling initiation of a balance adjustment period for performing the balance adjustment from a frame number determined on the basis of frame number of the balance adjustment period. If so determined, the display device performs filtering using a smoothing filter to smooth the target pixel. Light emitted by the light source enters into the light guide sheet via the light coupling structure and is evenly emitted to outer environment via said light emerging structure, thereby enhancing light source utilization efficiency. The connector is located at the distal end of the instrument and is arranged to be readily manipulated by a twisting action to connect the instrument onto the guide-wire for sliding movement therealong.

1459827522-c4f1ee48-2a3c-442b-be72-842119e00d4b

The invention provides novel organometallic complexes useful as olefin metathesis catalysts. The system comprises a mixing chamber connected by separate feed conduits to pressurized sources of the first and second liquid components. This positional arrangement allows the lens barrel unit to be provided as a compact retractable unit, and ultimately achieves miniaturization of the camera.

1459827522-fb44db91-22f2-46ca-8867-23255a288169

Generating a series of digits corresponding to a personal identification number of a user for unified messaging access to personal information management data. The present invention provides a substantially rigid orthopedic stabilization scaffold for attachment of one or more external fixators for the realignment of one or more

bones of a patient. A GPS antenna and receiver means provides onboard GPS position and velocity data in earth referenced navigational coordinates.

1459827523-816033ed-545c-4a59-8ce9-bb21af097ae6

A wireless communication device including a system ground plane and a retractable antenna is provided. The method comprises providing a cleaning disc, and applying a liquid polymer precursor to the cleaning disc by spraying or spin coating the liquid polymer precursor onto the disc to form a polymer precursor film on the disc. The light emission device may include plural semiconductor light emitting elements having a different wavelength ranges such as diodes stacked in a compact and predetermined order such that wavelengths of light from each diode are emitted from the light emitting elements.

1459827523-8e7c30a4-15bb-45c9-991c-6522da1bb0ca

An apparatus for use with a weather radar system having a radar antenna, the apparatus for mounting to an aircraft and for verifying terrain features shown on an electronic display, the terrain features based on terrain data from a terrain database. The method includes generating a first file of the file system referencing at least a part of the sectors and none of the further sectors, so when the first file is rendered by a playback device, the data is reproduced which is included in the part of the sectors. The acceptability of the security token is determined to authenticate the first user, and the acceptability of the identity token is determined to securely identify the second user.

1459827523-a80ab619-6beb-46ec-8aa4-3231899accb9

To achieve smooth drawing of air into a fuel cell, the air-flow resistance of an exhaust passage is reduced and intrusion of water into an exhaust duct is prevented. An LED light bulb is also disclosed. The variant may correspond to a variant of a user interface component of the CE device or a functional component of the CE device.

1459827523-f0e2ef0c-5632-434b-996a-1fa5f6bca3d1

Novel aqueous slurries capable of removing calculus, plaque or stains, adherent to tooth surfaces of a warm-blooded animal, when used in methods that are self-practicable by an individual human or practicable by an individual human on another warm-blooded animal, combine finely-divided charcoal; water; and alcohol, ammonia or hydrogen peroxide to form the slurries. A detecting circuit detects contact of the antenna with a user or decrease the electric field intensity around of the antenna, and generates a notice signal based on the detecting result. A binaural microphone may pick up ambient sound which is mixed or combined with the delayed program data for producing a combined stereo audio signal. The first supporting link includes projected parts projecting at edges of base ends.

1459827524-ae2c2f06-308c-4229-b02b-7e845a1b9383

A navigation system extends satellite navigation to divers, underwater vehicles, and surface vessels. Certain aspects can relate to creating at least one conformal absence of a non-optical electromagnetic output to limit distortion to an imaging of an at least a portion of an individual resulting at least partially from at least one distorting feature associated with the at least the portion of the individual. The base station has a GPS receiver that generates base station position signals, a master wireless modem that receives the mobile unit position signals, and the mobile unit message signals. The seatconsole may also be configured as a console in either the rear seat, intermediate, or front seat positions. An offset computation module provides first and second offset terms which are summed with the unweighted parameter estimates.

1459827524-c7e4c4d1-bce2-41a5-93ec-c71d6f6c57b3

A storage system for storing a plurality of single-serve-beverage cartridges. The infusion pump system can employ a number of power management techniques to reduce

the likelihood current drain of a rechargeable battery of the infusion pump system. The image data may include image of a tissue site and the reference color marker.

1459827524-d025eea1-8bb6-4bbb-8b0e-e6064a782fdd

A stiffener sheet for flexible printed circuit boards, includes alternately laminated polyimide layers and polyamideimide layers, wherein a molecular structure of the polyamideimide is represented by the following formula: wherein Ar and Ar' represents different substituted aromatic groups. Also disclosed is an optically-based system and method for detecting an occurrence of a failure in a CMP process by detecting surface pits in a metal film by an examination of pulse shape in a reflected probe beam pulse. Numerous dimples are formed on the surface of the cover. The item is provided to the user in exchange for a subset or all of the reward points.

1459827525-281323ac-7e84-43ae-9c65-1ebbc39e9494

Increased health, safety, and environmental awareness motivated the development of new and improved water curing technology for formulating, manufacturing, and using water curable compositions. A first detector is disposed on a surface opposing to a magnet fitted to an actuator, and a second detector is disposed thereunder. Next, the system produces a discretized representation of a well-conditioned boundary integral equation in the form of a well-conditioned matrix equation, modeling the interaction between the incident field and the object. An outer member is formed with double row outer raceway surfaces opposite the inner raceway surfaces. Preferably the ribozymal DNA contains a first recognition sequence :tagattg or ctact, respectively for CCR5 or CXCR4 and downstream thereof a second recognition sequence acttg or acgttg respectively for CCR5 or CXCR4.

1459827525-2d8aa5ec-5625-4d57-ad2d-604765a90321

In a disk drive of the perpendicular magnetic recording method, there is disclosed a servo data encoding method for recording servo data with a particularly low frequency on a disk. The line surface is surveyed by digital imaging and/or an electronic distance measuring device; and incidents of line rising from the spool are captured and reported to an on-board computer which, proportionally to such input, orders variable engaging/releasing of braking force to the brake of the reel to avert backlash. The sensor or actuator systems relate to the operating state of the fuel cell stack during normal operation and have a safety control module that is designed in terms of programming and circuitry to control safety-relevant sensor or actuator systems.

1459827525-42a8ee0f-8379-4f54-b5c9-c48d0c6bc135

Embodiments to increase the capacity of the evaporator of a vapor-compression refrigeration system are described. The polymer is a cyanate ester thermoset, a phthalonitrile thermoset, a crosslinked acetylene thermoset, or a hydrosilation thermoset. The skirt defines at least two areas of reduced thickness spaced from one another, which are configured to allow the skirt to flex when the overcap is removed from the container. The discharging drivers simultaneously turn on IGBTs of the switching circuit to discharge the smoothing capacitor when the output voltage of the power-converting power supply circuit is equal to or lower than a threshold.

1459827525-7caa9a75-c685-4ff1-87f8-84fbe2e5e390

Apparatus for assessing the condition of fruit or vegetables comprises a transducer which is brought into contact with the surface of fruit or vegetable in a tapping motion. Also provided are diagnostic, prophylactic and therapeutic uses. For each server, a collector thread is spawned to collect information regarding the server by sending requests to the server and receiving responses from the server. The processor then determines a desired modulation current for the laser using the slope efficiency.

1459827526-464cd9f2-2bde-4834-872f-61404836f5bf

A method of producing a H<sub>2</sub> rich gas stream includes supplying an O<sub>2</sub> rich gas, steam, and fuel to an inner reforming zone of a fuel processor that includes a partial oxidation catalyst and a steam reforming catalyst or a combined partial oxidation and steam reforming catalyst. In addition, the attachment may include a raised ledge that may be used to retain a customer's mobile phone, tablet, shopping list, coupons and/or writing utensil while shopping. The initial setup data is used for determination of memory operating conditions, and the status data indicates whether the initial setup data region is presently normal or not in functionality. In one aspect, the query is automatically submitted to the search engine. Video content analysis may be performed on the two-dimensional image data, and then the depth data may be used along with the results of the video content analysis of the two-dimensional data for tracking and event detection. More specifically, embodiments of the present invention relate to a pump and signal combiner capable of conveying several kilowatts of pump laser power for kilowatt class rare-earth doped fiber amplifiers without suffering thermal damage.

1459827526-8ab4b86a-c2f3-4c60-8846-34c90cd25c37

The features described herein are directed to a method and system for use in a computing environment for representing files stored in stacks by using a stack icon. In one embodiment, two substantially symmetric elements are used, each covering an opposite head and upper surface portion of the device. The system allows for the content provider to determine the license status of content and update the license status of content which was previously provided by that provider. One or more exit holes are provided in the first side wall for fastener screws. The apparatus and method vary the inertial forces applied outside the feet to affect the degree of difficulty of the exercise. The high frequency circuit apparatus comprises a multilayer substrate 12 in which direct current circuit patterns 16 and 17 for transferring direct current signals are formed on an upper substrate 121 of the multilayer substrate 12 while a high frequency current circuit pattern 18 for transferring high frequency signals is formed on a lower substrate located lower than the upper substrate.

1459827526-cc1fda8d-c87b-42e6-a749-eb841052d409

A sensing assembly comprises a forward point for mounting on a crop divider associated with a header. The invention contemplates separating C<sub>4</sub> hydrocarbons from C<sub>8</sub> hydrocarbons in an effluent from an oligomerization reactor. Shape recognition algorithms are applied at a suspected location of the human form shaped object in an image from the sequence of images to detect a shape of a human form in the image and a second feature from within the detected shape of the human form is then selected and tracked, thereby providing verification and updating of the location of the human form shaped object. A pair of locking slots are cut into the support transversely to and in communication with the axial slot so that the mounting pins can be rotated within the locking slots.

1459827526-ec101d84-0e54-421f-984c-c325ca9d53b0

A system and method for managing a spreadsheet are disclosed. In one instance, a RFID antenna is used to power a reduced-pressure pump that is fluidly coupled by a conduit to a reduced-pressure dressing. In one embodiment, the number of shards generated is based on the number of groups received. The deleted data is stored in a recovery log. If the portable information processing apparatus 10 starts dropping, the hard disk drive 14 enters the withdrawal mode.

1459827527-473dc746-41d7-4b3a-a207-378c4ee7e66d

Disclosed is a wideband and multi-band frequency up converter used in a satellite earth station. Each of the piston-cylinder units is formed of at least one piston arranged movably in a cylinder, and each is connected in an articulated manner, at one end, to one end of the stabilizer and, at the other end, to a spring-mounted wheel carrier part. Thus, the storage device according to the present invention can satisfactorily carry out recording operations even when information is recorded

continuously. A support ring is oversized in relation to the shaft so that a channel is formed between the inner surface of the support ring and the outer surface of the shaft and this channel extends over at least part of the length of the shaft. Each pulley assembly includes a dynamic synchronizing component, and the rigging preferably also includes structure adapted to avoid the usual leaning moment imposed upon the pulley assemblies by the cables of conventional riggings. In one embodiment, the pyrimidine derivative is capecitabine and the camptothecin derivative is CPT-11.

1459827527-6c8d9b2e-1d84-4eb4-a9ea-a6c81552a986

It is acknowledged that an electric double layer capacitor is markedly superior in power density and cycle characteristics to a secondary battery. The dental prosthesis, such as a crown or short-span bridge, is a prefabricated composite shell that is modified by the addition of composite material and cured on-site to form a custom-modified device. A portion of the stack gate structure adjacent a trench sidewall of the trench isolation region may include a first nitrogen doped layer. Additionally, provided herein is a cell culturing system including a substrate and a coating thereon of the composition to assess potential stimulators and/or inhibitors for their effects on various cell cultures while increasing the signal dynamic range. The system and methods include direct growth of graphene on diamond and low temperature growth of graphene using a solid carbon source.

1459827527-aec19565-a283-44f5-9a3c-54b6cfcb081b

A voice activity detection method in a low SNR environment. The driving dynamics of the vehicle are controlled by way of brake and/or engine intervention, notably depending on a change of the movement of the vehicle in the three-dimensional space and relative to the earth coordinate system and depending on the effective direction of gravity or the earth's gravitational pull. A display update is caused by transmitting a display notification to an IP telephone.

1459827527-bb6310d5-0eb0-4b9b-8e22-fb777afd055b

Novel organic compounds comprising azaborine are provided. The apparatus allows for easy attachment of cameras of varying sizes onto the scope of a firearm and along the same longitudinal axis of the scope. The variator disk having furthermore at least two partial disks which are designed as a traction disk, on which the running surface is formed, and as a supporting disk, respectively. A plurality of launch areas are defined for scenes of the presentation. And a cover substantially encloses the countermeasures system, wherein the cover is removably fastened to the mounting side of the mounting structure.

1459827529-19502c63-0626-4969-9e3e-1fe12afd5ac0

A laser depilator comprising a unit for removing hairs from the skin, a light source for irradiating laser light, and a lens for irradiating the skin with the laser light irradiated from the light source while deforming the beam shape so as to conform to the shape of a region of the skin from which hairs are removed by the hair removing unit. There are provided control tags, in a transmitted page selected to succeed a currently displayed page, for controlling display functions in said currently displayed page in combination with means responsive to these control tags for implementing said display functions. Even when each LED has a small light quantity, a sufficiently large quantity of light can be projected on the subject by the entire light source array unit, and hence, the three-dimensional measurement can be stably carried out. The system migrates the virtual machine to the hypervisor according to compatibility between the group tag and the affinity group tag. By using a central server to draw on stored information and content associated with the entities the server can broker the exchange of information between the entities and the devices.

1459827529-3022ddda-9f93-41df-b695-a6f44c4ebb6d

Particular embodiments may enable setup and signaling of co-routed and non co-

routed label switched paths of a bidirectional packet traffic engineering tunnel in an unambiguous manner with respect to provisioning of the LSPstunnel. A dynamic album may include a set of songs provided through an artist specific application installed at a user device. The method further includes conducting a lookup at the SMSC to determine the home SMSC for the originating mobile handset and sending a redirect to the mobile handset as means to facilitate a dynamic update of the home SMSC location stored on the wireless handset.

1459827529-cc7e95d4-a2ba-4154-b172-3ebb579190ab

A messaging server application system handles message creation, receipt, and response for any sort of digitizable message in any format. When it is time for a handoff from the first base station to a second base station, the first base station transmits to the second base station at least one of the sets of security information it received from the central security node. The molded polymer covering surrounding the cheek arms provide a round on the inner edge of the cheek arms which engage a wrist. There is no lightly doped region in between the channel region and the second heavily doped region. The host device will preferably disallow all further communications involving the particular identification code until the authorized user can be contacted and the transaction specific code reset or even a new set of transaction specific codes are provided. The technique is based on the recognition that there are traits of electromagnetic signals that are dependent on topography, the receiver, the location of the transmitter, and other factors.

1459827529-e75e32d0-a1c1-4d6b-b843-038bb711a7d9

A fluid collection system having an island with a central collection vessel with a splash pad filling the opening thereof and a fluid collecting surgical drape with fluid dams, and associated fluid removal ports for collecting fluids related to surgical procedures from the vicinity of a patient positioned on the drape on an operating room table. The outer leg part has: a tubular body defining a longitudinal axis and having an interior passage through which the axis extends centrally. The DMA circuit includes a data FIFO which is shared by all of the logical channels and the FIFO depth can be allocated dynamically allowing for the maximum number of channels to be scheduled and concurrently active.

1459827530-1411c693-9bab-404d-8668-1c73f322a931

An improved mass analyzer capable of parallel processing one or more analytes is set fourth. It is possible to increase the communication distance of a wireless IC chip with an on-chip antenna simply contrived for reduction of the production unit cost by increasing the size of the antenna mounted on a wireless IC chip or by increasing the output power of a reader as in a conventional way. Further examples include methods of plugging a honeycomb body with a plugging material control module. The power factor control circuit regulates the DC output voltage.

1459827530-907fc80f-8e77-48a7-a299-345884de39db

There is provided a semiconductor device that enables high-speed data read and reduces the area of a drive circuit for activating a word line. The ambassador guide improves response time, automation, and efficiency of use of searchers and resources of the search system. The global smartcard cache data is associated with a freshness indicator that is compared to the current freshness indicator from the smartcard to verify that the cached item data is current. The first lumen extends along the catheter body to pass an inflation material to the balloons to control an inflation level of the balloons.

1459827530-93ea18a8-8401-445b-888f-2238b0feb5eb

A fiber optic sensor system comprises at least one measuring sensor 1 providing an optical output dependent upon one or more parameters to be measured, e. In this configuration, when the disc reproducing means is performing a reproduction operation on a disc, the tray driving means moves the tray at a low speed, and,

when the disc reproducing means is not performing a reproduction operation on a disc, the tray driving means moves the tray at a high speed. touch, as well as by eyesight to determine wear of the brake assembly friction couple. In an equipment or a system to which the invention is applied, it is possible to flexibly adapt to deviation or fluctuation in its characteristics and to reduce the power consumption. Message senders and receivers may choose from a variety of filter and forward options that allow them to manage their communications via the universal mailbox. Additionally, the power conversion system also includes a controller that provides a self-adjusting set-point control scheme for the power converter.

1459827530-da473770-3319-4778-8666-acaf072b26fe

A resin composition having excellent impact resistance and heat resistance, comprising a poly-3-hydroxybutyrate, and a core-shell latex rubber comprising an acrylic rubber and/or silicone-acrylic rubber copolymer as a core component and polymethyl methacrylate as a shell component, or a specific thermoplastic polyurethane, is disclosed. The connecting device has a housing arrangement which forms an outer conductor. Optionally, to reduce harmonic distortions and to further stabilize the output common mode voltage of the amplifier, current is controllably supplied to the intermediate stage of the amplifier. In one alternative aspect of the invention, the switch at the switch-out end of the waveguide resonator is a plasma switch, employing at least one dielectric window positioned in the resonator guide to have minimum effect on the resonator Q. The common-mode level adjust circuit alters a common-mode level of a differential input signal to be substantially equal to a desired common-mode level and the tuning circuit provides a compensation voltage to the common-mode level adjust circuit based on a difference between the common-mode levels.

1459827531-178be359-8066-4d1e-b037-96b23bdddb3c

A method and system for allowing a vehicle dealer and manufacturer to match dealer orders and manufacturing plant shipments easily and equitably are disclosed. The new variety is an Abutilon, and naturally blooms from April to September. The phase images are then combined to generate a single high-spatial resolution phase image of the optical wavefront.

1459827531-269864bd-d459-497a-89c9-ec9fa24d826f

A medical bed for positioning the patient in the lithotomy position having a mattress pad including a flexible footrest section. In the present invention, audio advertisements are selected based on a mobile phone subscriber's profile, and accompanying SMS messages or m-coupons are further transmitted to the subscriber only upon their request. Preferred embodiments also include positioning the restricted venting away from the bulk of the capillary material in the fluid container, and providing a capillary break and capillary accumulator adjacent to the fluid interconnect port. The control unit includes a repetitive controller storing a predetermined number of the push-pull signals.

1459827531-73605e1e-a03d-4551-9e16-dde3c6377017

A scanner system analyses data plotted in a scatter plot in accordance with user-specified criteria or statistical measures from the data population, to produce a scatter plot that displays in the plotted data the boundaries for the selection of out-lyer points and/or otherwise visually denotes in the plotted data which points are the out-lyer points. The subject connector includes a housing having an electrically conductive portion and a bore therein. Its hardcoat layer has a pencil hardness of 4H to 9H. The flange is seated in a groove at the side of the bearing block and lowers the coefficient of friction at the rockshaft thrust surface interface. Using a shim, executing at each node, to monitor each of the processes, the parallel process is debugged such that neither the process or the particular message passing system implemented on the cluster, needs to know of the existence or details regarding the debugger. The controller includes a historical data recorder and a processor.

1459827531-9065c331-d6b2-4bf6-8847-b4ff271bc744

Entity disambiguation resolves which names, words, or phrases in text correspond to distinct persons, organizations, locations, or other entities in the context of an entire corpus. The monitor module is configured to receive a set of indicators from a wireless network. As a result, the alignment and spectral response of the tunable filter train are optimized. In at least some embodiments, the UID can be configured with a controller, a microprocessor, and a vector-specific actuator that includes an electrically-deformable material. The channels and the passages are oriented consistently with the airflow of the fan. The interworking interface module preferably comprises a mobility gateway and an IP client, wherein the mobility gateway handles mobility management information and the translation of control signaling information between the cellular network portion and the packet-switched network portion.

1459827531-d45d07a8-2bad-44fb-b4a9-480a9fe336da

A system for chemical mechanical planarization comprises a platen assembly for holding an object to be planarized and a polishing head comprising a puck holder assembly for coupling to a substrate for holding a polishing pad. A signal obtained during the scan may be sampled and digitized based on detector position over the multiwell plate. The first, second, fourth, and fifth internal ground electrode are connected to the respective switching regulator devices.

1459827532-386be6fa-2ca3-4f32-8b37-0706bd77d02a

There is disclosed a method of providing detailed information using a multimedia based traffic and travel information message and a terminal for executing the same. Routing information is further shared with the external protocol peers, and fault tolerance is provided in some embodiments by establishing redundant communication sessions with external protocol peers. The digital files may be stored in the electronic device, any device functionally connected to the electronic device or a combination of the aforementioned. Remote calibration is implemented using a method for remotely compensating for I-Q imbalance wherein a data packet having a known signal is transmitted to a receiver for conversion by a quadrature demodulator and compensation factors are estimated for compensating for imbalances in the in-phase and quadrature phase signals resulting from conversion of the known signal.

1459827532-b66725a0-86ff-48ba-a1fa-08f80c06065b

A system and method are for inserting modifications into an executable program at the time an operating system loads the executable program for execution. As the temperature of the critical components in a power supply rises, the output voltage from that power supply will be lowered, so that the coolest supply will have the highest voltage and thus the highest current to the load. The covered electric wire uses the flame-retardant composition as a covering material.

1459827532-d2d6bdc7-5a89-482d-869a-47a939987b5c

A method for controlling a solution process for the polymerisation of olefins is disclosed. An aqueous solution of a hindered amine selected from the group consisting of 2-amino-2-methyl-1-propanol, 2--ethanol, 2--ethanol, and 2--ethanol is used as the CO<sub>2</sub> absorbent solution, and carbon steel is used in building the members of the equipment that contact the aqueous hindered amine solution. A plasma field is generated in the plasma generation section, such that the plasma field is generated remotely from the processing section. Treatment or maintenance operations can then occur through the ports, which can be fitted with nozzles. Detecting an incoming train direction at a predictor by utilizing a second receiver attached to the track rails at a location offset from the first receiver. Air forced into the shelf board combined outlet duct 5 through the air duct 10 is exhausted through an outlet opening 5d of the shelf board combined outlet duct 5, and air curtain is formed along the opening of the storage section 11 of a cabinet 1.

1459827532-d5dd7112-6d91-4040-8793-d18f5f0d6405

The present invention is directed to a strong platelet aggregation-inhibiting agent which does not inhibit COX-1 or COX-2. In case an obstacle which blocks a smooth traveling of the vehicle is detected in the first route, a second route to bypass the obstacle is searched for. The runtime environment further includes a scoped memory area for the allocation of objects therein for access by the critical real time thread. They can also be fabricated using metal. C) Facet joint immobilization may be implemented by inserting a fastener across the facet joint and into the vertebra so that the assembled fastener expands inside the vertebra. In one embodiment, the apparatus comprises two or more interrupt vectors and moderation timers are set with different interrupt rates.

1459827533-4b3e7cc1-0148-4bd8-8fd1-fc97c0bd25ba

Apparatus and method for testing a system having a transient response that is longer than the intervals between stimulations, using a sequence of stimuli containing a small jitter. Measurement errors attributable to transistor threshold voltages are canceled out by obtaining a difference between output voltages. The storage device contains program code which, upon being executed by the processor via the memory, implements the method. In the detector the neutron reactive material is arranged so that the incident neutrons to be detected interact with the neutron reactive material essentially in the portion nearest to the charge collecting areas provided by the electrodes in the first semiconductor element to which the neutron reactive material is coupled with.

1459827533-d04f6e15-569c-4b13-9c53-b122269f992b

Embodiments of the invention provide a method associated with a RAID configuration, wherein RAID storage volumes are created by RAID controllers from a shared pool of disk drives. In one aspect, a request is received at a server for a syndicated feed from a peer on a peer-to-peer network. In the latching mechanism, the extensible lever system is locked with the spring energy store under tension by way of a support element, an auxiliary lock and a primary lock, in addition to a stop that is allocated to the primary lock. An acknowledgment is sent in response to the amount of data received from the sender meet in the expected size of the congestion window for the sender.

1459827534-07856364-c228-437f-9401-9fae04decba5

The invention relates to a method for producing special transition metal compounds, to novel transition metal compounds and to the use of the same for the polymerisation of olefins. The router utilizes protocol templates to identify the protocols that encapsulate messages sent by the devices, and to determine the format of the messages. During a burst access cycle the address is incremented internal to the device with additional address strobe transitions. For each blind hole, a through bore is arranged in the second yoke half, wherein the attachment screws are passed through the through bores and are received in the blind holes. Memory read requests to read data in a cache line that is not currently in tile shared invalid state are broadcast first to remote nodes.

1459827534-de23bb2c-7d9a-4ef8-8278-b06152102222

An optical recording medium and a method and apparatus for assigning a spare area in a rewritable optical recording medium are provided. The software application is used for facilitating interaction with a schema-defined service by a terminal device over a network. This method can also be used to complete partial metabolic networks and cell signaling networks where adequate starting information base is available. A signal having, for example, time-varying envelopes is used as an optimized test stimulus. Following patterning of the photoresist, isolation trenches are formed in the semiconductor substrate by etching through the silicon rich nitride in accordance with the pattern formed on the photoresist.

1459827534-ee4ea7a7-2f95-4910-9893-8a0471842370

A system and apparatus for cleaning a substrate is provided. In such a flat panel display manufacturing apparatus, a process gas is supplied into a chamber in an evenly diffused state to generate even plasma inside a symmetrical interior space of the chamber. For laser welding, a pocket is formed in thick parts to control the welded web thickness for fast melting and thorough mixing of top and bottom materials. Electric current of each motor is increased or decreased so that there is no current difference between the motors 13. The critical desorption pressure is determined based upon the presence of gas within the formation fluid. An engineering operations channel providing control functions is carried in AAL2 minicells.

1459827534-f3e734b5-6347-4de3-96a5-1752ded28d91

Generally speaking, systems, methods and media for implementing a firewall control system responsive to user authentications are disclosed. Also included are a sense amplifier for amplifying data of the second global data line pair and outputting the amplified data to a data line, and a write driver for outputting data of the data line to the first global data line pair during a write operation. The second meander-shaped conductor is disposed on the substrate in a second reciprocating bend manner for providing a resonant frequency band corresponding to a second operating frequency. AC power is switched between the transformer taps in response to a request for an increase in lighting intensity.

1459827535-2c58306a-9721-4f0f-96e9-857197850ce2

A flange bolt cutter for separating two connected flanges. A plug is provided for connection to another outlet for expanding the other outlet. The upper side-wall insulating layer can be etched back to expose part of the lower side-wall insulating layer formed in the bottom of the contact hole. The bearing unit is installed between the hub body and the hub axle at one axial end portion of the bicycle hub so that the hub body freely rotates with respect to the hub axle.

1459827535-71cc10c2-28b7-4622-8e50-17d0fc9f7256

A capacitor 12 is formed by laminating a lower electrode 12b, a dielectric 12e and an upper electrode 12t in this order. A spring rod has a first end mounted at a first location to the first wall of the insulated compartment and a second end mounted at a second location to the second wall of the insulated compartment. In response to a trace being evicted from trace cache, the prefetch unit may fetch a line of instructions into instruction cache. A semiconductor device is directly formed on the flexible substrate using a semiconductor process. The inlet is connectable to a fluid source and the outlets are connectable to appliances such as a shower, bath or washbasin.

1459827535-e934c2c3-224c-4162-b504-7244ad2a8505

This invention relates to the composition of metal alloy-doped heterogeneous catalysts and their method of use. Light can propagate in the portion, such as in response to illumination. The memory also includes a cumulative production value for each time window. The configurable width buffer device includes a multiplexerdemultiplexer circuit coupled to the entry pin and the internal channel for accessing the memory device.

1459827535-f9b1d473-f4b2-4c54-9596-e89cba13fc81

Provided is an information processing system capable of preventing leakage of business data from an information device for personal use such as a portable telephone and false access to an in-house system. The waveguide material is capable of propagating light generated by light emitting source, such that at least a portion of the light is diffused within the waveguide material and exits through at least a portion of its surface. A media access controller is provided with an address filter table capable of storing a plurality of entries. The antenna also includes an electrically conductive, non-planar ground reference located at and/or to a second side of the imaginary plane.

1459827536-09998f85-f7e8-46e7-b0f4-b1d6dfddaa84

A new and distinct variety of rose plant is provided which forms in abundance on a substantially continuous basis attractive double cuplike blossoms that are orange and finish to light coral-salmon coloration. An event record is stored that associates a command entered by a subscriber to a time. Also provided are methods for treating Wnt-related disease states.

1459827536-7a2c0e36-0f3a-4246-a8a7-dccd2c0e9bbd

In a disclosed embodiment, a \u201cvoice noise power\u201d is added to an aggregate voice power which is the total voice power used by all users in a cell. The plurality of terminals includes a sensor terminal connected to the sensor, a power terminal connected to at least one of the sensor and the storage, and that receives power, and a data terminal connected to the storage. The second dealer may also have previously determined a minimum acceptable commission, which may be posted on an administration environment or page maintained by the second dealer. The service gateway keeps track of client available memory and sequence numbers in messages to generate error codes when applicable. A core VM is associated with a shell VM configured to perform shell VM functions and communicate with the core VM.

1459827536-a30496d4-45e0-455f-8511-f6614d094d41

A method is performed by a computer in communication with a hardware security module. A radiation detection badge in accordance with the invention comprises a radiation detection unit placed within a sealed thermoplastic package, wherein the thermoplastic package has a geometric feature that constrains the radiation detection unit to an orientation within the package. A plurality of spacers disposed between the diaphragm and the channel plate for supporting the diaphragm on the dams. Securing means are provided on the bottom of the support for mounting the support to a surface on a watercraft.

1459827536-b8385b4e-a6b3-47ee-a56a-9565faa4a256

A printed circuit board may be used in a first mode where boundary scan techniques are used to externally program and/or test devices on the PCB, or a second mode where an internal source programs devices using boundary scan techniques. Oil and air are drawn from an oil cavity of the bearing assembly and evacuated through the rotating shaft as the shaft rotates. electric motor includes a stator housing, permanent magnet structure, and an armature assembly. The thrust inversion flaps pivotally move between a normal operating position in which they allow the passage of the secondary airflow and block the windows, and a thrust inversion position in which they block the passage and clear the windows.

1459827536-ee1dcb5-a155-4ef6-8a57-7bd4028592b7

A method is provided for maintaining the heat in an exhaust after treatment system connected to the exhaust pipe of an internal combustion engine. The chamber can receive photographs and other objects that can be viewed by persons standing at the gravesite. Use of the temporal tags allows for automatic distribution of content relevant to the recipient, based on their presence in the video, or of persons in the video of which they are interested. When located near an interior opening, the barrier element may be provided on a reinforcing member positioned around the opening or on a door which shifts to improve access through the opening during placement of forming ties or the like.

1459827537-3e98a6c9-4043-4bc4-af71-69ef1131e044

The present invention provides a method to balance a clock tree dynamically. The device may communicate the calling parameters identifier to a called device, may receive a called parameters identifier from the called device, and may communicate the called parameters identifier to the network device. The first spiral stirrup forms a plurality of pitches and axially wraps at least a portion of the steel element. The user terminal drives a game service platform associated with a

plurality of games and provides the game group creation request information and the ranking inquiry request information through the game service platform. A desired medical device is then configured from the fine grained material.

1459827537-6e201768-549d-4463-8fbb-2f8b68812d30

A specimen holder and method for controlling the same, which can mount and fasten a specimen to allow observation thereof by joining a body and a stand of the specimen holder together. The track sections are each provided with a slot 110 with which a power point connector 400 may be engaged at any point by inserting a contact member of the connector 400 through the slot 110 at a chosen point and then rotating the connector 400 by 90 degrees to bring the contact member into engagement with electrical conductors 126, 128 of the track. The radio frequency shield has a first portion, which shields the associated coil segments from adjacent magnetic field and magnetic field gradient generating coils, and side elements, which shield the coil segments or groups of the segments from each other.

1459827537-beeb0b8f-a8bd-4548-a8c1-1761da1e0ec5

A tool determines a characteristic of an installed weld fastener using a dimensional measurement device, and includes a threaded portion engageable with the weld fastener and a cylindrical portion. In one embodiment, the reversible work platform is attached to a frame assembly with a plurality of bushings and associated bolts, and can be reconfigured from a left-handed configuration to a right-handed configuration by removing the bushings and bolts from above the desk, flipping the reversible work platform, and reinstalling the bushings and bolts from above the desk. The configuration may be for specifying applicable industries and/or countries for the modeling element. It is incorporated in the packet header, and means that the same interface can be used to couple many different external gateways, and interface them with many of the gateway controllers. The loops containing the first portions of the connectors can be removably attached to separate poles on either side of a back of a chair.

1459827537-e76a08f7-0faa-4ea6-b9fe-7768597c64c1

A method is provided for determining a bandwidth allocation needed to provide a specified QOS requirement that takes appropriate account of statistical variations for packet streams in a transmission link. The frame-protector sidewalls may be connected together via a frame-protector bottom wall. In a semiconductor device including a thin film transistor, a semiconductor layer of the thin film transistor is formed with an oxide semiconductor layer to which a metal element is added.

1459827538-11281c94-480a-4ccc-8eda-8a8c8bb8064d

An improved apparatus and method for gravel packing is provided. The system and method can also allow the first subscriber to continue to make and receive calls and messages with the second subscriber's mobile device. The electrodes extend from at or about a corresponding one of the fixed contact and the movable contact toward the closer of the first end of the vacuum envelope and the second end of the vacuum envelope. The examination measurement value is compared with a reference measurement value, and conclusions can be drawn about the topographic and/or chemical properties of the object from the result of the comparison. For each range estimate, a confidence level of a range estimate is signaled, a confidence interval for the range estimate is signaled, and a confidence interval scaling factor for the confidence interval is signaled. The heat dissipation device includes a bracket attached to the motherboard and at one side of the memory chips, at least one fan, and at least one connection member attached to the corresponding fan.

1459827538-292fcea1-4012-4945-9ca1-44d81f99c17e

A film containing an interpolymers of ethylene and a 3-substituted C<sub>4</sub>-10 alkene is prepared using a catalyst system comprising a Ziegler Natta or chromium oxide catalyst. The underside of the cap is provided with a plurality of spaced shallow indentations elliptical in shape and moulded into the plastics material. The

invention is based, in part, upon the discovery that a combination of agents directed toward the various stages of the chlamydial life cycle is effective in substantially reducing infection. The heat sink structure may also include a coating of radio-frequency absorbing material covering at least a portion of the second surface. The processing unit is associated with a mixer unit having means for combining the second audio signal with the first audio signal.

1459827538-b5d89068-1ee2-44b0-b418-2ded2cff4ab9

A lock device having a key and a lock cylinder. Dynamic signal processing comprises determining the rate of motion of a dataform, for example a barcode, which is passed in front of the scanner's data collection module. The host or the server can verify the response to authenticate liveness of the input imagesignal and reject it if the response is different. Let  $L_x$  be the lossless encoded data length, and  $L_y$  be the lossy encoded data length.

1459827539-a8f97cb0-c02a-4ded-afd0-82f74c72fb79

The invention generally relates to the improved performance of the rear planetary gear in an automobile transmission. The apparatus includes a channel estimator and an antenna selector. Subsequently, the information about the predicted maintenance management is represented on a display means. The CPU 104 checks the limitation on transmission capacity set in advance for each data transmission means.

1459827539-a95646c5-52f2-4d21-84a2-d81f56abb0f3

A new method to form RF devices in the manufacture of an integrated circuit device is achieved. The present invention provides a way to transmitreceive the CSI more accurately and efficiently by setting a virtual reference resource for measuring the CSI. Also, before the operating system refers to the registry data, the rewriting data stored in the RAM is used to rewrite the registry data stored in the RAM to the registry data included in the rewriting data. Thereby, the wind turbine component is connected solely to the support structure in a fixed but detachable manner. The frame includes at least one anterior support member that extends downwardly from an upper leg engaging portion to define an anterior ankle portion which extends to a medial portion connected to a foot plate.

1459827539-f946552f-528c-4c05-a8f8-6fed55f7153f

A fuel injector for a gas turbine engine comprises a housing stem and a nozzle, the nozzle including an internal wall in heat transfer relation with fuel flowing through the nozzle, and an external wall in heat transfer relation with ambient air. The system includes a first and second manifold. The database activity monitor determines whether the database activity monitor became unavailable, and, in response to determining that the database activity monitor is unavailable, restarts the database activity monitor. The structure may be treated by expressing the melted obstruction from the structure. According to this structure, Small size semiconductor device having high reliability even after a probing test can be provided. With this construction, when the exit light beam from the first anamorphic optical element is divergent in the auxiliary scanning direction, the degree of the divergence can be controlled in accordance with the position in the main scanning direction to keep the diameter constant when the light beam enters into the second anamorphic optical element.

1459827540-253e4277-b675-49dd-a7de-bff0a8de03b9

Huffman trees may be rapidly and effectively created by sorting a plurality of nodes by weight in an insertion sorter stack, popping the two lowest weighted nodes from the insertion sorter stack, forming a branch node from the popped entries, and placing the branch node into the insertion sorter. The plate has at least one aperture for receiving the latch and at least one flute along the face of the width of the plate allowing epoxy to be placed between the plate and the door jamb. The first input device is selected from the group consisting of an accelerometer, a microphone, a camera, and a biometric sensor.

1459827540-9384a733-1bea-4c67-91a7-9cee5818bb19

A method is disclosed for determining and predicting temporomandibular joint motion and to use the predictive model to prepare improved TMJ replacement joints, improved crown, cap or bridge contouring, improved teeth alignments and placements, and improved mouth guard and dentures. In one embodiment, the requested tasks are telephone calls received by a network based contact center, and the workers are telephone agents associated with the network based contact center. The method may additionally include pivoting the second pivot axis about the first pivot axis when pivoting the second door, the second door being of a smaller size than the first door and forming at least a portion of the first door. An interlock is engaged with latch mechanism and is in selective engagement with the quadrant. According to another implementation, controllable devices are placed between wordlines and the wordline driver circuits. The technique utilizes an autonomous underwater vehicle to obtain data on water column characteristics in a seismic survey area.

1459827540-d8fe924b-bd10-40c2-8469-673d725478f9

A method for reading data from a plurality of DRAM devices connected to common command, address, and data busses. The network configures a monitoring pattern for each of multiple CCs that are configured for the UE in dependence on the received capability information. In a first operating position, the running gear is in an active position for road traffic and the packer tools are brought outside the engagement range with the ground.

1459827541-02e2d680-64dc-4382-9c00-77bfde501108

A packet analysis apparatus analyzes content of communication obtained as a result of monitoring or capturing a packet passing through a network. Each of the communications lines is coupled through the system and includes a first termination at a first telecommunications termination site and a second termination at a second telecommunications termination site. The rectilinear ultraviolet radiation source is disposed at an angle to the plane of rotation, and not parallel or perpendicularly thereto, therefore. The main piston and the damper tube at least partially define a compression chamber.

1459827541-0b4a18b5-2ad3-4f39-9538-df277e2f08c7

A powertrain system is configured to transfer propulsion torque to a driveline of a vehicle. When a signal of an -th image is applied to the signal electrode, the pixel drive circuit applies a voltage to the pixel electrode during a first duration of time in response to a signal of an N-th image stored in the first sample-and-hold circuit, and the second sample-and-hold circuit stores the signal of the -th image within the first duration of time. The service node then matches the offer and requests in accordance with one or more parameters specified in the offers and requests. An optical fiber advance mechanism be used to advance and/or retract the length of optical fiber to align it within the hollow probe.

1459827541-2ab1728c-d8ce-42ed-b86b-2f8eb7062dc2

A method for classifying a tissue sample of a biopsy specimen into one of a plurality of classes is presented. The H-switch circuit controls direction of current through the magnetic write head. A communication area of a first antenna to read out data from the representative tag group is arranged to partially overlap with a communication area of a second antenna to read out data from each RFID tag of the tag group. The desired curve for ECT warm up trajectory is used to adjust temperature in the cabin so that fuel consumption can be reduced.

1459827541-6f1538d4-4b84-447b-bbc5-5a9125b4a4bc

One aspect of the present disclosure is directed towards a new film forming paint that Bragg diffracts light in the visible and NIR spectral regions. Fluid pressure opening applies a discharge pressure to chamber for delivering emulsion explosives composition through outlet to delivery hose for charging blast holes. The swivel

base is pivotally connected with the front strut and the rear strut, and further has a vertical shaft hole for pivotally connecting and supporting the foldable upper frame.

1459827541-c7b16278-ad34-4a57-b919-bf07c34deab4

Provided are an apparatus and method for coding and decoding a multi object audio signal with multi channel. In a laser machining method for removing remaining defects on a photomask by a method of laser machining, the remaining defects are removed by using a configuration in which irradiation with a laser beam is performed from below with a to-be-machined surface directed downward, and irradiation with a laser beam in an atmosphere containing a halogenated hydrocarbon gas. The amount of filler in the paper is measured, as is also the filler concentration or the total concentration in the white water or the stock. The printer system outputs a transfer request to the network server system in response to the print request. The recorded signal is converted and analyzed by the frequency detector, and is compared to a known preprogrammed specific frequency vs. The retaining means may comprise a hole through the bar through which the retaining element, in the form of wire 30, 32, extends.

1459827542-3413b17a-fc38-4af5-93b5-f561d13883eb

The embodiments disclosed herein relate to various medical device components, including components that can be incorporated into robotic and/or in vivo medical devices. The contraceptive device may remain in a small profile configuration while a sheath is withdrawn proximally, and is thereafter expanded to a large profile configuration engaging the surrounding tissues, by manipulating one or more actuators of a proximal handle with a single hand. Spatial adjustment between the first and second portions is provided by an adjustment assembly.

1459827542-6c0b601d-bc91-40ea-806a-bccaaa21862c

A multi-floor building construction system for progressively constructing floors on load-bearing means of a foundation as the occupational need to do so arises and while sub-floors can be occupied. The HST includes a variable displacement hydraulic pump driven by a prime mover, and a hydraulic motor fluidly connected to the hydraulic pump. under a pressure of 0-3 kg/cm<sup>2</sup> to form a buffer layer on the inner walls; and vapor depositing a metal alkoxide as a barrier on the buffer layer; and vapor depositing an alkali metal alkaline earth metal compound alone or mixed with metal alkoxide as a decoking layer on the barrier. When the control mechanism is operated, it opens the valve structure to connect the ports of the rotation motor to one another.

1459827542-93723101-a114-4dd4-8a90-c160dba9322c

Provided are a method and system for reducing glitch in a switch circuit. The application server code is deployed within a distributed datastore and utilizes the datastore's data locality information to fulfill requests with minimal remote procedure calls, reduced transfer of data between servers, and shared data caches. When the computer couples with the female USB connector, the auto-detecting switch would automatically couple the converting means with the network.

1459827542-f1a46b2d-bbfd-4568-81c1-595b4ef2c7bc

Portable platform assemblies, e. This invention relates to collection of chemicals for separations and analysis. According to some aspects a frame of reference using predetermined markers is defined and updated based on a change in location of the markers and/or specific signature information. Wireless transmissions between the portable audio device and the external audio system may be, but are not limited to, optical or radio frequency transmissions.

1459827542-f7f4b4bb-ad4e-4542-9a51-93383a081523

An approach is provided for generating accurate and substantially real-time map and location-based data in a cost-effective manner. The imaging unit adds signals of

respective N pixels out of M pixels per single frame and outputs signals of MN sample points at each frame for high-speed imaging and imaging at a second frame rate greater than the first frame rate. Each gripping member is movable relative to its respective link for gripping a container by the neck of the container. The storage system also includes switch and mapping system, which in one embodiment could be an interface bridge processor, operatively linked to each of the plurality of drives. The classifying, selecting and allocating steps are repeated until allocation of resources is completed.

1459827543-1bc0ecb1-75db-4124-8cf0-c6f65baab411

An educational tool for teaching a child to read and write includes a writing board having a writing surface and a raised rim extending around the writing surface. The light emitting diode is fabricated on a semipolar or nonpolar GaN containing substrate and emits electromagnetic radiation of a first wavelength. According to the lantern detachable cap, since the lantern detachable cap has a clip part at a lower portion of a connecting portion of a moving manipulate member and a lantern attached to and detached from the clip part, the lantern can be freely attached and detached. An aircraft central processor unit is operatively coupled to the pilot sensor.

1459827543-a8f4986e-9b72-48c4-899c-5b8f1295adbb

A method for detecting precipitation in a region monitored by radar beams includes ascertaining a first average power of a first backscattered radar signal, ascertaining a second average power of a second backscattered radar signal, and detecting an existence of a homogenous medium when the average powers conform. The saddle pads incorporate a perforated honeycomb cellular structure which contours to the horse's back and/or the saddle to provide uniform load distribution. The current transformer may include a plurality of current transformers. A plurality of user-interactive mechanisms are provided on the housing. As a result of the visible light characteristic changing layer being exposed to the laser beam, a visible-light reflectivity of the visible light characteristic changing layer is changed, thereby forming an image corresponding to the image data on the label surface. The magnitude of the voltage swing between the first and second voltage levels is reduced in comparison to other voltages of the Content Addressable Memory device, or in comparison to the voltage swing of prior art bit lines, so that effects associated with power dissipation by the bit line are reduced.

1459827543-cef8e650-bd73-440a-820c-acd94b17ab38

A sensor system for sensing liquid level in a bilge, for use in automatic bilge pump actuation. According to the present invention, there is provided a diagnostic agent for diabetes which can be used safely without side effects to give accurate results immediately with less physical pains on the subject. The outboard motor has an oil pump, a suction passage, and a return passage. The second boot will cut in booting time for a specific application and will make application software small. The droplets are sized to substantially freeze on contact with the cooled surface. The device authenticates itself after having received authentication data from another device during the read mode, and the device switches permanently its mode to the write mode after being authenticated.

1459827543-ef752b8c-7d66-4d3c-a945-35569bc49cf1

Provided are a hard tissue restoration material, which is excellent in hard tissue restoration ability, extremely effective in promoting recalcification of dental enamel, and excellent in protection properties and aesthetic properties, and a hard tissue restoration method. Each cell includes a respective plurality of member stations and an access point station. The counter keeps track of the number of under-flows and over-flows the absolute rotary position sensor generates during movement of the actuation element. The module includes a second memory device connected to the signal line and the clock line such that the signal and the clock signal arrive at the second memory device at substantially the same time and after

the signal and the clock signal arrive at the first memory device.

1459827543-fbc516b8-165c-4041-93f5-1b76e865a2b9

A two-piece planet carrier for use in a power hand tool, the carrier comprising a drive portion mountable to a rotor of the tool and a pinned portion having a crank pin. The base body has a first surface and a second surface which is opposite to the first surface and receives light from light sources. In addition, the Java beans are preferably implemented as dynamic Java beans.

1459827544-62eeacce-c689-4e56-bb08-b024524af8a5

The present invention provides a process for production of a cyclic ester by depolymerization of an aliphatic polyester. When supplying an alternating current to coil with the frequency swept by impedance analyzer, the magnetic field made to be induced in coil will operate on the conductive film of wafer. The transmission is operable to provide at least one reverse speed ratio and a plurality of forward speed ratios between the input member and the output member. The object image is subjected to gradation conversion with the gradation conversion function determined by the determined values of the variables. This can assist in making navigation information more readily available and in some cases, users can use parcels of navigation information while other parcels are being still delivered. Exemplary embodiments may provide scripting language code and execute the code causing examination of at least one annotation associated with a referenced collection of code.

1459827544-dfd49290-637b-4d15-95c8-029127cdc9e1

The present invention is a unique combination and physical packaging of low power COTS electronics, real-time operating system, and custom firmware that relays data, messages, and GPS position through the Iridium Short Burst Data satellite system. The technique provides for the initiation of a collaborative session by an application server. The thrust generators are opposingly mounted to the housing and face opposite directions both when the housing is in the retracted position and when the housing is in the extended position. The die is attached to a substrate via the nanostructure bump. A compound represented by the formula :wherein each symbol is as described in the description, or a salt thereof. The rib includes an interruption providing a gap in the rib defining a forward rib portion and an aft rib portion.

1459827545-0c81d734-a95b-4fd7-a54c-ecfdc53b13b8

A system and method are provided for adaptive synchronization of timing information provided in communications messages transmitted between independently clocked communication nodes of a wireless communications network. The solid catalytic system comprises titanium or vanadium compound, a compound of magnesium containing at least one halogen, a particulate porous support, and optionally an internal electron donor. Preferably, the storage system includes a tracking system that detects, monitors, and displays to a worker the location of the storage carrier containing a particular customer's prescription order, thereby providing easy retrieval of the customer's prescription order.

1459827545-41fc9e11-910e-4a5d-8641-8943ff3cc68c

Disclosed is an optical frequency controlling device for ultra-dense wavelength-division-multiplexed optical channels in which center frequencies of optical channels are aligned. According to an embodiment of the invention, a conductive film is formed on a conductive plug connected to an active region of a semiconductor substrate, and on an interlayer dielectric film formed around the conductive plug. The terminal request is forwarded to the TGW through a tunnel from a tunnel endpoint located below the TGW. A 3D image generator generates a 3D panoramic image, when the three-dimensional panoramic image is viewed in a specified line of sight. A compound having the following structure is disclosed.

1459827545-7ef2d47f-0382-4c04-9bf8-247ae4b1e437

A support structure for a pedal of a vehicle pivotably supports a pedal assembly to a pedal bracket mounted on a vehicle dash panel. The signal generator includes at least one delay cell with a delay that approximately corresponds to a phase shift  $\frac{\pi}{2}$  rad for a given signal. The method includes immersing each drop in a gelling solution containing a reagent capable of reacting with the polyelectrolyte of the film so as to form the gelled casing.

1459827545-99f9376e-6487-4572-8345-9c90ea08f8e9

In the reception of digital information transmitted on a communication channel, a characteristic exhibited by the communication channel during transmission of the digital information is estimated based on a communication signal that represents the digital information and has been received via the communication channel. The device has a diving collar disposed around an upper region of the lure body, rather than a lower region, which is common in conventional lure devices. A dot pattern having dots on a transparent test chart sheet, facing the film, is photographed by image pickup upon reflection of the dot pattern on the film positioned on the inspecting surface. The first and second resonant cavities are separated by a sub-wavelength grating layer configured with a non-periodic sub-wavelength grating. The plurality of lateral edges of each syringe flange is coupled to the lateral edge of adjacent syringe flanges in a breakaway configuration to facilitate separation of each of the plurality of syringe assemblies from the panel.

1459827546-00880bcb-3075-40ef-a52d-9793db635d86

A chemical composition including a moiety comprising a quencher, a tethering element, and a ligand that associates with and quenches a fluorescent polymer is disclosed. The improved system may also include a magnetic circuit having second pole pieces located between the first pole pieces and the target that controls the flux directed from the first pole pieces to the target. At the same time, the present invention provides for simple assembly and component replacement. The second fundamental matrix calculating unit calculates a second fundamental matrix by multiplying an  $M \times 7M$  matrix, which has diagonal components corresponding to an  $8 \times 78$  DCT transform matrix and the remaining components corresponding to an  $8 \times 78$  matrix with all elements being zero, and a transpose matrix of an  $M \times 7M$  forward DWT transform matrix. The connection guard further includes ventilation for moisture and heat dissipation. Accordingly, a Sitemap can be created without having to manually re-enter data from the data source into the Sitemap.

1459827546-65dd1529-0cf0-42de-a96e-dae7f2d72727

A heat exchanger block including at least two heat exchangers each including a pair of longitudinal headers with tubes extending between the headers, at least some of which are aluminum cast parts. In some embodiments a Gray-like labeled QAM cross-constellation is used in wireless communication systems. The header base includes a header contact opening. In this state, a casing of the air cleaner has an opening portion to permit insertion and extraction of a filter element. This extension permits a practitioner to clip away obstructed portions of the second capillary. In particular, the disclosure teaches a method for creating representations of signals input from a slow clock domain into a fast clock domain and vice versa.

1459827546-8b463b1b-8073-4f1d-b318-dca1493ecadb

An abdominal exercise machine for providing crunch-type exercises for upper and lower abdominal muscles comprises a support frame assembly and a back support member. The amplifier chain has at least first and second amplifier stages connected in series. A portion of the fresh air induced into air pathway in the superintegrated heat exchanger is preheated by coolant pipe coil and hot surface of the three way catalyst and then is finally heated by exhaust gas through a heat exchanger unit.

1459827546-90440933-2c29-4ec7-81e0-9c855cf74759

An angular rate sensor includes a piezoelectric vibration device; and a detection section, wherein the piezoelectric vibration device includes a vibration section having a first support section, four cantilever sections supported by the first support section, and a second support section that supports the first support section. , flowing a coating gas comprising aluminum trichloride and a carrier gas through the coating retort at a flow rate of the coating gas of about 100 to about 450 standard cubic feet per hour, providing a concentration of aluminum trichloride in the retort of less than 1. A precompensation value is assigned which correlates to the count of non-transition data bits preceding the data transition to be written. The force causes the cells to cut into the end of the prepared bone. Also, methods for the preparation of such compounds, pharmaceutical compositions comprising such compounds, and methods for their uses. In this embodiment, the second gap region is wider than the first gap region to reduce binding as the door moves onto the non-vertical track segment.

1459827546-e53178fd-88fe-44c5-a669-ac117e380765

A power window system for a motor vehicle operated by a linear electric motor. Transfer of display data corresponding to an updated user interface can occur via a memory shared between an agent server and an agent client in a terminal server environment. The output is based upon frequency, i. The hydrogenated disaccharides make it possible to obtain an excellent compromise between retardation, plasticity and the mechanical properties of the mineral binder.

1459827547-260804d5-a57d-404f-b6bd-4307b824ea3b

A digital rights management method is negotiated prior to initiating delivery of a DRM encoded content item over a digital network between a client and a target server. In particular embodiments, the method can allow for tunneling to multiple data centers on devices with limited, e. The engine operates lean of stoichiometry and nitrides of oxygen in the exhaust gas feedstream are reduced on the second aftertreatment device. The dinodex may then be read to retrieve the extended attributes stored either inside or outside the dinodex. In the linear guide, the under seal has an elastic lip portion, in a portion of the under seal coming in contact with the slider main body, which has a length approximately equal to an axial length of the slider main body and elastically comes in contact with the slider main body.

1459827547-3114bc42-ee27-48f2-b7f1-565e7bc16471

A disk device having a readwrite processing device to improve the efficiency of operations between write commands that have overlapping data, and to prevent delays in execution processing of starting commands. Changes in the resonance can be brought about, permanently or temporarily, by changing the size of the micro-resonator with precision, by changing the local physical structure of the device or by changing the effective and group indices of refraction of the mode in the micro-resonator. The patient records are then analyzed by correlating selected patient data contained in the patient records with disease indicia for each of a plurality of diseases. The first RGB switch outputs fifth RGB signals. The ear piece has a fixed portion and a release portion respectively formed at an end side thereof for fixing and releasing the heat-dissipating body.

1459827547-51c549a1-744c-4142-a2a6-ddf81822282c

A process to produce ethylene polymers is provided. The tracking system may also indicate the location of prerecorded obstacles along the desired snow plowing path. The device signals to the user if the user's execution of exercise repetitions falls outside the user's pre-set requirements for speed and range of motion. The method also includes steps of etching the target material layer using the patterned hardmask feature as a mask feature, wherein one of the gases chemically alters the patterned hardmask feature and at least one of the gases chemically repairs the patterned hardmask feature so that the patterned hardmask feature retains its

dimensions during the etching. The actuating end includes a ridge portion.

1459827547-6fe4a3a1-568d-4da2-a89d-a873d6c55b9e

A flash memory device is programmed by loading first data into a page buffer of a first mat. To that end, a compiler defers emitting write barriers until it reaches a subsequent instruction in the mutator code. Restriction membranes separate buffer flow from the first flow path and the second flow path. This circuitry includes a plurality of conductive features defined in one or more levels of the cell.

1459827548-5b030f0a-554b-4f1a-afd0-fafe0a929dca

Methods, systems, and apparatus, including computer program products, for managing resources in virtualization systems, including multi-cloud systems. The grooves are longitudinally formed on the internal sidewall of the tubular member. Such feedback information increases the likelihood that the laser impinges samples and provides useful data. The refresh controller keeps the memory device in the self-refresh mode until the data processing system re-enables external refresh signals.

1459827548-862ed695-d27c-469d-a1a6-1dffb019038

A method, apparatus, and system for compensating for lamp lumen depreciation. The loading device includes a plurality of funnel elements, through which the tubes can be loaded with bulk material, whereby the funnel elements are adapted to the reactor so that a substantially closed surface can be created with a plurality of funnel elements arranged side by side when the filling tubes extend into the tubes of the reactor through the filling openings. Channel conditions are sampled to model the performance characteristic curves. The aim of the invention is therefore to create pumps or fluid motors which are characterized by high degrees of efficiency and long service lives.

1459827548-e1663766-93a7-4099-b7fa-79c097d833e0

There is disclosed a method of fabricating electrodes of plasma display panel using photo-peeling method, which can make the electrode highly precise in correspondence to high resolution. In one arrangement, a household classifier is generated and delivered to user equipment devices. This allows the memory-type liquid crystal display device to reduce power consumption while keeping its display quality. An edge movement module minimizes the geometric cost function thereby forming a minimized geometric cost function. A steel plate is fixed to a predetermined position at one side within the main body of the case.

1459827549-6eede49f-8632-474d-86b8-a76597938ba5

A system and method for portable instrumentation is proposed, comprising a server computer and a portable instrument that is wirelessly connectable to the server computer. Optical switches are provided for selectively coupling inputs/outputs of different branches to enable a routing of optical signals through the unit. Various means are disclosed to provide for a radial distribution of the produced light wherein the produced light properly strikes the collimating reflector for concentration into the beam of light. One or several characteristic variables of the force-time curves are determined for each scanning point from the real-time evaluation results and the stored digitized force-time curves and an image of the sample surface is obtained from said characteristic variables of the scanning points. The method comprises determining the effect of a candidate compound on the binding of a probe compound which binds to a first binding site on the biological substrate in the presence of a first multibinding compound which binds to the first and second binding sites on the biological substrate.

1459827549-74981812-7e3f-4c3d-9a4b-4ac2da787ed5

A method for calibrating a high frequency measuring device so as to accurately measure plasma processing parameters within a chamber. The fixture is adjustable in three axes and configurable to accommodate intake manifolds from various manufacturers. Information is transferred between mobile communication devices by

organizing the information as a script. The carried data may include an embedded code relating to data particular to that individual strip.

1459827549-96eb8d13-2183-462f-8afd-cfddee7ba0e5

A girth adjustable waist belt that easily converts to a diver's buoyancy compensator with/without integrated weight system and can also easily convert to a utility backpack and belt in which one single size will fit the general population is provided. When a request to use the content is received by a client agent controlling the use of the content, the conditions of use are checked. The freezing process then moves the AGC into a FROZEN state from the TRANSITION state, based on net change of VGA gain control codes over the monitoring time window. Also disclosed is a method for obtaining a transparent zinc oxide thin film, which is not doped or doped with a group 3B element, using the composition.

1459827549-9a6edacb-e58a-4b4a-92c2-c08990204833

Identification information is extracted from a current broadcast of a piece or music or other type of information of interest to a user, and stored in a memory or other storage device, in response to a user command. Immobilized fire fighters or others may be placed in a supine position atop the platform, their air packs entering into the contoured aperture; so that they may utilize the air supply while being evacuated. At least one switch performs a switching operation for turning on/off the peaking amplifier according to the control signal. Alternatively, the carbonaceous material has a peak in a wavelength range above 1,360 cm<sup>-1</sup> in a surface-enhanced Raman spectrum which is measured by the same surface-enhanced Raman spectrum. The floor plan of a building is determined by moving the array around the outside of the building. The media content may be received in response to the single request and the media content may be stored in a memory medium.

1459827550-6fa864cd-375f-458f-a37f-c84a8d9738fd

A system and method for automatic bone extraction from a medical image is provided. In order to increase the number of client devices that can share a public address via network address translation, the client device may be assigned a public address when the client device's expected port utilization is at or above a port utilization threshold. The conductive layer is arranged on the bonding pads of the chip as contact points. The apparatus is especially useful for surgery of tissue within a capsule, such as cataract surgery. A delay line is further included to delay the sampled incoming data and the recovered quarter clock by the detected phase difference.

1459827550-80eebf80-3ce6-4c13-9094-a5881960f719

A cap-like head backing cover includes a plurality of types of cover components. The method may be used to screen either a chemical library in order to identify a molecule having a gene-specific lethal property in the cells, or to screen a group of DNA molecules in order to identify among them one or more modulators of gene function which are synergistically lethal to the cells together with an incapacitated gene of interest. In a second configuration, the switching circuit may couple the first transceiver to the second transceiver via the second processing path. The channel is configured for receiving a removable coupling member of a flashlight. In an alternate embodiment of the invention, one or more RSJs can be used in place of the RSJ and the biasing resistor. The spray shield may be trimmed to size by the user and may be easily replaced by removing it from the adaptor.

1459827551-bdf2bf4a-9315-440f-bb04-ed890808aae

A communication device is provided which transmits and responds to differential currents. In accordance with this method, substantially no gas contained in the heat insulator is diffused at the time of cutting the heat-insulating housing, and the gas can be collected at a high concentration because it is collected by being allowed to leak out at the time of compressing. The backlight module includes a

metal frame. The IM server receives the user's selection of a graphical element that represents a remote IM instance of the multiple IM instances. In order to obtain rapid response of an actuated auxiliary pressure medium consumer it is proposed that the amplifier device consists of a proportionally controllable pressure reducing valve.

1459827551-be67f100-f6a8-4fa3-8110-bd78a5be1f57

An image with a wide visual field can be captured without causing deterioration in measurement accuracy. The knife carriers are arranged along a comminution path of the comminuting unit and have a leading longitudinal edge. The torque-transmitting mechanisms being selectively engageable in combinations of four to establish at least seven forward speed ratios and one reverse speed ratio within the planetary gearset.

1459827551-d381afe2-d0f1-4803-a9d5-828deb5f7bd2

Excellent exposure performance is achieved by disposing a shade system in the vicinity of a mask. The element comprises an imageable layer over a support. The memory device has a data latch for storing flag data and a cache latch coupled to the data latch.

1459827551-df7ad490-ea21-4581-8641-070149483392

An apparatus, method and system are provided for correlated noise reduction, in a trellis decoding environment, such as second generation HDSL, in which crosstalk impairments may be significant. A phase-change material is located between first and second electrodes for applying a read voltage to the phase-change material to read the programmed cell state. A contact region of the substrate is bounded by the trench. The method further includes constructing a token of the input text that includes the current character and the one or more next characters, the attribute of the current character and the one or more attributes of the one or more next characters intersecting with each other. The present invention also discloses a diagnostic kit for immunological recurrent spontaneous abortion, and method and kits for monitoring the therapeutic effect for immunological recurrent spontaneous abortion.

1459827551-e6e9d469-6a05-4200-be49-9ecd2c035994

This application describes designs, implementations, and techniques for controlling propagation mode or modes of light in a common optical path, which may include one or more waveguides, to sense a sample. The agricultural implement also includes a carrier frame pivotally coupled to the hitch assembly by a main pivot joint such that the main pivot joint resists substantially all lateral loads between the carrier frame and the hitch assembly. The arrangement has a detector at the shell for detecting ambient temperature or shell temperature. The packer collar embodiment includes a hydraulically actuatable packer 70. Also disclosed are intermediates thereof, and methods of making and methods of using same. Because the changes in impedance associated with the electrode-tissue interface can indicate obstruction of current flow and positional lead displacement, lead impedance can indicate the quantity of electrical stimulation energy that should be delivered to the target neural tissue to provide corrective adjustment.

1459827552-16a9e7eb-9b72-4bd4-bfb4-fd0ba4d4d378

An advanced process control method for semiconductor fabrication is provided. The MOSFET comprises an insulating substrate; and an oxide protection layer on the insulating substrate. An amount of electromagnetic radiation is applied to the target area, and a response to the electromagnetic radiation by at least some of the cancer cells in the target area is measured. The power-on reset circuit releases the reset after the expiration of a power-on reset period. A method of stroke amplification is further included.

1459827552-3bfc8dba-ac8d-4fb3-b474-c0ff0acab050

The present invention relates to anthraquinone derivatives which act as a fluorophore, to a process for producing said anthraquinone derivatives and their use as fluorophores for staining membranes in live or fixed cells. The area has a portion which is formed by removing a substance, contained in the at least one of the lower electrode layer and the upper electrode layer during formation thereof, after the at least one of the lower electrode layer and the upper electrode layer has been formed. A shaft extends through the fluid pump and the vacuum pump. In yet another position, the stop acts as a workpiece guide, especially useful for supporting crown molding during cutting.

1459827552-5da19453-1284-47c5-9fc0-f7e852156ae1

A method for forming quarter-pitch patterns is described. The device provides output in the form of a default output and variants. The translation lookaside buffer may be a MIPS-like TLB in which multiple page table entries are cached in each TLB entry. An apparatus for administering the test method described is also provided. The antenna has a full range, preferably by default, in the handheld mode, and the controller is operative, preferably automatically, for decreasing the full range to a restricted range in the hands-free mode.

1459827552-a6a6c00f-18d8-45c8-ac93-cdec96fa6b92

A voltage variable material including an insulative binder that is formulated to intrinsically adhere to conductive and non-conductive surfaces is provided. The outlets are without valves for opening and closing, and the flow of the air through the outlets is controlled by control means associated to each outlet that exploit the Coanda effect. The controller 12 has: a preliminary recording unit 13; a judgment unit 14; an extraction unit 15; a drive condition determining unit 16; and a preliminary recording terminating unit 17. The diastereomeric salt of optically active 4-amino-2-methylbutane-1-ol with an optically active reagent for optical resolution is decomposed by bringing into contact with a solvent and an alkali and subjected to solid-liquid separation, thereby recovering the optically active 4-amino-2-methylbutane-1-ol from the filtrate. When the unauthorized stop process detecting unit determines that the CPU has provided an instruction to perform an unauthorized process of causing a selected clock generating source to stop the generation of the selected clock signal, it can furnish an interruption signal to the CPU.

1459827552-ce4b1323-f340-4ff3-82d7-2295ed2d289d

A characteristic image detection interpolation unit performs interpolation processing for increasing the luminance value in low-luminance area which is partly present in an input image. The method includes gathering patient-specific data related to concentration of a contrast agent within an arterial network using a coronary computed tomography angiography scan. When the plug connector is mated with the receptacle connector, the contact portions of the first terminal are clipped between the contact arms of the corresponding second terminal to electrically contact the corresponding contact arms tightly such that ensures the first terminal and the corresponding second terminal electrically connected with each other steadily.

1459827552-dff7f5e3-3d23-4ba9-b105-976fc23e0d8a

A compound oxide powder producing method for producing compound oxide powder made of at least two kinds of metals. The chemically excited liberated carbon atoms are then enabled to traverse a surface of the reactant liquid and are directed across a collection surface. Based on the meta information, content of the documentation archive for update is integrated into the documentation application at runtime of the documentation application.

1459827553-6bb8a986-6773-4395-9f96-68dbe3cca7ab

In a receiver for receiving digital television signals with carriers near the upper frequency boundaries of TV broadcasting channels, co-channel interfering NTSC video

carrier and its lower frequency sidebands are removed from intermediate-frequency signal by trap filtering, preferably in SAW filtering used in the intermediate-frequency amplifier. The encryption device is operable in response to signaling from the file server to cause encryption of data being moved into the physical storage, and decryption of data being retrieved from storage. By so doing the test path for boundary scan testing is segregated from the operational signal path which is used when the device is performing its normal function. The request and the response are transferred between the first radio access network node and the second radio access network node in information containers that are transparent to the core network. The assembly of the device can then be completed.

1459827553-72f5e331-6f06-4b66-86c7-0b3866ab840b

The present invention provides microparticles that create permanent tissue markings, such as tattoos, designed in advance for change and/or removal on demand, as well as methods for implanting the microparticles in tissue and changing and/or removing the resulting markings. Methods of preparing these foams are also provided. The supported member defines two holes that will engage the engagement portion of the supporting member to securely retain the supporting member in desired position and support the supported member.

1459827553-bb6a4d54-ccf0-4fb9-a9e8-10e7d83529bc

A readout system for receiving return signals originating from one or more energy pulses fired toward a scene. The time slots are defined in accordance with a time base responsive to broadcast time signals. For each n-gram accepted by the finite state transducer, a frequency counter associated with the n-gram of the one or more text-characterizations in the set of text-characterizations is incremented.

1459827553-d27d0b52-4b42-4830-98a3-8e112e81a6f7

The invention relates to a blade for use on a wind turbine and a method of assembling laminated profiles for a blade for a wind turbine. A detection unit detects a required driving force of a driver. The portions of the intermediate SiGex layer outside the window are etched and the portion of the intermediate SiGex layer exposed through the window having ions implanted therein is not substantially etched to form a patterned intermediate SiGex layer.

1459827554-22d199af-6f45-4173-bcb2-d33c61cfb16a

A storage system comprises a plurality of vdisks, with each vdisk containing a plurality of storage segments, and each segment providing a specific class of service. The electronic module includes an outer wall defining a lateral housing for the assembly head of the inflation valve, delimited by a metal plate made in one piece with the electronic module, for pressing of the locking face of the assembly head, and furnished with a notch for the body of the inflation valve to pass through. The system integrates a reporting module, and also an economic module to evaluate cost versus benefit of each subsurface operation. A second terminal of the first electrical switch is grounded.

1459827554-3a229570-c60b-4951-8aba-026ad853b724

A moisturizing, personal cleansing composition with a limited number of naturally-derived, naturally processed, generally regarded as safe, biodegradable ingredients comprising a plurality of oleosomes, an anionic surfactant, a non-ionic surfactant, a lipoaminoacidic surfactant, and a humectant. A through hole is made through piezoresistive layer; a light source is arranged under the bottom of the light emitting key. This anonymizes the set of households that are selected to play an ad, by ensuring that when an STB meets defined criteria and sends a "criteria met" message or "ad shown" message to a head end, an STB or household identifier is not revealed, thus anonymizing the household information from the head end.

1459827554-ca147159-7e8f-49bb-aa19-6f023f1342d6

A method and an apparatus provide a service of multimedia data in a mobile terminal. The motor driving system outputs a driving signal containing a voltage value, a current value and a frequency value for driving a motor. The instructions are installable by the customer, and are capable of enabling dormant computer hardware resources upon installation. , guided via the SCR catalyst in a constant direction of flow and subsequently fed back to the remaining section of the regenerator. It has been discovered that this b value is substantially directly proportional to the log exposure of the pixel.

1459827554-d2f75d8e-af75-47f0-be8e-e23aba05fd49

A semiconductor memory apparatus includes a memory cell array having a multiplicity of data lines and a multiplicity of local amplifiers, each of the local amplifiers being associated with a data line. In this method, values of at least one kinematic measurement parameter of at least one thread section are measured and, based on the measured values, approximation values of the tensile force which acts on at least one thread section are calculated by means of a computation model. In addition, the processor optionally receives a predicate vector that includes N elements.

1459827555-02dd8a8f-8171-4cde-8cdf-7262f892d28e

A multi-pass type color image forming apparatus. Both a semiconductor device and method of manufacturing a semiconductor device using an amorphous silicon layer are provided. A selective edge phase mixing unit for the memory device may operate to receive the clock signal and control signals. This invention provides a process for making a pharmaceutical composition comprising combining a therapeutically effective amount of a compound of the invention and a pharmaceutically acceptable carrier. The first and second steps are fluidly connected to the second orifice and substantially fluidly disconnected from the first orifice when the second valve member is in the closed position, and the first and second steps are fluidly connected to the first and second orifices when the second valve member is in the open position.

1459827555-35fc45d8-0437-4b5e-93cd-4136c50ffcc8

Disclosed is a plasticizer composition which comprises an ester-based plasticizer and an ether compound and exhibits improved workability and heat loss in proportion to content of the ether compound. Based upon receipt at the interactive voice response system of the communication, visual data to provide to the remote requesting party as part of an integrated interactive script is determined. P-ASIC preamplifier circuits are complex low-noise integrated circuits which dissipate a considerable amount of power. The frequency of the wellbore signal may be changed downhole. The first electrical harness is fire-resistant for a period of five minutes without any exposure of its conductive tracks so that the conductive tracks can carry their signals.

1459827555-d6eb028e-6e00-41b5-bd20-b40a88721942

A method and apparatus are disclosed for detecting data, such as a sample sequence read from a recording channel. A system includes a source for providing scan-in sequences of state data as input stimuli into a device under test and expected scan-out sequences of state data. These features allow the radar tracking of moving objects to be more fast and accurate. The obfuscation of a software image so as to becloud the comprehension of hackers in reverse engineering pieces of software comprising the software image is provided.

1459827555-f7a69a89-4ba7-4a1a-af75-305b3412e5fb

A collapsible and portable rocking chair includes left and right frame side assemblies collectively defining forward and rear leg portions, armrests, and back support members. The special vacuum loader and industrial dust collector has a solids-gas separation compartment comprising a tangential cyclone separator, preferably a perforated plate tangential separator, which is positioned generally alongside and laterally offset from one or more filtering compartments to minimize

turbulence and re-entrainment of the collected particulate material. The disclosure also discloses a mobile terminal. The pulsed counterforce controller calculates a time rate of change of a dynamic load value of the load object, and outputs a counterforce command signal indicating a counterforce command value for generating pulsed counterforce. Responsibility for considering interdependencies can be delegated to a video driver, such as a video miniport. The sealing joint is formed by the extension of the soundproof lining itself, extending towards the peripheral edges delimiting the opening of the partition and by such value as to enable an integral peripheral contact with a peripheral zone of the fitting to be installed.

1459827556-7c98c0b7-18df-4630-a451-af20f337eb62

A method and an apparatus for improving the gray-scale linearity of a plasma display. The new early ripening, very fertile grapevine variety is particularly characterized by an attractive berry color, a very uniform bunch and a firm berry with tender crunchy skin. An inflatable member is coupled to the elongated member and positioned in an interior of the basket assembly. The separations system is operable to separately selectively separate water and mixed butenes from the crude product such that a refined mixed butanols is produced. Once the mapping has been determined, it is stored and used by the database system to determine how to store subsequently received XML documents that conform to the registered XML schema. The modular cell design allows for horizontal and vertical scaling.

1459827556-7fd21153-2ed1-413b-b453-c4c292b7961e

A new and distinct cultivar of Nemesia plant named \u2018Pensky\u2019 that is characterized by a compact habit, dense upright spikes of blue-purple flowers and oval shaped green leaves. The ingot is then hot worked to form a billet having a smaller average grain size and a larger diameter than possible in the past. An axially moveable actuator, such as a packer cup, engages the sealing ring assembly to causes at least a portion of the sealing rings to expand radially outwardly to seal the annular space and cause the sealing ring assembly to contact the uphole stop. The trench extends beyond the intended ABS plane and in the opposite direction into the intended yoke area. The multicast policy identifies common services to be applied pre-replication, and exceptions specifying additional services to be applied post-replication to copies of the multicast packets for the one or more zones.

1459827556-ae821483-f9a8-4747-a2b8-672653282667

An overvoltage protection circuit is for a circuit of an output MOS transistor and a load connected in series between a first power supply and a second power supply. The trench may be used in combination with doped sidewall isolation regions. A termination mirror having a reflection face is so buried in the clad layer as to reflect the optical signal guided in the core layer, to the outside of the optical connection board. One common type of relays can be used to all three of these parts. A wire is connected to the bottom end of the spring and a copper pin terminates the remaining free end of the wire, enabling the insertion of the copper pin into the flat cable of a circuit tester. The Miniature Vein Enhancer of the present invention may also be attached to a magnifying glass, a flat panel display, and the like.

1459827556-e22ca978-14e1-469f-80ec-3ed30913d370

A secure database appliance leverages database security in a consistent framework provides consistent, flexible, and adaptable security using mandatory access controls in addition to user and role based security for access control and accountability. The protection system allows the user device to postpone validation of purchased tags stored in a tag table for installed software and to re-establish ownership of a tag table to recover from invalidation of a tag table identifier value resulting from revelation of a tag table identifier value. 4 millimeter, in which the external layer has a uniform thickness with a uniformity criterion C, which is less than 0. In one aspect of this embodiment, at least a portion of the

one-piece plastic shell can include an inner skin offset from an outer skin in a double-wall configuration.

1459827557-6580cfff1-20f9-4348-976e-0d2402c2f925

This invention relates to apparatus and a method for connecting a pin array and a circuit board. A sheet metal conducting member has a flat base portion that lies in the casing under said operating member, and has four upstanding plates that extend from bends at the periphery of the base portion. Each two wings received in the same receiving groove block one rear edge of the terminals. The binders described herein comprise a humic substance, preferably leonardite, combined with a polymerizable isocyanate, a polymerizable polyol, and a polymerization catalyst to make a polyurethane resin binder in situ in a foundry aggregate, such as sand.

1459827557-8dbeeb6d-5dd5-4280-a815-db301d4e10e0

A semiconductor device of the invention comprises a semiconductor element provided within a housing, a bonding wire, a sealing resin member covering the semiconductor element and bonding wire, and a sheet member. The system includes a first constraining wall and a second constraining wall. Predetermined fractions of total drawn-in air passes through the respective different filter units and thus are subjected to corresponding cleaning by the different filter units being adjusted to each other with respect to pressure drop. Other methods of recharging an electric vehicle are also provided.

1459827557-db0ac9e8-64ee-4530-b5e5-2d01d8e4733f

A motion control device 10 for a vehicle exerts braking force only on the rear wheel at the inner side of the turning direction for generating a yawing moment on the vehicle only in the turning direction of the vehicle when an absolute value of an actual lateral acceleration  $G_y$  is not more than a value  $G_{yth}$ , i. An inner lens of transparent sheet material is formed, which may have a generally pyramidal configuration and presents a plurality of inner sides. The processing element executes a first application to call a second application for permitting the user to enter a plurality of defining terms for the second application to apply the defining terms as search filters for searching and retrieving uniform resource locators for linking to contents relevant to the defining terms entered by the user. In addition, dropped connections during hard handoffs are minimized by using a special code channel and dynamically adjustable data rates to evaluate the proposed new link. Slips and books are managed using identification codes, and knowledge is managed using item data and knowledge table. A set of values is extracted from the three dimensional representation at a value of the first parameter, and a functional is applied along lines, or parts of lines, of the extracted set of values, the lines extending along values of the second or third parameter.

1459827558-282b952d-2131-492d-83c6-d1078086961b

An electronic device includes a housing, a tray, and an ejection mechanism. A data storage system may include a client computer system coupled to a first data storage device and a second data storage device and configured to transmit a first data write request. , a copolymer of styrene and acrylonitrile, B) a graft copolymer, e. A component mounting accuracy is calculated based on the image. It is possible to effectively perform a quasi-phase matching when a width of periodic electrodes is shorter than a coherence length generally used as  $\lambda_{\text{qpm}}$  of a quasi-phase matching period. Also provided are synthetic intermediates useful for implementing the inventive methods.

1459827558-441e52c5-129b-407c-a02b-ffa134ab52fb

A new and distinct cultivar of *Campanula* plant named 'PKMh02' 2019, characterized by having compact plant habit; freely branching plant form; vigorous growth habit and less need for chemical growth retardation; greater number of larger flowers per plant, and large upright pale blue flowers. In one embodiment, a

method in a data system is provided. The rucksack further includes a VELCRO releasable fastener having a pile piece and a hook piece constituting a fixed part which is provided at an upper portion of the back wall to have a predetermined area, while also constituting a movable part which is detachably fastened to the fixed part. An initial angle is set at zero and a x-minimum, y-minimum, x-maximum, and y-maximum of the polygon are determined.

1459827558-6f21052b-0a2f-4072-9d86-f2eae356d929

A fluid flow indication apparatus is provided for monitoring and giving an indication of fluid flow. Information may be written to the storage media as sequential data sets with each data set including a catalog describing the information in the data set. When the number of times is equal to or more than a certain rate from the number of optical black pixels on the horizontal line, an optical black float state is determined and clamping operation is performed in accordance with a held value immediately before.

1459827558-b49860f1-620d-4b11-a110-a00fd60910a9

A server in a telecommunications network connects to subscriber equipment of at least one type and to caller equipment of several different types via a communications medium. Furthermore, the invention of such an actuator relates to the use of such an actuator for the headlamp leveling of a headlamp. A cleaning sheet is selectively attached to the support plate for collecting dust and dirt to be cleaned.

1459827559-27ed3cdf-52ae-4738-966f-533d0b59f867

An apparatus for manufacturing high quality glass wool fibers, and more particularly to a spinner including a radiation shield is disclosed. The operational status of the pump is monitored by monitoring the condition of a switch associated with the pump which is adapted to change state when the pump piston is withdrawn into its pump housing as a proper reaction of the pump to its drive signal and return to its original state when the pump piston is no longer withdrawn. The chamber is configured to extend substantially in a second direction. The resin layer covers at least part of the film. 7 mPa, and two or more turbulence channels radiating to a nozzle opening, said channels causing a flowing liquid to rotate relative to a flow axis. In a mesh network that includes a wired border node and multiple wireless nodes, each wireless node advertises a backhaul throughput approximating the throughput between that wireless node and the wired border node.

1459827559-5185fb0e-1e18-4cea-9048-a18cc43ccf09

The family of transmissions has a plurality of members that can be utilized in powertrains to provide at least eight forward speed ratios and one reverse speed ratio. These proteins can be produced in various functional forms from spontaneously secreting cells or from DNA segments introduced into cells. The portable digital cellular devices include a liquid crystal display window which allows a user to select a desired song to be heard or game to be played. Consequently the critical thickness of strained silicon that can be grown without significant misfit dislocations during later processing is effectively doubled for a given germanium content of the silicon germanium layers. In another aspect of the invention, the sleeve is provided and disposed to cover the enlarged inner diameter portion. The guide pin translates relative to the guide member as the lock ring rotates between the first and second positions.

1459827560-671a69a7-fd32-407c-af85-75f8b29cf2d3

Continuous data protection is performed as two parallel processes: creating an initial backup by copying a data as a file directory from the storage device into the backup storage, and copying the data to be written to the data storage as a part of a file directory into the incremental backup. There is also disclosed a method for making the aerosol and methods for treatment and diagnosis using the aerosol. In addition, it is possible to facilitate the comparison of the tomograms

with one another by installing a plurality of indicating bars in the phantom so that their cross sections can appear on each of the tomograms. The auxiliary switch sub-assembly includes an auxiliary switch including an actuator, and a mount attaching the auxiliary switch to the operating mechanism of the circuit breaker within the housing thereof.

1459827560-681f3a76-0b6c-4258-8462-d45eb876f8e2

A sample analysis apparatus is provided with a structure for stopping rotation of a disc at a precise position. The built-in test signal attenuation circuit includes circuits for generating an attenuated, degraded, chopped signal. Techniques to scale relative electric-field measurements to absolute units, stabilize electric-field phase drift, and calibrate electric-field data that is corrupted when the probe is used in regions where temperature gradients exist are provided.

1459827560-8ce89508-5c2c-4278-b8e7-a634a4d479fe

A system and method of restoring material properties is disclosed. For example, one method comprises capturing a photograph of an observed geographic feature in a geographic region. The robot controller is in communication with the camera controller and the robot controller causes the robotic arm to position the camera at a first inspection point. Thus determined priority information is output to a scheduling section. The trip lever is held in the latched position by a hardened latch having a minimal surface area, which is positioned near an opening located in the armature.

1459827560-ae407828-e86d-42f8-a38c-e84d84797162

This invention provides a screening method for sterol regulatory element binding protein pathway-specific inhibitors using a mutant cultured cell, as well as therapeutic agents for hyperlipemia, arterial sclerosis, obesity or cancer containing an SREBP pathway-specific inhibitor selected by said screening method. Techniques for bonding one end of a lead line to one end of a multi-strand non-metallic braid are provided. This is facilitated by using one or more interruption controls stored in memory and associated with each guest program. An overall rating is calculated for an option with respect to the dimension as a function of the weights and option ratings.

1459827560-ba423247-d2f1-4b10-a32a-5f91c0a51d81

A multi-functional mortise lock that can be rapidly converted between different functions without opening the mortise lock case by installing blocking screws that extend through threaded blocking openings in a sidewall of the case and into blocking interference with moving components inside the case. The relocatable power tap also includes a power supply connected to the plug and configured to convert an AC signal to a DC signal, and a detector connected to the plug and configured to determine the existence of ground and polarity faults. The pivot structure includes a tube extension and a pivot rod. Data recognition for the first storage type system information is stricter than that of the second storage type information. In some embodiments, the gesture exchange device may be configured to establish a wireless communication connection with a second gesture exchange device for exchange of user data, such as in response to detecting user performance of the gesture exchange signature and/or determining that the second gesture exchange device is within a predetermined proximity. The evaluating unit is constructed for calculating the data received by the sensor unit and for transmitting a control signal to the at least one drive unit, and the at least one drive unit is constructed for driving means set up for adjusting at least one physical characteristic of the microscope.

1459827561-41120b58-b62f-4f20-af39-e81629489657

The invention is a method for direct updating, by dynamic production data, of a fine geologic model representative of the distribution, in a reservoir, of a physical quantity characteristic of the subsoil structure. When the switch

selecting device outputs a first signal, the first switching device set can deliver the gamma voltage input signals to the resistor string; when the switch selecting device outputs a second signal, the second switching device set will deliver the high voltage input signal and the low voltage input signal to the resistor string. The sleeve includes a plurality of inwardly directed protuberances providing a gap between a substantial portion of the cup sidewall and the sleeve.

1459827561-a357b28c-ca5a-4ac7-a0a7-08dd0e75368c

A liquid pharmaceutical composition comprising a biodegradable polymer, polyethylene glycol having a molecular weight of less than 600 Daltons, a pharmaceutically active agent and less than 0. The silicon nitride sintered body has a porosity of 1% or less, a three-point bending strength of 800 to 1000 MPa, and a fracture toughness of 5. The method also includes examining metadata associated with a file on the data storage device to determine an access frequency of the file, and classifying the file as a function of the access frequency. A control receives a first signal indicative of a magnetic field sensed by the first magnetoresponsive sensing element and receives a second signal indicative of a magnetic field sensed by the second magnetoresponsive sensing element.

1459827561-a7d04623-b016-4df6-b25a-de536263a0b8

In one general aspect, various embodiments are directed to an ultrasonic surgical instrument that comprises a transducer configured to produce a standing wave of vibrations along a longitudinal axis having a node and an anti-node at a predetermined frequency. The network is made up of at least one cluster containing voice servers which allow for telephony, speech recognition, text-to-speech and conferencing functions, and is accessible by the subscriber through standard telephone connections or through internet connections. A resulting URL list is searched for digital watermarking. A rotation guide extends radially outwardly from each hinge hole. The controller may display a guidance element on the display at a position overlapped with the section of the road as seen from the perspective of the driver, such that the guidance element indicates whether the road is passable based on the determination of the controller. The energy store and the additional energy store are connected in series, and the DCDC converter is provided for coupling between the base vehicle electrical system and the vehicle power supply system.

1459827561-d5e85203-1b34-4137-898c-f58144e85a0f

A monitoring and protection system is provided which is highly modular and expandable. Intake air may be obtained directly from environmental air at atmospheric pressure allowed by engine cycle operation and an approximately constant diameter retro-tube having a volume approximately equal to a swept volume of the piston movement. In one embodiment, the same erbium doped fiber type and length is used for both power amplifiers and high gain amplifiers, reducing manufacturing costs. Two radio-opaque bands placed close to one another define a narrow radio-translucent band such that when the X-ray head is rotated to a position where parallax is reduced and the radio-translucent band can be imaged, the renal artery can be appropriately imaged without being obscured by the aorta.

1459827561-f9fcdd4e-4eb2-407b-a7a9-11b635739e66

An electronic message is analyzed for malware contained in the message. The PWM-signal generation unit generates the PWM-signal based on a fundamental switching signal having a fundamental switching frequency selected by the fundamental-switching-frequency selection unit. The document clustering system forms clusters of the documents by operation of the clustering system. Good tolerance to common diseases and pests is exhibited. The frame has vertically extending positioning beams or lugs that segment the raised floor into a plurality of load-holding positions. The first core contacts the bulge when the molding apparatus is closed.

1459827562-3c8a3bbe-0f8b-4d46-a643-c2e58be25118

Drug derivatives are provided herein which are suitable for loading into liposomal nanoparticle carriers. The TCU may send multiple PID map requests for different mode and PID combinations over a vehicles communication bus, and then may append each received PID map to the already-received PID maps. The reference electronic manuscript acquisition section acquires a reference electronic manuscript used for identifying a reference position of an edit part in an edit electronic document that is an electronic document to be edited and is read from the storage section. Activation points of times of the sense amplifier enable signal corresponding to the active command signal are multiplexed depending on input/output bandwidth option information. In certain example embodiments, the coating or layer system has good corrosion resistance, good mechanical performance such as scratch resistance, and/or good color stability ) upon heat treatment.

1459827562-f42d388e-161c-43fa-8dc3-b89e78ba5be4

A non-volatile memory and a method of fabricating the same are described. The locking element is inserted through an anatomic vessel or hollow organ wall and the implant from outside of the vessel or hollow organ. The first codeword may be selected to be the minimum first codeword within a set of codeword pairs that preserves the peak luminance required by the input image data.

1459827562-f4894415-dfea-41ce-b277-d3f86d38c0a9

A recording disk cartridge is provided which includes a plurality of flexible recording disk media stacked inside a cartridge case so as to rotate integrally. A muting state is detected at a particular endpoint during the conference session and the multimedia from the particular endpoint is recorded even though it is not forwarded and rendered to the other endpoints during the conference session. An exterior cover panel of opaque material is removably positioned in covering relation to the see-through panel and at least partially separably attached to the bag structure, allowing the cover panel to be displaced from covering relation to enable facilitated viewing of personal affects through the see-through panel for easy selection and removal.

1459827563-33ec7489-5a65-4c9a-b08a-fddc597b99f5

A message analysis device is described including a storage device, display device, and a selection device. The device includes a vertical guide rail mounted to the first wall right angle corner point and to a second wall right angle corner point. The sub-networks may be structured via a hierarchically defined criteria priority, which takes into account the communication required in the operation between the individual control devices within the sub-networks and between the sub-networks, as well as the data quantities to be transmitted to the individual control devices. In another implementation, the present invention provides a packet load shedding mechanism that reduces the consumption of system resources during periods of high network traffic volume. More specifically, embodiments of the invention allow a first computer system to support a first URL scheme by encapsulating its transport information into another URL scheme that is natively supported by the first computer. In such instances, the input valves and the diaphragm valves are commonly controlled via high pressure solenoid valves, while the select valves are selectively controlled and the outlet valves are commonly controlled via low pressure solenoid valves.

1459827563-7fa271d0-400f-4254-8732-7c40ed5cdf7a

Supermolecular structures and devices made from same. The device also includes an apparatus mounted to the base to interrupt current through the conductor when a signal from the current sensor indicates a predetermined condition. The apparatus also includes a read control unit configured to select a steering submatrix from the steering matrix based, at least in part, on packet transmission instructions associated with a packet being processed for transmission. High potential is then applied at the fracture point of the formation to effect fracturing and to enable the fluid to transport proppant into the fracture.

1459827564-a7408795-5e5e-44e4-816d-d0fb99390d6d

Method and system for determining a measure of quality for images by using multi-level decomposition are presented. The activity pattern may be obtained through the user's application at the time of registration, or may be obtained by detecting the locations of the user for a predetermined period, such as for one week, using a GPS or PHS. In one embodiment, the motion detecting component detects motion of the electronic device and generates a signal to the controller indicating the motion.

1459827565-bc34c547-166e-4f3f-afa4-85f8218bc6e4

A policy integrity validating unit validates whether a system model can achieve an objective set up in a policy without violating a constraint set up in the policy when a system model is operated according to a procedure set up in the policy. Each of the plurality of stations has a station-aisle interface that provides an interaction area to the main aisle. The fuel filter is shaped so as to extend outward from a region of the fuel pump as seen from the above, and a filter housing for covering at least one of an upper portion and a lower portion of the fuel filter, front and rear portions of the fuel filter, and right and left portions of the fuel filter is provided with the fuel pump unit. Automatic methods of detecting and tracking moving objects that do not rely on a priori knowledge of the objects are also described. Upon receiving the BGP advertisement, the second CE converts the BGP advertisement and transitive IGP attributes into corresponding IGP advertisements. A second decompression unit compresses input data by a second compression method utilizing a statistical coding method.

1459827565-c4f049da-d2c2-4317-897f-0467773b2e66

A method and apparatus for detecting a change in an internal configuration of a platform. The medical device has a layer overlying the exterior surface of the medical device. The inflator has an igniter that directly ignites the main gas generant in the inflator. The thickness of the low-k CMP protective layer can be adjusted to accommodate larger variations in the CMP process without significantly impacting the effective dielectric constant of the structure. The signal generator is designed for the emission of at least two signal beams covering in given relationship to each other an area and the signal receiver is designed for the time-resolved reception of the signal beams in such a manner that the generator-receiver distance can be determined from the time signature of the signal beam reception.

1459827566-8d890a47-4f45-4681-ae91-c02b0c42d49c

An electrolytic sanitizer is disclosed for use in a dishwasher holding a salt solution, the dishwasher having a water rinse cycle. The system includes a secure data entry device connected to the public data network and a gateway device connected to the public data network and to a private data network used for transmitting messages between financial institutions. The transistor MP functions as a path transistor that connects a signal line INL to a signal line OUTL. The rotor has blades that are capable of imparting a varying obstruction to the flow of drilling fluid through the stator passages depending on the circumferential orientation of the rotor, so that rotation of the rotor by a motor generates the encoded pressure pulses. Only one occurrence of any source file in the enumeration of data files will be recorded to the destination optical media, and a data tree of files on the destination optical media includes multiple pointers to the same data file. Each inode of the set of inodes refer to the duplicate file system block.

1459827566-a38724b8-2f1e-40ff-b881-a9fe765d81f6

State of test points on an integrated circuit are encapsulated in a telemetry frame that is wirelessly conveyed to a test system. Then, a conductive polymer layer as a solid electrolyte is formed thereon and thereafter a first metal plating layer is directly formed on the conductive polymer layer, thereby forming a cathode portion. Then, the software is activated, the components ordered to save configuration data

and transaction data in a database, whereupon the components are stopped. The alarm device may be mounted onto a vehicle for preventing the vehicle theft.

1459827567-f746272a-55a1-4b46-8493-48ec25cc0fe8

An electrical contact includes an upper extending portion, a lower extending portion and a bridge portion. Joining of tungsten heavy alloys which are alloys typically made from W<sub>2014</sub>Ni<sub>2014</sub>Fe is used. The modified arthropod may be characterized as having a shortened life-span, a reduced ability to transmit disease, a reduced susceptibility to a pathogen, a reduced fecundity, and/or a reduced ability to feed from a host, when compared to a corresponding wild-type arthropod.

1459827568-3d083d36-6006-4e99-92f1-af316053a61d

An elongated strap member that is coiled in a box and is bent lengthwise as it is drawn out of the box, providing an economical, light, compact means of connecting multiple structural members without sagging or other disadvantageous deformations between the structural members. The microstructure rows are arranged on the light output surface, and the extending direction thereof is parallel to the extending direction of the first side. The expected value is a weighted average of all the measurements for a variable, in which the weight assigned to the measurement from each sensor is determined according to both its reliability and accuracy. A segment of the imaginary straight line is delimited by the first point and the second point.

1459827568-3e94f03c-b5ad-48e7-8561-bb679db2d54b

A modular sprinkler controller is disclosed. The display comprises a plurality of electrophoretic cells filled with charged particles dispersed in a dielectric solvent. Addition of the mobility-modifying phosphoramidite reagents of the present invention to oligonucleobase polymers results in unexpectedly large effects the mobility of those modified oligonucleobase polymers, especially upon capillary electrophoresis in non-sieving media. This rough topography structure may be used to align integrated circuits and wafers. The radix-4 butterfly unit of the invention uses the symmetric relation to reduce an amount of branch computation required for each radix-4 butterfly unit to a half. The queries are modified by grouping terms as phrases, correcting spelling errors, and augmenting the query with category terms that trigger query execution on certain data sources.

1459827568-a4fdd9ef-fa81-4657-8e5e-c35f082659d7

There is provided a surface treated product that moves relatively in a fluid, wherein a surface of the surface treated product has continuous dimples, each dimple having a diameter of 10 to 2500  $\mu\text{m}$  and a depth of 50  $\mu\text{m}$  or less. A gate dielectric 15 is provided on the semiconductor layer 12, and a gate electrode 14 is provided to extend from the top of the gate dielectric 15 to the top of the STI 13. The information handling system also includes a processing system coupled to the memory controller. A respective end cap is arranged on the two end sides of the main body. And, a final scale resolution is created by dividing the spaces bounded between actual horizons and fault planes, and eventual actual part of the outer boundary into one or more horizontally oriented fine layers. The module includes a memory to store management event information and a controller to operate in an active central management controller mode and in a standby central management controller mode.

1459827569-2841de57-e7b4-4471-95f3-05aa160f2d68

The present invention involves a system and method for limiting access to computers by an individual; and a system and method for rewarding an individual with computer access. A pivoting guide has a distal end attached to the entrance and a proximal end attached to a movable portion. One sensor is connected to an anode of the differential signal source, and the other sensor is connected to a cathode of the differential signal source. The abruptness reverses the electric field and voltage

potential gradient along the insulator outer surface, repels charged ions away from the insulator, and thus prevents the formation of a conductive path between the central electrode and the shell.

1459827569-4bb49c9f-0745-4e6f-a703-132f1e7d7730

Methods of calculating pixel values representative of a scene are disclosed herein. At least one N-type electrode is connected to the N-type semiconductor layer, and is exposed to an opening through the active layer and the P-type semiconductor layer. The backing bracket is mounted to a dwelling to maintain the shutters spaced from the dwelling when the shutters are in the closed position. The cutting portion also has a cam member with a cam arcuate surface and a cam bearing surface, located on different sides of a cam pivot axis. Housing-fixed shaped areas determine the ability of the actuating element to pivot by means of the interaction of said shaped areas with shaped surfaces.

1459827569-7041cb5d-0045-4ae9-af75-6196c9aff1b3

A roofing system includes a plurality of insulation boards adapted for overlying a roof deck to form a layer of insulation, and a plurality of cover boards adapted for overlying the layer of insulation. The method comprises the steps of: generating digital image data depending upon an X-ray image corresponding to at least a part of the bone; transmitting a digital image data signal comprising the digital image data; and processing said digital image data signal. As the suspension lift tab slides along the ramp, the resistance of the circuit changes. A conveyor is on the conveyor carriage in a loop around the front conveyor wheel and the rear conveyor wheel.

1459827569-ceedaf51-0948-4284-a57d-72e14276c90a

A method and system are disclosed enabling configuration of a control system for an electrosurgical generator system for creating new surgical applications without changing the underlying software system. The reservoir is approximated by a reservoir model having a plurality of cells. Thereafter, the concatenated or second data packet is transmitted to the second destination address.

1459827570-19b445e8-8c7a-4034-8413-0db09f6f8b8a

An earth boring drill bit comprising a bit body having a longitudinal axis along a path of the bit, a first plurality of cutters mounted to the body, and a second plurality of cutters rotatably mounted to the body, wherein a longitudinal axial relationship between the first plurality of cutters and the second plurality of cutters is adjustable. When more than one outstanding transaction affects the same memory location, dependencies are established to ensure the correct sequencing of the competing transactions. A second memory cell is programmed to a second threshold state by applying an initial bias voltage to the second memory cell which is function of the recorded bias voltage. Each of the pumps is connected to one of the cartridges and can be activated to draw a desired amount of liquid from that cartridge. A second electrode is disposed adjacent the outer sidewall of the first electrode and separated therefrom by the capacitor dielectric.

1459827570-37058c9a-6e5d-4faf-b425-7fdd80ea6c02

A device for decomposing the oxides of nitrogen contained in effluent compositions, such as the exhaust gases generated by automotive combustion engines, is described. A plurality of terminal slots is formed in a front side of the plug body for respectively receiving a plurality of terminals. The collet is formed as a series of individual, arcuate tangs which are joined together by a retaining collar, the collar allowing the segments to be resiliently opened within the fastener so as to allow the crests of the tubing to pass therethrough. The eccentric rotor includes a printed wiring board, a cylindrical bearing for insertion of a shaft, and a weight which are integrated to have a flat disk shape by resin molding. The docking station has greater cooling capacity than the portable computer alone to provide enhanced cooling of the high power mode of operation. A set of precursor-ions that

has substantially similar intensity ratios in both sample portions is determined to be associated with the same polypeptide.

1459827570-a1e642ce-f78b-471a-89cb-ab728f2e6fed

An exemplary embodiment of the invention relates to a method, system, and storage medium for providing a dynamic multi-dimensional commodity modeling process. Any combination of fail safe features may be used with or incorporated into the DDV such as redundant valve members, an upward opening flapper valve or a metering flapper below a sealing valve. The disc brake being susceptible to a thermal expansion and a thermal contraction and as a result the effect of the clamping force applied to bring the first and second friction members into engagement with the rotor may change during a time period that the parking brake application is initiated until it is terminated. When deformed, an elastically deformable element exerts a force on the engagement element.

1459827570-d1b56c13-21e4-4814-9e8b-a57dea4906a5

A combination lock capable of being opened by a key or inhibited the same is disclosed. In one example, a thoracic impedance threshold is modified to an adjusted thoracic impedance threshold. A sliding switch within the housing has a first position that electrically couples the first and third center conductors to one another and a second position that electrically couples the first center conductor to one of the second center conductor and the terminating element.

1459827571-1fc15a26-5572-40bf-ae05-ef7e22d71278

A system and method for encoding dynamic image information for an image generated by a computer application executing on a processor. The motor 1 in accordance with the present invention comprises a motor body A, an output shaft 3 projecting from a front end of the motor body A, and a voltage-supplying terminal 8 provided in the motor body A, the terminal 8 having an elastic force in a direction substantially orthogonal to the output shaft 3 and also having a grounding portion 14 disposed near a rear end of the motor body A. According to this invention, one of ordinary skill in the art can easily machine an actual article in conformity with the actual shop floor in the actual factory to make a metal mold. The argon containing plasma process may form a first layer on the fin structure and STI structure and an ammonia fluoride containing plasma process may form a second layer on the first layer. Accordingly, even in a refrigerator having the ice making apparatus installed on a rear surface of the door, the ice making apparatus can permanently provide an effect of preventing water inside the ice making cells from flowing out of the ice making tray due to an openingclosing operation of the door. The whole system allows for a minimally invasive pump implantation and augmentation of flow.

1459827571-288dcb1f-1c74-44b1-bfc7-776d1aedab3a

Peripheral Component Interconnect Express tunneling over Converged Enhanced Ethernet networks. An apparatus for quantitative assessment of spatial distractor tasks of a subject comprising a display device, an input device, a control device, and a tangible computer readable medium. A response is provided based upon this correlated search engine activity information. The method may further include notifying the particular user of possible undesirable content with respect to the given network information source dependent upon the indication. For example, the LPD can determine the angle of the viewing surface relative to the LPD and then adjust the horizontal and vertical scan mechanisms to return the image to its original configuration, such as rectangular.

1459827571-c67371cc-5d4c-45c1-ba97-835a41de4473

A novel operational amplifier is disclosed which is divided into an input stage, a common mode feedback stage and an output stage. This electromagnetic noise suppressor has high electromagnetic noise suppressing effect in the sub-microwave band, and enables it to reduce the space requirement and weight. If one or more are no longer available, the backup server re-uses a root tag vector entry

corresponding to one of the no longer available root hashes. Each network device includes a routing protocol having a version and a type. Active control surfaces, turbo-fans, propellers provide precision control of the apparatus.

1459827572-219ef247-4b60-4afd-ae14-bfe00cc3c058

Apparatus, and an associated method, for acting upon data signals received at a base station of a fixed wireless access communication system. Systems and methods for determining erythrocyte membrane fragility include devices for measuring the concentration of at least one cell-free hemoglobin derivative, and using the absorption properties of cellular and cell-free hemoglobin derivatives in the Soret region. The implement includes, for example, a substrate, a cover and a spacer between the substrate and the cover. In one embodiment, two sheets of piezoelectric material are connected electrically in parallel.

1459827572-51bd037f-9725-45fd-811f-32ad8b0de889

A method of distributing research data from a common database to a user of the common database is provided. The anvil surface includes a plurality of angled grooves having a variable groove width. The front forked portion of the valve-core engaging member includes a recess formed therein for accommodating a plunger of a Schrader-type valve therein to allow the forked portion to be positioned over the plunger in the valve to provide for engagement of the cooperating forked portion of the valve core. computes and transmits to the unit R a plurality of sender's quantities; and3. The circuit receives at least one electrical audio signal. The system incorporates a grinderdehydration system, waste transport, a holding container, fuel air regulator, and a novel combustion heat regulator in combination.

1459827572-c96d9291-8cc5-47e9-b5e1-0f1e67830288

A one-size-fits-all uni-hearing aid is described which is adapted to fit into either ear of an ear canal of a user to a depth proximal to the tympanic membrane. In one embodiment, the rapidly deployable mobile fogging system comprises an emergency response vehicle. In response to the storage-modifying memory access request, the cache memory performs a storage-modifying access to all granules of the target cache line of data if the partial cache line hint is not present and performs a storage-modifying access to less than all granules of the target cache line of data if the partial cache line hint is present. The front-end component conditionally calls the Wait and Signal functions depending on whether the lock is currently contested when a new process wishes to acquire the lock, and on whether any process is currently suspended, waiting to acquire the lock.

1459827572-e7f5338e-84e6-4911-8f19-b99e199e93aa

A high speed transmit driver is provided, along with methods to improve driver slew rate, decrease transmit jitter, improve termination accuracy, and decrease sensitivity to supply noise. This problem has been overcome by using IrMn for the pinning layer at a thickness of about 20 Angstroms or less. This fluid layer may be maintained by immersing the component in liquid or by using a captive couplant column between the probe and the component surface. Thus, the impurity concentration estimation means accurately estimates the impurity concentration in the hydrogen system of the fuel cell. The width from the position where the first element isolating region contacts the first gate insulating film to the top surface end of the first element isolating region is equal to the width from the position where the second element isolating region contacts the second gate insulating film to the top surface end of the second element isolating region.

1459827572-f148cdbb-fe87-46c6-8625-8fcf2d9d1ffc

A system for composing an audio-visual presentation over a communications network includes a composer system having a computer processor and associated memory and a telephone device, the composer system having a presentation containing at least one visual slide stored in the memory, and a host system including a computer processor

and associated memory. The first conveyor system includes a ribbon that forms a closed loop along at least a portion of the semiconductor device manufacturing facility. The payload calculation system may further have a processing device configured to calculate a mass of a payload moved by the work implement. After then, the device is operated in the calibrated states. The system provides for more simplified maintenance of vehicles where moving the entire vehicle to a service location might be impractical. A choke point is provided on inlet-side armature surface, and is formed by an annular, stepped prominence on inlet-side armature surface.

1459827573-146acd6b-1b61-44f7-ad41-713e6c6293f4

A method for the production of a biodegradable foamed product 7 from a base material and a blowing agent 1. The device transmits laser light generated from a laser light source toward an optical pattern rotary plate to receive its reflection light by an optical receiver. The motor control compartment further comprises a light assembly attached thereto. The write test is used to indicate an abnormal condition of a head. A catch is attached to the second plate adjacent to the second end.

1459827573-5ad7bd1c-a07c-4e82-9f7c-2559dc51d07e

Easy to attach and detach blades for overhead ceiling fans. The receiver system includes a plurality of antennas and a signal processing circuit. The image-forming equipment may include a photoconductor, one or more chargers, an exposure machine, a toning station, a fusing station, related equipment, and accessories. A controller evaluates the status signals and triggers warning signals when the status signals indicate that the bearings are in danger of being damaged by continued operation. The detection of the component video signal is made automatic by means of the microcontroller, the synchronization signal detector and the color decoder. The nozzles also include a plurality of heaters, wherein at least one heater is embedded into each nozzle body.

1459827574-51456a59-a11a-4f09-b699-1d5fc0392fe1

This invention presents a method to extract atomic parts of a graphics model using its skeleton. which has high electron and positive hole mobility and low leak electric current qualities. When executed by a computing device, the application is capable of communicating using a first protocol. The plurality of document tokens correspond to a plurality of documents which have been tokenized according to the one or more rule parsers. The outputs of the main signal path and the auxiliary signal path are inputs to a complex least mean squares filter to attenuate the IM3 products in the resulting signal. The tiled head-mounted display device can be readily applicable to augmented environments applications by simply adding an auxiliary free-form lens behind the prism with free-form surfaces.

1459827574-652ffa6d-6dde-4e29-9297-c910517f2dea

An activated carbon composition is disclosed, which includes an activated carbon and a carboxylic acid containing compound. One such system utilizes one or more electrodes to measure an additional analyte. The regulating threaded rod is extended through the middle column, for adjusting the distance between the first clamp block and the second clamp block. The BIST circuit also includes a BIST controller for coordinating BIST testing of the CAM core. The separated components having predominantly lean beef can be removed from the liquid as a reduced fat ground beef product.

1459827574-bdc228b5-23fa-4ece-9267-482d307da166

A beverage canister top that facilitates high flow rate includes a canister base, a lateral wall, and a canister top. The device may be manufactured independently as an accessory item, or it may be included in the snowboard at the point of manufacture. The duty cycle factor module is configured to determine a duty cycle factor of an internal combustion engine where the duty cycle factor represents

predicted driving conditions of a vehicle in which the internal combustion engine is housed. Using the planar grating, constantly changing glittering effects are formed at illuminating portions of the decorative object for enhancing aesthetic values. A threaded opening is located on the rear surface of the replaceable striking plate and receives a fastener to retain the replaceable striking plate on the front portion of the main body and within the recessed region and relief region. It involves the calculation of an interpolated Fast Fourier Transform spectrum of correlated signals in which the frequency lines corresponding to half-integer values of the frequency resolution defined by the FFT are obtained by a combination of both amplitude and phase values of the FFT spectrum.

1459827575-3d366553-38b4-43dd-aba6-f360beed0a8e

A connector for preventing a load from being applied to terminals, substrates, etc. These techniques may include analyzing a corpus of text to locate a first set of phrases that differ from a received source phrase by one word. One or more feeder modules deployed within the controller collect energy supply data from an energy source or feeder on the energy distribution system.

1459827575-afc2eb8a-8e68-4b33-952f-f72875f53515

A plurality of microwave introduction windows are placed at the top wall of the reaction chamber. The HSDP component dissolves asphaltene precipitates and maintains suspension of inorganic particulates before coking affects heat exchange surfaces. Six control elements may be operably coupled to each of the planetary gear sets and selectively engagable to create a set of different gear ratios between the input member and the output member. The check valve protection device preferably has an interior volume that fills quickly by relatively few cycles of the lubricant pump to reduce delay of lubricant to the injection point. In the retracted position, the both ends are located within the reservoir. The reactants are reacted in a reaction chamber located in the flow of water and the chlorine dioxide is passed from the reaction chamber directly into the flowing water.

1459827575-c4626edc-2cbe-4750-8807-1621215770df

A method and device for activating a starter, which is controllable by a driver unit, for an internal combustion engine of a motor vehicle. The signals are not read out at all, or even if the signals are read out, they are not processed as valid signals. First a layer of magnesium is deposited by DC sputtering and converted to magnesium oxide through radical oxidation. The air channel opens with an air channel window into the cylinder.

1459827576-2324227e-82eb-46e8-91ed-831ddddd22037

A system for monitoring a vehicle's contribution to the efficiency of flow and throughput in traffic includes: a computation unit that determines the fluctuation in velocity of the vehicle over a time or a distance; and a notification unit that provides a notification related to the determined fluctuation in velocity of the vehicle. The ram assembly includes a ram block for engagement with the tubular, a ram shaft for selectively extending and retracting the ram block, and a ram connector for operatively connecting the ram shaft to the ram block. The apparatus can also include an effector configured to transfer the loading force from the loader member to the work piece and is configured further to apply a cleaning force to a path that the work piece traverses to the milling region. In yet another embodiment, a first set of the coil springs has a barrel-shaped outer profile while a second set of the coil springs has an hourglass-shaped outer profile.

1459827576-2ae189cf-58fa-43c0-9915-8a5982d3e26b

A purge valve includes an aperture, a member, and an actuator. The invalid and undesirable conditions can include, for example, call looping, misrouting, mass calling, and excessive redialing. The power controller has an input and an output, wherein the input is electrically connected to an airfield power infrastructure and the output is electrically connected to a light module.

1459827576-5f4fe05a-bc0d-4f79-a673-b60d3bd729f9

An apparatus and method for lining ditches is provided. The up-conversion phosphor comprises an ordered oxyfluoride compound having a formula:

$A_3\text{U}_{22123a2}\text{RaM}_{04}\text{U}_{2212}\text{U}_{03b41}\text{U}_{2212w}\text{U}_{2032F1}\text{U}_{2212}\text{U}_{03b42}\text{U}_{2212w}\text{U}_{2033Nw}$ . The management center receives performance information of the remote location with respect to operational parameters of components of a refrigeration system of the remote location, and temperature data, at which food product has been stored. In one embodiment, the rows 6 run essentially crosswise to the longitudinal axis 7 of the brake lining carrier plate 1.

1459827576-78024f53-5db4-475e-9359-2593a6700924

An organic light emitting display including: a pixel unit to display an image, according to a data signal and a scan signal; a data driver to supply the data signal, according to a video signal; and a scan driver to supply the scan signal. The protruding portion may protrude from an upper portion of a sheet receiving surface of the movable member when the movable member is located in one position. The embodiment also includes a plurality of second communication devices with each second communication device configured to provide communications to user devices located on a different floors. Thereafter, the worker can disengage the securing mechanism to allow movement of the chalk line guide post and plate to a desired position in the slot corresponding to a desired angular orientation of the layout line. Based on a result of lookup operations on the set of associative memories entries using the generated one or more lookup words, the received packet can be identified as whether it matches or does not match the instance of the flow type.

1459827576-d1fe389f-2108-4dae-b4bf-d05e1cd27457

A data output drive transistor is rendered conductive when the potential of an internal node attains an H level, whereby an output node is discharged to the level of ground potential. In order to reduce as much as possible the displacement of the top mass, an additional counterweight can be moved by the motor over at least a large part of the path of displacement of the working mass in the opposite direction thereto. Each of the rotor shafts is positioned in a housing with each housing attached at a lower end to a distal end of a beam with beams attached at a proximal end on the right side and on the left side adjacent to the nose end of the fuselage, and on the right side and on the left side adjacent to the tail end of the fuselage. A molten resin is injected into a cavity for curing, with the upper and lower molds closed together, and with the lead frame positioned loosely without being tightly clamped between the upper and lower molds.

1459827577-03e094a6-39d5-4544-a11a-262f3c45159b

The present invention provides for fitting a multimodal hearing system to a recipient. In certain exemplary embodiments, the spinal plating systems can be configured to allow a surgeon to select a bone screw construct having a particular range of motion for attaching a spinal plate to bone as needed based on the intended use. The system enables business rules to be separated from application logic, thus allowing businesses to easily change rules and adapt and respond to competition without requiring code changes. A first protruded active region is provided in a manner to protrude from an end portion of the first active region. Other embodiments may be described and claimed. Accordingly, the time taken in programming can be reduced without increasing a unit of program in a multilevel flash memory, thereby improving performance in a multilevel program of a nonvolatile semiconductor memory device.

1459827577-29ecb057-4815-437f-b223-13d2dd5f275f

Secret information, such as seeds, codes, and keys, can be automatically renegotiated between at least one sender and at least one recipient. A communication link, coupled to the electronic device, is configured for transferring at least one onboard application program from the electronic device to

the second electronic device. The regulating means includes means for circulating a heating fluid through the platens, means for detecting the temperature of the heating fluids as it exits the platens; and means for responding to the detected temperature for heating the fluid supplied to the platens. A message is received from a distributed service from among the one or more distributed services. This is advantageous when a therapeutic agent would have widespread unwanted effects which could be avoided by confining the delivery to the malfunctioning or damaged brain tissue.

1459827577-667c3c27-258f-46ca-987c-07758a6e8f66

This invention includes an adaptor that facilitates reconditioning and charging of non-smart batteries in smart chargers. A first job is printed on the print media and a downstream finishing device in a first configuration acts on the media. The guide is provided with a coating having a hydrogen radical recombination constant of less than 0.

1459827577-9f816408-b4d1-4338-924b-4f16f73b53d1

The present invention provides a gaming device having an offeracceptance type bonus game. A mode setting device selects a mode between the first mode in which the printing device forms the image on the recording medium and the second mode in which the printing device forms the image on the intermediate transfer medium. First and second mounting flanges on the adapter overlay a portion of the channel, to cooperate with mounting flanges on a rearward end of the syringe, so that the syringe mounting flanges may be inserted between the adapter mounting flanges, and then rotated in the channel behind the adapter mounting flanges, to thereby lock the syringe to the adapter. Coefficients of the compensation filter and the gain compensation circuit are compensated on the basis of a head position trajectory obtained by actual seek operation. The invention also provides pharmaceutical compositions comprising such compounds, and methods of using the compounds for treating diseases or conditions associated with uncontrolled or inappropriate stimulation of CRTH2 function.

1459827577-c9a87111-1bc7-4625-b64c-168d2e489e60

Shape dummy cells that are designed to have the same dimensions and structures as MTJ memory cells are additionally provided in the peripheral portion of an MTJ memory cell array in which normal MTJ memory cells for storing data are arranged in a matrix. The wafer processing apparatus includes a transfer chamber which can be exhausted and has a plurality of gate valves, a plurality of vacuum processing chambers each of which can be connected to the transfer chamber via one of the gate valves, and a load lock chamber which can be exhausted and is connectable to a first gas feed line for feeding an oxygen-based gas into the load lock chamber. Define for one product-related entity a set of product-related entities referencing the one product-related entity and each other via a nested structure.

1459827577-ef73375a-385d-4c1a-a0a8-d71a1f3b63e3

An elevator installation, and a method of operating such an elevator installation, has at least one car and at least one equipment for detecting a car position wherein the equipment includes a code mark pattern and a sensor device. Also provided are a method to form an electrode that is capable of easily manufacturing such an electrode, a highly reliable thin-film transistor, an electronic circuit using this thin-film transistor, an organic electroluminescent element, a display, and electronic equipment. Upon a successful strike of the target, a ball is released down a helical track toward a rotating playing field interspersed with holes assigned various values.

1459827578-06222f81-059f-4243-a65a-e02aa6add47f

The overrunning bi-directional clutch assembly has two coaxial slipper rings and use one actuator to simultaneously uncouple the slipper rings and lock the clutch. Use of these esters also produces formulations with increased stability to ultra-

violet light, improved low temperature properties, lower viscosity and improved processability as well as reduced smoke on burning. One of the mobile station identifiers is identified as corresponding to the mobile station. As a result, it is possible to prevent a stopper from being damaged and to improve the reliability of the sensor.

1459827578-082d2e56-de5f-45ba-83d1-545816cd4cd2

A dental hygiene device for wearing in the mouth over the teeth and along gums has a flexible open-support structure and a fabric covering overlying the support structure. The measuring tube is held to oscillation in the transducer housing and vibrator, at least at times. The elongated lands have side walls between top and bottom surfaces of the cavity plate to form elongated cavities. Positive impact squares, negative impact squares and indifferent impact squares are assigned to the game playfield though the software platform based upon manufacturer and casino specified odds for each \u201cCoin-In\u201d credit level and value of game play. The load impedance is a complex impedance exceeding an impedance generated during power matching in the saturated power amplification apparatus.

1459827578-73fed3a6-0aeb-4adb-83cb-524a0cba2230

Improved methods are provided for the application of downhole oil or gas well treating agents, such as liquid corrosion inhibition agents. The first face is substantially smaller than the second face and the third face. A decoder may determine whether the PCI byte enables are combinable, contiguous, and/or active, and, using state machines, transfer a quantity of the PCI data and associated byte enables from the first queue to a second larger queue. In order to allow a MS to receive a PTM-M in an IDLE state, a unique protocol identifier is permanently assigned to PTM-M transmissions whilst other identifiers are dynamically assigned to other PDPs by the network. The invention also relates to the process for manufacturing the plate and to the device that includes said plate.

1459827578-82c6c3c3-5a70-4c34-84e8-bf11a2a4374f

The present invention includes a method of fabricating a non-volatile memory device having two transistors for two-bit operations to improve electron trapping efficiency and integration degree of the non-volatile memory device, and a method of driving the non-volatile memory device. In the method, discontinuities along a loop are identified sequentially by comparing the measured waveform to waveforms generated on the basis of a hypothesized topology. The compounds of this invention represent a potential new class of anti-tumor or anti-metastasis agents, one that has shown promising activity against solid tumors. The circuit board also comprising a strip of conductive material on the first surface, the strip of conductive material forming a perimeter around the first region of the circuit board, the strip of conductive material coupled to the ground plane, the strip of conductive material defining at least one gap wherein the trace is oriented through the at least one gap. Block statistics associated with each mode pair are accumulated by separately encoding each block using each mode pair, and selecting the best mode pair for each block according to a measured characteristic of each encoding.

1459827579-12f21f51-6be5-4979-a71f-73ea0a1397f7

The invention provides a process for the preparation of 6,6-dimethylhept-1-en-4-yn-3-ol comprising of reacting t-butylacetylene with a proton-extracting agent selected from the group consisting of an organometallic compound and metallic lithium to form a t-butylacetylide, reacting the acetylide with acrolein at temperatures between 40 C. The first set of passageways and second set of passageways being separate and permitting the warm water laden air stream to be cooled by the stream of ambient air so that water can condense out of the warm water laden air stream. The method further includes calculation of the logical relationships for the sub-systems implementing the second diagnostic method, and the transfer of the logical relationships to the sub-systems implementing the

second method and the transfer of the model to the sub-systems implementing the first method. The string object may simply be a hash key in a hash table for the server application, which stores the complex object.

1459827579-709026e1-ff9c-4e3a-bfc7-d1b1b3d8908a

Semiconductor devices, methods of manufacturing thereof, and methods of arranging circuit components of an integrated circuit are disclosed. The invention also relates to methods for producing these inhibitors. The present disclosure also provides processes for preparing compounds of Formula as provided herein, including N--5--2--3--2-oxopyrrolidin-1-yl)cyclohexyl)acetamide. The DVD subpicture bitstream is used to carry and display data channel information such as stock quotes, electronic program guide information, advertisement information, and the like as well as provide interactive menuing functions.

1459827579-cc65f6ad-3578-4601-804c-a37e14917537

A fuelair separation apparatus for separating air and/or vapor from a liquid fuel. The waterproof admixture composition can protect reinforcing steel bars against oxidation in the presence of salt, thereby ensuring excellent anti-corrosive performance and thus greatly improving the durability of reinforced concrete even in salt-damaged areas and corrosive environments and the like by inhibiting the corrosion of the reinforced concrete. Additional aspects of the invention include c-di-AMP activity modulatory compositions, e. The handle has a bend and may be rotated 180 with respect to the base member to achieve different effective handle angles.

1459827579-d62e09a5-262e-4038-91ae-a9f9ad00babf

Structures with improved solder bump connections and methods of fabricating such structures are provided herein. The resulting coated particles have highly uniform, adherent coatings that allow easier production of good quality quantum tunneling varistor devices. Other methods, systems, and apparatuses also are disclosed. 8 to 25 micron from an infrared light.

1459827580-44332afa-828f-4237-9605-cafaad92866a

A system and method for a compressor may include an inverter drive connected to the compressor that receives electric power and modulates a speed of the compressor by modulating a frequency of the electric power. The invention also provides an agent for remarkably enhancing the above-described effect for promoting the proliferation of hematopoietic stem cells and hematopoietic precursor cells, comprising the MK family in combination with known hematopoietic factors such as IL-3, IL-6, G-CSF, GM-CSF, M-CSF, SCF, and EPO. The device also includes a swimmer connection mechanism removably attached to the fuselage by a locking mechanism whereby the swimmer connection mechanism connects a swimmer to the device, and a control mechanism attached to the fuselage and the propulsor. The message hygiene stamps allow the filters to determine whether the email message has already been processed by the filter within the email infrastructure. The first computing device generates a first key component based on the first random value.

1459827580-50bdf2e6-d3ac-4c2b-9542-26bb3d07afb5

A Roman shade includes an upper rail, a Roman shade assembly attached to a lower side of the upper rail that is pendent and foldable, and a rolling shade retractable in the upper rail and retained at the backside of the Roman shade assembly. The method of this embodiment may also include generating striking voltage and steady-state voltage for at least two lamp loads. The sensor element senses at least one physical property of a medium to be measured.

1459827580-816dd6c4-de34-4cd1-a417-167b6c8f4236

A method to facilitate a network-based commerce transaction commences with the recording of a transaction agreement between a buyer and a seller. The power supply device supplies to the electrode chips a preset welding current until the

spattering is detected. 5 weight percent to 10 weight percent of a functionalized rubbery polymer, and from 0. A user, such as a system administrator, interacts with the control nodes to logically define the hierarchical organization of distributed computing system.

1459827580-a3c8ab61-d91e-4b2b-8036-012c18b2c8f3

A fixed station and an on-board apparatus are constructed to carry out a short range communication. The dispenser is pistol-shaped, formed of a generally cylindrical body and a downwardly extending handle with a trigger. In a state where the long bodies form the shoulder sections for clothing.

1459827580-b89cfd39-ebff-403a-b8bb-d935b6d972da

A toothbrush and toothpaste combination assembly includes a housing that has a top wall, a bottom wall and a perimeter wall attached to and extending therebetween. The frequency-variable oscillator includes: a voltage-to-current converter circuit for converting a voltage level of an input signal into a current level within a predetermined range; and an oscillator circuit for varying a frequency according to the current level from the voltage-to-current converter circuit and oscillating the varied frequency. The matching names are propagated to at least some higher-level cells in the hierarchical design, in place of the original names. 49%, by weight, of the combined weight of the plant sterol and the soy protein material and/or the isoflavone.

1459827580-f592b772-c6ca-497e-bc23-a43d0e3e088f

A liquid crystal display device having two pieces of liquid crystal display panels commonly using a source driver is provided which is capable of displaying a different image in each of the two pieces of liquid crystal display panels. An adjustable hanger rod assembly includes a rod with oppositely oriented external threads at opposite ends thereof. The transaction sticker includes a first account identifier linking the transaction sticker to an account or record configured to track a value available for use toward a purchase of goods and services.

1459827581-80722ab1-34ba-480e-956c-c90c677c0b22

The present invention provides a reagent for analysis of immature leukocytes comprising: a surfactant which can damage cell membranes of erythrocytes and mature leukocytes, a solubilizing agent which can shrink the damaged blood cells and a dye for staining nucleic acid, wherein the reagent has an osmotic pressure of not lower than 10 mOsm/kg and lower than 150 mOsm/kg. Some or all of the switching blocks produce more than two block output words in response to each block input word. Billets are disclosed that notch the billet leather to receive a connecting strip to connect the billet leather to the tree webbing, thereby reducing the thickness of the billets. When a read or write operation is performed for the banks located farthest from the data pads, the repeater on the GIO line buffers the GIO signal, and thereby reduces the load of the GIO line, decreases the delay of the GIO signal, and improves the slope of the GIO signal.

1459827581-8356e23d-d755-44e3-a8d7-2ee709e49c80

Various systems and methods are provided for monitoring patient physiological data without the need for adhesives or wires to be connected to a patient. The computer worm detection system then determines whether the anomalous behavior is caused by the computer worm and can determine an identifier for detecting the computer worm based on the anomalous behavior. A vessel which forms a space around the structure is filled with inert gas to cause inert gas to enter the gas purge space, purging the gas purge space with inert gas. 0.2 to 2 parts by weight of a peroxide; and 0.

1459827581-adfffd6a0-5842-4efd-8557-70c7e1725644

Methods and systems for x-ray detector and x-ray source arrangement in cone beam computed tomography systems are provided. The possibility is decreased by controlling a power source so that a voltage drop of a Zener diode maintains a

Zener breakdown voltage. Preferably, the repeater autodetects and/or autoconfigures some or all aspects of repeater operations, such as detecting and/or configuring in response to appropriate or approved cable-type connections. The chassis is configured to provide the proper configuration for alignment of either an original or replacement set of operating components mounted on the chassis if the chassis and set of operating components are mounted within the interior volume of the housing. In some implementations, each of these solutions may have a corresponding recommendation score relating to the expected efficacy of the solution to solve the challenge. Furthermore, each drain passage connects the track directly to the exterior environment to avoid the possibility of one drain passage becoming blocked and urging water back into another track.

1459827581-d3d7c0d2-2bc5-460f-8903-9628ec7fd4c9

A computer method and system of caching. The method uses solution-based components that are mixed and dispensed into regions on a substrate for drying and/or heat-treating. A control unit of the patient-monitoring system includes signal analysis functionality that is configured to determine that an alert event has occurred, in response to the first sensor signal. According to one embodiment, at least one sublithographic gap is a slit or line that traverses the width of the gate conductor structure.

1459827582-11e6b512-64db-4457-b1ab-42351141ead0

The collect cellular call identifies the cellular telephone carrier and called party cell phone. The assembly comprises a truck bed floor portion and a cargo bed door portion. A saddle is slidably mounted on the shaft between and pivotally connected to the handles. A CPU controls the locking mechanism to inhibit the disk unit and the main body from being locked together while the removable hard disk is in operation.

1459827582-30cea3ba-6476-4866-a7d8-c9c5d69d6756

A semiconductor memory includes a core array including a plurality of memory cells, and a redundant array to be substituted for a substitution object area having a defective cell in the core array. In one aspect, the invention includes a brick tie that interfaces the masonry veneer and interlocks with an anchor plate mounted on a structure. The method and system use crowd-sourcing to build and refine the wireless AP fingerprints. The invented cartridge need not seal to the pressure vessel, because the cartridge neck protrudes outside of the pressure vessel to seal directly to a filter head.

1459827582-b6634b71-d1d3-472e-9df6-b9810c1b7969

A method and a device for compressing a gas-phase medium, particularly hydrogen or natural gas, in a single-stage or multistage process using at least one piston compressor, wherein the medium may have a water content up to total saturation with water. A query for a set of Matching XML documents is received. Based on the information received from the other nodes, each node determines whether it is the leader. The invention also provides compositions comprising vesicles that, during culture of bacteria of the invention, are released into the culture medium. Any of several hierarchies of the connections in a storage enterprise may utilize such wireless connections.

1459827582-ddaf4c81-4645-487e-bed1-e20f603aace8

A connector for differential transmission is disclosed. The catalyst has a high performance when used for the production of compounds by various reactions. A user operates a remote control for sending a sending to the drive motors to regulate the speed and direction of rotation of the spinner independently from the tire rotation. The stoichiometric condition is maintained by controlling the amount of fed oxygen to the amount of fed fuel.

1459827583-0f30b73d-c91f-401c-94ac-ab79076deb65

A method, system and computer program product for controlling information gathered by data collection agencies in an electronic transaction. A voice code conversion apparatus demultiplexes a plurality of code components, which are necessary to reconstruct a voice signal, from voice code in a first voice encoding scheme, dequantizes the codes of each of the components and converts the dequantized values of code components other than an algebraic code component to code components of a voice code in a second voice encoding scheme. The featured content items stored in the database may include any type of data, such as text data, hyperlink text data, markup document data, computer code, or other types or combinations of data related to a particular topic. Adjustment indicators and status indication elements disposed in or on portions of the housing are configured to enhance readability and recognition, which facilitates safe and efficient operation of the device. The photographs are cataloged in the server according to the identifying data and can be subsequently ordered using the server which is typically an Internet web-site.

1459827583-68570c5d-63ed-4965-a6a0-933f13e0fe9e

An axial bearing unit made up of a cage and races is in which the collar located at the outer peripheral edge of the race is extended by a first flange and a protruding rib is formed in an area made up of the collar and the flange. The fiber-optic sensor device is capable of sensing a change in physical quantity by using two fiber Bragg grating units arranged within an optical fiber and a fiber-optic sensor unit arranged therebetween, thereby implementing a low cost fiber-optic grating sensor having a simple structure without requiring a reference FBG. The outer sleeve has a distal anchor engaging end, a proximal end, and a central passage extending from the distal end to the proximal end. Connecting a filter network with an inductor and a capacitor to the output of the comparator and deriving the feedback signal from the filter network, results in an output of the comparator which is a DC output with a superimposed ripple. The methodology includes calibration of a known pattern to the area array image sensor, equations to map the physical points to the image sensor, algorithms to determine a best estimate of the coordinates of occluded points, and techniques to merge the computed coordinates from different sections of the object. These characteristics include the spectral emission characteristics of the plasma, the spectral absorption characteristics of the plasma, the physical dimensions of the plasma, the angular distribution of the light emitted from the plasma on the coating and the geometry of the coated surface.

1459827583-e81042f6-1650-4f1e-b5e8-81fe3673dd07

A method and system for real-time monitoring voice mail during an active call includes generating a duplicate of a calling party voice stream being recorded by voice mail for a called party on a call with a previously connected party. The ceramic mold provides an insulation layer between the molten metal and the steel die, and prevents welding between the molten metal and the die. One or more errors are selectively introduced during synthesis of a polymer in response to the signal. The display shows the value of the voltage or current supplied by the power-supplying device.

1459827584-7b75260d-e8ce-48bc-8c75-3d809ed64e1b

Described are devices, methods, and kits for non-invasively measuring glucose. An integrated circuit device can include a first raised sourcedrain structure having a first height above a substrate in a first region of the integrated circuit including devices formed at a first density. The first wireless communication module receives a video signal through a first wireless communication system.

1459827584-9bb15b93-b4ad-4900-98ca-a197d5e3c389

A method for manufacturing a hot-rolled sheet attains grain refinement of the steel sheet whose grain size is extremely fine. The terminal device has a network connectivity subsystem enabled for data connectivity with a wireless communications network. The compositions are formed by solution or melt blending of the components

and may be formed into shaped articles.

1459827584-bc0f5d32-2e2a-46a1-b952-08838fbd9e91

A system and method for switching between input clock signals from different clock sources without losing lock by providing a supplemental correction signal to the loop filter in a phase locked loop circuit. The barrel is covered at one end thereof with a transparent board. An example assembly includes a sensor and a tire pressure controller that causes a decrease in a pressure within at least one tire of a vehicle in response to a first condition detected by the sensor.

1459827584-f9b35ae7-52fb-450c-ab43-78b2df10f64c

A thin film semiconductor device such as a photovoltaic device is fabricated on a lightweight substrate material which is affixed to a layer of material which is in turn supported by a carrier. A carrier for refrigerated goods is held on each telescopic extension by an adapter that bridges the space between the carrier for refrigerated goods and the telescopic extension, the width of the space being at least equal to the width of the telescopic extension. The system is a part of a fuel cell power plant. Thereafter, the memory information written into the memory cell thereof is made unrepogrammable to thereby disable rewriting of the post-shipment memory information. Another wind instrument, includes: a hollow tube having an open lower or distal end; a mouth hole formed in an upper or proximal portion the tube; a first finger support attached to and extending away from the tube; and a second finger support attached to and extending away from the tube. The method determines, when comparing a selected line segment or concave vertex i with another line segment j, any significant parameter value associated with a point on selected line segment, where the locus at that parameter value describes the skeleton.

1459827585-6032015a-0768-4e2c-a170-4b453c917df0

An integrated circuit is provided with a power supply terminal and an external circuit connecting terminal which is DC insulated from an internal high-frequency circuit and is connected to an external circuit. Several such applications are detailed. In addition, the elastic body has a bulk modulus lower than a bulk modulus of the mold body. The R-string sub-circuit is coupled to the switched capacitor circuit and the pair of differential input ends of the operational amplifying circuit. The supersonic external-compression inlet also includes a subsonic diffuser section arranged to receive flow from the supersonic compression section and to diffuse the flow to a subsonic condition.

1459827585-9a011173-b77d-4eed-8b50-701da4fc1baa

A oral care brush device is described for use primarily for massaging and stimulation of sensitive gums and teeth. A mating surface of the flex-circuit has a signal conductor portion surrounded by a shield conductor portion. The receiver unit receives a signal and identifies a transmitter station by its signature. A user can selectively switch, through operation of an operating section, between the issuing of the image writing reference position signal based on the circumference of the image carrier and the issuing of the image writing reference position signal based on the detected reference position.

1459827585-f8c7914c-74fa-4523-a35a-196c7559f653

There are provided an engine disposed between right and left front side frames provided in an engine room, a radiator disposed obliquely such that its upper end is located forward in a disposition space in front of the engine, an air cleaner disposed above the radiator, and an electronic control device disposed in a space above the radiator and below the air cleaner. The imputing system includes an inventory database, a data engine, a search engine, and a loop engine. In its simplest sense, a quantitative assessment profile of visual motion discrimination by psychophysical responses is generated on a tangible computer readable medium. If one of the control processors fails, the other control processor uses the same

bandwidth on the same facility to continue forwarding packets for a network connection. Standby times are significantly increased, resulting in longer periods of operation before battery charging is required, while keeping minimal the probabilities of missing incoming data packets when the interface is turned off. The length of the floating gates and the thicknesses of the control gate lines can be made less than the minimum resolution element of the process by forming an etch mask of spacers.

1459827585-fb3a1a1d-e675-45d3-b8f7-3dee78992a75

A document migration system that controls release, from a source enterprise content management system, of batches of documents and metadata and loading, to a target enterprise content management system, of batches of documents and metadata that have been released from the source enterprise content management system. Fabricated in the form of an integrated circuit, each such motor driver circuit has a parasitic transistor unavoidably created between two neighboring transistors. The additional opening acts as an exit or entrance for the fluid. The first and second portions are formed of a unitary construction and form an L-shaped configuration. Moreover, in the present invention, a biometric technique can be integrated with a cryptography technique. In addition, an optical code reader may also include an optical device to rotate an image as it is projected upon a stationary tilted image sensor array.

1459827586-38fb8150-db92-4828-aaa1-e51da7629a3a

The present invention relates generally to cutting blades for shredders. First stage rotor blades in the low pressure turbine are oriented oppositely to the rotor blades in the high pressure turbine for counterrotation. The diagnostic module reports a coking value to a user based upon an amount of compensation performed by the throttle control module. A first connecting branch with a first diode connects the first potential point and the potential point between the energy storage devices.

1459827586-832c9f23-90a0-4065-9942-6983d4997d83

The present invention provides in some embodiments, a portable device for massaging and treating a person's muscles. A pivot assembly is provided between the mirror head and the mounting bracket. Further still, a band storage including a motor driven control drive arranged to change the length of a variable length storage path for the at least one fiber band, wherein the band storage is arranged between the creel and the at least one feeder roll. Responsive to a determination that the IPC object is not an IPC shared memory object, a kernel handle that a process wants to be used for a new IPC object is registered. A retaining plate abuts a retaining ring, within the bushing, and a fastener through the retaining plate draws the hub and shaft tightly together during assembly. Located between the red and blue device structures is the green device structure.

1459827587-1b4cf7f1-6088-47d8-966d-a2a0d29a888f

A testing environment and a method for telephone number identification and/or verification. The distal end of the outlet tube is in flow communication with the desired component. The header is indicative of a tunnel that is used to support traffic from the first network to a second network over the backbone. The retaining plate 9 is thus freed allowing the foot-retaining part 1 to separate from the suspension part 2. The warning unit generates the warning notifying the user that the vehicle is in a situation inappropriate for the user to leave the vehicle when the door opens under a situation in which the charged device has been determined from the detection of the first switch as being set at the charge location. A groove for an optical path, through which the received light passes to be guided to said light receiving element and a first protective groove formed around said groove for an optical path to block said adhesive resin from intruding into said groove for an optical path are formed on said semiconductor substrate.

1459827587-3ec30fc0-cf86-47b1-9ba9-d64fc1ce73b0

The environment and growth of vegetation within a soil embedded culvert system is improved by directing artificial or natural light onto the vegetation within the enclosed passage defined by the culvert system. Certain novel coated substrates, such as diatomite porous substrates are disclosed. The evaluated system is the system from which the mobile station must retrieve parameters. This transfer belt can transport an attached wet paper web, and release the web smoothly to a next stage in the papermaking process, over a long period of use. The method includes receiving a data packet, calculating a time stamp difference value, determining whether a maximum token bucket value has been exceeded by the time stamp difference value and determining whether there are enough tokens to transmit the packet. Precise machining of a small corner interface of the base plate where a stator is typically seated and aligned with the base plate is made unnecessary.

1459827587-61b0db21-aa2a-4b3b-bf0f-ea790ce6b192

A control surface for an audio processing system that performs surround sound panning includes a touchscreen in combination with one or more other input devices. In some embodiments, tickets may be used to provide access to an enterprise resource without separate authentication of the application and, in some instances, can be used in such a manner as to provide a seamless experience to the user when reestablishing a per-application policy controlled VPN tunnel during the lifetime of the ticket. The second dielectric layer includes a higher refractive index relative to the first dielectric layer, such that the first and the second dielectric layer create an optical waveguide. Upon execution of a message rule, the rule is decompiled using a copy of the code library and translated into server specific for executing the extended rule on received messages. The second transistor has a control terminal connected to an output terminal of an opamp. An outlet pipe is fluidly coupled to the fourth opening.

1459827587-e5ab5025-84c0-4b98-81ec-5657493bfd9a

An embedment tile for producing a tactilely detectable surface in a pedestrian walkway. The system operates by first receiving a request at an application to provide content to a user. The receiver also includes a bias current controller for generating bias current according to an output of the super-regenerative oscillator, and a pulse width controller for receiving a predetermined clock and controlling a width of the clock according to the output of the super-regenerative oscillator. The apparatus has a first element which sets the nodes to clusters.

1459827588-20220606-5b92-4e75-a157-e004f96ddf62

A method, system and computer program product are disclosed for compressing encrypted data, wherein the data is encrypted by using a block encryption algorithm in a chained mode of operation, and the encrypted data is comprised of a set of N encrypted blocks, C1. Also, a container with hand hole reinforcement provided by the partition set. The fixing strap and the auxiliary fixing strap are connected with each other in a vertical direction by a bent piece. The reference sample ions are introduced to and trapped in the ion trap. The optical bodies are generally constructed such that the at least one of the L\*, a\*, and b\* color scales of the polymeric core differs from the L\*, a\*, and b\* color scales of the metallic layer.

1459827589-20126de7-f31e-4ded-8cbc-ab20645acf24

A mode-locked laser employs a coupled-polarization scheme for efficient longitudinal pumping by reshaped laser diode bars. The device also repairs those leaks with an on-board repair component. Each branch instruction is identified and evaluated to be one of true and false. The server stores the data and transmits the data to a data processor.

1459827589-884b7fd1-c61f-4255-acfd-a25dcf8a8019

An exhaust arrangement for a multi-cylinder internal combustion engine of a vehicle which has a row of cylinders. The discontinuities can be longitudinally extending

strips of material in the cable jacket. The second data processing unit stores the personal data of the new member in correlation to an existing member when the existing member confirms the new member. The insulating housing includes a base portion, a tongue portion extending forward from the base portion and passageways extending in the base portion and the tongue portion to receive the terminals. An environmental sensitive electronic device, a display apparatus, and a manufacturing method of a barrier functional film are also provided.

1459827589-cad16a32-de4c-4a68-afd9-2895034c2915

A film treatment device has a cutting device for cutting a plastic film web. The spiral-starting portion of the centrifugal wall comprises non-stepped portions formed along curves of 1-1 and 2-2 respectively, and a stepped portion formed along a curve 1-2 that provides a thickness increase area encompassed by its upper-side curved surface and its lower-side curved surface. The jaw extension members also include an outboard end.

1459827590-126b4454-88e5-4caa-9d3d-bc95cda67c17

A system for acquiring digital images for a device having an integrated camera includes an Application Program Interface. The pipe or liner has enhanced resistance to the permeation of hydrocarbons relative to polyethylene. By controlling the position of the tape guide, the tape can be caused to move a direction perpendicular to the primary direction of travel of the tape.

1459827590-2f91ca3d-2f44-4f03-b091-37610fe0c52a

A color filter substrate including a substrate, a black matrix layer and a color filter substrate layer is provided. The image is provided to the client device, the image associated with a first geographic coordinate. 5 to 20, and \u2014Y represents a hydrogen atom or a cation, selected from the group consisting of an alkali metal, an alkaline earth metal, ammonium, an alkylammonium, an alkanolammonium, and a glucammonium. Furthermore, the breaker units positioned at the two ends are connected linearly to each other by a communication bus. The shared scan cells are coupled in series.

1459827590-31946371-662d-470f-9b34-b1ef1f533038

The invention discloses a wastewater ballast method that includes the steps of collecting wastewater, treating the collected wastewater, storing the treated wastewater, and discharging the treated wastewater during ballast operations. In the case of producing the crosslinked acrylic moisture absorbing fibers by applying a crosslinking treatment and a hydrolytic treatment to acrylic fibers, acrylic fibers made of a copolymer containing from 1 to 5% by weight a comonomer having an acidic group as a comonomer component are used as the raw material fibers to be treated. Each of the plurality of ballast holders is connected to no more than four panel support members, each ballast holder perpendicularly connected to one of the upright portions. In one example, the cached entities are session locks and the object is a file system object.

1459827590-e99192a9-44d3-4a61-99ac-13a208781d4a

A touch screen driver that can be used with a resistive touch screen includes an input/output module that supplies at least one input signal to at least one of a plurality of input/output ports of the touch screen and that generates at least one output signal, in response to the at least one input signal, and in accordance with at least one control signal. The display module has a polarizer. The spectral filter assembly permits a very high degree of elastically scattered light rejection and excellent stray-light reduction and management, while permitting a high level of optical throughput to maximize the signal of the weakly scattered Raman signal.

1459827591-0058da45-03ca-4b19-85c9-70056ede002f

A plasma etching apparatus for etching semiconductor wafers. According to one aspect, the architecture enables wire-speed execution of any Packet Handling

application, at any packet size. Alternatively, the trays can be positioned as components of the green roof system, filled with plant growing medium, and planted following their installation. The first error syndrome can be used to check the integrity of configuration information during subsequent error checking.

1459827591-4e7add10-a7a5-42b1-93f4-67a72b2fb95e

Various techniques for manipulating data using access states of memory, access control fields of pointers and operations, and exception raising and exception trapping in a multithreaded computer system. The surgery automatic suturing and knot tying apparatus comprises a positioning board, a threading module located on the positioning board, and two thread drawing modules and two needle threading arms located on the positioning board. If the destination port is not capable of receiving data, the transfer controller waits until said destination port is capable of receiving data.

1459827591-c3e42b62-086d-49fa-a6b3-29c6f856dc60

A method and apparatus for providing load balancing of subscriber session in a multi-slot gateway employing utilization counts are disclosed. The pipe may include a plurality of spray delivery devices to spray cooling fluid from the pipe to the inside of the wedges. Accordingly, the present invention reduces the frequency of breakdown or malfunction of the switch units and increases the using period of the switch units. The sintered supporting layer has a plurality of posts arranged in the flattened pipe to vertically support therein. A non-application server specific MBean exposes a set of attributes about the application to the sub-agent and hosts the non-application server specific MBean in a dynamic MIB. The engagement member 21 can be removed from contact with the spool 11 by sliding against the biasing effect of the legs 24 so as to engage with a step 27 in the elongate opening 20.

1459827591-ee171a18-7bf4-410e-90d5-71c72918785e

An apparatus method may comprise, a multi-layer reflecting coating forming an EUV reflective surface which may comprise an inter-diffusion barrier layer which may comprise a carbide selected from the group ZrC and NbC or a boride selected from the group ZrB<sub>2</sub> and NbB<sub>2</sub> or a disilicide selected from the group ZrSi<sub>2</sub> and NbSi<sub>2</sub> or a nitride selected from the group BN, ZrN, NbN, BN, ScN and Si<sub>3</sub>N<sub>4</sub>. The support portion extends along a principal axis thereof. The rigid connection member provide an interface between hoses disposed inside the patient chamber, and hoses disposed outside. Then, the measuring results are corrected with corrective values. The method includes applying a relatively high pressure, in addition to a relatively high temperature, to cure the adhesive material. Preferably, the combination of and provides a synergistic effect.

1459827592-6818a531-815a-45c0-a6f1-5aa0bf0f94cd

A method includes determining a position and length of a non-zero run in a row of a pixel map. In one embodiment, the information that is collected is defined by a configuration file. The closing system has a clamping mechanism housed inside a body that can clamp a bag placed inside the body with the opening of the bag disposed about the clamping mechanism. Retention members, operably engaged with each of the first and second portions and spaced apart about a laterally outward surface thereof, are adapted to engage the body, after insertion of the collapsed assembly, second portion-first, into the cavity, and subsequent lateral expansion of the first and second portions, so as to retain the assembly substantially within the cavity.

1459827592-785db038-d8f1-4495-890e-cce3d261685e

A data model for navigating data. The holding apparatus is slidable upward and downward along with the spindle of the EDM and maintained within the midsection of an electrode tube for reducing the deformation of the electrode tube during its movement. The toggling of the flip-flop is controlled by comparing the capacitor voltages to the reference voltage, such that the toggle frequency is proportional

to the time charging the capacitors. Thus, a board is connected with the connector at four corners of the board, and the first unit has long connecting slots that are used to circularly form a square frame.

1459827592-a56df18d-f541-4c9a-9e80-e0a000d9fc1f

A method of determining a location of a network condition within a wireless mesh network is disclosed. The system includes a pair of superimposed antenna radiating elements, each of which is connected to an associated feed network. A second capacitive insulator on the second semiconductor substrate electrically isolates the primary and secondary side circuit while permitting signal transmission therebetween. A determination is made of whether the particular trading order is an outlying trading order by determining whether the particular trading order differs from at least one comparison price by more than a threshold value.

1459827592-b3259792-fbf2-4dcf-8a6d-c57bc5354535

An object of the present invention is to provide a liquid crystal display device making it possible to lower the power consumption thereof when a still image is displayed. The impedance control circuit includes an impedance comparator which is formed equivalently to the resistive element and the plurality of sets of circuits, and which performs an impedance comparison with each of a plurality of replica circuits to form an up signal that increases the impedance and a down signal that decreases the impedance. The mobile device may be localized without information regarding the positions of the magnetic signal sources. Intermediate voltages that lie between the ground voltage and the base potential can be tapped at respective node points between each two immediately adjacent Zener diodes. A single measurement point on the outline of one spark gap definition portion is selected as a reference point.

1459827592-c81cfd1e-120d-4a36-bd18-2a82129d898a

A method for controlling a hybrid drive of a vehicle is described, the hybrid drive including as propulsion motors an internal combustion engine and at least one electric motorgenerator, and the output shafts of the propulsion motors being operatively linkable to a power train of the vehicle. The solder jet apparatus is a continuous mode solder jet that includes a blanking system and raster scan system. A yoke layer is disposed in contact with the above-described main magnetic pole layer, and the width dimension of the yoke layer is increased stepwise or continuously toward the rear in the height direction and the width dimension is increased stepwise or continuously from an upper surface toward a lower surface.

1459827593-024714eb-e977-4045-a2ef-db5620f69dc1

A radial type light-guiding plate comprises a light source, a light-guiding plate, and a reflective component. The component-specific configuration data is extractable and processable at each component receiving a broadcast of the distributable multi-component configuration file. When a current value of one of the hoisting machines reaches a current set value, which is set in advance during acceleration of the car, the elevator control device applies the speed command for that one of the hoisting machines, whose current value has reached the current set value, to the other hoisting machine as well. The actuation handle serves to release the striker assembly from the latch mechanism and also to allow the first and second striker bars to toggle between the first and second latched positions. A light guide with a body that, in a preferred embodiment, is cup-shaped as shown in FIGS.

1459827593-91787079-7852-40a6-a89e-d69af7731ec1

This disclosure presents an application model generation device and method based on hierarchy structure. The form is rendered in accordance with the data and user interface elements of the loaded form template. This improves fuel consumption by simplifying the oil supply passage of the cylinder head, reduces power loss of an oil pump, and decreases the size and weight of the cylinder head.

1459827593-a166233b-1a94-488b-8d08-7a377b797f05

A well system can include an accumulator in communication with a wellbore, whereby the accumulator applies pressure to the wellbore. The signal beam impinges upon the object and reflects back toward the beamsplitter. To produce a specific output document, a particular workflow template and selection parameters are input.

1459827593-f02f65ff-35df-4b4f-8bb6-9c184ef1d92f

The invention provides a sensing system for a self-service terminal and a media cassette for use in such a self-service terminal. The inner sleeve is located in the outer housing. Second data are obtained on the basis of the front surface shape data obtained through the first measurement operation and the back surface shape data obtained through the third measurement operation. A torsion adapter may also be used to attach a prosthetic foot of the present invention to the remainder of a prosthesis. The NAND string includes one or more memory cells, a first selection transistor coupled to the memory cells, and a second selection transistor coupled between the memory cell and the first selection transistor, wherein the second selection transistor has a process defined threshold voltage. The vibrating arm transmits an energy beam, and a laser incidence area where incidence of the energy beam to the inside of the vibrating arm is allowed, is disposed in a position of the other main surface on the opposite side of the vibrating arm overlapped with the second weight portion.

1459827593-f264cbf1-25d6-4003-bca6-7b9f9274eeb2

An apparatus and method are provided for reducing the width of a plurality of longitudinal slots or other openings spaced circumferentially around a slotted tubular member. The timing control circuit controls the IO switch timing signals that each IO switch timing signal remains activated until associated one of the plurality of banks gets out of a row active state after once the each IO switch timing signal is activated. In particular, GGP can be used for the treatment of wrinkles, fine lines and visible discontinuities of skin, for the treatment pigmentation disorders.

1459827594-0943593b-276f-4ec8-bae4-864af0aca399

An improved process for providing an individually customized fresh brewed coffee beverage on demand by a consumer, in a wide range of variety and strength. The pushbutton is shielded by way of a rotatable collar that extends over the pushbutton and shields the pushbutton, so that a thief may not defeat the pushbutton lock mechanism by attempting to rotate the pushbutton in order to allow operation of the latch mechanism. The image compression apparatus performs image compression with a first segmentation for a first plane set that includes at one bit plane in block image information in the original image information. The display trolley assembly and display module are configured for during ejection and retraction in a blade enclosure so that the display module folds flat and retracts into the blade enclosure to reduce damage during shipping.

1459827594-be92d0cd-6ac7-4296-bc86-0116097c7496

Provided herein are systems, devices and methods for the correction of spinal deformities with the use one or more implantable rods configured to apply a corrective force to the spine. The actuator can include a button and a spring coupled to the marker. The modulation at frequency  $f_{mod}$  shifts the signal to side bands about the modulation frequency. The compressed high-humidity air and the regenerating air are guided to dehumidifying-and-regenerating components of the dehumidifying-and-regenerating unit by a shunt rotor of the air distribution unit to complete the dehumidification of the compressed air and the regeneration of the dehumidifying-and-regenerating components. The wires are guided towards one another, by way of the torch tubes, wherein at the outlet and in the region of the electric arc, the electric arc of the electrodes wires, which is arranged in the contact region of the wires, is arranged in the region of the flow of the

discharged process has, referred as the main gas arranged transversely to the main transporting direction of the wires. Each of selected ones of the elongated elements comprise a first conductive element.

1459827594-c5619fc2-de26-4881-a3e0-16b5c8694cdd

To provide a mobile communication system capable of easily performing selection of an optimal transmission mode. In forming the capacitive element which uses a polycrystalline silicon film and the tungsten silicide film as a lower electrode, the tungsten silicide film is re-crystallized by heating using an RTA system before forming a silicon oxide film used as the dielectric film. A vertical stem is in contact with the semiconductor layer through the window and a ledge is a lateral epitaxial overgrowth of the vertical stem on the insulating film. Eventually, a particular change record is located which contains a complete copy of the data object. Fluid storage and dispensing systems achieve zero or near-zero headspace character, and prevent or ameliorate solubilization effects in liquid dispensing from liners in overpack vessels.

1459827594-ffdc77aa-bd3a-445b-9675-947f443686ea

This separation wall for an aircraft cabin comprises: a rigid and fixed vertical panel, a section movable between an opened out position in which the movable section projects beyond the contours of the rigid and fixed panel and a retracted position in which the projecting portion of the movable section is retracted at least partially in relation to the contours of the rigid and fixed panel. The thickness of the speaker is minimized while maintaining the sound quality and increasing strength. In accordance with one method, a request is received to display object information from different network resources. If exchanged account information is changed in one relay server, the account information after the change is notified to the other relay server. The machine enables a method of cutting rumble strips close to obstructions on narrow shoulders while driving the machine in the direction of moving traffic. Wagering game developers can reward users who create the most popular wagering games, and develop proper versions of these user-created wagering games for deployment in wagering game establishments.

1459827595-ec4f79c8-7abe-4428-bbdf-1b079aa36368

A conjugated polymer compound is disclosed. Impurities left remaining in an oxide semiconductor layer are removed without generating oxygen deficiency, and the oxide semiconductor layer is purified to have an extremely high purity. the number of alarms of fixed targets erroneously declared as moving targets in the radar images of two- or multi-channel MTI radar devices, wherein the suppression of fixed target echoes over the moving target echoes within the main antenna lobe occurs through a space time adaptive processing STAP filter. As the pump body fills with liquid condensate, a high liquid level position will trigger the respective pump mechanisms to allow motive gas into the chambers, pumping the liquid out of the pump body. A sealant surrounding the blocking dam and having a third height is formed. The deposition film contains sulfur in a range of not less than 1 mol % and not more than 5 mol % as a ratio to carbon.

1459827596-2287ffaf-3305-4d0a-be87-7bb6f4d4bcfe

An electrical connector has an insulative housing and a plurality of subassemblies. An enhanced irrigation system which is adapted for disinfecting agricultural irrigation water system-wide includes apparatus for continuously feeding chlorine to the irrigation system and apparatus for monitoring residual chlorine at an outer field point for the purpose of achieving chlorination disinfection system-wide. The desiccant reversibly absorbs moisture, and in response thereto, heat is released and absorbed by the desiccant to effect a thermal management of the roof system. A second transistor has a gate coupled to the first word line.

1459827596-7bbc812e-ee70-4712-bafd-17875f5bbefe

A server system receives messages from client computing devices. Nervous states

enforce locking of selected information based upon the confidence of the security of the information under sensed external conditions. If the download is interrupted, the system uses the recovery state information to resume the download at an efficient location in the data stream.

1459827597-4671b6b6-c910-4625-8c66-43084f0c75cb

A photomask having a machine-readable identifying mark and suitable for manufacturing integrated circuit devices and a method for forming the photomask and identifying mark are disclosed. The method involves connecting the USB Flash Memory device with the data processing system and storing the driver of the USB Flash Memory device in the BIOS of the data process system. , they produce an opposing torque or force when angular displacement or translation is applied upon them, due to shear stress developed within their elastomer parts. A vacuum pump creates an air flow that flows from the gap between the suction hole and the mounting side surface into the suction passage through the suction hole. In various embodiments, for slots of the first type, broadcast transmission requests have priority over peer to peer unicast transmission requests.

1459827597-a47f3e47-3ebb-4457-96cf-9a4e26666470

A transceiver includes an optical waveguide and a first filter optically coupled to the optical waveguide and operable to filter a first optical signal in a first wavelength band propagating downstream. The transmitting path further comprises a first transmission protocol path and a second transmission protocol path configured to receive a first data signal and second data signal, respectively, from the DAC. An activation unit, which is driven at lower power consumption than the measurement sensor, activates the control unit when a physical quantity having a correlation with the physical quantity of the measurement target has satisfied a given activation condition. An optimal selection of final pairings is based on the relative values of the pairing metric and other priority conditions which may include quality of service requirements.

1459827598-6f5376d2-f17c-4bc2-9d25-bb85e1c0b9f2

A converter having an exterior shell with a central axis, at least one gas inlet and at least one gas outlet. The correlation estimates may optionally be improved using pilot symbols for a plurality of antennas and for a plurality of pilot signal ports, and across a plurality of subframes. A plurality of fixture blocks is provided, with each fixture block having a hole therein and including a plurality of striations for cooperatively engaging the striations in the lower flange of a deck slat. A sidewall is disposed generally along at least a portion of the perimeter and has an edge for engaging an external mounting surface. In one embodiment, speed is improved by utilizing a parallel loaded buffer register which receives parallel data from the high speed shift register and holds that data during the write operation, allowing the shift register to receive serial loaded data during the write operation for use in a subsequent write operation. The inventive process comprises the step of contacting a calcium carbonate containing mineral powder with a solution or emulsion or dispersion of a binder.

1459827598-c27d8d8a-6662-4523-baad-0dbbc78a153a

A device for conveying packaged goods and/or bulk goods from and/or into a transport device includes a boom. The first drive unit is operated so as to cause the first transmission member to reciprocate, thereby causing the ejector pin to reciprocate. An incrementing mechanism using the \u201ctime stamp\u201d indicator generates a tweak which separates different contexts over different times such that the effect of \u201cType 2 replay attacks\u201d is mitigated. In another aspect, the methods comprise assaying for the presence of elevated levels of an antibody that binds to or is immunospecific for a CEP adduct in the bodily fluid of the test subject. The collector rings are made of dissimilar metal materials respectively. It further relates to an article comprising said composition and a method of removing target metal-ions from an environment comprising contacting the environment with said

composition.

1459827598-c416e4f3-21d1-49dc-9abf-bc1397c197ed

A control circuit and associated method for dynamically controlling power to one or more heating elements are provided. An optical connector is provided with a splicing section for securely supporting an incorporated optical fiber securely supported at a ferrule and an optical fiber of an outside optical fiber cable in an end-abutting condition. The bone plate has a flat portion for engaging a second bone segment and a barrel portion having an internal bore for slidably receiving the lag screw. In another example, the magnetic field can be rotated. An isolation barrier hermetically seals the fuel injection pump from the engine. Separating the chain module into module members and linking the module members together by linkages distributes the chain tension across the width of the chain module, and thus the hinge pin joining adjacent chain modules.

1459827599-7644fc72-124f-43f1-b35c-23715a8d41f0

Apparatuses and methods for manipulating droplets on a printed circuit board are disclosed. A base member of the mechanism is fixed to the apparatus body, has side wall sections at both sides, and has a linear rail extended along the pulling direction and at least one circular rail extended from the linear rail on each of the side wall sections. When the outputs of both of the data judging units are different from each other, a signal Early indicating that a clock phase is too early or a signal Late indicating that the clock phase is too late is outputted. Experimental results show that we have modified the precursor in such a way to reduce gas phase component of the deposition when compared to the unmodified TDEAT-NH<sub>3</sub> reaction.

1459827600-40e6666b-46b4-4a4e-87a4-9b5fd8911ba9

Drug delivery compositions for specific delivery of a drug to a tumor are described. Examples of methods include methods of water-wetting an annulus in a subterranean formation having an oleaginous-external-aqueous-internal fluid disposed on at least a portion of one or more surfaces of the annulus. Preferably a securing mechanism holds the exhaust stack pipe in proper orientation with the muffler stub pipe. The purge trough extending axially toward the suction side of the airfoil, aft of the leading edge, to channel a purge flow.

1459827600-7d7fffd4-ad89-47b6-a8b1-73ea97b56453

An apparatus and a method for measuring signal decay of a magnetic recording medium using an approach in which a control track and a track of interest are located on one track are disclosed. In particular, the present invention relates to a system that integrates digital video content with object-oriented script to provide object specific marketing, including potential channels of distribution, such as internet shopping. The system also includes unicortical screws having a reasonably large head adapted to seat against the outer surface of the bone and a threaded shaft adapted to engage in the screw holes, and pegs adapted to engage in the peg holes. The gateway transmits the packet from the physical interface on the Internet side to the Internet. The at least one MIM capacitor is fabricated on at least one of a face of the first integrated circuit die and a backside of the second integrated circuit die. In this manner, the integration of a semiconductor device can be improved and an area occupied by the semiconductor device can be decreased without causing degradation of junction voltage resistance and increase of a junction leakage current in the semiconductor device.

1459827600-bc9ac42f-b602-4d1a-96b0-487bd5d73959

Compounds are described that are active on PDE4. A system and method can provide for the storage of volatile memory contents of an application upon shutdown of a mobile device, and restoration of the contents upon startup. In order to reduce effects from drift, the reference image is at this time measured within a shorter time than the essential observation image. Apparatus for and a method of printing

books on demand with such double laminated covers is also disclosed.

1459827600-efa72b99-f896-4550-9942-d5db86ce1b07

The problem of the present invention is to provide a carbazole derivative which has an excellent heat resistance and can be formed into a film without crystallization. An air flow sensor is associated with the main body and configured to measure the air flow created by the patient's one of at least inhaling and exhaling air. The structure type of the second zeolite is different from the structure type of the first zeolite. The pair of semicircular beams is pivotally attached to the top and bottom braces in which the pair of semicircular beams defines a perimeter of an imaginary sphere between the top and bottom braces in which the semicircular beams are locked in place to the top and bottom braces with the pair of bolts and nuts. Preferably, the dose of drug is administered at dinnertime to a patient in the fed state.

1459827601-dec0dfa2-eb2d-4924-b2ac-0b9aa486b24a

Disclosed is a skin treatment device for personal use. The system includes a power circuit configured to provide power. Based upon determining that the wrap number stored in the trace block is one less than or equal to the master wrap sequence number, the method includes reserving space in a buffer associated with the trace block and storing the wrap number stored in the trace block as an old wrap number and incrementing a use-count of the trace block. The two pressure drop values are compared, and once occlusion is detected, an alarm is generated, and the ventilator responds to protect the patient from over distension. The energy or power in each frequency bin is then multiplied by  $f_n$ , where  $f$  represents an estimate of the frequency of the bin, and  $n$  is an exponent which is used to normalize the frequency content of the data. Other aspects and implementations are contemplated.

1459827601-eeec383e-6a8d-4ca0-93b6-3c8060e367c6

An active matrix substrate includes a gate electrode, a gate insulating film, a semiconductor layer, a source electrode and a drain electrode, which are sequentially deposited on an insulating substrate. A flow structure is at the bottom surface. At least one coupling is between adjacent stator segments and shaped to allow movement of adjacent teeth in a so-called loose tooth design. Accordingly, the cooking apparatus can be easily designed.

1459827602-0a978ae1-a829-472d-98a9-9abfe7334669

Provided is a photodetector that detects missile launches from an above-flying surveillance platform through clouds. A page of data of the memory block having a first address is replaced responsive to a generated multi-page copyback program command. The displayed patient information includes scheduled medical procedures for each patient and a visual cautionary indication in a consistent position relative to each patient in the worklist for whom cautionary information is stored. In one example, a potential torque increase at high speed and low airflow that may be caused using electronically actuated valves is compensated for using multiple paths of the transmission.

1459827602-f3c02457-6900-493e-8a97-5c0be13c166d

The present invention relates to a fresh gas supply system for an internal combustion engine, in particular of a motor vehicle. This is achieved by providing for channel assignment messages to be sent over the paging channel of a plurality of base stations, which increases the probability of one of the messages getting through. The surface of the front panel 2 is provided with an exterior sheet 4 covering the touch panel 3 in the recessed portion 24. Therefore, the sub-bobbins are mounted in two extended assembling troughs of the main bobbin, the first coil is wound on the primary winding area at the outer side of the main bobbin, and the first coil is separated from the second coils not only by horizontal distance but also by the assembling troughs.

1459827602-f47285dc-a8da-4cea-ab3f-cb2e01cbc5b1

A method for is provided forming a thin-film transistor on a flexible substrate. The shell may cover the entire inner face of the patch, or a substantial part thereof, and a peripheral edge of the patch and the shell cooperate to form a flush interface with no sudden surface steps on both interior and exterior surfaces of the implant. The multi-heel connector is adaptable for accommodating a riser key to adjust the rafter contact surface pitch, and a joist spacer to accommodate a joist having a cross-section smaller than the multi-heel connector loop portion cross-section. The method can further include comparing the natural frequency of the contact element to a predetermined frequency limit to detect a defect. A no hinder turn restriction may be combined with or may replace other types of turn restrictions and may be utilized for both left and right turns and for streets with single or multiple lanes.

1459827603-1f00ea16-1962-4f23-b139-eebadad4ac60

A method of displaying heterogeneous information includes executing an application program to process one or more activities. The subject polypeptide and nucleic acid compositions find use in a variety of applications, including research, diagnostic, and therapeutic agent screening applications. The outer faces are returned in to a position of minimum distance between these faces by return means, when the fluid feed to the expandable chamber ceases. Further described is a method of performing maintenance on a wind turbine, including the steps of halting a rotation of the shaft, operating a lifting arrangement to raise the shaft, and removing a bearing pad of the wind turbine main bearing from the bearing housing of the wind turbine main bearing. Third, an incremental portion of actual subsurface illumination is generated using the incremental portions of actual survey data, to incrementally generate actual subsurface illumination at the data processing location. Such lithographic apparatus is in particular suited for the streaming of subsequent double exposure jobs.

1459827603-587c5e85-3ea6-4a27-828e-010ed2f6a9a1

A process whereby scrambled data of the stream are, in parallel with their recording, descrambled so as to extract therefrom additional data corresponding to information required by at least one function of the special mode or \u201ctrick mode\u201d. The radial configuration includes a graphical timeline spirally disposed about at least one axis point in the graphical user interface. The portable phone sends a re-size instruction to the digital still camera.

1459827603-6ed74fba-82d4-4b6b-8d0c-11d41f844b2d

In an audio-information encoding apparatus, in order to encode an audio signal containing a white-noise component, an index  $i_L$  indicating the energy level of the white-noise component and an index  $i_R$  designating the start index of a random-number table are introduced into a code train. The method uses a complement states grouping technique that comprises the steps of finding the state distances between complement states; forming the reduced-state trellis by grouping the complement states with state distance no less than the minimum free distance; and by keeping the complement states with state distance less than minimum free distance unchanged. This process can be carried on throughout a hierarchy of windows as the user browses for a destination window for the drag operation. The system also computes and displays object trajectories from the computed flight characteristics which account for the characteristics of the object and the atmospheric conditions.

1459827603-ef7b25dd-6b32-448c-ad67-9aa2b1445152

A system, method, and apparatus for the authentication of the physical location of a target node are disclosed herein. The apparatus includes a portable housing configured for standing on top of a flat surface and a window on the portable housing. The surface of the optical path control sections 31A comprises first to M-th planar portions 32A1 to 32AM. In another embodiment, the oysterbreak comprises a plurality of growth layers of regular polygonal-shaped members made from a material

capable of inducing aquatic sessile organism attachment and growth that when stacked, form a relatively portable, breakwater module. Additionally, image pickup control unit 37 switches sensor control unit 31 to the still image shooting mode while mechanical shutter 21 is closed. The present invention is useful for biomedical diagnostics, chemical analysis or other evaluation of the target sample.

1459827604-3fa5eebb-72da-464f-ab15-67894fb833a6

The invention relates to an arrangement and a method for the identification of parameters in a nonlinear model of an analog-to-digital converter and the use of this information to reduce the nonlinear distortions of the ADC. The plurality of spread-spectrum signals are radiated by a plurality of antennas, with each antenna preferably spaced by one-quarter wavelength. Each data processor in the first set can authorize access to file systems directly accessed by more than one data processor in the second set. , based on GPS or other location data. A contact sensor is also included to indicate when the optical navigation device is no longer in contact with the transparent layer.

1459827604-4ac2a99f-bc11-455d-9f23-d05fcf84950a

Flexible polyurethane foams are prepared by reacting organic and/or modified organic polyisocyanates with a polyetherol mixture and, if required, further compounds having hydrogen atoms reactive toward isocyanates, in the presence of water and/or other blowing agents, catalysts and, if required, further assistants and additives, by a process in which the polyetherol mixture consists of. The operating point data includes a first voltage at which the microprocessor may reliably operate at a frequency and at a first temperature, and a second voltage at which the microprocessor may reliably operate at the frequency and at a second temperature. Each of the plurality of display surfaces may face a different direction. The security status determines the security level of operating the computer system. Recycled glass is reformed to provide glass microspheres of sufficient quality for use in a projection screen. After receiving the wager input, the objects to be revealed are randomly selected.

1459827604-53cf4ed3-82c2-4b1b-adbe-aacdd8f0eaa0

Ridge vents and methods of their use are provided. Each player is dealt seven or eleven cards, all concealed from view with only one card revealed during play. Further, the inventions relate to compositions and methods for delivering active ingredients simultaneously with a top dressing composition to golf course turf. The control circuit generates a current able to reset the magnetic core of the reactor. Movable contacts corresponding to fixed contacts formed on a printed circuit board are formed at the tips of the first and the second extending portions. The end-effector is comprised of: a micropump fluidly coupled to a microtube; a piezoelectric sensing structure disposed in the microtube; and a processing circuit electrically coupled to the sensing structure for determining the force of the fluid flowing through the microtube.

1459827605-01650db2-19d1-416f-be79-ca9e690796bf

A switching signal input device for use with an electronic apparatus is provided. Light is captured by at least one collector. The method then compares a first address, incoming at the input and associated to an information packet, with said first set of numerical strings according to a longest prefix match criterion and using a binary search for performing the comparison. Upon re-pricing the leg order, one or more additional queue holder orders will be placed in the market. At the first EDF gain section output, the combined amplified signals and residual pump signal are decoupled, the amplified signals being attenuated in the VOA while the residual pump signal being routed around the VOA. The object of the present invention is to suppress a dew condensation at the first evaporator to prevent a freeze of the dew condensation water even if the temperature of the air for air-conditioning introduced from the outside of the vehicle is low.

1459827605-93efdaef-c070-4a1e-89c6-9561cfa3ff88

A film storage unit is disposed vertically above a film transfer cylinder, and an unwinder device and a rewinder device are disposed vertically above the film storage unit. The shell includes an end wall defining a receiving slot and a sidewall perpendicularly extending forward from a side of the end wall. The line neutral conductor is connected to the line ground conductor at a termination point in the electrical distribution system. A mobile network access point is directable to within a communication range of the second communicator of the remote station when the remote station is outside of an existing communication range of the second communication network and the first set of signals includes a resource request for the second communication network. The second assembly module is operable to access the mailer template file and for each client and create corresponding client mailer data comprising the common data, the selected client account data specific to the client, and the advisement data and store the corresponding client mailer data for each client in a mailer file.

1459827605-c03ab09a-8377-4442-bb5b-23a74a55a6dd

A method and related system of filling therapeutic gas cylinders. Methods for making such devices are also provided. A set of predetermined possible synchronization patterns is detected in a received signal. Further, input is received from the first communication device over the short-range wireless network specifying a telephone number for a telephone call using the second communication device. The plurality of driving electrodes are formed on the other side of the one of the at least one planar piezoelectric layer.

1459827606-6e98d166-e63f-4c91-b0e8-5b9f9809e158

A receiver transponder to be used in an optical add and drop multiplexer connected in short haul type networks receives light signals from two opposite directions on input fibers. A waveguide according to the present invention includes a first conductive channel, and a second conductive channel disposed generally parallel to the first channel. Printed instructions can be included with the tray. The cooling-cleaning unit is used to supply a high-pressure gas, which flows through the distance measurement unit to perform cooling and cleansing operations.

1459827606-b6bf084b-157e-410a-ae5d-9d46f3126e63

A squelch circuit with an adjustable reference level, having an input level comparator with a first, a second, a third and a fourth current input terminal, a first and a second input terminal, and an output terminal. The system and method create a heuristically generated routing selection list based on a history of previous routing transactions. The reaction is promoted by a salt of formula  $MX_1-4$ , M representing a transition metal such as Zn or Fe and X representing a mono-anion, or by  $BY_3$ , wherein Y represents a fluoride or a phenyl group optionally substituted. A system control and debug unit and a trace cache operably connected to the system bus can be used to diagnose and store errors conditions.

1459827606-c5d61d0f-6329-40fc-8e3e-c3857faba95f

A potentiometer, used in particular as a position sensor or position transducer is disclosed, which has at least one wiper path and one wiper that has at least one contact element, resting with a contact face on the wiper path and electrically contacting the wiper path; the wiper and the wiper path are movable toward one another. A tube is pivoted to the pivotal block at a first end; the tube has a down facing cavity at a second end. The invention also relates to plants and varieties produced by the method of essential derivation from plants of DLL1344 and to plants of DLL1344 reproduced by vegetative methods, including but not limited to tissue culture of regenerable cells or tissue from DLL1344. Any node may have defined for it one or more actions which are triggered whenever the node is reached. An image data processing unit performs predetermined image data processing including processing of receiving for each pixel the 1-line output image data in the main scanning direction output from the preprocessing unit, and converting the image

data into binary data. The ignition element is embedded in the material of which the bottom wall is made.

1459827606-c9168897-67ee-4540-8b97-d3004d23d043

The invention relates to a hand tool machine with a torque limiter enabling a user to set a maximum torque which is transmitted by a motor drive to a tool carrier. The formatted text comprises at least one text sample having an associated text sample format description. The invention works in conjunction with a conventional reject pocket located further downstream in the note path for the collection of notes identified as rejects during the subsequent main detection function.

1459827606-fe4e5232-c9cf-4329-aa62-a71c2ff3902f

Reducing virtual memory power consumption during idle states in virtual memory systems comprising tracking the topology of the system memory by the system hypervisor and operating system running on any selected virtual machine hosted by the system hypervisor. In an embodiment, a method includes the steps of creating a list of requests issued by an application program, associating an indicia with the list indicating whether the list contains a request, querying the indicia to determine if the list contains a request, and adding a new application program request to the list when the indicia indicates that the list includes a request. The optical transfer function from the light source to the light detecting element is enhanced, and the efficiency in utilizing light is improved. The outer flow path may be configured to direct a flow of an outer layer around the inner layer.

1459827607-4d5ca9db-3f31-4f49-b4cd-b0e944bfe540

A method of analyzing nucleic acid sequence data produced by automated sequencer comprises scaling the data according to a map of relative heights of homozygous base data. In addition, a vent 34 is also positioned within the housing opposite the fill cap 38. The valve element has a piston which is reciprocable in a cylinder containing gas. Furthermore, when the fuel cell system is used at home, an additional space for installing the nitrogen container is not required and the fuel cell system can be easily installed. In another aspect, a process for forming the electronic device can include patterning an insulating layer.

1459827607-c00f4391-8e0a-480d-9ff6-509913065f15

This invention provides a novel processing technique from customer authentication to order price claim in online sales of commodities and the like. The invention also pertains to a method for the preparation of such an ink jet recording medium and to methods for the preparation of a coating composition and a dispersion useful in the preparation of such an ink jet recording medium. The base is made of a resin whose coefficient of linear expansion is adjusted in accordance with a coefficient of linear expansion of the semiconductor element mounted on the capacitor element. Further, fragmentation of the plant root material may be minimised. The particular user's responses to the set of questions are indicative of whether the particular user belongs to the group.

1459827607-e1eea10f-029c-4e43-9d1f-b38124ced89e

A lighting module for a vehicle headlight for producing a lighting beam of the type having a cut-off. In particular, the method according to the invention is used to match two telecommunication systems using different encoding methods between the transmitter and receiver. The compounds produced thereby are useful as thrombin receptor antagonists. If the statistical threshold is exceeded or the selected criteria is met, the current map may be abandoned in favor of a different map. The torque transmitting mechanisms are selectively engageable in combinations of at least two to establish at least eight forward speed ratios and at least one reverse speed ratio between the input member and the output member.

1459827608-867e180b-bae5-47de-b0c8-125ccbf94c67

\u2018LMV200\u2019 is a distinctive variety of *Lomandra hystrix* which is

characterized by the combination of an arched foliage habit and the presence of light yellow to green leaf variegation. A folded heat sink is attached to the exposed top emitter pad of the MLP by a soft solder attach process. The player's selection of which progressive award to play for is based, at least in part, on a relative probability of the player winning the selected progressive award compared to the relative probabilities of the player winning the non-selected progressive awards. In some embodiments, the energy transfer element transmits intense ultrasound energy in a frequency range of 1\201330 megahertz, and the fluid acoustically couples the energy transfer element to the bodily organ, and the fluid also cools the energy transfer element. The prosthetic valve assembly is compressible about a catheter, and restrained from expanding by an outer sheath.

1459827608-bf23ccd9-d7b5-4f62-ae13-2c04665196d1

A projector includes a light-source device, a discharge duct having an air intake port facing the light-source device and a discharge port, an axial fan mounted between the air intake port and the light-source device in an outer casing. Designing the mask can be costly and time-consuming, which means that the testing of a circuit involving a transistor can also be costly, time consuming and a barrier towards efficient circuit development and testing. Additionally flexibility according to the device design requires that the nanowire at the substrate may be either InN or GaN. The noble metal particles are carried by the second particles in a larger proportion than by the first particles.

1459827608-fbf3a576-0733-4c2d-bbb1-4368be39c62d

A system and method for providing an input attribute collected in an area while harvesting a crop from the area is described. In an embodiment, a circuit includes first and second samplers to sample a data signal and output data and edge information in response to a data clock signal and an edge clock signal. The side panel web is attached to the chassis web and has fasteners thereon. When a predetermined number of whitened symbols are accumulated for one of a plurality of gain configurations, an arithmetic mean is calculated and used an offset value. The modified exchange key is then encrypted using the content key to render an encrypted modified exchange key, and the encrypted modified exchange key is then hashed with a nonce to render a bus content key. The tread belt has at least a pair of belt layers, and one layer comprising inextensible reinforcing cables inclined at substantially zero degrees relative to the circumferential direction of the tire assembly.

1459827609-566a2a7e-7df3-46b8-a5dd-a68bc809147e

A fastening element is adapted to cooperate with a tie member to exert a compressive force on first and second components. The spinal implant defines a first transverse dimension and a different second transverse dimension, and is initially inserted into the intervertebral space while in a first operational configuration wherein the first transverse dimension extends along the height of the intervertebral space. The hydrofoil may have various configurations and be detachable, while the motor may be electric and have an associated battery that is situated underwater in use.

1459827609-84eddbba-1e50-4c28-81f3-ab98a1b834e5

An exemplary light emitting diode assembly includes a cover, a substrate, a LED unit, a first electrode terminal, and a second electrode terminal. The light-emitting units are arranged with the light-exiting surfaces of their respective lightguide plates being substantially flush with each other. Electrode surfaces are in metallization layers among the ceramic layers. A pair of actuator assemblies is rotatably couplable to each of the mounting brackets. The apparatus includes a monitoring unit that may be mounted on the water heater, and a display unit that may be mounted either on the water heater or remotely therefrom.

1459827609-de925071-250d-4e6d-8403-8a24a2180592

The multifunctional portable pneumatic exercise device is a muscular exercise and training device that may be used for a multiplicity of exercises and with a wide variety of muscle groups. The method comprises creating a node for recording a current radio access technology that the client uses for communicating with a core network of a wireless communication system in a management object tree corresponding to a workflow for the device management. The method includes: instructing the second repeater to cease issuing transactions to the first repeater; synchronizing an arbiter within the second repeater with an arbiter within the third repeater; instructing the second repeater to begin issuing transactions to the first repeater; and instructing the third repeater to begin issuing transactions to the first repeater. To improve the corrosion prevention properties and the durability of the surface protection, an end region of the pressure tube which starts from the piston-rod-exit end side is excluded from the surface protection.

1459827610-420bfe4c-29cc-439b-81d8-7495a02e3e1c

A method of forming a metal wire in a semiconductor device includes performing a first etching process on an insulating layer formed on a semiconductor substrate to form a trench and an insulating layer pattern, the insulating layer pattern defining the trench. The second end portion of the braided aluminum lead wire is joined to the magnet wire after the step of brazing. The supplemental gutter support bracket also requires no additional mounting points to the eave or gutter while remaining invisible to the viewer on the ground after installation.

1459827610-6467583d-790e-4f00-8797-262e8c529705

A power transistor is arranged between an output terminal and a power supply terminal. The output spectrum of the semiconductor laser is narrowed and stabilized by an internal grating to provide high spectral brightness. The tachometer reading unit includes a register configured to store a value indicative of a maximum stretching duration. The mobile body is a trolley or cart for negotiating an aircraft aisle. The exterior framing in total defines an integral launch box for the jacket. Portions of leads 3A, 3B protruding on a reference surface side are placed on one side surface side of the heat radiation block 2 on which the semiconductor laser chip is mounted.

1459827610-66e85a1e-77e1-4ad8-a45d-5ee2c4caa0d4

An automated system for continual transdermal extraction of analytes present in a biological system is provided. If a device is properly configured, operating the device in a transmit-mode to transmit functional operability data. The output device mixes the audio signal component having the frequency characteristics corrected with an audio signal of the right channel and an audio signal of the left channel to generate mixed output audio signals, and outputting the mixed output audio signals as a right channel output audio signal and a left channel output audio signal. The second segment size represents a maximum segment size that can be transmitted. Also monitored are the data replication activities in the network. One embodiment of the invention relates to the deletion of the transmitted image data.

1459827610-c562d7b9-6429-4727-a5d4-b38358428620

A process including: magnetically energizing susceptible magnetic particles; and accumulating the resulting terahertz lasing mode output of the particles. In this way, a user can quickly see the watch face in the proper orientation so that the time can be quickly and correctly determined. The metrology arrangement comprises a reference element, the reference element being mechanically connected directly to the first imaging arrangement component. The apparatus may include systems for gas pressure sensing; chamber pressure equalizing; and microprocessor control, for controlling the displacement of the diaphragm and the pressure equalizing device by a signal input from the pressure sensing device. The revised, and more accurate, transcript may be used to train the acoustic model, thereby producing a better acoustic model than that which would be produced using conventional techniques,

which perform training based directly on the original non-literal transcript. The second MTF is an MTF at a spatial frequency of  $\frac{1}{2}$  of the Nyquist frequency.

1459827611-196446af-8899-4158-8efe-96d1b427f08f

An apparatus includes an antenna having multiple conductive portions. A network, network device and network server that can implement various aspects of this method are also disclosed. The second semiconductor region is disposed on a bottom part of the gate trench, and is surrounded by the drift layer.

1459827611-98cfd4a4-8204-49a0-ab74-b7fb7da7a99e

A vehicle trailer backup assist system and method includes a hitch angle detection apparatus and a target monitor controller. The system includes a discharge assembly and a composite formation device operatively linked with the discharge assembly. Each lug group preferably includes three separate lugs, each lug having a substantially flat outer surface lying in a different plane than the outer surfaces of the other two lugs.

1459827611-a22e009c-54cc-46f4-96e9-66c522a6a8b7

An outdoor illuminating device and illuminating method using LEDs as light sources to reduce a load on the environment and effectively function as a crime deterrent to contribute to environmental design for establishing safe and secure communities. The carton comprises a bottom panel, a first side panel, a second side panel, a plurality of flaps at a first end of said carton, a first side end flap at a second end of said carton, and a second side end flap at said second end of said carton. The mobile nature of the stand also provides a hunter with the option of using a gun support lanyard, which can be attached to the upper part of the stand or its supporting member. The pair of reflective elements is remotely adjusted, in tandem, for driver rearward viewing when the car is in forward motion and only provides a split view during backing. Another method includes introducing a quantity of liquid into a container and covering at least one predetermined internal surface or component with the liquid to mask the surfaces and keep the hyperpolarized gas away from the predetermined internal surface, thereby inhibiting any depolarizing affect from same.

1459827611-c830bc0f-fd8d-4b1f-98fd-d38121b72bbb

The present invention discloses a USB memory card such as an intelligent stick, of which a control of data encryption is included to enhance data security and meet the data security requirement. The tobacco extract or slurry is treated and modified prior to being subjected to the foam fractionation to enhance the extent and efficiency of protein removal. The invention also provides pharmaceutical compositions and methods for treating diseases, for example Alzheimer's disease, in mammals comprising compounds of Formula I.

1459827612-1512cab3-160e-4598-b8ad-ae1e386ed818

A handheld gamma camera or PET system with a disposable detector head is provided. A clock signal is used only in the AND-plane for pre-charging the product term lines. If desired, the predetermined number of unused codes is always the same in each implementation. A cost function value  $J$  is computed for each point in the grid by applying a phase adjustment of angle  $\theta$  and a frequency adjustment of frequency  $\omega$  to the input signal; performing one or more iterations of the K-means algorithm on the samples of the adjusted signal; generated a sum on each K-means cluster; and adding the sums. When the sample outlet is thus opened, fluid sample flows from the sample collection cup to the test compartment. In other words, the first end system may not send loopback cells, and instead rely on the determination of the other end system.

1459827612-2c27183d-3add-418b-a26c-d81e5d2e2aff

A storage system configured to be applied to a broad range of access forms to the file and improve performance of file access control processing. When the operating

object appearing in a virtual three-dimensional space is selected based on an operation by a player, the viewpoint location data corresponding to the operating object is read, and a viewpoint location is set. At least one second anticlimber extends along at least a portion of the front face at a second position that is vertically different than the first position. The invention may also comprise a flared lamp shield attached to the housing, which is capable of protecting the lighting fixture from damage.

1459827612-aa8954b3-ba1e-42c6-9ac8-ffdc1b9f639f

An electrical steering system for a motor vehicle, having an electric motor having a worm gear which is made up of a worm and a worm wheel, coupled to an input shaft, having a ring gear, worm wheel forming one of the two coupling parts, that are to be coupled to each other, of an elastic compensation coupling whose other coupling part is connected, rotatably fixed, to the input shaft. The method comprises the steps of: forming a pinned ferromagnetic layer on a connection layer; forming a tunnel barrier layer using a semiconductor film on the pinned ferromagnetic layer; and forming a free ferromagnetic layer on the tunnel barrier layer. An image index file for individually accessing the image renditions is modified to include a reference to the corresponding image quality flag file record entry. The document processing system may optionally compare selected document metrics against preselected document metrics in a similar manner, either fixed in a media or electronically, i.

1459827612-b2efe2bd-2059-43a8-8433-039dcffba8c9

The present invention relates generally to the field of prothrombin time reagents for determining dysfunction in the coagulation system and more specifically to reagents made from native thromboplastin or purified or recombinant tissue factor and phospholipids from a natural or synthetic source. Hereby, a leading end of the medium, after pulled into the dimples once, is transported in the pulled state. The strings of the guitar press upon the cylindrical tube. , according to factors such as telescope type, power and configuration, location, weather conditions and altitude. Methods for determining the FSR index of each ring-down event are also provided.

1459827612-f4ee08-9797-4a9c-9ae7-3c80ec890584

An Enhanced Reverse Link Encapsulation packet for a MDDI system combines and improves upon the functionality of the Round Trip Delay Measurement packet and Reverse Encapsulation packet. Each has an associated cache storing a subset of the data for access by that processing unit. A process step is then performed on the plurality of MEMS dice while they are secured in the holder and may be performed simultaneously on all of the MEMS dice secured in the holder. The sensor assembly may also include associated structure to cooperate with a reference location element to place, align and secure the sensor assembly to the patient's skin at a desired location. The efficiency of production and maintenance of various rotatable warning light configurations is improved by reducing engineering, production, maintenance and inventory costs. An XOR comparison may be used to determine if the design cell features match the corresponding master cell features.

1459827613-5ce8db92-45e2-4a8a-855a-b6388aea0877

A Three-Dimensional Structure Memory allows for physical separation of the memory circuits and the control logic circuit onto different layers such that each layer may be separately optimized. In each of the semiconductor chips, an optional circuit is formed. The frame is formed by integral molding by casting. The first and the second dielectric layers are formed on the surface of substrate and the surface of the capacitor components respectively such that the capacitor components are secured in position in the hole of the substrate. In this way, off-leak current may be reduced and noise on a power line and/or a ground line may be reduced. Examples of these include inflammatory and allergic respiratory complaints, inflammatory diseases of the gastro-intestinal tract and motor apparatus,

inflammatory and allergic skin diseases, inflammatory eye diseases, diseases of the nasal mucosa, inflammatory or allergic conditions involving autoimmune reactions or inflammations of the kidney.

1459827613-9254df4e-7293-4a95-9a73-c155ebe7fc67

The invention relates to a method and device for reducing the wake vortices of an aircraft during the approach/landing phase. The digital TV broadcasting data frame according to the preferred embodiment of the present invention comprises a data frame which includes at least one data field which has 313 data segments. The Internet access activity includes access of at least one Internet protocol from the group consisting of newsgroups, file sharing programs, file transfer programs, chat rooms, peer to peer chats, and electronic mail activity. The imaging optics are for optical devices, particularly in ophthalmology though the invention is applicable to other ophthalmological devices as well as to optical devices outside of this field. To control pronation and supination of the shoe and user's foot, the hardness of the medial stabilizing pod may be greater than that of the lateral stabilizing pod. The bowl receives one of two differently sized baskets.

1459827613-c2f0a8c7-3193-4388-a2c7-94df3e172fc7

The present invention relates to novel fluorescent dyes, novel fluorogenic and fluorescent reporter molecules and new enzyme assay processes that can be used to detect the activity of caspases and other enzymes involved in apoptosis in whole cells, cell lines and tissue samples derived from any living organism or organ. A visual display system includes a projector having a light source with a fixed spectral output, a display screen receiving the output of the projector and emitting a diffused output, and a color correction contrast enhancement filter positioned between the diffusing screen and a viewer. The edge may present a profile and may present a closed section. The separator roller also includes a recoil mechanism.

1459827614-38e4b572-3dbb-40e1-9509-5dd1f6cdf57a

A method and system for adjusting and controlling the plasma uniformity in a plasma processing system is described. The FMM software may describe the normal modes and natural frequencies of a mistuned bladed disk using only its tuned system frequencies and the frequency mistuning of each bladedisk sector. The projections are formed at positions near the outer edges of the plate, which are distant from the center of the plate at which no projection is formed, and which are at equal distances from the center of the plate. A wiper plate 22 and an orifice plate 24 are disposed inside of the housing. However, the force required to sufficiently deflect the wires is high enough so as to minimize nuisance alarms.

1459827614-52d9e1cf-e1d6-4a90-8f5f-8c0da19b28d3

A reflective semiconductor optical amplifier includes a substrate, a waveguide with a buried heterostructure formed by sequentially laminating a lower cladding, an active layer, and an upper cladding on the substrate, the waveguide including, sequentially, respective straight line, curved and tapered waveguide regions. The respective successive pawls are mutually coupled by means of at least one link plate. Also provided are methods for enhancing the transmucosal absorption and bioavailability of bioactive peptides and proteins using such compositions.

1459827614-765fbd91-475c-4433-873d-ab47bc39a408

A chemical sensing probe comprises an optical fiber or may be mounted on an optical fiber. The cap includes a first attaching member and a second attaching member that are detachably assembled into one piece. Evaluation means evaluates the corrected frame image using a motion blur evaluation function. A mold is used to sandwich the plug within the trunk. A manifold can be used to maintain a vacuum source for the catcher throat and the additional channels, while pulling the unprinted ink back to the fluid system. And at least an OTA for determining a cut-off frequency, out of the plurality of OTAs, is controlled so that transconductance thereof is variably-

controlled according to the pseudo-random values, and the cut-off frequency is variably-controlled based on the input setting value.

1459827616-47e1bd87-90a7-458c-890b-a42ebf2e747c

A structure includes holes formed in a layer of tape. The oxidizing catalyst includes a solid acid, including a strong acid ion and an inorganic oxide, and a platinum-based metal. The node tree is scanned to identify one or more conditional logic constructs that are sources for creation of inferred latches. The transcoder is capable of receiving a request identifying a media file from a first client and, in response to receiving the request, retrieving the media file from the content store in a first format. 5 wt % C, from about 40 to about 60 wt % Co, and incidental impurities. In one embodiment, the present invention relates to formulations designed to render herbicides, fungicides, pesticides, insecticides and/or phytotoxins easier to identify upon application to one or more types of vegetation.

1459827616-8ee7dfb4-e039-496e-b86c-edeb2b18e704a

Fluorescent monomers are described and claimed which are synthesized by reacting a substituted or non-substituted naphthalic anhydride with an amine and with a moiety containing a polymerizable group. Also disclosed are methods of preparing such NO-donating compounds, pharmaceutical compositions and medical devices containing such compounds and methods utilizing such compounds in the treatment of various medical conditions. This compound also has little, if any, calcemic activity and therefore may be used to treat immune disorders in humans as well as renal osteodystrophy. The value of the preferred shares will be based on the value of underlying shares invested in separate account funds.

1459827617-66ec5c92-13c6-46a4-aaf6-6e79cdb63636

Techniques for the display of a signal with a wavelet transform of that signal in a wavelet transform viewer are disclosed, according to embodiments. Each sub-network agent manages its sub-networks via its own management protocol, and collects the sub-networks' information. The detection unit is configured to detect a write region in which additional information is to be written, from the original image.

1459827617-a83810a2-d841-4c0b-94cc-84e9b8c7643d

A fusing member rejuvenating method and apparatus for cleaning and rejuvenating an external surface of a fusing member of a toner image producing machine. A phyllosilicate substrate, for example vermiculite or montmorillonite, acts as an inexpensive support to a thin layer for a polyvalent metal sulfide, ensuring that more of the metal sulfide is engaged in the sorption process. A magnetic field is established and the magnetic component and/or magnetic field is manipulated to drive the implant through tissue. Two diced first piezoelectric composites are interdigitated and joined to form a second piezoelectric composite of reduced volume ratio and finer pitch. The system also includes at least one storage container disposed in fluid communication with the reclamation element surface and configured to store moisture and moisture-borne material collected by the reclamation element.

1459827617-f9a44152-e5f4-40d0-a64f-3d9687069e5d

Methods and systems for providing fine grain call admission control into a communication network are disclosed. Which is covalently linked by a hydrolytically stable bond to a first polymeric textile softening species and optionally emulsified with a second polymeric textile softening species. A completed instance of the process object may be created for the product. In other example embodiments, the device includes a mount to which the housing attaches in multiple positions, with the mount having a frustoconically concave back surface in one embodiment and with another embodiment additionally including mating cylindrically convex and concave surfaces of the mount and the housing. By maintaining increased decoder buffer levels, future rate reduction of the video data may be avoided or applied to

a lesser degree.

1459827618-4b333bb2-c8e2-45b4-83ab-8fb20c3ba8ad

The present invention relates to compounds of Formula ,and solvates, hydrates, and pharmaceutically acceptable salts thereof, wherein ring A, R1, R5 and R6 are as defined herein, useful as FLAP modulators. The signal is filtered with a matched filter as in conventional methods. The delivery catheter is advanced within the patient until its distal end is located adjacent to the desired insertion site, which is preferably the junction between a coronary artery and passageway formed in the myocardium between the left ventricle and coronary artery. An image processing unit performs an image process based on the image data in the rectangular areas read by the reading unit and the image data in the reference areas stored in the second storage unit.

1459827618-a91790c1-fd20-4a0f-85ee-d88aa9daeb80

A tool which includes a substrate which has a first surface and a second surface wherein the first surface and the second surface intersect to form an edge. A plurality of pixels are each provided with at least two sub-pixels to emit different color lights, wherein one field has at least first and second subfields divided and driven independently. The base includes a first portion that includes a non-magnetic material and a second portion that includes a magnetic material. The received PN clock signal is recovered by providing PN phase adjustments of the received PN clock signal.

1459827618-ad50e680-9077-4907-ba3a-5626eb00d73a

A field distribution correction element for positioning on an examination subject in a magnetic resonance system for local influencing of the radio-frequency field distribution during a magnetic resonance acquisition has a system of electrically conductive dipole strips essentially running in parallel, arranged on a carrier element. Lubricating oil is circulated by means of a pump force of the hydrodynamic groove. The screen is connected to the shaft and includes a second capillary medium suitable for receiving the liquid drawn by the first capillary medium and distributing it over at least a major part of the screen where it evaporates.

1459827618-c6de1aab-e12f-451c-ba55-e5ecc4f31cb3

The present invention relates to a process for preparing a surface treated mineral filler product, and to its preferred use in the field of plastic applications, and in particular polypropylene - or polyethylene -based breathable or extrusion coating film applications. The vacuum head may initially pivot to bend the edge of an individual page up away from the book, to aid in page separation, and then subsequently differently pivot to help peel the same page gently away from the vacuum head and flip it over onto the opposite side of the book. The sensor is configured to generate a signal indicative of a temperature of the power consuming device.

1459827618-ebbcc3ad-6374-4c72-8260-b5c5ff5d6d0c

A method of testing and an embedded probe-enabling socket are provided for implementing debug and testing functions. The assembly includes an elongated body having a proximal end and a distal end and a first lumen having a sidewall extending between the proximal end and the distal end, a first distal opening disposed at the distal end, and a first guide wire opening disposed proximally of the distal end and co-planar with the sidewall. In one embodiment, volumetric isotherms are calculated. When utilized with mechanically-driven percussive bit assemblies, where air is only needed to remove debris from a rock face, separately-provided air is delivered to the bit segments of the present invention as described above to clear the gaps of debris. A similar formula, based on both distortion and bit rate characteristics, is used to select the particular quantization value within the quantizer set for each video signal value being coded. The control device may operate to control an output power of the generator concurrently with

controlling the output power of the prime mover.

1459827619-3980c501-b4e2-4d2c-9eb7-3dbe03a76079

Disclosed is a wave powered electric generating device for generating electric power from wave-driven water body in a fast, easy, inexpensive, and efficient manner such that the set up has less configurational complexity, involves easy installation and maintainability. The plant displays good vigor and good tolerance to diseases, particularly with respect to Black Spot. With a sheet feeding apparatus, an image reading apparatus and an image forming apparatus constituted as described above, even in a state in which the document is set in the document tray, the set state can be easily canceled by operating the document regulating plate. A long term average of pathloss estimates is determined. A second aperture is also located on the top panel to accommodate a filling assembly.

1459827619-7416f2c4-2bed-4c3c-a608-b9af0b8b2503

A leak detection system for a pressurized pipeline used in conjunction with a fluid control valve having an electric actuator or with an alarm signaling device. Accordingly to the electrode apparatus, it is possible to prevent leakage and/or diffusion of hazardous or harmful substances into the ambient environment in the event of breakage of equipment, such as a waste disposal landfill, by setting the electrode apparatus around the equipment and by capturing the hazardous or harmful substances, or rendering them harmless by their redox reaction. Therefore, in consideration of peripheral traffic environments such as existence and absence of the preceding vehicle, the awakening degree of the driver is determined, so that determining accuracy of the awakening degree is enhanced more than that of a conventional method. A compensation unit may include a second modulator to generate a compensation signal proportional to the estimated frequency variation and modulated with a second modulating frequency. Once fastened thereto, the valve can be opened to provide for fluid passage between the first and second receptacle.

1459827619-909b23c3-734c-4081-8125-bcaa62c223a3

A method for improving a downlink signal received by a listener on a phone is disclosed. The packet's characters are sequentially selected and analyzed against the backref-NFA until a match or no-match between the packet and pattern is determined. The invention further relates to genetic complements of plants of variety CH675395.

1459827619-e79b532a-0126-4e66-ab8e-dd7844d1f1e5

A method and system for reserving a communication channel in a mobile telecommunication network. The clamp has a link pivotally connected to the handle and to a plunger. At least one of the elements is a reflective element that has a rotationally-asymmetric surface positioned in a path of the radiation.

1459827619-f98302b1-d977-416c-bb02-3babf655c9f4

According to some embodiments, systems for an integrated pump and cold plate may be provided. The prime mover of the invention provides substantially reduced drag in a flow of fluid, and an increased torque output, compared to prior art prime movers. The data is used in the inventors' model to compute a SPS porosity and an absolute permeability at a reference SPS pressure and a reference sorbed gas composition. Responsive to detection of a TLB purge during the set up or execution of a data movement operation, the claimed invention aborts the operation, and then enqueues corresponding completion status information to notify processors of the event. The rotatable axle of the lifter arm may be located above the upstream V of the log cradle member. An inspection device to be lowered in the borehole and then to be retrieved.

1459827620-5a3c67f0-57a1-4778-a9cb-7eeb4e9394da

Methods, systems, and articles of manufacture for managing possession of a financial card product are disclosed. The semiconductor device includes a

relatively highly doped substrate and an epitaxial layer formed over the substrate. The source address may indicate where the first routing protocol packet originated. Different wetted bow sections and retractable plates are used for starting side cavities. These extensions may be in the form of one or more of an operation, an event, a dataset or property code. Between the light receiving part and the measuring object is placed a polarization-state selector part which permits polarized light of a specified polarization direction to pass therethrough.

1459827620-609e632a-865d-4519-8879-ceefa2240c00

Nuclear matrix proteins which are characterized by a defined expression in tissue are provided. A front sight coupled to a forward end of a gun includes a top sighting point and optionally lateral sighting points. In the tray, by increasing a flutter occurrence speed, although the optical disk player has a high recordingreproducing speed, occurrence of flutter can be prevented, and accordingly it is possible to reduce error in disk reproducingrecording and prevent noise occurrence and wrong operation. The lateral section includes a microphone and a battery assembly, and is dimensioned to avoid occluding the ear canal while it is at least partially laterally suspended therein.

1459827620-75a85d3b-13a9-4f93-825a-7af8fd9aced9

A method for operating an amplifier module of a communication satellite involves saving at least one configuration parameter of the amplifier module in a non-volatile memory designed to store the configuration parameter when the amplifier module is not energized. The fan holder includes a plurality of separated brackets located at sides of the heat sink. The vapor phase growth at a low temperature yields a uniform crystal layer, and the ensuing vapor phase growth at a raised temperature yields a uniform crystal layer with good reproducibility in conformity with the first crystal layer. The air flow downward from the outside of the cylindrical blade portion is prevented by the annular base portion.

1459827621-4e0269a0-057a-461f-ba00-64224bdb1b85

A method for the control of flows particularly within an ATM switch transmission network with a distributed architecture. The signal paths on either side of the differential amplifier are made equal with equal loads along each path. The maintenance liquid contains water and at least one water-soluble organic solvent of alkanediols having a boiling point of 250\xb0 C.

1459827621-b2090c63-75a4-4340-9dfd-4118aa2f8aea

A radio frequency filter includes a substrate, first and second dielectric layers formed on first and second portions of the substrate, a ground plane formed on a third portion of said substrate, a carbon nanotube array, and first and second electrodes. The tubing may feature a formable outer section, and the expansion of the tubing may be achieved using a compliant rotary expander. Forward error correction comprising Turbo coding and puncturing achieves a smooth functional relationship between any measure of performance and the effective coding rate resulting from combining the lower rate code generated by the Turbo encoder with puncturing of the parity bits.

1459827621-bb3f9399-f209-483f-bec1-2fb230c71fe3

A composition for disinfecting an animal product comprising an electro-chemically activated, anion-containing aqueous solution. The seat ring of the control valve of the present invention is preferably fabricated through the use of a direct metal laser sintering process. The position of the plurality of cells includes a first dimension coordinate and a second dimension coordinate. The calibration may be updated after evaluating the calibration set for best calibration based on inclusion criteria with newly received reference analyte data.

1459827621-e0f884e1-5422-4201-a07b-6ba6037a1881

Embodiments of the present invention relate to methods and systems for making a

call. The dispenser includes a tape holder and a reservoir for storing drywall joint compound, wherein when the dispenser is placed on another dispenser of substantially the same configuration, at least one of the respective tape holders and reservoirs nest with one another. The method includes the step of providing a web server class library and a virtual machine class library.

1459827622-8c8ee285-dbd3-4b6c-8c5f-3783f05c137d

An orthotic insert assembly having a stationary heel post with a guide slot and an unattached rigid plate member with a depending peg that is received in the slot. Etching is performed to pattern the bottom electrode and barrier layer using a fluorine-based recipe resulting in the formation of a first fence clinging to the sidewalls. 70 Btu\inhr\inft2 at 73\in0 F. Further, a series circuit of the switching device Q1\ue2032 and the clamp capacitor C1 may be connected across the terminals of the switching device Q1. The effect effectively and exactly reading configuration information at a power-on stage is accomplished through the method.

1459827622-954dbf52-cf1a-48d2-9304-a25b44f34e1f

A network device is disclosed, in accordance with an embodiment of the present invention, which includes a transceiver adapted to transmit and receive information and an internal antenna and an external antenna connector coupled to the transceiver. The first-conductivity-type substrate has a first surface for light incidence and a grounding terminal. In a typical embodiment, the modified dielectric surface is created by treating an exposed dielectric layer of the interconnect structure with a gaseous ion plasma. A U-shaped lower tether is disposed in an upper portion of the interior of the protection portion; vertical direction dividing portions of the lower tether extend to the upward side from portions that correspond with both knees of medium-bodied occupants.

1459827622-a5b95235-b49d-4f99-899d-4ee3e6ea861b

As changes are made to a document, each change may be assigned an extended identifier comprising a globally unique identifier component and an integer component. Also provided are the seeds of soybean variety XB29K13, cells from soybean variety XB29K13, plants of soybean XB29K13, and plant parts of soybean variety XB29K13. A sum of absolute transformed differences value from a motion estimation of a signal being compressed using H.

1459827623-2647f773-a555-4691-a91f-0925cd2b74aa

A semiconductor packaging technique provides for a semiconductor device with improved electrical and thermal performance. The chemical delivery assembly is comprised of a chemistry housing that has a first receptacle and a second receptacle formed therein. An actuatable electrical switch arrangement is also disclosed.

1459827623-3007315f-cae2-4958-ac52-02e87419594b

A position measuring method and a position measuring system using the same are disclosed. The pitch material is useful as a binder material for various applications such as clay pigeons. The container has an opening at an upper end thereof and holds a material inside. Specifically, the dielectric material has a Qm higher than that of a so-called low-Qm material.

1459827623-a6d4c0c1-2d11-49dc-b46d-014bbac75870

The present invention relates to variants of parent Termamyl-like alpha-amylases, which variant has alpha-amylase activity and exhibits altered properties relative to the parent alpha-amylase. A hand-held vacuum shield has at least one vacuum inlet connected to a source of negative pressure. The first and second supporting surfaces each have lips. Another embodiment places annular conductive structures on the female receptacle.

1459827623-b87a97a3-4ff3-4d31-947a-6952f7513756

A processing chamber comprising a reaction vessel having an electro-reaction cell including a virtual electrode unit, an electrode assembly disposed relative to the electro-reaction cell to be in fluid communication with the virtual electrode unit, and an electrode in the electrode assembly. The device includes a heat-conducting substrate disposed in thermal contact with a high temperature region. The frame substrate accommodates z-interconnect ball pads arranged to align with corresponding z-interconnect pads on the substrate of a package. The valve body is capable of rotation with respect to the piston pump assembly to dispose both the first channel pathway and the second channel pathway each to two operative positions to receive the liquid, gel, or slurry and to two inoperative positions blocking fluid communication with the liquid, gel, or slurry. A well is associated with the base, into which water is received from the base before being circulated into the bowl.

1459827624-28f55d9a-3e11-44c5-a51e-e63dbdf0b112

A scaleable network monitoring system is discussed. Thus, the flow control valve has a simplified construction and is made easily, thereby decreasing costs of fabrication. The body structure may have a variety of shapes, including planar, cylindrical, conical, and the like.

1459827624-58ebea49-1534-4614-bf41-78e3cb63afe9

An image capturing lens assembly includes, in order from an object side to an image side, a first lens element, a second lens element, a third lens element, a fourth lens element and a fifth lens element. This hybrid power output system is compact in structure, can increase the power efficiency and reduce the fuel consumption, and can realize multiple drive modes. Each set comprises first electrode lines at the opposite boundaries between the lens area and adjacent lens areas, and at least a first pair of electrode lines disposed between the opposite boundaries and symmetrical about the centre of the lens area, wherein each set comprises at most six electrode lines between the opposite boundaries. A Web site is provided for users to access the programs.

1459827624-f61c6ceb-7946-4064-8011-dcea8775250a

An electrosurgical forceps includes a shaft having a pair of jaw members at a distal end and movable about a pivot from a first position and disposed in spaced relation relative to one another to a second position wherein the jaw members are closer to one another for grasping tissue, a movable handle that actuates a drive assembly to move the jaw members relative to one another. A sense current flows to substantially a lamination layer direction of the lamination layer structure portion and the lamination layer structure portion has disposed thereon a high-resistance layer which crosses a path of the sense current, whereby an element resistance can be increased and a magneto-resistance change amount can be increased. A control path is implemented using processor components to increase resource efficiency. In addition, the shelving unit can be folded into a smaller volume and reduces the cost of packaging, transportation and storage of the shelving unit. The present disclosure further relates to methods for preparing the copolymer compositions and shaped articles comprising the copolymers.

1459827625-5efd98e5-db12-432b-89aa-5638a2f18073

A pivotable bracket is provided such that a constant moment of friction is present at the hinge. The reservoir, which is capable of containing water and compressed gas, has a horizontally sloped bottom wall and a trough located at the bottom of the bottom wall. The member is placed into the said tube, fixed with adhesive tape to the hinge. Each such implanted device is configured to be monitored and/or controlled by the SCU via a wireless communication channel. The binding member includes is comprised of a pipe, a bar or a rigid block.

1459827625-c7647963-aa29-4d2d-9f8c-6e8752be7ef6

A control method adjusts fuel injection into an engine having a variable

compression ratio. A capability is provided to automatically compensate for torque disturbances caused by a photoreceptor belt seam crossing a mechanical device in a photoreceptor belt-based transfer subsystem in an image forming device. 0.5 to 1 megg, a neutralizing agent content of from 0. The tooth defines a blind cavity having a second predetermined configuration and opening to a rear of the tooth. For example, the methods and materials relating to the use of cAMP inhibitors to treat liver conditions are provided. First and second power supply networks electrically connect the power supply with the first brake component and the second brake component respectively.

1459827625-ea40b064-a661-4aa9-a827-639b4646be26

A fastening spider and a method of fastening a wear-resistant lining element to a support surface, over which wear-resistant lining element material in the form of pieces or particles is intended to move. A narrow stem comprises a plurality of holes running throughout the stem. Each of the sub-pixels includes a first electrode, a second electrode opposite to the first electrode, and an organic light emitting layer between the first and second electrode. On an interconnection circuit pattern of the assembly substrate are formed stud bumps. The active layer carrier concentration, mobility, and interface with other layers of the TFT can be tuned to predetermined values.

1459827625-f2285d8f-b840-4c70-97e9-829397d9b0bd

A convertible gas piston conversion system for the AR-15, AR-10, or their variant rifle platforms is provided to convert the platform from a direct impingement gas system to a piston driven operating system. The channel system has a channel having at least one entrance for supplying a cooling medium to the interior of the channel. The different pitch values can be multiples of the minimum placement resolution of a production tool to be used to produce the Bragg grating. The second set of edges is positioned outside the first set of edges by a pre-defined distance. The present invention, therefore, provides for a higher quality and more efficient spotting of movable mold cores than is currently possible. A memory address translation data structure may be accessed, for example, in connection with a memory access request for data in a memory page, such that attributes associated with the memory page in the data structure may be used to control whether data is swizzled, and if so, how the data is to be formatted in association with handling the memory access request.

1459827626-9f8e72ed-9f32-4e6a-94c0-fdf3da2b1768

A silicon-based photovoltaic cell is disclosed having a red light conversion layer that absorbs ultraviolet rays, blue-purple or yellow-green light of the Sun's solar radiation and converts the absorption into a red, dark red and near infrared subband radiation. The fiber optic network also includes a fiber distribution terminal including a terminal housing, a terminal termination region and a terminal pool. The server system sends the location to other mobile systems in accordance with the permission criteria, with or without a request from another mobile system for the location. The cooling water also flows through the interior of a duct tip at the forward end of duct.

1459827626-aabbfa18-4dbe-47cf-9108-ec7c899df73b

The method that is disclosed enables specific information network traffic flows to retain packet ordering in a packet network in which multipath techniques are used. The compounds of the invention are useful for treating immunological conditions. Each inkjet print head ejects ink from a corresponding ink supply in droplets as needed and aimed on a media. A tax lot is created for the identified at least one security to identify a total value for the at least one security, and the method determines whether the virtual portfolio complies with the asset allocation model. An illustrative embodiment of the fluid meter includes a meter housing having a housing interior, a rotatable paddle provided in the meter housing and a counter coupled to the paddle.

1459827626-b77bf992-4008-4760-8087-854ea11be4c8

An array substrate of the present invention includes a storage capacitor that has a storage-on-gate structure. To prevent formation of a burr to an inside of the recess during formation of the mating surface, an entirety of at least one edge segment of a peripheral edge of the recess opening on a circumferential end surface of a semi-cylindrical member as an unprocessed body of the bearing main body, the at least one edge segment intersecting with an axial direction of the member, is chamfered. Delayed electromagnetic wave, which is generated by particle beam, is summarized with the optical field, which is transformed on said structure. The dynamic optic, when activated, provides the additional needed optical power for the wearer to see clearly at a near distance. Solder connects the bypass diode, the conducting portions, and the photovoltaic cell. A computer device reads the digital output and calculates the absolute value of the capacitor based on the counter value.

1459827627-4124c5d2-f638-472f-a020-88a965ec8956

A speech recognition system for processing voice inputs from a user to select a list element from a list or group of list elements. The reduction of noise is done by non-conventional methods of connecting hardware shielding techniques. Each of the notching devices is movable, so that the relative position of the two notchers is variable.

1459827627-b9c94ad7-33cf-434d-baff-d1b58743412c

An image sensor includes a pixel array, a bit line, supplemental capacitance node line, and a supplemental capacitance circuit. The pressure fluid device includes a pressure fluid supply in the interior of a movable drive translator. At least one embodiment of the CSA system and method allows a single analog-to-digital converter and single RF demodulation chain to be used for an arbitrary number of sensors, thereby providing scalability and eliminating redundant data acquisition hardware. In addition, a first conductive layer is arranged longitudinally in each of the capacitorresistor regions so as to contact the left and right edge portions of the unit cell. At this time, after wiring lines connected to the defective device are cut off, the repair device is electrically connected to portions of the wiring lines, the portions of the wiring lines being located at positions nearer to the drive circuit side than the cut-off positions of the wiring lines.

1459827627-baf5200f-8743-4b23-9c37-e6efd5c3cc66

A display device has a driver including a level converter formed of polysilicon MISTFTs. The contents are divided into a plurality of content groups. The said communicate system can dynamically allocate the available bandwidth to thereby serve subscribers with more control channel and/or control channel bandwidth and/or communication channels and/or communication channels of greater bandwidth as the need presents itself.

1459827627-e5281c7a-74e7-41d8-bdbf-de747690b9e8

A device having three evaporation sources and a unit for moving the respective evaporation sources in one chamber is used, whereby it becomes possible to increase efficiency of use of an evaporation material. The longitudinal frame component is formed at a first length when used on a first vehicle type and formed at a second length when used on a second vehicle type. Calibration logic provides for setting an operation value for a parameter of the communication channel, such as by executing an exhaustive calibration sequence at initialization of the link.

1459827628-a1a182c2-1bfb-426d-baea-5e4df3655db2

A device for testing pneumatically operated brakes of a first vehicle and of a second vehicle being connected and having interconnected brake systems. Elongated bores, interfaces, or terminations packed with elastic material provides relative movement between the devices to allow spinal flexion and extension. Such logless

component can avoid logging at a middle tier, and exploit logging that is already performed at a client side and/or various end point servers.

1459827628-bce8ba90-2da7-4ec5-a5f0-31aaecc0cb2a

A method and apparatus provide an integrated circuit package with improved heat dissipation and easier fabrication. The present invention solves the above objects by providing a porous crystalline saccharide having a number of pores, a process for producing the same, comprising the step of keeping hydrous crystalline saccharide at an ambient temperature or higher in an organic solvent for the dehydration, and the use thereof. The stacking unit is raised by the raising unit and is lowered when the sheet storage unit is drawn out. The dynamic bias circuit can include an error amplifier, the error amplifier generating the gain stage bias voltage responsive to the current source feedback voltage.

1459827628-c2104024-9975-4ab0-8d6f-ab5bc306e135

The present invention is an improved bow holder. Therefore, even though a high frequency clock signal is inputted, the word line is disabled and precharged when a cell node is charged enough. Configuration information is imported to the network device.

1459827628-c7c3ef2a-31ab-444d-a3c5-b262efa6567e

A portion of a traffic channel message is detected and decoded to determine if a rapid handover procedure may be used. When processing a read or a write command, a scheduling arbiter examines a bus schedule to determine that a read-read conflict, a read-write conflict or a write-read exists, and allocates an available memory space in a read buffer to store the read data causing the conflict until the read return data transmission can be scheduled. The interior hollow has a large diameter portion, a medium diameter portion and a small diameter portion. The method comprising exposing the concentrator to the biological and/or chemical materials in an environment and activating the superlattice structure optically or electrically followed by the detection of the biological and/or chemical materials. In a third embodiment of the channel autocorrelation tracking technique, the present invention reduces the phase change that can occur at receivers. To achieve this, the stack is dynamically loaded by the host to a reserved memory region, and a vector of the target is set to point to that reserved memory region.

1459827628-f8ac02e7-dc0e-4b5f-a9e6-951ab7fd83e8

A deck support system for supporting cargo in a freight compartment is provided. An N-type memory transistor and a P-type memory transistor are formed over a substrate. Between the first and the second EDFs, a variable attenuator is arranged. The present invention has some advantages in that it prevents the cutting of the Al layer on the concave corner of the second metal pattern layer and the exfoliating of the second metal pattern layer from the first metal pattern layer. Because output power generally scales with output area, this increase in output area results in higher possible output powers.

1459827629-167466ca-baf0-4c0d-a688-427b2b812d9a

A metal coordination complex of a biologically active moiety and a metal is disclosed. The interface may contain one or more different types of gateways, including a PSTN voice gateway, an analog modem gateway, and others. The spring segments are configured to flex to exert spring forces on the component contacts, and to compensate for variations in the size or planarity of the component contacts. The device can be configured as an illumination angle variation device.

1459827629-287e7a2c-8b74-47ec-bb32-3d622716caf3

An elevator car comprises a cover extending over at least a portion of the top surface of the car. The wireless telephone and the vehicle have corresponding mating units. The optical fiber of the back plane includes a terminal end. At least a portion of i) an extension field of the data packet and/or ii) a padding field of

the data packet is set to the checksum trailer value.

1459827629-4d7946f9-386b-4073-9df5-9015a282c328

An antenna includes a dipole feed, a first dipole element connected to and extending outwardly from the dipole feed, a transmission line extending from the dipole feed in an opposite direction, and a flexible electrically conductive sleeve surrounding the transmission line and connected to and extending outwardly from the dipole feed. The expansion joint construction permits position changes of the building parts with respect to one another. As a result, it is possible to control the apply pressure of the first clutch or the second clutch and thus rapidly execute a shift. A terminal monitors full paging channel only after a quick page message has been received on the quick paging channel.

1459827629-bc58f403-3aae-4b96-9a69-4558689ff7bb

A high level Operational Support System framework provides the infrastructure and analytical system to enable all applications and systems to be managed dynamically at runtime regardless of platform or programming technology. A motor and a generator accelerates and decelerates the flywheel for storing and retrieving energy. Each simulated player is dealt a hand of cards pursuant to a predetermined card game selected by a game player. The selection screen may cause a user to select a print setting from among the actual print condition. Accordingly, the cutout can provide clearance for the rotation of the hangable tab beyond the hinge connection.

1459827630-45b4983f-59df-40c3-b375-4d1db745b066

A method, apparatus, system, and signal-bearing medium that, in an embodiment, receive cues, one-time passwords, and a presentation order. Data transmission on the forward link is time multiplexed and the base station transmits at the highest data rate supported by the forward link at each time slot to one mobile station. The housing assembly also includes a metal sleeve located within the interior region of the plastic enclosure, and a magnet structure located within an interior region of the metal sleeve. The thermosetting monomers may advantageously be employed to produce low-k dielectric material in electronic devices, and the dielectric constant of the polymer can be controlled by varying the overall length of the arms. The epicardial patch is dimensioned and compliant to substantially avoid impeding myocardial functionality when affixed to the area of the epicardial surface. sec to produce a microstructure that provides a strip having a yield strength of at least 200 MPa.

1459827630-772b0821-2cc1-4414-808f-039a9ee81846

An apparatus generally comprising a circuit and an interface device is disclosed. The laser slab has a trapezoidal cross-section in a direction perpendicular to the optical-quality interface. Time points on the waveforms are marked with pointers so that users can easily visualize the relationships between different signals. Each of the plurality of times slots are capable of having an on value or an off value.

1459827631-76a35d33-f222-4a5f-ad98-743f2bf00772

It is analyzed whether print data includes first image data common between pages and second image data different between pages. According to the invention, in order to correct a wavefront deformation, at least two optical elements each have an optically active surface locally reprocessed aspherically. However, prior to the deposition of the second metal layer, the protective layer is exposed to air. Information may be retrieved from or delivered to the removable device.

1459827631-9853463e-5a1c-4d5c-99b9-893fb818669e

The invention comprises a system, catheter and method for measuring the cross-sectional areas and pressure gradients in any hollow organ, such as, for example, blood vessels. A given mailbox in the system can be shared between telephones on multiple ones of the networks in question. The knife blade is pivotally retained in

a retainer housing that is secured to the carriage.

1459827631-b18dbb98-4291-4fe7-b5d1-67a07ebd7a2f

Graphic User Interface for Data Processing Device A handheld data processing device has a touch-sensitive display screen and interface means for generating a graphic user interface on the screen, the GUI having one or more image elements, each representing an input. The bookmarking apparatus includes an intersecting first path and a second path, a sheet bundle conveyance device, a cover sheet conveyance device, a first and second path cross-over unit, and a joining stage. Therefore, the hybrid architecture of low complexity can be attained.

1459827632-31837495-9250-424e-9f22-12b21b8c45f8

A circuit is described for operating an auxiliary unit for starting internal combustion engines via a starter battery. The blanket belt travels about guide rollers which have a lesser mass and/or a lesser diameter than the form cylinders which offset the colors onto the blanket belt. A first photoresist layer is formed to cover the logic region, and expose an inter-metal dielectric layer adjacent to the second conductive layer in the memory cell region. A fastening element, which, by a contractive force in the mounted state, connects the wall section with the protuberance. The bearing and pressing device includes a spring unit, being supported against a receiving part mounted to rotate about a rotor axis. Thereby, four chip packages are provided with this design, the layout of conductive traces formed within at least one of the flex substrates is meandered to compensate for length differences with respect to the other flex substrate.

1459827632-546b19a3-cf76-4655-9f5c-b9f7c6872c8e

A monolithic integrated circuit includes programmable processing circuitry. The ferroelectric memory structure includes a substrate, an insulating layer formed on the substrate, a plurality of oxide electrodes formed on the insulating layer, a ferroelectric layer formed on the insulating layer and the plurality of oxide electrodes, and a plurality of metallic electrodes formed on the ferroelectric layer and corresponding to the plurality of the oxide electrodes. According to one embodiment, systems and methods are provided that analyze various parameters that are derived from the unified data collection system to calculate a QA score for the radiologist. Moreover, the flash memory storage apparatus further includes an extra ground lead electrically connected to the ground lead or a protrusion on the substrate, such that the ground lead first electrically connects to a host when the flash memory storage apparatus is plugged into the host.

1459827632-68c52805-d9b1-4c89-8fdd-6acaefe60a70

A cleaning material is applied to a surface of a substrate. The method includes adhering a first base member having the pattern region and a second base member with an adhesive material, and sealing an exposed portion of the adhesive material by a metal film. Through the method and the communication node, lossless bandwidth adjustment in a point-to-multipoint OTN asymmetric bandwidth carrier system is implemented. 55 gram per cubic centimeter of volume.

1459827633-9e235492-5908-4cf7-b4a9-1a2dc605ae2d

A system and method of managing traffic flow in a communication network is provided. A description is likewise given of a process for decreasing the content of unbound glyoxal in glyoxal-treated polysaccharide derivatives. The unit includes an array of radio opaque fiducials arranged for use in image calibration for an imaging system. The base burners operate along with vertically firing hearth burners and optional wall burners in the upper portion of the firebox. Increased flexibility for design and operation of the power station is achieved in that an electronic decoupling apparatus, which decouples the two operating frequencies from one another, is arranged between the generator and the consumer.

1459827633-f1210b16-7085-4553-b3b5-aa2a8e264e1e

With first, second and third current exchanger circuits cascaded, a current in proportion to a difference between an ambient temperature  $T_a$  and a reference temperature  $T_r$  is input to the first current exchanger circuit. A non-venting pulser is disposed in the drilling fluid in the supply line, and the non-venting pulser is adapted to generate pressure fluctuations in the flowing drilling fluid. Embodiments of the invention are comprised of elastic fabric to provide a cooler, better fitting garment, that holds ballistic armor inserts and trauma plates securely in position, enhancing the comfort and security of the wearer. The second stage includes a DC-to-DC converter connectable to a battery.

1459827633-f1b67904-a965-4d92-a6e5-e563f093ade8

Even in an apparatus connected to another apparatus which periodically transmits a command, a mode transition such as transition to a power saving stand-by mode can be performed. During operation an input block of size  $K \times 2032$  is received. The bone plate incorporating internal sliding elements containing a threaded receiving hole for bone screws that have a correspondingly threaded screw head. A monitoring device measures a suitable parameter, such as impedance or temperature, and indicates when the tissue between the electrodes has been fully ablated. The ratio of the total sense current and the switch current will be independent of process variation and temperature.

1459827634-5038bbef-9b90-4593-b67a-e26bc6966fbf

A system, method of automated testing and control of networked devices is provided. The auxiliary section has guides for fitting an advertising support. Most preferably, the HTI device includes a casing which contains the dual modal propellant and a nozzle through which combustion gases generated by the ignited high burn rate propellant may be discharged thereby entraining ignited particles of the low burn rate propellant. In response to the extracted communication information, the decision maker decides whether the other transport channel should be enabled, and provides to the physical layer an indication of its decision. Upon detecting a buffer underflow, a fill operation is performed on the buffer and the playout delay is modified to provide a sufficient number of frames to be played out. A hoop may be fitted and compressed around the segmented casing.

1459827635-25cc1cf7-115d-43c2-baaf-b075efcb493c

A new method of process control for fusion welding maintains a controlled weld pool size or volume, for example in some applications a substantially constant weld pool size or volume. The apparatus includes a housing member for positioning the ignition assembly on a lid of the drum. These constituent features are provided in a layer configuration to realize high portability and ease of development. Other aspects relate to enhanced position determination, adaptive coverage enhancement, local mobile networks, open access femtocells without a backhaul, and local broadcast of media through utilization of femto enabled devices. The movement of the specimen under the beam of incident electrons may be continuous, and data for multiple image pixels may be acquired in parallel using a time delay integrating detector. The invention includes, for example, prosthetic heart valves, annuloplasty rings, and grafts, having enhanced biocompatibility and biostability.

1459827635-8c9a5a5e-f42a-4429-acf6-ccf937ed8a66

A network device and its mode of operation. Decentralized storage and multi-access paths provide complete sets of data without dependence on a specific or pre-defined data source or access paths. Each pin has a head against one of the end plates, and each pin has spaced apart grooves thereon extending from the other end plate. This arrangement allows the studs to move independently of the sole and of each other to provide greater traction capabilities to the article of footwear. Thereafter, the data is analyzed to reach conclusions regarding the material samples.

1459827635-9b2a7ec7-94c6-4c1d-adf2-bbc9982caf27

The subject of this invention is the presentation of a three dimensional glass

sculpture depicting realistic subjects such as flowers, leaves, birds, animals or abstract shapes in a decorative window. The use of such a shape enables the power threshold for forming self-maintained electron avalanche discharges to substantially increased and satisfactory filtering properties to be obtained. The parts are welded to each other on the periphery of the projecting part and receiving opening. This translated location may in turn be passed to an application executing on the device. The compositions may be utilized to treat or prevent disease in aquatic animals such as farmed fish or crustaceans.

1459827636-bf0b401b-009e-4d2c-828d-2fbf4d004434

The present invention provides a novel compound having FGFR inhibitory activity or a pharmaceutically acceptable salt thereof, and a pharmaceutical composition containing the same. The first m-sequence and the second m-sequence are modulo-2 added to form the I branch of the primary scrambling code. In order to reduce computations related motion metric derivation, the motion metric is based on sub-images corresponding to a current frame and a previous captured frame instead of full-size images. The picking member has an outer surface section that includes a high friction portion axially adjacent to a low friction portion.

1459827636-eb41c241-cf20-45ff-bf68-ca731f666085

The invention discloses a novel MOSFET device fabricated by a gate last process and its implementation method, the device comprising: a substrate; a gate stack structure located on a channel region in the substrate, on either side of which is eliminated the conventional isolation spacer; an epitaxially grown ultrathin metal silicide constituting a sourcedrain region. A header analyzer separates a header from a packet received via a network and outputs a lookup sequence. The spacer's front end may be curved. The support brackets are coupled to one or more flexible bands and utilized for clamping the duct between the support brackets and the flexible bands. In some embodiments, the method receives a command to switch from running the navigation application in the foreground to running another screen view in the foreground.

1459827636-f49da805-b321-43da-90d8-8aa5775389a6

The present invention relates to a high-voltage electric double layer capacitor, and more particularly, to an EDLC in which a surge voltage and an operating voltage are enhanced by improving the structure of a unit cell. The transistor also includes a first conductivity type contact region provided in the second conductivity type channel diffusion region, and an electrode wiring connected to the first conductivity type source contact region and second conductivity type source contact region. The nanocomposite mat includes a reflectance-enhancing coating conformally disposed around an outer surface of the fibers, having a refractive index different from the reflective fibers, and which increases a reflectance of the substrate in the visible spectrum. The SIOS instruction set allows the execution of both simple and complex operations, which speed up application development since programmers need not be concerned with the microprocessor-specific details, and can concentrate on developing intelligent operation routines according to the requirements of the problem at hand. One end of the shaft member is fitted into the second hole.

1459827636-f4de5a28-ebc7-4c30-a241-e39c47146073

The present disclosure relates to facilities, systems, methods and/or catalysts for use in chemical production. These novel compounds inhibit the processing of amyloid precursor protein and, more specifically, inhibit the production of A $\beta$ 2-peptide, thereby acting to prevent the formation of neurological deposits of amyloid protein. The suction tube extends to the upper end of the sealing cuff and opens into a recess on the outside of the tracheostomy tube through a side opening oriented at right angles to the radius of the tracheostomy tube. The securing member is coupled with the utility bed adjacent to the rear seat.

1459827637-0e766941-d3e4-4fed-868e-649e6864ff31

Methods, systems, and media to improve the manufacturability of cells and structures within cells of an integrated circuit are disclosed. A rear end portion of the cam groove is open at a rear end surface of the cam ring to serve as the accommodation section, and the cam follower is disengageable from the front cam surface in the cam groove against a biasing force of the biasing device when the cam follower is engaged in the accommodation section. The pneumatic tire of the present invention is obtained by using the rubber composition for the tread rubber. The sensor employs a thin film of photoluminescent copolymers, which is stable in air, water, acids, common organic solvents, and even seawater containing bioorganisms.

1459827637-1f1027fd-7898-4699-a243-6ac1e3269314

A switching control circuit for a switching power converter utilizes an oscillating signal that causes reduced electromagnetic interference by the power converter by way of modulating the frequency of the oscillating signal within a specified frequency range. The method defines a routing graph that has several of nodes on plurality of layers, where each node represents a sub-region on a layer. A component is disposed in the process chamber so as to be heated by the plasma when formed. The input sampling rate is based on a first clock signal and the output sampling rate is based on a second clock signal, wherein the first and second clock signal are independent of each other. A method of making a fluid pump for pumping a volume of fluid under pressure from a fluid source to a fluid dispenser.

1459827637-93d1c59a-93a9-4701-bcf1-d17ac16c7a89

In a method and apparatus for influencing transverse dynamics of a vehicle, for a chassis intervention is carried out when an intervention condition is met. A focus can be scrolled through the rows of the display and a row selected. The invention is designed to provide a report with test results. The pre-call message is played to the one or more intended recipients during the ring back period in response to determining the incoming call is from the one or more intended recipients using the identifier. The pharmaceutical composition can be administered to a patient as a liquid, and gels after administration into a sustained release drug delivery system from which the biologically active botulinum toxin is released over a multi-day period thereby localizing the drug as a depot and controlling release to enhance the therapeutic effect per dose.

1459827637-dc459b31-1441-4b21-9f35-72d76820e0e4

Methods and apparatus are provided for providing PCI Express support. The amplifier can be operated at a low or no power level during an integration period of a photodetector to reduce power dissipation. In general, the light modules are adjustably coupled to the luminaire via a coupling structure that provides one or more adjustment mechanisms for adjusting the orientation of the light modules for adjusting an output directionality of the luminaire, while substantially maintaining the spatial profile of the luminaire. The image fixing unit includes a magnetic flux generator, a heat member, a magnetic flux adjuster, and a controlling member. In many cases, the copying costs are eliminated too.

1459827638-1338df78-cb96-4429-8ca6-efc2e090ebf2

Embodiments are directed to providing access to a resource over a network. Depending on a context, the wireless device changes its operational behavior in accordance with a defined profile, when a context parameter changes. Additionally, in the case where, from the detection unit, a signal of the same rotation direction is continuously inputted twice or more times, a determination that an internal combustion engine is in a stop state is cancelled. A determination is made, based at least in part on the screen data, whether any video assets in the video mosaic page should be blacked out. The first and second connecting members cooperate in the open position to fixedly connect the lid to the body so that the dispenser is stably placeable on a horizontal surface in the open position with the body

sidewall being angled to the horizontal surface. The polypeptides can be used to prepare vaccines against mycobacterial infections and for serological diagnosis of mycobacterial infections.

1459827638-5adabef2-1145-481c-bf32-7cd00002fc65

A point-of-sale self-checkout terminal includes a code reader device for automated entry of a product identification code present on items for purchase and a customer input device for receipt of data from a customer. The 100-yuan banknotes recognized by the recognition unit are transported directly to the to-be-bundled money stacking section through a transport path, bundled into a batch by the bundling device, and stored in the bundled money storage chamber. The method and device are useful for rearchitecting the spine. Said conical recess is provided with slots at its sides for connecting with a socket. The mobile base includes wheels and a foldable frame carrying the juvenile seat. Each recess is configured as a slot which extends in parallel relationship to a circumference-proximal side of the permanent magnets.

1459827638-f9308e32-875d-4549-8efe-db150501774c

An ink jet ink including a self-dispersible pigment, a salt, a polyoxyethylene alkyl ether and a water-soluble organic solvent. The ultrasonic detecting element detects an ultrasonic wave. The system determines whether an entry in the buffer contains valid information. Thereafter, the changes in magnetization are detected by a pair of solid-state magnetoresistive sensors arranged in gradiometer mode.

1459827639-41a762a5-d41f-44d1-804a-d70bfae07e84

A photonic guiding device and methods of making and using are disclosed. When a single tester channel is to access multiple IC pads, the probe card provides a branching path linking the channel to each of the N IC input pads. The internal combustion engine drives the generator device. A second capacitor is coupled between the third conductive path and the second conductive path through the first inductor to provide a second series inductor-capacitor circuit that shares the inductor of the first series inductor-capacitor circuit. The supporting unit 360a supports the rod integrator 300 by pressing of the screw 362a along the direction of the diagonal of the rod integrator 300 via the supporting member 361a. The zinc salt may be zinc nitrate hexahydrate, the first additive may be benzyl alcohol and the second additive may be urea.

1459827639-5572b006-3fd0-4d83-a3bd-f02502a4c29c

A nesting chair includes a self-supporting base with a pair of leg members. The animal control device is deployed such that the target pest animals in the protected area will be attracted to touch the device and so will contact the electrodes, receive an electric shock, and be frightened from the area. The fiber optic module can be hot inserted into a module cage which has guide rail slots for mating with the guide rails of the fiber optic module. If the optical element is not cleaned within a predetermined time after the warning, a kill command is executed to prevent the player from cheating. The memorabilia system and method are operable to accommodate at least five generations of infant home journeys. Receiver circuitry receives and separates an upstream signal from the subscriber line into an upstream voice signal and an upstream data signal.

1459827639-aaaa9359-d370-496f-98f2-a9a49d159810

A thin generally rectangular package for containing a farinaceous product such as dry mixes, cereals and the like including a portion that is removable from the carton with out opening or destroying the integrity of the package. A plurality of OELDs have the same shape, and gradation can be implemented by controlling the number of OELDs that emit light. In addition to authenticating the good, the system may also authenticate the user and provide different information to different users and/or limit information that is provided unauthenticated users. Finally, a master controller for controlling the operation of the card transport mechanism is

installed. Alternatively, the silicon carbide layer may be deposited by reacting a gas mixture comprising hydrogen or argon and an organosilicon compound in a plasma. The cooking utensil retaining apparatus includes a flat elongate member with a plurality of bends designed to be releasably attachable to a user and accessibly holding certain cooking utensils while working.

1459827640-039c0214-724e-43de-95d7-b851dbff703d

A system and method for aggregating services within a VoIP network. The black matrix divides a plane surface of the transparent substrate into pixel or sub-pixel unit to form a light-shielded area and openings above the plane surface. Accordingly, an existing drive or apparatus for recording and/or reproducing data on and/or from an information recording medium can smoothly record and/or reproduce data on an information recording medium that is of a higher version than the existing drive or apparatus.

1459827640-5f116951-32b4-47e1-a9ac-adbc43998675

An inlet air dynamics characterization control system for an internal combustion engine includes a first module that estimates a future firing event manifold absolute pressure and a second module that determines a MAP cycle difference based on the future firing event MAP and a previous cycle MAP. The transistors include a gate and diffusion layers. The spectral estimation determines a dominant frequency component in the frequency response estimates and derives the measured arrival time based on this dominant frequency component. One of the three-terminal regulators is configured as a voltage regulator. The thermoplastic elastomer composition comprising.

1459827640-d73cd58f-2ad5-4185-ad86-a66df0db4480

An electrical generator is driven by gravitational force provided by a plurality of pairs of water tanks. A total magnetic field is measured during a calibration routine prior to a drilling procedure. The pipeline register stores a data validity flag and a WRITE control flag to control writing data into a general purpose register unit. The method also includes heating the suspension from a side of the suspension opposite to a side of the suspension in contact with the photo-thermosetting adhesive with a heated gas-stream. However, in response to detecting that the prediction is incorrect, misprediction behavior is inhibited. The flux of light emitted from the light source is entered into a deflection surface of the deflecting means at a limited angle in the sub-scanning section and, by setting parameters in a manner that satisfies a given condition, the pitch unevenness can effectively be reduced in the optical systems.

1459827640-d8708966-fc5a-41ea-ace5-9386cb61cf4b

Compounds of formula I are provided: wherein each of R1, R2, y, m, n, and Ar are as defined, and described in classes and subclasses herein, which are agonists or partial agonists of melatoninergic receptors. Said pairs of rails each consist of two U-shaped rails, an upper rail and a lower rail. By means of signal recognition electronics of the circuit arrangement, the output signal is transformed into a recognition signal representative of the signal class. The pores formed inside the carbide-derived carbon can be expanded during the activation process in the preparation of the carbide-derived carbon-based anode active material.

1459827641-872bd45c-1854-4cfb-80c8-cd071ea42ced

Embodiments of an invention for inter-processor attestation hardware are disclosed. The fiber laser system includes a focusing optic configured to focus the output beam of the system so that it propagates through an elongated slit formed in the bottom of the housing. In one or more embodiments, the birefringent layer alters the polarization of the light reaching the viewer's eye if the user is wearing polarizing glasses or lenses so that less light from the display is blocked. Wireless stations are load balanced across APs so that user bandwidth is optimized. Thus, the metal oxide having a superior step coverage and a high dielectric

constant may be formed using the organic metal compound by an atomic layer deposition process. The semiconductor memory device further comprises common data bus line pairs each connected via switch transistors to the corresponding memory blocks, a readwrite amplifier for performing a data readwrite operation through the common data bus line pairs on the memory blocks, and an SRAM cell electrically connected via switch transistors to each common data bus line pair.

1459827641-96d664ec-cfa3-439d-a8b3-c4839b6d7bbc

A communications system may include a first wireless communications device communicating based upon a first wireless communications protocol, a second wireless communications device communicating based upon a second wireless communications protocol different from the first wireless communications protocol, and a wireless base station. The coating composition may be applied by a spray coating technique or a roller technique. This step is repeated for every independent parameter.

1459827641-cd458fc6-2b79-4570-94ee-d0eacbc3c2ac

A bale transporting apparatus includes a frame, and ground engaging apparatus mounted on the frame for supporting the frame above a ground surface and permitting movement of the frame across the ground surface. The tester records a specific magnetic pattern onto a magnetic disk in a magnetic transfer method. The magnetized magnetic layer or a polarized electret material provides a predetermined magnetic or electrical field pattern. Additionally, the top blade has an outwardly tapering shape, such that upon completing a cutting operation a remaining portion of the severed railroad rail may be held and clamped by the jaw set for transportation or further processing. One of the plurality of register stack frames is a current register stack frame. The present invention relates to a method of manufacturing monodisperse spherical metal particles characterized by passing liquid metal through a porous membrane so as to disperse the resulting liquid metal particles in a continuous liquid phase.

1459827642-3c7c05c8-8a2d-4674-9816-c5e79a07fcbb

The present invention provides an apparatus and method of reporting logged measurements in a wireless communication system. The parallel-to-serial converting unit converts parallel signals into a single-ended signal. The relay controller is configured to open or close the first relay or the second relay in response to a power requirement indication. ELISA plates are described that permit the detection of anti-lipoidal antibodies and that permit the co-detection of nontreponemal and treponemal antibodies in biological samples.

1459827642-97721dbd-59a4-41eb-ab2e-87a3b3d4ae1a

When a storage capacity of a file server is expanded using an online storage service, elimination of an upper-limit constraint of the file size as a constraint of the online storage service and reduction in the communication cost are realized. Pivotaly attached to the first and second gripping arms are separately formed first and second link members each having first and second ends. The combination determination unit compares the detection information of the mobile object sent thereto from each of the mobile object detection unit with a predetermined condition to determine that a target mobile object is detected-when the detection information satisfies the predetermined condition.

1459827642-b290531c-6da5-4731-b753-247f95f5e36f

A system for identifying digital content related to a portion of a block of text receives, automatically or via input by a user, an indication of one or more words included in the block of text. The belt loop cover is preferably attachable to and detachable from a belt loop and provides a decorative element for clothing. The y-direction stutter count provides the estimate of pixel stutter from pure statistical data variations. A user display preference based on one or more of the header attributes is received and the e-mail message is displayed on a display

device in accordance with the received user display preference.

1459827642-caff849d-0adc-40fb-a802-9b0946220858

There is provided a system for the delivery of inhalable medicament comprising a monitor for monitoring the breath cycle of a patient, a medicament container having a release mechanism for releasing inhalable medicament therefrom, and an actuator for actuating said release mechanism, the actuator being actuatable in response to a signal from the monitor. A sensor is configured to scan for discoverable Bluetooth devices within a flow of vehicle traffic and to create a log of identified Bluetooth devices. Furthermore, the exposed end portion of the lead is formed to spread toward the outside. One form of block-to-instance assignment may be based on mastership of the blocks.

1459827642-d8e6f996-4064-43b6-ae94-81f014f44371

The present invention provides a method of removing electrostatic charges from a clean room with a laminar flow apparatus. The methods can include performing an amplifying step, a hybridizing step utilizing a SNP specific hydrolysis probe including a hairpin structure toward the 3' end, and a detecting step. The cord holder includes a leading edge, a leading edge groove at the bottom of the leading edge defined between a pair of hoof-like feet, a cord space beneath the cord holder, a vertical groove beneath and approximately aligned with the neck of the hook retainer. The flow control device is disposed between an internal flow space of the injection string and the reservoir rock opposite said positionzone, and said device is hydraulically connected to at least one through-going pipe wall opening in the injection string, and to said reservoir rock. Aircraft emissions, both on the ground and in the air may be determined using tracking data.

1459827642-e79fe88e-bcb8-4f2a-a40e-efa083286784

A heart-rate variability analysis apparatus comprises an electrocardiogram information detecting unit, heart-rate signal calculating unit, breathing signal calculating unit, and heart-rate-variability information providing unit. The machine includes a bill dispenser, a receipt printer and other transaction function devices. The top surface has a first opening formed therein that is formed at a location that permits a consumer to see the shirt or other item that is contained within the box. ¶ Thus, between adjacent body wedge blocks a flow passage for cooling air is created that allows gradual contraction of the flow from the endwinding region toward the subslot ducts, thereby reducing pressure losses. In addition, the tubing hanger housing includes an annulus and an annulus passageways in communication with the production annulus and the separated area, respectively.

1459827643-2ad3acb0-16f2-4a10-9399-0f35604e79ae

An apparatus comprises an extruding device having a dispensing opening for extruding a flowable material along an exit direction through the dispensing opening, and a cutting arrangement for separating a dose from the flowable material, the cutting arrangement being movable with a motion component that is parallel to the exit direction. The mirror head is pivotable about a first pivot axis relative to the mirror base from a position of use into a parking position. A synthetic barcode module detects the presence of a barcode scanner and produces light output that emulates reflected light corresponding to a scanned barcode.

1459827643-3fff5b1a-fb61-40e3-8b68-8ed96bdfb7f5

A phase selectable divider circuit includes a select circuit receiving a plurality of signals having a common frequency and a different phase. Scrambled content may be recorded in all conditions, however, only authorized copies are processed for descrambling and viewing. A device for carrying out this method is also disclosed. In one embodiment, position adjustments are based on the detected angular position.

1459827643-d62dedd0-9c21-4e06-941a-da1757edd2bb

A light-controlled light modulator can achieve high-speed, low-loss wavelength conversion. A pitch circle radius of a driven side gear of the drive mechanism is continuously and progressively increased from a maximum cooling position side part to a maximum heating position side part. The DC-DC converter includes an inductance element and a switching element, and performs voltage conversion by storing energy in the inductance element from an input power source when the switching element is on, and discharging the energy, the energy being stored in the inductance element, to a load side when the switching element is off. 6 wt % based on the total weight of the curable liquid and that silicon modified or fluorinated polymerizable compounds are either absent or present in the curable inkjet inks in a concentration of less than 20 wt % based on the total weight of the curable inkjet ink. As the tank is heated by being lowered downhole, nitrogen desorbs from the zeolite and the gas pressure increases.

1459827643-dd93232a-8062-42ab-bdb9-b91d953cc97e

A vacuum drainage system operable to remove waste from a source. Provided by the invention are the seeds, plants and derivatives of the soybean variety A1036170. The mounting structure includes spring fingers which snap over the core.

1459827643-e65808d2-8a91-49d8-a858-471c7a4cf2ed

A thin film transistor array substrate and a manufacturing method thereof are provided. The apparatus provides for the production of a large scale volume of hydrogen peroxide by the generation of a liquid bearing bubble cloud. , acquiring the presence of a packet of data and associated timing information. The magnetic poles are provided such that a distance d, between end surfaces of the magnetic poles and the conjoined body decrease from the interior to the outer periphery of the conjoined body. The seat can also be folded into a small package when not in use.

1459827644-24cf6dbf-cc80-4aec-b1d9-ec1a3e5067b8

A method for self aligning a lapping guide with a structure of a write pole. The heating element is arranged between the chamber and thermostat, so that the thermostat's response to the heating element mirrors that of the load in the chamber. 5; performing a discrete Fourier transform of N4 points on the pre-rotated data; and post-rotating the data transformed by the DFT by using a rotation factor  $b \times b7WNk+0$ .

1459827644-4adb20ec-05b7-4948-9e51-a79b2844aea4

An image receptor medium is disclosed as having a non-porous base medium and an imaging layer. 10 mPa or more at 25°C. The noise canceling pickup with an electret, can be used in the higher frequency band and in a wide frequency range to cancel the noises more effectively. In this new technique, a set of tuning parameters is determined which accounts for degradation by representing the overall effect of the larger set of health parameters as closely as possible in a least squares sense. Thus, unnecessary electromagnetic emission is alleviated while satisfactory communication quality is secured.

1459827645-2e85c16a-be18-4e6c-9ecc-fc91d907bb0b

A technique facilitates use and installation of a large bore completion system. Logic is included in the image sensor system, that when executed transfers clock signals from the host controller to the image sensor through the first terminal of the image sensor and also transfers one or more digital control signals between the image sensor and the host controller through the same first terminal. In one embodiment, the SHP specific inhibitor is NSC119910. A releasable locking means holds the front panel closed against the rear panel, and can be unlocked so the front panel pivots open, creating a first open position wherein contactless smartcards can be accessed in both card holding means. The pressure medium supplying device communicates with the pressure medium introducing space via a pressure medium introducing opening formed on a bottom portion of the high pressure

vessel.

1459827645-6d69b5b8-cbe7-4611-9f9e-ae6b2adb66eb

A method and device for creating hanging drop cell aggregates. Individual stringers of a pallet matrix are interwoven together, with stringer notches interlocking with notches of crossing stringers from both above and below any one stringer. This method is best independent of prior mask versions, and uses no prebuilt matrix of backup/alternate entries. Likewise, air at a third set temperature is supplied to the intermediate zone. Also disclosed is a microfluidic device having an array of microfluidic structures, each connecting at least two wells of a well plate, and connecting three or more wells in alternative embodiments.

1459827645-726205b9-b387-4c83-925c-c6019ac0c1a7

A protection frame has a frame body and a supporting arm. A global time signal from a global time reference or common time source can be used to calculate a common view based clock offset between the two clocks. The input line is used for inputting electromagnetic signals. A beam with multiple webs extends between the bottom plate and the top plate. The power spectrum measurement system includes a detection circuit and a processing circuit.

1459827645-7ceb22a2-7dc5-42f9-a6fb-c4b30faa910c

The present invention discloses a linear compressor which can rapidly overcome load and improve compression efficiency, by synchronizing an operation frequency of a linear motor with a natural frequency of a movable member varied by the load and varying a stroke of the movable member according to the load. The carabiner mounting members are mounted or mountable spaced longitudinally apart along the each top rail. The variety is distinguished from \u2018Driscoll El Capitan\u2019 and \u2018Driscoll Venice,\u2019 in particular, by its height, longer petiole length, longer fruiting truss length, open canopy density and moderate susceptibility to powdery mildew. Embodiments described herein may provide inexpensive sensors with high selectivity and sensitivity. The prosthetic heart valve is configured to be collapsed for introduction into a patient using a catheter and to be expanded for deployment at an implantation site.

1459827645-aa301fb4-f3db-4857-8859-f189655042dc

A portable auto-injector configured to store various wet and dry medicament components separately. The wireless telephone includes an array of microphones and a DSP. The polyacetal resin composition of the present invention is provided with flame retardancy while maintaining the excellent innate properties of polyacetal resins, so that it can be applied to the fields where the use of polyacetal resins has been restricted. Processing unit 236 may operate under control of software stored on a memory to control a switching circuit.

1459827646-3dcaf533-b582-4e4f-8339-a40bdc1a9ef3

A dehooking device with a slidable bite sleeve having a rod with a spiral looped hook removal end, handle, and a slidable bite sleeve. The light guide is made of transparent material through which light passes. The virtual connect device virtualizes connections between the physical server or servers and a network infrastructure. The interconnection port is on an outer side of a MOS pair region including the PMOS transistor, the NMOS transistor, and the region between the PMOS transistor and the NMOS transistor. Inbred maize lines derived from inbred maize line PHE35, methods for producing other inbred maize lines derived from inbred maize line PHE35 and the inbred maize lines and their parts derived by the use of those methods.

1459827646-a20f00db-fd8b-470b-9ec5-fe76ab0a0cc1

A photoelectric sensor amplifies a received light intensity signal generated through light projection processing and light receiving processing, and performs detection processing using the amplified received light intensity signal. An upper

bound and a lower bound for an energy detect threshold parameter are determined. The optical probe is constructed and arranged to detect in a selected tissue region of the subject a manifestation caused by the delivered drug.

1459827646-f8628b9c-d105-4e8f-b32b-7209493beba1

Provided is a cable with a connector having a form in which a connector is fitted to a cable. The mixing tube is connected to a settling chamber for allowing settling of the flocculated contaminants and for supplying clarified water at an outlet of the settling chamber. Based on the signaling messages, it is determined whether a war dialing event has occurred or is in progress.

1459827647-578c2ecd-d385-4b37-aa00-4656988c70ba

Generating an optimized supplier allocation plan includes identifying parts and suppliers associated with an allocation problem, where each supplier can supply at least one part. A solderable contact layer is then formed over the passivation layer. The dowels may be positioned in different sockets to accommodate different size bags. Filters with various configurations are disclosed for accommodating the removal of contaminants from the process streams of different industries, with high efficiency for contaminants removal, simple construction, low operational and maintenance costs, and low hazardous operation. An intermediate brace engages the base when the outboard ends of the leg supports are disengaged. Here, a violation is permissible when using monotonically increasing virtual channel numbers or monotonically decreasing virtual channel numbers.

1459827647-d1d43269-bc69-40df-9bc3-13faee487d42

There is disclosed a data storage system used in a computer environment where there are plural host computers and plural storage array controllers. Slider including components controlling the air flow to maximize FOD efficiency and/or including specific components minimizing an air bearing pressure under a Flying height On Demand operation away from a maximum air bearing pressure, placing a peak pressure off of an FOD area created by a FOD protrusion, and shrinking a high peak pressure area of the air bearing surface. Whether the mark count value corresponding to the logical page is greater than a predetermined threshold is determined. The chuck claws are used to hold, that is, clamp the disc on the turntable.

1459827647-e48ff061-95d9-42d5-91ac-b319c6748255

A process for the preparation of bitumen foam, wherein a gas is dispersed into the bitumen with a temperature of less than 200°C. The mounting device can also include at least one through pocket, connected to the recess, into which an actuating tool can fit. Various device embodiments comprise a port to receive a neural activity signal, and a feature extractor adapted to receive and process the neural activity signal to produce a neural marker that includes information for the neural activity signal. Finally, the method generates, during runtime, a dynamically allocated database for the second device that provides a second set of error handling data. 6 electron volts lower than a lowest energy level of a valence band of the hole injection layer in terms of a binding energy, has a surface facing the functional layer, and has a recessed structure such that a portion of the surface overlapping with the light-emitting sublayer is located closer to the anode than other portions.

1459827647-f841f3c1-4263-4c4b-bb02-e3d63fa5a62e

A method for selecting an operating mode for a frame-based communications network consisting of a plurality of stations attached to a transmission medium. In setting the stator coils on the coil holder, the stator coils are sequentially set on the coil holder in a predetermined direction, which is a coil setting direction, from the starting stator coil so as to overlap one another. The linkage element has first and second arms, which have opposing, inwardly facing arcuate engagement surfaces for engaging the valve pin guiding element. When a user selects the CMC module from the onscreen display, the user is presented with a text console, where

the user can login to a text terminal interface of the CMC module. Wavefront measurement systems and methods may help position and isolate the eye from ambient light. The invention also relates to an additional device, a corresponding method and a computer program.

1459827647-fe8e5e35-4093-4480-838f-58838dc22b55

A cam barrel 19 rotates in one way in varying a power to move four lens holding frames in the same direction by displacements of four cam openings 33 to 36. One example integrated circuit includes a threshold detection and timing circuit that is coupled to measure a signal during an initialization period of the integrated circuit from a multifunction capacitor that is to be coupled to a first terminal of the integrated circuit. A more robust orientation mechanism which minimizes rotational movement of the associated piston when it is fully seated within the booster housing is provided for. The adjusting member also has two engaging slots adjacent to another side of the through aperture and an assembly device having an assembly base.

1459827648-05a5adfc-5084-4961-a521-867beff23983

A modular fundus camera including an adaptive optical module that detachably interfaces to a fundus camera body and image capture subsystem. The field coils are placed over necks of the pole path pieces and the return path pieces are affixed to the pole pieces. In a preferred embodiment, the system includes a display for displaying the digital image. This allows the designer to quantify and take advantage of design practices that make all transistors similar, for example, by orienting all gates in the same direction. The retainer and captured nuts are attached to the member to form a retainer assembly, which holds the member and nuts together until the member is installed on the studs of the larger assembly. A water receiving means is provided at a side wall of the body portion.

1459827648-675a3047-c721-46fb-bab3-26e934fb36be

Taking a set of unlabeled images of a collection of objects acquired under different imaging conditions, and decomposing the set into disjoint subsets corresponding to individual objects requires clustering. The equalizer generates signal levels as a logical function of bit history to emphasize transition signal levels relative to repeated signal levels. A process for producing a set expanded foodstuff, comprises the steps of passing a soft foodstuff composition which may be in at least a partially expanded condition and which contains a vaporisable expanding agent, at a first temperature and a first pressure into a setting region at a second temperature, said second temperature being lower than said first temperature. The liner aft end support mechanism includes at least three individual support elements configured to allow a part of the individual support elements to move in the flow direction relative to at least one of the liner or the casing.

1459827648-d48fc01a-df00-41fd-acd2-f672a912aec0

Registration information is sent from a customer to a registration system over a network. The optical device further includes a first optical layer which is at least partially transmissive and at least partially reflective to incident light. The printhead defines a plurality of raster lines extending over the intermediate transfer member at a non-perpendicular, fixed angle vector relative to the advanced direction.

1459827649-1ea133ca-994a-4b5d-af25-db001df573c6

An inline repeater that uses a forward-pumped DRA that can use a pumping light source such as an FBG pumping light source and a fiber laser, which are the most commonly used, and an optical fiber communication system are realized. The fusion protein is present as a trimeric complex or as an oligomer thereof. Over the semiconductor substrate in a part exposed from the second insulating film, a semiconductor layer, which is an epitaxial layer for sourcedrain, is formed. At least one event signature match is found that comprises information for an event

being logged in a event log, and is associated with the dependencies. In such an aspect, the communications device is a member of the group of UEs. An external programming terminal is selectively coupled to the internal programming interface circuit through the coupling switcher.

1459827649-b0b245c4-1188-4a0b-879a-dc9c7116c35d

An LED lighting arrangement on a flexible substrate. A plurality of connection terminals is installed on the terminal set for electrically connecting other devices. An electrical connection is formed between the bus-bar pattern and the bus-bar terminal piece using male and female connections. The service mapper may thus map the service to a selected device of the plurality of devices for deployment thereon, based on a matching of corresponding elements of the service requirements and the device characteristics. Electronic watermark inspecting processing with heavy computation loads is performed vicariously for judging whether or not duplication of contents is permissible.

1459827649-c786d0bf-728d-4ac6-89ef-d538da6324be

A method of storing data includes receiving general purpose data and special Error Tolerant or Streaming data, storing the GP data using a data storage method, and storing the ETS data using a different data storage method which affects the access rate, resilience to errors, data integrity, storage density, or storage capacity. The blade and blade supporting structure are engagable along bearing contact locations that are spaced apart in a direction parallel to the axis so that the blade is stabilized both radially and axially as the knife operates. The two rotor blade portions may have dissimilar angles of incidence.

1459827650-4b890ff8-f703-42d2-b874-73df444a0ded

A method for removing mercury, and in particular elemental mercury, from a fluid stream by blending the fluid stream with a second stream comprising iodine. The particles interact with the matrix in the form of a high-speed jet generated and energized by an explosion of an explosive material that contains the premixed powdered components of the working medium composed of particles of a hard material and ductile metal, and if necessary, with an addition of a process liquid. The receiving side is provided with an AC-coupled receiving circuit 4 for receiving the light intensity modulated signal and extracting therefrom only an AC component, and a discrimination circuit 5 for discriminating the rise timing from the received signal. In the present invention, for the solder balls contacting the contact pads of the circuit board directly, which reduce the space that a connecting socket used in prior art and improve the usage ratio of the layout on a circuit board.

1459827650-547489e8-899d-4166-83c7-56097b10ef56

The invention relates to a method, in which from two images of a security element, which are recorded with right-handed and left-handed circularly polarizing filters, a differential image is produced, on the basis of which the authenticity of the security element is tested, and an apparatus for carrying out the method. The method comprises forming a portion of a field oxide in an integrated circuit so that the field oxide has a gradual profile. A call is placed to a destination device while the mobile device operates in the second communication mode. Once the second BMC does not response to the second message in a first predetermined time period, the electronic device recovers the firmware of the second BMC using firmware of the first BMC.

1459827650-7aea43ef-42b6-47be-9445-aae1e1f8e2a7

Methods and apparatus are provided for determining quantization parameter predictors from a plurality of neighboring quantization parameters. The techniques include receiving an identification of a pattern, generating configuration data for the pattern, and storing the configuration data separately from the pattern. The present invention also allows one to achieve material with unique properties and handling characteristics. The resulting code symbols from all sub-channels are then

merged into one set of symbols.

1459827650-9ccde052-49b1-4797-a765-9e72ef905ee0

A microwave antenna feed arrangement provided with a unitary body with a feed bore between a launch end and a back end of the body. While achieving the desired axial restraint, the system is configured to allow remote manipulation of the locking system. Dependent upon the type of product or service involved, a schedule for continuously submitting post-sale market data for the product or service may be provided and the consumer may be encouraged to submit post-sale market data in accordance therewith through a variety of incentives. A plurality of despreaders are connected to the RFIF section, each despreaders despreding the I and Q components of the combined signal into a despread signal.

1459827650-9dafb75d-6a83-4df5-b626-bc15e826cd39

A data acquisition method and an electronic device are provided. The device may also include a parting line detection unit, which may be configured to receive the input image and detect a parting line that separates two sides of the input image. The end of the item is gripped after insertion of the item, and is cut off and ejected when the pulling is completed.

1459827650-a2e651af-64a4-42cd-9efd-82b9c124ca2d

The present invention is directed in general to a LCD-panel, and particularly to a LCD panel whose gate drivers are assembled without a printed circuit board. The attributes are comprised of individual linked values having conflict-resolution data that indicates a change to an object at an attribute-value level. The #1 branch beam is supplied to a portion to be machined, so as to machine the portion. A cable means is coupled to the energy delivery device means.

1459827651-31ff68fe-7b3b-4dca-b9ee-879c1d5afa9e

Compositions for reducing the formation of dust and methods for making and using same are provided. The housing is formed in two parts and defines pillar blocks for journalling the or each balancer shaft. In order to reduce the surface roughness of an FRP substrate, the FRP substrate is coated with an organic insulating solution and thereby planarized.

1459827651-390da424-c386-4c05-97e1-60f4126af6c0

Provided is a system and program for automatically handling an error when retrieving a file for an application. The relationship between the Base Object and the Related Object may be any one of one-to-one, one-to-many, many-to-one or many-to-many that can be defined while deploying the CRM application. The retard roller is arranged to oppose the main feed roller and gives to the sheet with which the retard roller is in contact a force to convey the sheet in a direction opposite to the sheet convey direction.

1459827651-9e3fceca-bfb7-481f-ac0c-2f73e4139bc2

Disclosed is a light guide panel using a laser stamper, and a method and a device for producing the same. With the use of electric charges on the surfaces of particles, the particles and selected polymers are allowed to electrostatically bind to each other, such that the surfaces of the particles are coated. The operator command specifies velocities along two orthogonal axes and those velocities are transformed into an angular velocity and a length velocity for the member. Accordingly, the flexibility in design of the present invention allows control of the performance of the superconductor and is cost effective. In a third stage, a position of the mobile device on the identified building level is determined. The rotary encoder generates a signal in response to rotation of the roller, raising the print head to preclude damage.

1459827651-d2deb763-d010-4cdb-b002-8c1bd4fa41b0

A first electrode and a sacrificial layer are sequentially formed on a substrate,

and then first openings for forming supports inside are formed in the first electrode and the sacrificial layer. By a combination of electronic sensors onboard the pointer and external calibrated cameras, a host computer equipped with an RF transceiver decodes the orientation sensor values transmitted to it by the pointer and computes the orientation and 3D position of the pointer. An electrode portion is connected to the displacement detecting portion.

1459827651-ea063db3-30f8-4ce8-ac98-b2b0882a01e5

An approach for transmitting packets over a shared communication channel is disclosed. The present invention is particularly suited for an electro-optical detection system equipped with an optical dome or window. The methods of achieving stable transformation disclosed herein include tissue culture methods and media, methods for the bombardment of recipient cells with the desired transforming DNA, and methods of growing fertile plants from the transformed cells.

1459827651-ef90bf10-2010-4897-bd3b-ec57f90acd11

A process for enhancing chemical stability, corrosion resistance and for improved adhesion characteristics is described for use on metal or metal-alloy non-consumable electrodes, current collectors or other metallic articles used in electrochemical cells. The device includes a housing having a storage container with an oblique base and an air conduit opening into the base and of a deposition device that is positioned above the storage container. Accordingly, the gain change of the AGC loop is done within the Guard Interval in order to avoid signal distortion in the output signal, thereby the DAB receiver having high fidelity is achieved with low cost.

1459827652-71dd3c2b-70ea-4418-8b56-d84cf45d9ea3

A fluid injector has a housing, a valve body and an actuator unit inserted into the housing. Service placement decisions are made in a way that accounts for performance and availability requirements of both the service being placed and other services. A value for each parameter of each of the algorithms that are to be optimized is supplied.

1459827652-bf8c114d-70cf-4cd1-9222-766296836c78

A method and system for determining the location of plural devices operationally coupled to a computer system using a 1-Wire bus is provided. The fuel barrier may be made of the polymer of a macrocyclic compound having, in the same molecule, preferably three substituents that allow polymerization and crosslinking. The locking tab protrudes from the outer surface of the cylindrical body and is configured to interface with a detent formed in the barrel to limit rotational movement of the cylindrical body relative to the barrel. The propulsion unit is operable such that in at least one interval of the ground speed of the tractor, the electrical fraction of the power delivered or absorbed by the electrical machines is zero.

1459827653-f11e47c5-d5ca-4955-a579-436c16dc3489

An optical storage media management system and process for storing and organizing a relatively large collection of optical discs in the form of a display binder with a plurality of display sheets including associated indicia matching a positional identifier indicating the location of the disc. A request is received from a partition within a plurality of partitions in the logical partitioned data processing system to access error information. The invention also discloses a method of manufacturing such a head stack assembly.

1459827654-2e7b1b94-e56d-45b5-8c71-6b34bd6fbf29

An eye drop device and a method of applying eye drops to the eye are disclosed herein. An address for the memory cell is determined. The damper is configured to be operated by linear movement of the third operation element in a prescribed range set between a use range and the stored position, when the sun visor body rotates to

the stored position. Action unit execution device executes the action defined by the selected action unit for a preassigned execution time by rotating left and right leg driving wheels in a driving mode including a combination of forward rotation, reverse rotation, and stop. The Tesla coil may repetitively burst the electric field such that pulses of electric current are conducted to the electrical target.

1459827654-76936183-4990-4e1d-ade4-520753b849d1

A method and apparatus are provided for treating hydrated material in a fluid that contains water in which a stable nitroxide is attached to the hydrated material. In certain embodiments, machine interfaces such as remote control devices for operation of various devices are provided. Then any corrective actions that were taken to address the at least one previous instance of the error conditions are determined and possibly used to resolve the current error condition. The processing network maintains a history of the authenticated transactions and voice samples. The radiation beam is arranged to have a predetermined polarization state and the redirecting elements are arranged to provide a minimum radiation loss in relation to the predetermined polarization state of the radiation beam. The stress layer may comprise a flexible material.

1459827655-3eb69f5c-cf5e-47fe-8558-ef119f87e80f

The present invention provides a technique for producing acetone in a high yield from hydrated ethanol derived from biomass, without requiring a large amount of energy. The interface adapter is configured to convert transmissions received from the host device to the second interface protocol and to convey the converted transmissions to the plurality of storage devices. One of the clamping portions pivots about a pivot point for clamping the knife and for releasing the knife so that it may be easily removed from the knife holder.

1459827655-d7939c7b-27c0-413b-9a01-f880811268ee

The present invention relates to chemical compounds of Formula are as herein defined, pharmaceutical compositions, and methods of use in the treatment of conditions or disorders mediated by TNF-alpha or by PDE4, including but not limited to rheumatoid arthritis. The sample is placed on the stage such that the center of the sample is substantially aligned with the center of rotation and a measurement assembly is located above the sample to examine the features optically. An appropriate shape of the blank has a base section and an arcuate section associated with the base section. On the basis of the notified result of the determination, the CPU controls a display unit, a speaker, a light generating unit, or a vibration generating unit to generate a predetermined stimulus in order to notify the external access.

1459827657-299baafe-7051-4ce0-99be-89126851cf6b

A fan operating status monitoring system includes a detecting module to detect pulsation currents generated by the rotation of a fan, and further convert the detected pulsation currents to voltage signals, thereby allowing a differential magnifying module, a first processing module, and a control module to process the pulse wave signals in orders to measure the rotation speeds of the fan. The system and method use existing hypertext transfer protocols and is capable of transmitting real-time asynchronous data between server and client regardless of firewalls or proxy servers implemented at the client or the server. Also provided are methods to detect the presence or amount of two or more vitamin D metabolites in a single assay. A web object is transmitted as a flow of packets and the transmission is preceded with an announcement specifying a broadcast channel and a flow number.

1459827658-22261741-2f58-4f64-9cde-9bb56e10f673

A process for providing illumination source conditions for the accurate determination Zernike tilt coefficients in the presence of coma is described. The driving circuit is coupled to the programmable voltage generator and the back light

module for adjusting the brightness level of the light sources inside the back light module according to a plurality of driving voltage signals generated by the programmable voltage generator. Certain embodiments of the disclosed technology offer compaction ratios on the order of 1000\xd7. The blade is configured for controlled deflection about the backbone when vertical forces in excess of a predetermined force are met, to prevent damage to the surface or to the object. The vitreous layer thus formed makes it possible to prevent the build-up, on the refractory walls of high-temperature ovens, of dust or by-products coming from the raw materials and/or their reaction products.

1459827658-edfa6704-8386-41e6-ae79-ebeef5b9a9f3

A method and a device provide for the controlled feeding of a reducing agent into an exhaust gas treatment unit with a storage capability for an exhaust gas component to be reduced which is generated from a mobile internal combustion engine. First and second sets of conductive terminals are accommodated in the tongue plates and a couple of upper and lower shielding members enclosing the tongue plates for surrounding the conductive terminals. The inductive device generates an induced electromagnetic field when the inductive device receives the electromagnetic wave. The client apparatus overcomes the problem of the environment such as the luminance based on the notification from the server apparatus and then retries a biometric authentication. The reader device may trigger the temperature tag to send the temperature readings with a signal such as an infrared signal, a radio frequency signal, and the like. In particular, the holster is adapted to be worn by a user in a concealed fashion under various outer garments, the holster comprising components that are capable of conforming to various body contours and additionally being able to substantially control the vertical and horizontal motion of the firearm.

1459827659-228f847c-4a92-4297-aa94-2c2bb8cef07e

An input signal is filtered to remove aliases and a switched capacitor network undersamples this signal to provide a downconverted, near-baseband signal. The discharge vessel encloses a discharge volume containing an ionizable gas filling including at least a metal halide, two current lead-through conductors connected to the respective electrode, and a seal having sealing material through which at least one of the respective current lead-through conductors issues to the exterior of the discharge vessel. The pitch of the spiral cut can be varied to facilitate a gradual transition in flexibility along the catheter. The center side member is set larger in strength than the side sill.

1459827659-4e8d6987-28f1-43f9-8b21-fa58f1e70c26

The invention provides a device for measuring the pressure of a tire. and oxidized by introducing oxygen gas onto the surface of the substrate. The radiation-emitting material is disposed between a transparent anode and a transparent cathode.

1459827660-6fffd1e33-eda9-4847-b07f-b52f30cfe0e2

Charge storage devices need to be charged from time to time. One embodiment of the invention comprises a neuroprotective stent or device adapted for placement in an intervertebral foramen of a vertebral column and configured to resist compression or impingement from surrounding structures or forces. Such collisions clean and round the particles by chipping away surface projections and coatings without crushing the particles. A means for monitoring the brightness of the lamp load develops a brightness signal that characterizes the brightness of the lamp load. The digital main board digitizes the analog signals into a digital transport stream prior to processing. The central electronic control module can provide electrical signals to each pilot valve module which can provide hydraulic signals to each directional control valve module and to off-board hydraulics through a subsea equipment receptacle mated with the subsea control module.

1459827661-c71c6f6a-92c1-4d30-81d3-59c6013e1e3b

In one embodiment, one or more components of a user interface are arranged in a hierarchy of layers. Rotation of the rockshaft causes the disc opener units to be raised or lowered. The spacer grid includes first grid straps and second grid straps, which are crossed and arranged in transverse and longitudinal directions at regular intervals and have the shape of a flat strip, and support structures, which are fitted into the first and second grid straps around intersections of the first and second grid straps so as to support the dual-cooling nuclear fuel rods. The housing 2 contains the semiconductor light-emitting device 4, the driving element 6, and the monitoring light-receiving device 8. An electrolytic layer is disposed on the electrochromic material single layer.

1459827662-7d721c17-3889-445f-af85-6ab1e495f0bf

The invention relates to a method for the preparation of compound of formula. In order to operate the headlight more efficiently a value of the luminance is individually adjustable for each of the illuminants, and the value of the luminance of the respective illuminants is adjustable in dependence on a position of the illuminants along the first direction of extension and/or the second direction of extension according to at least one predetermined distribution function. Nanocrystals are then deposited on the altered surface of the tunnel oxide. A receiver receives the ciphertext messages and, for each received ciphertext message, performs the following operations. An examination position for the test person and a presentation apparatus for visual marks arranged at a distance of several meters from the examination position are also provided. In the coupled condition, the container extends at least partially perpendicularly to the direction of outflow of the fuel from the fuel outlet of the aircraft.

1459827662-e46a9017-d1af-410b-a83b-c95503a9d277

The combining of two technically contrasting functions of safe stopping and braking by armature short-circuiting is served by using two means for pulse inhibition to block the respective current valves in the event of a fault by interrupting respective supply voltages for driving the control valves of the upper bridge arm and those of the lower bridge arm. The slot height and or wall thickness vary with slot elevation from the base, to achieve a desired minimum Soil Threshold Angle in the slots, where said Angle parameter relates to resistance to entry of surrounding soil. The halogen-containing metal layer and the semiconductor substrate are reacted to form a metal silicide electrode. Due to the high thermal conductivity of the carbon fibers, a lower loading percentage is needed to obtain significant gains in thermal conductivity. The apparatus further includes: a sequence modeling unit for receiving from the database the contents and the feedback information and modeling the number of feedbacks as sequences based on the ranked user groups; and a post similarity calculation unit for measuring similarity between the modeled sequences. The NAT types of candidate neighboring nodes are determined by sending probe messages or from data received from a central overlay network server.

1459827663-28e348a2-da80-4fcd-b2d1-9683c9ec18f9

Prefabricated wall segments for construction of buildings. The system and method promotes the use of electronic tags, and, the funding of collective accounts that may be associated with charitable or other philanthropic causes. The frame pivots on the outer side of the glazing for quick loading and unloading of the glazing and the protective sheet on the outside of the glazing, and the frame also pivots closed to seal the glazing and protective sheets securely within the window protector assembly. They are kneaded, and the EPDM rubber is vulcanized and molded. Parameters are presented such that a user simply checks and unchecks boxes, or clicks on radio buttons, to configure network device parameters.

1459827663-f00fbcd8-4ab5-4d65-9d88-7de4fa0d8db4

A security storage container has a primary security feature that is adapted to be locked and unlocked with an appropriate key. A driving method of the present exemplary embodiment includes a generating step of generating electric charges in

the photoelectric conversion unit during a period from a first time to a second time; and a transferring step of transferring electric charges generated in the generating step of generating into at least two electric charge reception units in parallel. The first web is led over the first supporting structure.

1459827664-142c8edf-90fa-46b4-ac22-d06e7bb84618

A front loading refuse vehicle includes at least one positive displacement pump having an associated valve system in fluid communication with drive mechanism that operates a lifting arm, packer, a rear door of the vehicle, and a hoist for a refuse storage body. The system comprises a GPS terminal, a location aiding server, and a communications system. In another embodiment, a structural product formed from mixing the composition with an effective amount of water has a twenty-eight-day compressive strength of at least about 4,000 psi and, more preferably, a twenty-eight-day compressive strength of at least about 5,000 psi. Upon receiving the tag line message, the client then determines that the server is capable of using the common protocol. A bus master status bit is pegged by the host controller only when the host controller is processing an active frame. The output is for outputting the echo attenuated signal.

1459827664-e760f31b-c70b-42c9-9e9b-c8f3e0b71c4e

Energy dissipative tubes are provided, along with methods of fabricating and installing the energy dissipating tubes. The method comprises the steps of determining a difference between a time of an occurrence of a point in a scan line produced from a first facet and a time of an occurrence of a point in a scan line produced from a second facet, and determining from the difference, a scan line error for the scan line produced from the first facet. A characterpersonality data generation unit generates data indicative of a user's character or personality by analyzing user input information. A freedom for the fore-and-aft movement of the link relative to the casing is relatively less than a freedom for a vertical movement of the link relative to the casing in a direction of the trunnion axis 02 and relatively less than a freedom for a left-and-right movement of the link relative to the casing in a direction normal to both the common rotation axis 01 and the trunnion axis 02. By an external magnetic field, the magnetizations of the free magnetic material layer are rotated in phase to magnetization directions of the fixed magnetic material layers. Methods for placing the invert emulsion drilling fluids in a subterranean formation via a wellbore are also disclosed.

1459827665-1e0b1db3-293c-49cc-86cc-e6f00dea82d4

A combination rotatingtipping mechanism for an agitator arranged in an inner tub of a washing machine includes a drive member, a tipping member fixedly mounted to the agitator and pivotally mounted to the drive member, and a pivot link interconnecting the tipping member and the inner tub of the machine. A mobile station causes descramblers to descramble a received signal with eight scramble codes. A second test tone signal is applied to the in-phase modulation branch input and a ninety degree phase-shifted version of the second test tone signal to the quadrature modulation branch input.

1459827665-24112f33-3da8-4d3f-8d1d-8f4013785dba

In a ladder-type piezoelectric filter, the attenuation in the stop bands on a low frequency side and a high frequency side are increased while the pass band is widened. In one embodiment, the method includes, assigning a different parent account identification number to each differently named parent account. The sensor package also includes a sensor chip adapted to measure a current flowing through the laminar current conductor, wherein the sensor chip comprises a magnetic field sensor.

1459827665-33db1217-559f-4541-97ae-8f463cdfd565

A clamp device includes a grip member, a clamp rod, and a hydraulic cylinder, and, by the grip member being inserted into an hole in a workpiece, it can grip the

inner circumferential surface of the hole. The user text is analyzed and compared to a writing culture. The screw groove of the nut and the circulation groove are machined by moving a tool of a diameter equal to or larger than the diameter of the balls, along the screw groove of the nut so that a step is eliminated at a joint therebetween. The size reduction may be accomplished using ball milling with a solvent combination such as n-heptane and oleic acid.

1459827665-bdcc01f6-7f5e-403c-8cfc-47a7661ec0e9

A fluid reservoir for use in a remotely adjustable gastric banding system comprises a housing and a flexible reservoir pouch positioned within the housing. The stator is arranged in opposition to the rotor with a predetermined spacing therebetween. The control unit of the present invention may broadcast a neighbor beacon to at least one neighbor. One or more flexible numbers such as a metal band or cable is used which is coupled to one or both spools via a pulley. A similar method is disclosed for selecting antibodies that may be effective antibody drug conjugates.

1459827665-ffec640b-0c02-41ec-bf8d-065b08cc2a1e

A device with a number of light emitting diode chips in a reflector is formed in such a way that the direct line of sight between the light emitting diode chips is interrupted by a partition. A value of a meteorological scalar field at an initial time is determined for a set of tracers. The detection circuit configured to detect a physiologic perturbation and the heart sound feature circuit is configured to identify a heart sound feature in the electrical signal. , physiologic saline; a second inlet to receive a gas, e.

1459827666-39c96ef9-d579-4665-8814-95e7c279e535

An air-fuel ratio control system of an internal combustion engine comprises a fuel amount determiner for determining a fuel command value. When receiving a modifysetup signal from a base station, the user equipment is configured to update the MDT configuration accordingly in the idle mode and perform one or multiple corresponding logged MDTs according to the updated MDT configuration. system pressure from a high-pressure region. The interest criteria may include the number of user posts in the one or more discussion forums and/or the number of users who have participated in the one or more discussion forums.

1459827666-5eaf3d97-c601-4896-95a0-1a6e841672c8

A water current generating device is provided that consists of a main body and a horizontal axis rotor attached by a mechanical connection to a fixed support structure. One version can have a tubular recess consisting of a first cylindrical cutout housing the bipod legs when concealed and a sliding piston that deploys the legs and a second cylindrical cutout housing a release mechanism and a void space for other accessories. Then, when the position of a manual valve is changed by an operation by the driver when the vehicle is stopped or the like, the switching valve shifts a transmission into the third speed \u201c3rd\u201d, which has a larger gear ratio than the fifth speed \u201c5th\u201d, to ensure the driving force required to take off again.

1459827666-ed4246ef-b51d-45db-8fb5-868059096625

An inductor for performing a chopper operation by turning on or off a first switching element MOSFET Q1 and obtaining an increased voltage is arranged on the secondary side of a transformer 112 and on the basis of the turn ratio of the transformer 112, a high voltage at the time of stable lighting can be obtained from a DC power source 111 at a low voltage  $V_{in}$ . In at least one embodiment, the method includes receiving at a server device a request for a determination regarding which of a plurality of users satisfies a plurality of conditions respectively relating to a plurality of user characteristics, and obtaining at the server device a conditions specification. Methods for spacer removal from PFETs when a stress layer is formed over the NFETs are also disclosed. The closure element is sectioned to include an openable section which incorporates discharge element in the form of a

pouring spout for discharge of container contents, and a closed section which is adapted to incorporate carrying element such as a handle. The attribute of the pixel to be processed is determined by analyzing the N-ary data as a result of the N-ary conversion.

1459827667-312ac30f-6bda-4fde-ba96-0e4dc94cfd43

An apparatus and method for supporting common channel packet data services in a cdma2000 random access network without using a traffic channel. The increase in the first set of users is capable of causing a decrease in the capacity to serve new users of the second set of users. The dielectric layer has an opening therein. The unfolding scale is larger in value than the reduction rate, thus the unfolding FOV is larger in size than the imaging FOV. The second mold is engaged with the first mold for compelling one of the at least two cavity plates to move toward the other cavity plate so that the at least two cavity plates are in contact with each other. The invention further provides coatings comprising the films of the invention, processes for producing such films and coatings, and various uses of the films and coatings.

1459827667-66794137-ccb9-4bc9-83f5-544b2f51c748

An image recording apparatus includes a conveyance roller which conveys the recording medium, a drive source for rotating the conveyance roller, a print head and a carriage mounted with the print head. The method allows for adjusting or controlling cell size and cell size distribution by controlling temperature and/or blowing agent concentration. When operating as a projection device, the relay lens stage projects a distorted intermediate image to the wide angle lens stage, which projects the image for display. A subkey combining function is generally employed in each round to provide new round segments by combining a round segment typically linearly with a subkey segment. The interior space is interposed between the first gripper passage and the second gripper passage. Viewers may also indicate preferences regarding the movie rating.

1459827667-8dc94ecc-6db2-48a7-bcc8-9d7ede2939f7

A client apparatus is configured to communicate with a device and with a server via network. The invention also related to pharmaceutical compositions comprising such compounds, methods of treating cancer by the administration of such compositions, and processes for the preparation of the compounds. And, upon the detection of a predetermined operation having occurred on the application 120, the operator's misoperation such as double clicking is invalidated by outputting the transparent window 110 in front of the application 120. A cooling speed is calculated in each element by performing a calculation of heat transfer between the elements adjacent to each other. A clean water outlet penetrates through the threaded channel.

1459827667-cd5e9526-e007-421a-91fe-15cb8de16fed

An airfoil for a gas turbine engine includes a generally radially-extending first cooling channel disposed between pressure and suction sidewalls adjacent the leading edge of the airfoil, and a generally radially-extending second cooling channel disposed aft of the first cooling channel. The bonus game enables the player to select an award offer from a plurality of award offers. Other improved features of a parallel opening hinge are also described. The processing component also determines a position of the detected object using the selected at least three pairs of receivers and transmitters.

1459827668-4c4d2b25-6b84-4d25-9b6c-b98d27e11261

A content reproducing method is provided for continuously reproducing content being reproduced by a client device in another client device in a multimedia data providing system including a server for providing content and a plurality of client devices for reproducing the content provided by the server. In one embodiment, the track analyzer includes a track detector and a computing device. An enhancement mode junction field effect transistor is fabricated in the complementary well. When

the mirror is moved away from the intersection point of two optical paths, the input lights will directly enter into output channels.

1459827668-500c96c1-7290-414f-ae55-af06b0043540

The reliable capture of data from a DDR-2 memory device can be provided using timing signals provided by the DDR-2 memory device in conjunction with enable signals generated there from. The inspecting apparatus of the present invention comprises an integrated circuit board; a tape carrier package fixedly connected to the integrated circuit board; and a connector having a first pads fixedly connected to the tape carrier package and a second pads connected to the liquid crystal panel. When traveling around curves, however, the drive slip value calculation can become inaccurate, thereby corrupting the computed wheel radius ratio data.

1459827669-163f81ff-c3bc-435a-9fdd-c72f4a678817

A method of operating a semiconductor device, a semiconductor device and a digital micromirror system are presented. One of the circuits may be used to manage the temperature of the engine while the other circuit may be used to manage the temperature of a component other than the engine. Associated with the computer are a calculation program and an information system that, by means of a reading device, reads correction information from data media of the accessories and conveys it to the computer.

1459827669-4f336f1f-7cb1-4039-a3b5-e9ac710c708c

A time base including a resonator and an integrated electronic circuit for driving the resonator into oscillation and for producing, in response to the oscillation, a signal having a determined frequency. Organic rich liquor recovered during anaerobic decomposition is further decomposed in a secondary reactor from which spent liquor is returned to the primary reactor while biogas harnessed from both the primary and secondary reactors is treated, and optionally used to fuel the operation of the organic treatment facility or for sale as fuel or electricity. The synthesized pattern is provided by synthesizing a plurality of first uneven patterns having a linear shape which is long in one direction, and a plurality of concave lens shaped second uneven patterns arranged at random. A strain relief member is mounted in the lower compartment and tightly holds the wires against the housing to prevent the unintentional disconnection of the wires from the switches.

1459827669-cb4b41ea-2740-4edb-be01-52705a6aa8a0

A system for electrical heating of risers or pipes has at least two concentric layers of metal wires adapted to be used for low-voltage direct electric heating, each pair being provided to heat a specific segment of a riser or a pipe. The armature is mounted so as to be movable with an inwardly directed face on the guide pin. In another embodiment, a portion of the cladding of a fiber is removed, creating two parallel surfaces. Each server in the distributed media network responds more quickly and efficiently due to its limited functionality and scope of media data files that it must server. The correlation among map pixels is used to propagate projection path data from map pixels traversed by a projection path to other map pixels. The security cover comprises four walls and a top plate joined to form a housing that encloses a rotating turret and a portion of a drive arm used to actuate the gate.

1459827670-244e0b45-8ad0-4c29-9a40-f21089e9184f

A capping system and method of use for sealing injectable drugs within vials is disclosed. The elastomeric film layer may include a plasticizer and greater than 7 percent by weight of a tackifier. When exiting the dip tank, the coated substrate can enter a UV-curing chamber for a UV-curing process. The method includes providing a holder substrate, which has at least one recessed region, the recessed region having a predetermined shape. The knitted fabric with interspacing can have a thickness of clearly more than 14 mm, meaning a thickness than far exceeds the needle stroke. The flexible locking piece return preventing means, locking means of

a first housing one member is engaged with the lock arm of the lever, whereby the lever is locked at the connection position.

1459827670-96a39f06-849c-454f-b25e-91944cd6ae79

Methods and systems are provided for steering network packets. The approach includes inspecting a predetermined set of operational attributes of the selected computer to detect a change in a state of the selected computer. A corresponding method of manufacturing is also disclosed.

1459827670-97aa0aa6-5175-443a-96e1-5d86cd7e40a6

Methods and apparatus for providing access to program channels, e. The probe assembly provides passage of fluids for irrigating the body interior and for evacuating matter from the body interior. There may be multiple producers and multiple consumers and each producerconsumer pair has a separate channel. Being formed in a manufacturing process of a MOS transistor, the present protection diode contributes to process streamlining and cost reduction. The linear targeting illumination beam is centrally disposed within the field of visible illumination. An expandable support brace is connected to the first side support, the second side support, and the center support assembly.

1459827671-0a62ba60-c577-4011-a831-ec020ec58377

Compositions and processes are disclosed for removing sulfur and sulfur compounds from hydrocarbon fuel feedstocks. An average rolling resistance associated with one or more portions of the haul route is determined based on the rolling resistance of each of the at least one machine. The method further comprises the step of constructing a repair path for the repair address. The frame is coupled with the front frame. , an electric motor, to a device to be driven, e. The method includes: routing the call initiated by a user to a soft-switch; receiving by the soft-switch the call information the calling user sends; after determining that the calling user is a WAC user based on the calling number, the soft-switch determining the route to the called user based on the call information and completing the call.

1459827671-586cad93-2e52-4928-a20b-6ba0b6b6b03b

A method for depositing a carbon doped epitaxial semiconductor layer comprises maintaining a pressure of greater than about 700 torr in a process chamber housing a patterned substrate having exposed single crystal material. A motor rotates and translates the implant, which is mounted on a hollow drum, relative to the needle. A new set of pointers is created. Also provided is fixture assembly comprising housing with LED light attached thereto. The claw parts are formed at both the end parts of the circular arc part.

1459827671-d36d15f8-8470-4ac7-a7e2-b1b13c2c1f34

Special CD-keys are generated so as to have special patterns recognizable by compliant installer programs, which require special actions to be taken by the compliant installer programs when recognized. The braking control system interprets operator onoff commands to the parking brake. The pushing motion causes a rod to move the piston pump, which in turn raises water to the surface via piping into the trough where the animal drinks the water. The UMDDI allows a device driver to execute in user-mode while the graphics engine remains in kernel-mode. The control cycles may be Kanban control cycles.

1459827672-2550fafe-332e-4f4c-8f38-ea0864824c35

An output buffer circuit that suppresses the generation of an erroneous operation signal during power activation includes a first level converter generating a first signal based on a data input signal having an amplitude range between a first power supply potential and a ground reference potential. In one example, virtual circuits in an Asynchronous Transfer Mode or Frame Relay network are assigned priority status and particular types of high priority data are assigned only to the priority virtual circuits. The second portion is coupled to a retention mechanism that

couple a portion of the bone on opposite sides of the fracture to a portion of the bone having the first portion of the two-part screw. The second number of stages correspond to a desired timing delay. The method also includes the steps of determining if the at least one channel is in use, and if the at least one channel is in use, determining the user of the at least one channel that is in use.

1459827672-493752c5-bcb0-46b6-bb23-ae843deb5be7

A method providing channel quality indicator feedback from subscriber stations to a base station may include a combination of a thresholding scheme and a best-M scheme. A computer job is divided into micro-jobs. The weight of a player standing on the putting green platform is used to hold or fix the platform to the base in an adjusted position. The first, second, third and fourth force directing means provide a redirection of force applied by a user at the shoulder and ankle height levels for a selectable exercise using resistance cables. At least one lifting device is assigned to the printing units for transporting printing unit modules. In the base state, the internal actuation chain and the external actuation chain are coupled to the actuation lever and the internal actuation chain and/or the external actuation chain can be decoupled from the actuation lever by the control depending on the operating state.

1459827672-5f0f6dd5-017b-456e-80ec-12ff3b1056d0

To correct for harmonic distortion of a power bridge, the form of a pulse at the output of the power bridge and of estimate of non idealities under different current conditions is acquired. The vibration of the product conveying member is tuned both statically and dynamically with a coarse tuning followed by a fine tuning. The line driver also includes a device to combine the first output signal and the second output signal to provide a total output signal to an output line. An instruction is provided to perform the invalidation and/or clearing. Also, the systems and methods allow a metal concentration to be varied in a controlled manner along the thin film depth.

1459827673-293324da-d9f3-4ae6-ac63-cc10e0703509

A semiconductor device which has a substrate formed as a rigid body, includes stress relaxation layers formed by filling in concave portions defined in a first main surface of the substrate, and a device forming layer which covers part of the first main surface and is formed in the substrate. A predetermined data sequence of the analog modulation signal is applied, the modulation shift of the analog modulation signal is determined, and the amplitude of the analog modulation signal is corrected to match the difference between the modulation shift of the digital modulation signal and the determined modulation shift of the analog modulation signal. Additionally, the display rack can be provided with front and/or rear removable panel carriers configured to removably receive front and rear panels. According to the invention, adjustment values for the mechanical compensation of play are incorporated, filed in the control system and taken into consideration during adjustment. pigment blue 60 as a pigment and a magenta ink composition containing at least one quinacridone pigment selected from the group consisting of C. The reactor is used for adjusting different operating conditions to process single or plural feedstock in each different reaction zone for producing the desired product.

1459827673-7fab355-3813-4e40-a44d-cab4fd135954

A binaural object-oriented audio decoder including a decoder device to decode and render an audio object based on head-related transfer function parameters. The apparatus includes a cleaning cycle control system that operates through the control system of the heat pump and eliminates the need for periodic acid cleaning of heat exchanger. Upon hearing such voice prompts, patients/listeners can know immediately when they are being asked questions that they are expected to answer, and when they are being given information, as well as the information that is considered sensitive. A third Active RFID tag is associated with a second container

for the first containers.

1459827673-9e73ee77-da0e-4d35-a37a-232403454771

A statement in at least one hardware definition language file specifies a plurality of design entities representing a functional portion of a digital system. With the field plate members at the lowest circuit potential, the transistor supports high voltages applied to the drain in the off-state. The connector body of the electronic-component connector has an open portion for accommodating a module inserted from the open side. The marker results are used to create statistical information useful in the analysis of the operation of the voice application in the IVR system.

1459827674-05596d96-a70f-4cb3-a8f4-8659e5926e16

An antenna of the present invention includes a coaxial cable, antenna elements, and an unbalancedbalanced converter. A shape of topography at the detected designated position of the topographic object and in a vicinity thereof, into a shape whose height is gradually changed, depending on a distance from the designated position. Such permanently inflated and solid flotation elements do not require a pneumatic inflation system, thus providing benefits in reliability and economy. If a travel component triggers traveler parameters, options for other travel components may be determined. Also provided are plants thus selected.

1459827674-22616b34-eec3-4d1b-9607-b2554413b482

An irrigation machine is selectively converted into a sprayer for applying chemicals that have been approved for use only by spraying equipment. The products have of the antifungal properties. A sequence of video frames is received from the plurality of video channels, wherein for each channel, video frames are received at a frame rate for that channel. The group proxy, which is given to a client for all of its interactions with the group of services, buffers calls from that client to its group when the group is unavailable because it is in transition. Meanwhile, the wake-up mode produces substantially full spectrum light at higher luminosity. The rotor may include a hub and a rotor blade connected to the hub to extend radially away therefrom.

1459827674-a80aef1a-2203-445e-a011-6dacc6fef1b8

A touch control apparatus includes a first light source, a first sensor, a second light source, a second sensor and a controller. The two wheels, the front plate and the rear plate are secured inclined to the rod by means of screw connections to form an angle relative to the upper sides of the plates. Instructions are re-aligned using a branch on a falsehood of the qualifying predicate if the complementary predicate is not available.

1459827675-b7709f90-0287-4d23-9923-8c6736e425de

A method of changing the resistance of a perovskite metal oxide thin film device with a resistance-change-producing pulse includes changing the resistance of the device by varying the duration of a resistance-change-producing pulse. In exemplary embodiments, the adapter may include a tow bar with a neck portion between a pair of spaced arm portions. In a specific implementation, a DC-to-DC converter includes two boost converter circuits.

1459827675-c0b65421-d176-497f-ac76-a09168b7bbea

A comfort system for a seat, in particular for vehicle and aircraft passenger seats mounted one behind the other in a row, has at least one support component movable from a non-use position to a use position. The structure bends when a force is applied adjacent to the first end, thereby causing an electrical potential difference to exist between a first side and a second side of the structure. The arrangement includes a proximal channel with a leading portion having decreasing radius toward the first rotor which acts as a collector and a following portion connecting fluidly the first and second rotor and a distal channel which is

separate from the proximal channel and opens into the following portion thereby adding to the airflow to the second rotor. A reply is received from the server in response to the request. The conductive material layer is formed on the top layer of the package substrate. The MEMS device is electrically coupled to the electronic integrated circuit and positioned to affect the behavior of light, relative to the active optical device, based upon the position of an element in the MEMS device as controlled by the electronic integrated circuit.

1459827675-f4604f88-1e8c-4428-9716-4a311c031c2f

One advantageous embodiment of the present invention is a variable-duct support assembly for mounting one or more ducts thereon. The print assembly is movably positioned relative to a print media for adjusting printing characteristics of an attached print head. A portion for calculating filter coefficients 44 calculates a filter coefficient  $W_2$  of a filter 42 to simulate a sound-transmittal line of an audio sound which is produced from a speaker 102 and is input into microphones 10, 12 by means of these stored filter coefficient  $W_1$  and various transmittal characteristics CS1, CS2 and the like. A split retaining collar having a plurality of interior circular protrusions mates with the circumferential grooves in the shank to prevent axial movement of the shank. Thus, the collision preventing projections ensure that the main portion and male terminals are spaced apart when the main portion is pushed into the receptacle in this oblique posture. A content organization and distribution system may be configured to receive content from a plurality of publishers and provide targeted content to a plurality of users having mobile devices, where the mobile devices are connected to the content organization and distribution system through a plurality of carriers.

1459827676-1c141872-5990-499b-a5c9-c3300e37fee7

An optical receptacle comprises a precision sleeve, a stub with an optical fiber fixed to one end of an inner hole of the precision sleeve through an adhesive, and a sleeve holder fixed to an outer periphery of the precision sleeve by press-fitting or through the adhesive. The arrangement comprises a basic unit with control function software and one or more modular unit containing hardware for the control functions. A bale is formed in the bale forming chamber. A steam dispersion tube is mounted within an airstream to be generated by the fan for delivering steam via the discharge plenum. Lightning strike data from a lightning strike data source is filtered to select individual lightning strikes to be displayed and processed to obtain the viewer friendly lightning strike location information to be presented overlaid on a geographic map or satellite image background. The compression operation is a robust header compression operation and the step of adapting control parameters of said video coding operation is performed in dependence of information about the wireless channel conditions detected on a feedback channel made available in a decompression step associated with the compression operation.

1459827676-6eb2710e-e9ab-43fa-83a4-bf487d631a8f

The present invention relates to methods and devices for amplifying nucleic acid, and, in particular, amplifying so as to generate products on a surface without the use of emulsions. A cooling unit provides, via a coolant loop, system coolant to cool the electronic component, and to an air-to-liquid heat exchanger is coupled to the coolant loop downstream of the electronic component to cool, in primary, liquid-cooling mode, air passing through the system. An optical second harmonic also may be generated by impinging optical radiation having a first frequency on an array of molecularly bridged metal nanoparticles, to generate optical energy at a second frequency that is twice the first frequency. First and second actuator buttons protrude from the lower surfaces of the first and second switch units. Also disclosed is a method for reducing volume swell of a polyhydroxy cured fluororubber article in contact with biodiesel fuel wherein 1 to 10 parts by weight of a diester of a dicarboxylic acid is incorporated into said article. In one example, the description includes a method for coordinating the control of the throttle, turbo charger, and valves such that the desired cylinder air charge may be achieved while

engine pumping work may be decreased.

1459827677-84b69f87-6d50-4296-bf0b-cb3f0778baef

Engineered surface treatments are applied to different types of hydraulic motors and pumps to improve the life of the contacting surfaces in said motors and pumps. Each of the columnar spacers is disposed with its vertex portion being opposed to a convex portion of the reflector. It bears a jumbo sized nut with a strong, well filled shell which is easily removed and contains light to extra light colored kernels with little size variation in a given harvest. Another terminal of the first capacitor is coupled to the anode of the first diode and the cathode of the second diode. Numerous topologies of interconnect systems may be achieved. The scaleable network consists of a tiered structure of sensor nodes within wireless local area networks using an ad hoc protocol to form the network and at least one gateway node within each LAN to provide a link to an operations center.

1459827677-e444d1d4-32bf-4a61-8a39-991261cd3940

An accessory support or holder is provided with pockets for holding items such as hymnals, communion cups, pencils and memo pads, and is adapted to be supported on a chair support standing between chair backs with the chairs joined in a row. The compositions produced by the method. An application requests a Transmission Control Protocol connection or transmission of User Datagram Protocol data on a socket.

1459827678-1118a299-65b4-4668-b263-5b64e25e31c0

A current fed inverter with duty cycle regulation of dc current to the input of the inverter is provided to increase the magnitude of inverter output power while operating a resonant load at resonant frequency. An apparatus and method are provided which allow the squelch circuit to be selectively enabled and disabled across SATA power states and in Advanced Host Controller Interface Listen mode. The memory may store instructions that, when executed, enable the one or more processors to identify an event for a machine that includes a desired output parameter value and send a command to a component of the machine. The tabs also create a mechanical and electrical connection between the slider and the microactuator.

1459827678-7ae665e6-3694-4afb-9902-1205eedba5ab

The present invention provides a base of handheld device having Email access function. Image processing is carried out on an actual image obtained through the actual photography for adjusting luminance and/or gradation of the predetermined target in the actual image. The present invention also relates to methods of making crystalline form I, form II and the novel solvate of Febuxostat. The external, accessory, gearbox drives other accessories. The dummy dielectric pattern is substantially parallel to the selection gate pattern, and self-aligned with one sidewall of the selection gate pattern to overlap a predetermined width of the selection gate pattern.

1459827678-b2a7acbd-f3f7-401c-aeeb-89e1aaa83c2e

A siloxane resin having the formula:  $abc$  where R is Z, Zn or ZOn where Z is a phenyl or substituted phenyl group; n has a value of 1 to 6, a has value of 0. A tubular sheath having a longitudinal slot extending along a portion of its length A post attached to the hub and positioned to project through said longitudinal slot such that the needle and hub assembly may slide along the length of the sheath from a position exposing said needle to a retracted position within said sheath. An access rule defines which API server on the online commerce site a specific third party application may access when using a specific API function call.

1459827678-f1da499a-6162-4c41-9f20-1cb17db5e851

A power management system provides wireless power to operate components of a remotely adjustable gastric banding system. Thus, a semiconductor laser having a flat element surface and excellent in heat radiation can be made in a reduced

number of manufacturing steps. Coordinated alignment of the viewing apertures of the disc and plate allows observation of a workpiece collectively through the disc and plate during rotary drive thereof.

1459827679-31dc61ac-d6eb-4b89-9a8e-0f96ccbc1fb4

An apparatus for extracting air from within flexible packages having granular or otherwise flowable contents includes a package conveyor and a downwardly-open, vacuum extraction hood through which the packages are conveyed so that an upper portion of each package is moved through the extraction hood. Braking means is provided at a portion of a stacker guide, and the braking means has a rolling body producing a braking force in the advance direction of an inserted banknote without folding the banknote. The rotating disk and the fixing device go into a gyroscopic movement inside the player. 000 gcm<sup>3</sup>, a melt index of less than 10 grams per 10 minutes under conditions of 190 C. The reaction is particularly useful for making substituted porphyrins with a wide range of substituents at the A and/or B positions.

1459827679-32ad92db-8362-45d0-8546-f1f82c34f52a

A loudspeaker system with an enclosure, an electro-acoustic transducer mounted in the enclosure so as to leave space inside of the enclosure that is unoccupied by the transducer, and an air-adsorbing material in the space inside of the enclosure that is unoccupied by the transducer. The cavities are disposed below planar antenna elements. The container may also include a handle coupled to the open end, and switchingly coupled to the latch portion.

1459827679-dba09637-57be-4f24-ad68-5fc8c52047b5

An electronic device and a control method enable easily inputted characters or numbers to be converted and used in an application. The implant includes a spinal rod having at least one passage therethrough for receiving a guiding member extending from the surgical location. The insulating film according to the present invention is formed using a composition for forming an insulating film including that polymer, has molecular spaces having an average space size of 0.

1459827680-113d6e11-8d6b-48ac-934b-7f10573c96f3

A method of modulating the human meridian system using a small bar magnet is provided. The handle is a rotatable structure which can support the box body to make the box body stand in an inclined manner, so as to allow the user to have a full clear view of the hand tools inside the tool box. A pivotal mulch door is located within the exit tunnel with the mulch door swinging between two positions. A first input is received from an interactive control. A de-entrainment device with a downwardly angled deflector in vertical alignment with an orifice in the tray deck may be integrated or not with the valve cover below the tray deck. A location of a target field of the header in one or more data units among the plurality of data units is specified, and the one or more data units containing the target field are identified among the plurality of data units.

1459827680-49d4a020-905f-4686-b9e5-8b1810183f89

This invention discloses the several means by which transient noise due to capacitance related displacement current can be excluded from the optical signal coming from a silicon detector used in opto-couplers. Devices, systems and methods include delivery of energy including bipolar radiofrequency energy for sealing tissue which may be concurrent with delivery of fluid to a targeted tissue site. The system also includes a microprocessor coupled to the sensor for activating the sensor on a first periodic basis to measure the device parameter. In the store are provided passage reception antennas for receiving the stuck state signal transmitted from the RF unit, gate reception antennas for receiving reading state signal transmitted from a bar code reader through the RF unit, and a store control unit for judging whether the takeout of the article N be permitted based on the reading state signal. The PCM bladder includes a bladder chamber having a filling

port and is configured to receive and hold a flowable phase change material, such as an ice slurry, which can be pumped into the bladder at the point of packaging. Because  $\epsilon_1$  is satisfied, cusps are not formed at opposite edges of each addendum of the inner rotor 2.

1459827680-987730fa-4f8b-422d-96b8-86ae7f3883f1

The present invention relates to an improved, simplified apparatus for rapidly cooking food in water with the assistance of steam and increased pressure that provides the benefits of improved stirring capabilities, increased simplicity of the apparatus, and improved self-cleaning capabilities. Previews of the secondary data visualizations are presented as the user interacts with the primary visualization. After the engine is started, the rollers 33, 33 move toward the bottom of the concave section 32 against the resilient force of the springs 40. Adjacent, end-to-end sections of the composite conduit are connected using a coupling that employs a cylindrical body formed of the same material as the tubes of the conduits.

1459827680-f61431ff-95fb-445c-8e54-4654466eb067

Apparatus and methods are presented for the automated creation, update, distribution, acquisition, and use of learning tools designed to aid users in memorizing information and learning new concepts. The invention also relates to the method for preparing such a product. The markup language viewer processes contents of the markup language file and resolves tokens in the markup language file using the token resolution information from the local storage to generate a resolved markup language file for display at a gaming system.

1459827681-0ccf570a-d580-4af7-b2f5-70a32fb3e6e6

The semiconductor laser has a resonance cavity composed of a gain chip, a Mach-Zehnder wide tuning port, and a wavelength-selective mirror component formed either as a ring resonator or a reflective Fabry-Perot etalon. A message is sent to prefetch one or more tokens, and prior to receiving a reply for the message, another message is sent for at least one of those tokens. A clip member has an elongated stabilizing bar slidably inserted into the channel, and the stabilizing bar itself then is secured to a horizontal ceiling or a track system mounted to the ceiling.

1459827681-27bb132e-19fd-4c2c-90d6-835484df688a

A semiconductor plasma processing apparatus for processing a semiconductor wafer includes a sensor for monitoring at least one processing state of the semiconductor plasma processing apparatus, first and second processing state monitoring units coupled to the sensor, and a selector unit for selecting one of the first and second processing state monitoring units. The fluid sensor includes a sensor chip having a chip surface, which has a measuring surface and a body surface. The converter block is coupled to the HW block and receives the residual DCOC centered at DC and converts it to a residual DCOC centered at IF.

1459827681-6b96efbe-2413-4275-9427-e05ce375d082

A method for manufacturing an optical device, including forming a thermal tape on a glass substrate, cutting the thermal tape into a plurality of tape areas, removing at least one of the tape areas, and coating a first color film on the tape area without the thermal tape. The method includes the steps of laser cutting a pattern of apertures in the surface of a tubular workpiece, radially compressing the tubular workpiece to reduce the outer dimensions of the workpiece and heat setting the reduced diameter workpiece to form the very small medical device. A plurality of bond pads is positioned on a surface of the first substrate and comprises a width extending over at least two of the plurality of conductive traces.

1459827681-8c103dda-fe3f-484a-86b4-58e97ed89235

A circuit and method for creating a high-power electrical pulse which has a smooth

or flat-topped configuration as well as a very short rise time. It also has a projecting part 52 having two surfaces formed on its side which opposes one of brackets 20. The command instructs the OSD system to process the input video stream according to various processing functions including layering at least one graphics plane on top of the video stream. In the underground configuration, inrush current restraint is enabled, the fault response time is set within a range of 1 to 24 ms, and the display is operated in only the dim mode. The calcium hydroxide is reacted by the phosphate to form hydroxiapatite or other calcium phosphate that is co-precipitated with the calcium silicate hydrate to form a composite-like structure on a nano-scale level. Once the stapling cycle is continued, the cocked and loaded striker and spring are released to apply a staple.

1459827681-b04fb644-4ee9-4ba8-b9e4-b95f691b865c

A hydraulic pump is provided that includes a housing having a fluid inlet and a fluid outlet. In one embodiment the magazine includes a mechanical arm with a cone clamp at its distal end, arranged to move the cone clamp from a cone storage to a location between the rails to sequentially deliver cones to the rail system. A pressure differential switch detects low flow demand and allows the secondary heating system to provide immediate heating to the water.

1459827681-edd063fd-7ddb-45d2-b9e6-b0919770853b

A tramp metal separation device includes a first housing having an inlet and an outlet, a first drawer and a second drawer. The method comprises generation of a unitary optical excitation pulse that carries a pump photon, a Stokes photon and a probe photon; and inducing a CARS process in the medium by exciting the medium by the at least one such unitary optical excitation pulse. The test and switching unit is coupled to the redundancy bus, and includes a relay matrix and a Copper Loop Tester.

1459827682-27c9163e-047a-4f8c-9a60-1ecc34ba70a2

An electric repeater for use in transmission line based electric fences. The bus system can have an address monitor unit including a table which is shared among a plurality of bus masters and stores therein access right information. The document cover includes a sheet.

1459827682-b0fb26a9-e08d-4bb7-9f0d-a4a7f8c62fab

An anode inlet unit for a split fuel cell stack or two fuel cell stacks having two anode inlets. Customer instructions are received at a host system to stage the money transfer. Behavioral indexing of circuit designs allows a user to maintain an indexed behavior database, track changes in behaviors as the circuit design's executable description evolves, and figure out how the executable description can be reused in different projects. The invention is characterized in that the methyl alcohol is fully dispersed in the reaction mixture. Bearings are captured between the surfaces and the bearing cage. Next, an article is placed in the accepting space, and air in the accepting space is then evacuated to allow the first cushioning wall and the second cushioning wall to bind the article up to retain the article in the accepting space and not to be shaken with the air packing bag.

1459827682-d45c6d14-799f-41f5-8db5-f2bcd895b977

A semiconductor device having the present high withstand voltage power device IGBT has at a back surface a p collector layer with boron injected in an amount of approximately  $3 \times 10^{13} \text{ cm}^{-2}$  with an energy of approximately 50 KeV to a depth of approximately 0. The cache system includes a line counter that counts the number of effective lines for each memory area. The partial interferometric device may include a Fabry-Pérot double point contact interferometer configured to apply  $\frac{1}{2}$  partial interferometry to a topological qubit. The invention also relates to further processing of the emulsion by wet grinding, high shear mixing and/or heating to enhance the hydration rate in the preparation of the well treatment fluid. The resulting molybdenum dithiocarbamate composition are according

to formula, wherein R1 to R4 are C11-C14 isoalkyl groups, and X represents oxygen and/or sulfur atoms, and R1 to R4 comprise, on average, greater than 98% C13:.

1459827683-185dd042-5f6b-4320-a24c-119f2e81b4da

An interlocking transfer system includes a workstation having four or more sides, each of which is positioned at 90 angles from the next adjacent side. The switched multiplexer comprises a transmit switch, a first diplexer and a power combiner. Then, the test signal is reproduced from the test area when a predetermined time has passed, to calculate the quality degradation of the user data from the evaluation result. The signal contributions and the switching event signals are combined, and a combined lumped circuit model is derived based on a combination of lumped circuit models of the plurality of gates.

1459827683-f97e14a7-11db-42a1-aea2-7d689728543e

Methods and apparatus for increasing the efficiency of a voice coil motor are disclosed. The airport-located subsystems are coupled by way communication paths, such as land line telephone links, to a remote flight operations control center. The album pages are encoded into a form that can be scheduled for broadcasting, and are transmitted to viewers for display on television receivers or similar devices. A page conveyor 12 for sequentially feeding pages 11 from the printhead assembly 13 to the support tray via the adhesive applicator 16. Upon reflection from the mask, a detector determines the intensity of the reflected beam from the mask and translates such measurement into a determination of reflectivity. The method for transmitting and receiving data allows for coding and decoding each bit of data with a different code.

1459827684-aaca1934-ea74-4dc9-bc47-c70479dd5e52

Techniques are provided for detecting a coded signal in the presence of non-Gaussian interference. This life path constant indicates the maximum acceptable state of wear of the tool for the machining of the workpiece. Ion exchange and reverse osmosis water softeners eliminate scale buildup in pipes, but are expensive. Also provided are security windows that utilize such window films. There is a counter electrode having a surface area in said treatment zone which is at least as great as the surface area of the treatment electrode. The integrated circuit card controller controls a plurality of client application programs which are selectively activated for the user on the communication terminal.

1459827684-c10ff844-028b-47f5-abd4-5c55ddc35042

An image photographing system in which one button is used in common for a function of prompt photographing and a function of photographing after a predetermined time has elapsed, comprises a button for instructing an execution of an image photographing process, a control unit for monitoring a depression of this button, and a timer. In some implementations, a combined sensor device includes a wrap-around configuration wherein an upper flexible substrate has patterned conductive material on an extended portion to allow routing of signal lines, electrical ground, and power. The first barrier is created by integrating the waste with an immobilizing mineral. Alternatively, the processing unit processes the audio information received from the telephone in accordance with standard Internet transfer protocols and couples the processed audio information to the second output port when the telephonic communication is to be performed using the Internet communications network and the standard protocols. The secondary fuel delivery means 20 is positioned upstream of the primary fuel delivery means 12 by a distance X, such that the secondary fuel delivery means serves to supply additional fuel to the combustion zone 26 during pressure troughs. The first pair of contacts is located in the first region and the second pair of contacts is located in the second region.

1459827684-cecd6467-2bc8-470a-9261-cb7c53101e7b

The present invention discloses a novel, stable polymorph of 1-benzyl-4--2-yl

methyl piperidine hydrochloride commonly known as Donepezil hydrochloride. The hacksaw blade is fixed to a shaft for rotation about an axis which is generally perpendicular to the longitudinal axis of a mounting member. An elevator located in the card stacking area has a movable platform for moving a stack of cards. The central computer receiving the updated block of data can calculate an expected receiving time of the next block of data accordingly. The solenoid control method and apparatus described above are applicable to a change-over shift operation.

1459827685-d5c256a6-9a97-4395-9bca-b9d5c23e6a6a

A wedge clamp assembly includes a body having a body cable gripping surface, and a slider having a slider cable gripping surface. An arrangement accuracy of the electronic components is determined on the basis of an arrangement accuracy of the component storage parts, and the electronic components stored in the component storage parts are limited in motion. The spikes define a plurality of outer surfaces that extend from a base to a tip. When using telescoping pistons, their placement on the liner and their pattern can meet the desired locations where grip is enhanced.

1459827685-e787d85c-bddb-4975-9a68-d85983331b65

An embodiment of the present invention relates to a repair circuit of a semiconductor memory device. The storage section may store device identification information identifying the electronic device and one or more face images of one or more users that use the electronic device while associating the device identification information with each of the face images of the users of the electronic device. These cells also carry oncolytic viruses, antitumor proteins, multidrug resistant proteins, chemotherapy, monoclonal antibodies, superantigens, superantigen conjugates and fusion proteins, siRNAs, plasmids and non-protein toxins and attenuated tumoricidal bacterial cells specifically into the tumors and induce a tumoricidal effect. The ONT receives a communication signal and broadcast image selection information from the user, and outputs them to the OLT through the splitter. Methods for making these transition metal compounds and for using such compounds in catalyst compositions for the polymerization or oligomerization of alpha olefins also are provided. With this configuration, it is possible to provide a charge information processing apparatus for calculating introduction expenses of facilities required for working as a franchisee that provides automobile repairing services by a specific repairing method.

1459827686-04b39630-2009-4349-9645-a93cbc550b86

In an Orthogonal Frequency Division Multiple Access communication system, the location of one- and two-dimensional bursts may be specified by specifying the starting location of the plurality of bursts. The medical data is output in columns, and the current results and past results of the same medical test are presented in the same row. The chip bond pad is electrically connected to the bottom chip and the top chip by interconnecting the bottom and the top chips and interconnected portions of the bottom and the top chips are encapsulated. The wafer is then developed to form a first set of repeating structures from the first set of repeating patterns and a second set of repeating structures from the second set of repeating patterns. In addition, the information processing apparatus calculates, as a feature-change amount, the difference between the calculated feature amount and a predetermined feature amount, and calculates the eye open/closed degree of eyes of the detected face on the basis of the feature amount and the feature-change amount.

1459827686-22f0b1c4-834c-4d11-85b2-ed428affb5a7

A radioisotope elution system including a radioisotope generator having an alignment structure. The method of manufacturing a display device includes the steps of: laminating a metal film, an oxide film, and an optical filter on a first substrate; separating the optical filter from the first substrate; attaching the optical filter to a second substrate; forming a layer including a pixel on a third

substrate; and attaching the layer including the pixel to the optical filter. The composition contains at least an additional component, which is a second non-intercalating dye in the composition that competes with said first dye for binding to the nonspecific binding sites, or a permeabilizing agent to enhance permeabilization of the dyes into the cells, or both. The second tool rest can move linearly along a third control axis perpendicular to the first control axis and a fourth control axis parallel to the first control axis. The first and second semi-conducting materials can be identical and the step of selective formation of the additional layer can be performed by selective epitaxial growth of the free zones of the thin film. With this structure, the amount of data required for a subtitle and the amount of data that should be processed when a subtitle is output may be greatly reduced.

1459827686-c99d1240-726c-4982-a206-c0807409e25d

A system and method for thermal management of a die is disclosed wherein cooling of the die is controlled by controlling coolant flow to switch between laminar flow and turbulent flow as desired. Some of the conducting segments have an electrically insulating portion. In such a case, two bosses formed on the bobbin of the coil assembly pass through two holes formed at the bottom wall of the ECU's housing, and one of the two bosses is plastically deformed at its lower end projecting outside an associated hole, thus forming a stopper preventing an undesired removal of the coil assembly from the housing.

1459827687-08c9ff9a-5c35-4c23-94d5-da54e9d2ed58

The invention is directed to an optical system for a fundus camera in which lens pairs are tilted relative to the imaging beam path to prevent flare. Specifically, the heat-dissipation solid defining an opening is formed on the target surface irradiated with an electron beam. In one embodiment, a digital register is used to set the battery discharging current limit, in another embodiment an analog circuit is used to set the battery discharging current limit, and in yet another embodiment or a combination of the digital register and analog circuit is used to set the battery discharging current limit. The charging circuit is electrically connected between the positive coupling and a positive output of the second battery, and facilitates charging of, but prevents current flow from, the second battery when the first battery is supplying electrical energy to the electrical system. The tilting joint has a pivot axis extending in a horizontal direction when the vacuum cleaner is in a position of use.

1459827687-506e2799-21a0-4c4d-a6a3-71aa069b309a

The invention concerns a product inhibiting transduction of G heterotrimeric protein signals combined with another anti-cancer agent, in particular farnesyltransferase inhibitors, taxol or gemcitabin, for simultaneous, separate or prolonged therapeutic use in cancer treatment. An assignment is provided of base addresses to the devices. A capacitor is electrically connected across the distal terminals and connectable in parallel with a series-connected energy source and switch. In a plan view of each end surface, each abutment section lies on a portion of an imaginary five-pointed star which includes five outer vertices alternating with five inner vertices. The attachment allows each roller to pivot independently of movement of other rollers.

1459827687-5433cb06-b5fd-4746-87f9-af92727a81d6

An optical sensing device includes a shell, a partition structure, a pivot, a shading member, at least one light emitting member and at least one optical sensing member. A network element may use an interface to communicate with a cluster of network elements. The controller determines an added mass and the height of the added mass on the vehicle, or a roll gradient, a roll acceleration coefficient, and/or a roll rate parameter that take into account the added mass and height from the roll rate, the lateral acceleration, the longitudinal acceleration, and the yaw rate of the vehicle, and controls the safety system in response thereto. The barrel

may be axially fixed to the yoke and may define an axially extending body having a second protrusion extending radially therefrom and engaged with the first protrusion to transfer rotation from the barrel to the yoke. As a result, information having subjective characteristics, such as musical compositions, may be compared and similar musical compositions can be located. The system has one sensor or a plurality of sensors with sensor elements for measuring the pupil diameter and the surrounding luminance.

1459827687-e44eee19-4d41-442b-b821-6d27688d10a6

A method and apparatus for handling mobility for a first host with a MPTCP connection to a second host. An operation control circuit operates any of the memory cells selected in accordance with an address signal during normal operation mode for performing a read operation and a write operation. Next, data bits stored in the selected cells are read. The system also includes an array of detector flow cells in fluid communication with the capillary separation conduits, and an array of high pressure connectors for connecting discrete capillary tubes to the fluid passages in the microfluidic circuit for introducing and removing the fluid samples from the system.

1459827688-3c8df81f-815e-4209-92f9-db524ec24cea

The present invention provides methods and systems for remotely recording an image using a mobile device. The display has a first and a second display portion which are hingably connected to each other. Then the plug-type element is passed through the opening of the housing by means of the holder and is plugged onto the contacts of the component. To optimize throughput across the whole building, station power levels are adjusted based on their location in terms of amounts of attenuation. The heat affected zone is covered with a corrosion resistant material to prevent future leaking, and to protect the weld from inter-granular stress corrosion cracking. In the supercritical heat pump cycle system, the decompression unit is controlled so that a refrigerant pressure in the refrigerant radiator becomes the heating target control pressure.

1459827688-983440e6-c716-4fea-9373-4b7429892028

The present invention is directed to an improved system and method in which a pen-sized and shaped device detects, recognizes and stores handwriting as it is written by the device. The door assembly also includes a cover positionable over the opening in a secure closed position to help prohibit access to the interior of the housing and away from the opening in an open position to allow access to the interior of the housing. 5 N; and the fixing device comprises a heating roller which is provided at a position apart from a fixing nip area. The audiovideo data in the user buffer accumulates; and interruptions in playback as well as temporary modem delays are avoided.

1459827688-d2aeab2f-4ca4-4f95-ab0d-cbb8c28838ed

A system configuration includes a processing element, an inputoutput interface device and a shared memory. The apparatus comprises a substrate, a control device and at least one signal processing device on the substrate. In this constitution, the low potential surface of the cathode which is positioned inside the concave portion is inclined to the side of the gate from the entrance toward the interior of the concave portion. Where image data, for example, for one line are successively inputted to and processed by the element processors, an interpolation process is performed by an arithmetic operation process common to the element processors in which the position information of the number of lines or like is used as a variable. The labeling includes a single substrate having several labeling options and can be designed with multiple main die cut portions separating various sections of the label such that various size labels can be produced from the single substrate.

1459827688-ee6a5371-67fc-4279-8e60-0495b9a6243d

The invention relates to a combustion chamber, in particular of a gas turbine, comprising an external wall structure that surrounds an internal area and an internal wall, which is formed by the surface of a housing that is located in the internal area. A frequency variable circuit is composed of a delay circuit, which has a plurality of inverting circuits connected in series, and a first selection circuit. The particles are coated with a polyamine-based compound, and an average particle size of the particles is 1  $\mu\text{m}$  or more. The drop amplifier includes an amplification path connecting the input connection to the plurality of output connections through RF amplifiers and a splitter, and a bypass path that bypass the splitter and forward and reverse amplifiers in the amplification path to connect the input connection directly to the output connection for the essential circuits. The retaining sleeve of the first capillary tube assembly is secured to one end surface of the accommodation member, and the retaining member of the second capillary tube assembly is secured to another end surface of the accommodation member. One or both handles can be rotated upwards to abut each other and carry the container.

1459827689-9beb5a87-f1e8-42f8-bc27-d22c3279cbde

A system and method are disclosed for environmental stabilization of a body of water. The magnetic interface generator is a passive array of spirals that are deposited on a substrate surface. The low power supply may supply enough power for the host device to detect the connection of the adapter and establish initial communication with the adapter. By monitoring wagers, game play is monitored and processing may occur to track each player wager and the amount wagered by each player. In some embodiments, the implement may include a valve and a specially configured storage cap.

1459827689-a7c02270-b96e-40b5-a7f9-bd15caab40ab

A method and apparatus for remotely installing a monolithic liner in a conduit is disclosed. The printer includes a top wall, a bottom wall and a peripheral wall extending between the top wall and the bottom wall. The system may be used in methods of inspecting layered structures such as composite aircraft components and repair patches applied to such structures. An electrical cable extends proximal through the tube from the light source. A switch element is configured to electrically couple the pair of switch electrodes in accordance with an operation of the operating part.

1459827690-563c38a3-400b-4677-bebc-ef22ba66aaae

A method and apparatus for method for transferring files between a primary storage system and a backup and restore system is described. The assembly may be attached, adhered, or otherwise embedded into or upon a removable oral appliance to form a bearing aid assembly. An anchor member is mounted to the display stand and has an aperture bounded by at least one flange. The monitoring system alerts users and connects to an existing security system to notify third-parties. The lead wire 132 is passed through the lower conductor 122 and the semiconductor substrate 110 and led outside. Additional layers of matrix material can be deposited on top of the nanocrystal complex layer.

1459827690-69ff1262-c0ea-488c-82f4-429b78a4703a

An automatic analyzer analyzes a measurement item by making a sample and reagent react with each other and measuring the reaction result. Each change statement comprises a change operator operable to perform change operations on the elements of a target data model. Based on the results of the comparison, the compensation mechanism adjusts selected bias levels in the operational circuit, preferably using current stealing circuitry, so that the functionality and performance of the operational circuit can be substantially maintained. The center sleeve includes a first joggle structure. These support members are affixed on both sides of the valve gate opening radially around a gate sleeve. A detected object is recognized by using the difference of an output characteristics correspond to a quantity of

reflected light.

1459827690-f727cbc3-9f92-4883-950f-58c4cf64f213

A resid fuel additive is provided that includes a plant oil extract,  $\beta$ -carotene, and jojoba oil. The containers are vertically stackable one on top of the next in self-aligning fashion to form a vertical growing column supported by an elongated upright support pole driven into the ground and inserted through an aperture in the bottom wall of each container. This allows the LD holder 10 to be fixed temporarily to the side wall surface 1a of the slide base 1 with the laser diode 6 being adjustable freely, resulting in an improvement in the assembling workability such as chucking of the holder by the adjusting jig and spreading of adhesive.

1459827690-fa637aeb-a22f-463c-9381-2fbd26ce9931

A non-invasive and non-systemic method for administering a local anesthetic. For this purpose, the crown is provided with a housing which houses a pipe, to which one end of a winding stem is connected, carrying at least one spring and a rigid ring secured to the crown and comprising notches adapted to cooperate with the spring. The first optical compensation layer is formed of a liquid crystal compound and has a relationship of  $n_x > n_y = n_z$  and an in-plane retardation  $Re_1$  of 100 to 170 nm.

1459827691-49b41c4e-80fb-40d3-a972-16d362c78285

A method of fabricating an interconnect structure of an integrated circuit device is disclosed. The magnetic sensing element has at least one planar layer of electrically conductive ferromagnetic material that has an initial state in which the material has a circular magnetic moment within the plane of the layer. The shape memory feature is positioned at a distal end portion of the tube member.

1459827691-8ae8e49a-d121-493d-ae7f-5acadd3a1aa4

An exhaust gas purifying apparatus for an internal combustion engine is provided for switching a switching valve at an optimal timing in accordance with an actual activated state of a catalyzer to achieve an optimal exhaust gas characteristic. The quality monitoring system comprises a plurality of quality monitoring functions located at the multimedia to packet conversion points. For each of the multiple search items, the method may assign a weight to each of the multiple search commands based upon the size and position of the corresponding search command. A light projection system in which one or more SLMs are placed includes a write UV light path and a read visible light path to form a color image projection display. The second gate electrode is formed of a second metal silicide including a metal the same as that of the first metal silicide. A rolling bellows encloses a compressed air space and has double rolling folds.

1459827691-9d886afa-f44f-43f6-8300-e9438deed236

A method for the washing of laundry in a motor-driver washing machine. A runtime object may be defined to listen for a trigger event in an offering business object. The switching means switch ATM cells or variable length packet data in parallel.

1459827691-c2036de8-1e15-4c70-bd09-623478301c3f

An apparatus and method for a preheated micro-reformer system is disclosed comprising a reformer and a micro-reformer in fluid communication with the reformer. Efficient utilization of transmitter power is achieved because radical reduction of side lobe regeneration provided by AQDBPSK allows operation of all amplifiers of the transmitter analog signal path, including power amplifiers, in energy efficient nonlinear mode without causing interchannel interference. The field lens is to at least partially collect the light modulated by the modulator. In a negative mode, the first terminal is connected with the negative electrode, and the second terminal is connected with the positive electrode. A change of a particular attribute throughout the entire document can thus be carried out simply

by changing the conversion style elements in which this attribute appears.

1459827691-d557a93d-49c2-4bf1-8961-d2e4d102f12c

In an image reader having a static-document reading function and a moving-document reading function, a static-document pressing member is movably arranged on a cover portion and a sheet passing opening is opened or closed by moving the static-document pressing member. The first system may receive one of the first data signals associated with a data frame, determine first synchronization information corresponding to one of the second data signals associated with the data frame, and output the first synchronization information. Additional systems and methods are also presented. A cell and battery are also disclosed incorporating the disclosed positive electrode.

1459827692-1e365460-bfd9-4d9e-8934-fc44cbe11080

Methods and apparatus for implementing an n-state ripple-adder scheme coder with n\22672 using an n-state reversible switching function and a non-reversible n-state switching function acting upon a first and a second word of at least 2 n-state symbols are disclosed. Hot air is circulated by the blower motor assembly into the oven cavity where the hot air is directed in a manner wherein a conflicting, colliding turbulent gas flow is directed at a food product providing for the rapid cooking of food products. The content search index lists document content, user generated content, and semantic vectors; the personal search index lists user generated content, user explicit gestures, and user implicit gestures. The selector valve is operated from the outside by the operating device.

1459827692-a1c5337b-dd4e-4414-a8cb-d8ab42ba0152

A system for splicing a conveyor belt with belt fasteners is disclosed. The system includes a reservoir of pressurized air and associated leveling valve that uses a relay valve to improve refill times when the vehicle returns from a dump mode operation to normal operation. The bracket pieces have a lip between upper and lower hub protrusion ribs and the lip has an outer cam edge with detents. Therefore, the drain currents of the driving TFTs are little affected by the variation in the threshold voltage. The embodiments provide a solution for improving the adhesion between the NFT and the spacer. 0\71016 moleculescm<sup>3</sup>, an OH-content in the range of 125 wt-ppm to 450 wt-ppm, an SiH group-content of less than 5\71016 moleculescm<sup>3</sup>, a refractive index inhomogeneity, \u0394n, of less than 2 ppm, and a stress birefringence of less than 2 nm/cm.

1459827693-0d68bb45-d6bd-4804-bfa0-7a0cd85d79d7

A steam engine with improved intake and exhaust flow provided by separate pairs of intake and exhaust ports located at both ends of a steam drive cylinder. The lines are thick, strong, long lasting and easily replaced when worn. The applied heat, however, does not introduce any significant heat into the distal end of the catheter. The first end of the expander member is configured to engage a substantially unexpanded loop of a stowage device and to expand the perimeter shape of the loop as the loop is moved along the longitudinal axis from the first end to the second end. Scalar variables may be assigned a fixed memory location. Characteristics associated with processing blocks are analyzed.

1459827693-350ac62b-2513-4b2d-85c3-e7fb21cffffec

A new and distinct cultivar of Lily plant named \u2018Tiny Missile\u2019, characterized by its compact and upright plant habit; vigorous growth habit; densely-foliated habit; freely flowering habit; upright flower buds and flowers; dark red-colored flowers; and good postproduction longevity. In one aspect, an integration engine receives a set of rules from an external application and receives item data including item identifiers from one or more tag readers, each item identifier being read from a digital tag bound to a physical item. First and second edge areas appurtenant thereto and pertaining to the insert are pressed against the opening in the case of fixing. The broadband medium noise of the

magnetic media is measured. Also provided are methods for isolating silencing agents so identified. A 2-alkyl-2-adamantanol is reacted with a carboxylic acid such as acrylic acid or the like in the presence of an acid catalyst such as concentrated sulfuric acid or the like and a drying agent composed of an acidic or neutral inorganic compound which is a solid at ordinary temperature in a dried state or of a water-absorbing high-molecular compound, to produce a 2-alkyl-2-adamantyl ester.

1459827694-095895c1-9623-46d9-a0e5-fa8d7213b2d5

A stage apparatus includes a base, a stage movable on the base in first and second directions, a first member movable relative to the base in the first direction, and a second member movable relative to the base in the second direction. The device comprises a single-strand smooth cable for supporting an action and/or measurement assembly, which cable is electrically conductive and has a breaking strength greater than 300 daN, and is disposed in the tubular element.  $cSi_3N_4$ , where  $\frac{c}{201cM}$  is at least one element selected from the group consisting of Mg, Ca, Sr, Ba, and Zn, and  $\frac{c}{201ca}$ ,  $\frac{c}{201cb}$ , and  $\frac{c}{201cc}$  are numerical values satisfying 0. The container and lid can also include an audible locking system where a cantilevered audible lock projection extending from the container engages an audible lock actuation protrusion extending from the lid to make a click sound when the lid is seated on the container. The compression step consolidates any fragmented balances residual in the remote queries, localize remote data, data map, or follow-up logic.

1459827694-5de8c01a-3058-464e-83d3-31a8d4bdb300

A liquid drop ejecting device is provided with liquid drop ejecting heads having different specifications from each other and plural dummy load circuits which apply electric loads to the liquid drop ejecting heads, and analogue switches for switching the dummy load circuit which is connected to the liquid drop ejecting heads according to the liquid drop ejecting head to be driven. This circuit includes a data path, which has: a transmitter latch controlled by a transmitter clock in a first clock domain; a receiver latch controlled by a receiver clock in a second clock domain; and an intermediate latch coupled between the transmitter latch and the receiver latch. The cavity unit is constituted by a plurality of sheet members which are stacked on each other. The keel post is attached to a triangular control frame, the base of which forms the control bar.

1459827694-97fdefda-5010-487a-bbdc-1b0701f4d3a8

A system and method for providing calling feature icons in a user interface that allow users to determine with ease the status of different calling features, and in respect of at least one embodiment, to identify with ease the communication lines associated with calling features that have been enabled on the mobile device. The controller has a command flow setting device that sets a command flow rate  $Q_c$  of the oil supplied from the oil pump unit to the assist force generating unit in accordance with a vehicle quantity of state such as a vehicle speed, steering angle or the like. The depressible portion is depressed internally by applying external force. For each flagged node, logic equations are added which represent the sum of the node's pass transistor loads, and further logic equations are added to compare the number of pass transistors turned on from one to the absolute maximum for the node. The data in the failed logical circuit in the first data network is rerouted over the logical failover circuit in the second data network until the failure in the network circuit in the first data network is resolved.

1459827695-4b4df21b-9529-4ce1-8315-60ac80d7238a

To provide a method by which a semiconductor device including a thin film transistor with excellent electric characteristics and high reliability is manufactured with a small number of steps. An image signal of a peripheral image which occurs at the same time as an objective frame in the input image signals, and is different in view angle from the image of the objective frame is generated using

the input image signals of the plurality of the frames based on the detected motions and the layering. This biomarker may also be used to diagnosing the effect of a change in lifestyle on visceral adiposity in a subject. The preform is high-temperature mold-released from an injection cavity mold and an injection core.

1459827695-64f8df0f-9fa7-48e2-a0e7-04bdbcb93573

A disk drive includes an enclosure having a cover and a base, a spindle motor assembly, a disk, and an arcuate raised portion on the base. The display device comprises a base panel having a substantially rectangular body and a plurality of longitudinal slots formed therethrough, the slots extending across the body of the base panel in separate radial and tangential directions to provide multiple areas of access to the shopping cart wall for balanced mounting of the device. A lock control unit shifts the VCT phase in a direction opposite from the VCT phase shift direction if the VCT phase is located on a lock-mode VCT phase shift direction side of the intermediate lock position when the engine becomes equal to or less than a first rotational speed, and otherwise the lock control unit allows the lock pin to be displaced in the lock direction.

1459827695-7ad4510d-0741-4c1e-9aed-034cd62af55a

Various methods and devices for replacing damaged, injured, diseased, or otherwise unhealthy posterior elements, such as the facet joints, the lamina, the posterior ligaments, and/or other features of a patient's spinal column, are provided. Freshly prepared foods means foods that have, in some manner, recently been transformed into an edible or consumable format. The lever can be rotated between the open position and the latching position by moving the lever handle. The polyester resins contained in the fine polyester resin particles, respectively, are cross-linked to each other by a cross-linking agent. Lastly included is a barrel wedge assembly comprising an expanding wedge subassembly and an unloading rod assembly comprising an unloading rod and an unloading rod housing. The diodes, the high-voltage capacitor, and the high-voltage resistance substrate are arranged in the longitudinal direction of the flattened substantially circular cross-section of the winding portion.

1459827695-a7ec2aaa-d40c-46b7-a1ce-cd37693fecfc

A continuously tunable linear phase filter having a ground connection includes a three-terminal Bessel filter having an input terminal for receiving a signal, an output terminal for delivering a signal, a control terminal for receiving a control voltage, and a varactor. The erosion control block includes cable channels formed therein from respective opposite corners of the block so that an axis of the cable channels forms an  $\infty$  in said block. A portion of the second stay-composing part, which portion is between the one specific part and the other specific part in the direction of the vehicle width, is not located further forward than the specific parts, and at least part of the portion is located further rearward than the specific parts. The invention further relates to the inbred and hybrid genetic complements of plants of variety I226211. The method determines a level of a securement associated with the determined type by a correspondence table, and emits the message according to a protocol having the determined level of securement.

1459827695-b18cdd8b-efbf-4d83-9924-54ca6fce267f

This disclosure describes techniques for coding information in a scalable video coding scheme that supports spatial scalability. The LAN system uses different spread codes, maintains transmission power semi-fixed, and selects a frequency and a frequency band in accordance with the kind and amount of information. One conductor in each pair is provided at the inner element, the other at the outer element and being connected to a respective voltage line which extends to an input terminal and to an output terminal respectively, the conductors being surrounded by an insulating material.

1459827696-620f9920-9a86-46d7-8173-7fe017a9f4f0

A system and method create an interconnection among users of different social networks. Pressure losses in the air duct should be minimized in order to ensure good overall efficiency. The method also includes forming a fuse window opening that is very shallow in the semiconductor device.

1459827696-da8c894a-ceb2-4f80-a67c-e26d6062420f

A radio frequency identification system for a motor vehicle, in which RFID tags having unique alphanumeric codes are encapsulated and mounted to selected vehicle components, such as the vehicle chassis, body, or engine parts. The method allows changes to be made to the start-up sequence of processes and applications initiated by the operating system based upon the occurrence of a designated event during the BIOS boot sequence. The module further includes a segmentation-and-reassembly unit; and a buffering-and-scheduling unit.

1459827696-e379d9fb-4a63-4245-a9c0-c4820f875307

Rotor having a shaft having an axial direction, where an inner and central cooling channel with an inlet and an outlet for a cooling agent is provided in this shaft, extending in the above-mentioned axial direction. The comminution device and the circulatory pump are operatively interconnected in a manner such that the comminution device is at least temporarily driven by the circulatory pump. Those magnetizations can then be read as different logical states of the MTJ. Each electrode of the piezoelectric diaphragm is connected to at least one of the wing portions of the terminals by a conductive adhesive.

1459827697-0742b31c-e221-4013-ba3e-07a1fd8fabba

A fiber optic distribution terminal includes an enclosure having a base. A SAN management system for monitoring and controlling zone integrity of a SAN. There, the validation rules include comparison rules for determining whether a display provided by the view portion substantially matches the main data portion. When the measured pressure has reached a predetermined shut-down pressure, the secondary shut-off valve is closed. The dissociating includes compacting the heated raw biomass waste, generating heat from an internal heat source, and applying the generated heat to the compacted biomass waste under pressure. Pharmaceutical compositions and methods of treating disorders involving blood cells are also disclosed.

1459827697-a4860bf2-9673-4bd5-a7e3-2733bb4fb910

The present invention provides a weld monitoring system and method that monitors and automatically coordinates information on the quality of each weld in a workpiece having one or more welds. The polymers and compositions provide enhanced sensitivity to activating radiation. The directional loudspeakers may be used with other vehicle loudspeakers to control spatial perceptions. Motion vectors originating at one calibration frame and terminating at the other calibration frame may be calculated.

1459827697-d8c482e6-cb57-45ae-ab3e-2cfe462dafc2

An assay device is made by combining a polynucleic acid with a molten material capable of solidifying into a solid thermoplastic or thermosetting material and then allowing the molten material to solidify. The corrosion rate of the coupons 30 can be used to optimize the environmental conditions, so that items in the environment corrode at desired rates. It further enables detection of SAAL resource defects. Another feature provides for use of explicitly addressed device ID messaging to effectuate the desired broadcast. The axial bore at the end surface is for ejecting a plasma stream.

1459827698-1a64eb48-11da-4c32-be8c-3d9b1cd9f1bb

A surface acoustic wave device includes a piezoelectric substrate on which is formed a transducer that generates acoustic waves on the surface of the substrate

from electrical waves received by the transducer. Epoxystearic acid methyl ester in particular may be used as the fatty compound while a butyl acrylateacrylonitrile copolymer in particular may be used as the acrylateacrylonitrile copolymer. The remote system may receive local system data from the local system concerning the use of the exercise apparatus, and the local system may receive remote system data from the remote system concerning the operation of the exercise apparatus. Meanwhile, an intense line beam is produced having a narrow dimension along a fast axis from an array of coherent CW lasers of a selected wavelength. The plasma processing method flattens either a positive side voltage or a negative side voltage of a voltage waveform of a high frequency voltage generated to the object at an arbitrary voltage.

1459827698-22dc4289-d746-43e0-8b71-c027f2d10048

A novel maize variety designated X00B150 and seed, plants and plant parts thereof, produced by crossing Pioneer Hi-Bred International, Inc. When new photosensitive mediums are loaded in a certain image forming apparatus, attribute information of the new photosensitive mediums is transmitted to the database via the local area network. A password component is operable on the client system for automatically on a re-occurring basis generating a password for an application operable by the client system based upon at least two inputs accessible from the client system. The front support piece is longitudinally adjustable and a length of the toe strap is adjustable to enable the binding to receive boots of different length and style.

1459827698-423d7697-8ac7-4ed9-a61e-e89d237b309c

A magazine for a railway anchor applicator having an anchor receiving mechanism for applying an anchor to a rail includes a chute structure. Freely rotatable connectors can include a spinner assembly and spring clips. The method then determines by the sharing device, sharing preferences of the selected application, creates an application package at the sharing device, based on the sharing preferences, and establishes a network connection from the sharing device to the receiving device. The electromagnetic field is also provided by an implantable net or array of electrodes which may either be hardwired to a pulse generator or coupled by means of wireless or inductive transmission.

1459827698-475c6490-4ef6-4de9-a151-68bab071fa23

A method for determining an optimal routing of data packets to subnet addresses in a network including a plurality of routers interrelated by a defined neighborhood relationship, includes, responsive to learning of a presence of a subnet, determining a distance between the subnet and each router. The system is suitable for securing the contents in safety deposit boxes or similar locked receptacles, and selectively permits access to key locks only to individuals who have been determined to be authorized to have such access. The method and system also include setting a focus range and exposing the photoresist layer over the focus range to form a photoresist mask having a trench therein.

1459827698-5367d82f-3dbd-457d-be50-3139600c7373

At least one green filter G having a filter characteristic for transmitting a green light component is formed in all of horizontal, vertical and diagonal directions in a block consisting of six optoelectronic transducers in each of the horizontal and vertical directions. The storage assembly includes a body that includes at least one surface, at least one sidewall, and at least one recess portion defined within the surface. The connecting portion may provide the tray portion with a first rotation in a plane substantially parallel to a plane of rotation of a non-pivoting wheel of the wheelchair and a second rotation in a plane substantially perpendicular to the plane of rotation of the non-pivoting wheel. Measurements of the catalyst's temperature characteristics with defined modifications of an engine's operating conditions allows determining the catalytic converter's gas conversion effectiveness.

1459827699-e919b45c-c2a3-467b-9e86-36495d14c8ee

Briefly, one or more embodiments of a process, system, apparatus or article to edit electronic content is provided. The binding mechanism comprises a first or front retaining element for retaining the front toe-end portion of a sports shoe, a second or rear retaining element for retaining the rear heel-end portion of a sports shoe and an elongate connecting element of variable shape between the first and the second retaining element. , enhanced reliability is increasingly demanded on electrochemical devices, such as battery, for use as the power source thereof. The proxy session initiation server releases the resources and transmits an information packet to the serving session initiation server, which also initiates a release procedure.

1459827700-7e567e69-355a-4cd3-8bcf-570078079c5b

An information storage device includes a storage node, a write unit configured to write information to a first magnetic domain region of the storage node, and a read unit configured to read information from a second magnetic domain region of the storage node. In general, in one aspect, a remote unit in accordance with the invention includes a spatial processing unit to process signals received by a plurality of antennas. The user interface receives a request for a product type and instructs the pumps or metering devices to dispense a predetermined type and ratio of macro-ingredients, micro-ingredients, and diluent to the dispensing valve for a predetermined flow rate. The film exhibits an excellent property for preventing reflection of light and excellent scratch resistance and can be produced at a low cost. The method comprises applying a coating composition to the stent; followed by terminating the application of the coating composition; followed by inserting a temperature adjusting element within the longitudinal bore of the stent to change the temperature of the stent.

1459827701-3e0ed80d-f8de-498b-b9df-0a4b196cca4a

A burner for operating a heat generator, includes a swirl generator for a combustion air flow means for injecting at least one fuel into the combustion air flow. An adhesive impregnated mat is moved longitudinally, and granules are provided onto adhesive, in predetermined bands. If an activity pattern associated with a reboot of the host is observed, access by the host to the network is restricted based at least in part on the observed activity pattern. In its tensioned condition, the local spring portion does not project, or projects to a lesser extent than in the relaxed condition, on the inner side of the envelope element, such that in its fitted condition the local spring portion presses under its spring force against the pipeline.

1459827701-df3e3866-5d4e-4f00-8e31-b7cc534e6822

The monitoring system for a gas turbine engine including a viewing tube assembly having an inner end and an outer end. This system includes a plurality of components positionable on a selected location for establishment of a multi-station decontamination and containment facility to decontaminate personnel and to contain contaminants collected during the decontamination process. Further, the invention also provides the capability of properly checkpointing a data write to a stripe according to whether or not the stripe unit has been migrated previously. Because both the initiation and the rate of polymerization may be controlled with temperature, the inventive methods are especially suitable for ring opening metathesis polymerization reactions and for molding polymer articles that require extended pot-lives. Processing is laser-performed in relation to a selected material whose internal crystalline structure becomes appropriately changed thereby to establish the desired mechanical properties for a created device.

1459827702-0456a3d9-3f01-4cef-8155-6e8c275495d4

An acoustic imaging apparatus and method that achieves desired delays with coded signals. A work string is tagged into the expansion assembly and run to depth. Each group is randomly reordered and utilized to determine a profit maximizing price as

a function of the bids and budgets within that group. If it is determined from the monitored rate of change that the gauge pressure may exceed the upper limit, the degas power increases can be stopped or the degas power decreased.

1459827702-5263ef35-39de-44fa-b4a8-b4bef3eb63cb

An apparatus for multiple antennas having a low coupling coefficient in a wide frequency bandwidth in a wireless communication system is provided. This network device includes a network connector and an integrated circuit. The rails are preferentially arcuately curved to provide an elevationally divergent scan with a relatively wide aperture in the near field.

1459827702-684cc0a8-2f7a-41e3-9552-2a46ce13aab2

In a method of controlling RRC state switching in a wireless communication system, adaptively controlling RRC state switching between an idle state and a connected state for a user equipment based on at least a detected mobility measure for said user equipment. The method heats the surface during the machining to vary the machining process at the surface relative to other surfaces of the component. The cell synchronization can be performed by using the demodulated information of the selected cell. The resource managers may comprise part of the asynchronous messaging infrastructure. A selected multiplayer online electronic game is selectively launched on all of the player's computers through a single command issued by the host. Data symbols and pilot symbols are allocated for down link and up link transmission resources in a two-dimensional time-frequency pattern.

1459827702-d49b87d0-834e-4f2d-8f0e-60b97fffd2852

A spacer for an artificial spinal disc arrangement is provided. The method comprises providing a recessed region in the underlayer. A resin distribution system is positioned between the lay-up and the fluid impervious sheet. Data that is associated with the transaction as the transaction flows through the sequence of software components may be accessed.

1459827703-105dbdbd-1a79-47e0-86e7-ff33c060b09d

The present invention provides a novel structure that can be used to make a common mode filter. The balloon has a first layer formed of a first polymeric material and a second layer formed of a second, different polymeric material, the second layer having a wall thickness which is greater along the central working length section than the wall thickness of the second layer along a section proximal and/or a section distal to the central working length of the balloon. The plurality of storage nodes is formed over a semiconductor substrate. Each light beam striking the surface produces a Fourier diffraction pattern of scattered light in the back focal plane of the imaging lens.

1459827703-3f43eda5-aa56-4d55-a06d-a8c136a6faba

Austempered ductile iron for components requiring high strength and/or ductility, which has a silicon content of 3. The result data group may be assembled as a virtual native document within the host operating environment, such that data from the data group may be accessed and manipulated as a first class participant through the host operating environment by client computers, without requiring nonvolatile storage of external data as native data to the host operating environment. The new store presents an alternative to conventional stores that focus mainly on price when other attributes are similar. The connection track is routed through the router in accordance with the one or more QoS parameters assigned to the connection track.

1459827703-83dcaaff-71a5-4a78-8b53-83fd19eb0e1a

A lubrication system for an aircraft engine includes a lubrication fluid tank and a fluid passage communicating with the tank to define an entry of the passage inside the tank. Using an encoder, the second compressed digital video bit stream is generated. % water in the presence of an emulsifier and, optionally, in the

presence of an activator. In an alternate embodiment, a selectable first group of capacitors are switched into connection within the bias filtering module as a second group of capacitors approximately reach a fully charged state within a specified settle time to provide improved filtering. The stackable surface module is especially useful in certain applications, such as for earthquake-resistant walls, a cupola, a bridge, a site fence, a noise protection wall, an upwind power station, a heat exchanger or a coastal protection wall.

1459827704-97ce32e9-ac00-4de4-8ba8-d5018487da18

A method of evaluating the feasibility of a CoreSight trace architecture in a SoC before the hardware and/or firmware is available allowing for better die size estimates and package requirement for the design in the early stages of planning. A 3D visualization may be used to identify and conduct an analysis of the integrated circuit. A plate-shaped plastic part provided with holes and a plug which projects through the aperture and is connected to the cover via at least one hollow pin. Spring assemblies are utilized to absorb force applied by the user. The steam generator includes a common electrode part, a low water-level electrode part which senses a low water level, and a high water-level electrode part which senses a high water level, the high water-level electrode part having a lower end which is positioned above a lower end of the low water-level electrode part and an upper end which is positioned above the low water-level electrode part. Metadata corresponding to the first set of backup data is maintained in the second computational device.

1459827704-9f7a0b35-2653-4855-991c-636c46dae7d8

Novel antagonists of  $\alpha$ 21 integrin and  $\alpha$ 32 integrin of the general Formula I: wherein R1, R2, R5, L1, L2, Rb, W and Z are as defined in any one of claims 1 to 13, A represents  $\text{CH}$  or a nitrogen atom, and p is from 0 to 4. The amount of hydraulic fluid flowing through the valve controls a force generated by the door closer assembly on a door. For example, a set top box at a hotspot can receive an instant message which includes a data set, including cookies, from a personal data assistant. If the destination port is capable of receiving data, the destination port allocates a write reservation station to the data.

1459827704-cabb982a-bd48-4a47-8bdd-94089c507534

A high-concentration photovoltaic solar module is formed by a casing that contains photovoltaic receivers in the base thereof, which are interconnected with one another, and in the upper part thereof has Fresnel concentrator lenses in a plane parallel to that of the photovoltaic receivers, which close the casing in a leak-tight manner. The longitudinal fabric elements may be secured to the cover cloth layer and the inner cloth layer with such as stitches. Indicator device responsive to the risk estimate indicates the risk of injury, or alternatively the risk of failure to incapacitate, and warns the user of the apparatus when the risk exceeds a predetermined threshold. The built-in antenna has an antenna element in a linear or plate shape. The filter element traps contaminant in the contaminant tray including when the contaminant tray is removed from the housing, to prevent spillage of contaminant during servicing.

1459827704-dcec5f53-978d-4f44-b5cc-3d16d72a87ab

A terminal and controlling method thereof may be provided such that a terminal user may select a specific channel from a plurality of broadcast channels received by a mobile terminal. A spray assembly is provided which includes a spray source for providing a stream of material to be deposited on a substrate, a collimator which is positioned in a path of the stream from said spray source and an aperture assembly, which is positioned downstream of the collimator with respect to the spray source and above the substrate platform. A predetermined color is given to a left side surface of the long projection, and a color different from the above color is given to a right side surface of the long projection.

1459827705-55ac72d9-45f2-4dd0-a746-c7c5a1b8413f

Shifts in the apparent charge stored on a floating gate of a non-volatile memory cell can occur because of the coupling of an electric field based on the charge stored in adjacent floating gates. A method is disclosed for treating a patient with an obsession, a compulsion, an anxiety or a depression disorder. Cohorts can be passed between views and analytics via drag-and-drop interactions as an analysis unfolds.

1459827705-99318003-a972-47e8-bf53-6ef34b9a3444

A workspace energy management method and system control the power state of workspace appliances using multi-factor presence detection and mobile phone identity verification. In one embodiment, terminals for signals sensitive to trace length outside a die are arranged at the corners of the die. The conductive film extends from a top surface of the light absorption layer to a bottom of the trench along one-sidewall of the trench and is divided at another-sidewall of the trench. 0% and a particle size of 45 to 75  $\mu\text{m}$  is 20. A weak filtering operation can be applied to reduce blocking artifacts, and a strong filtering operation can be applied to smooth luminance transitions. The microorganism preferably further exhibits reduced intracellular S-adenosylmethionine synthetase activity, L-threonine auxotrophy, enhanced intracellular cystathionine  $\beta$ -synthase activity and enhanced intracellular aspartokinase-homoserine dehydrogenase II activity.

1459827705-e35aa2a9-7f32-434c-a4be-dced14f92653

Timely projections of product sales for a reporting time period are obtained by combining actual sales data received from reporting stores and estimated sales data for non-reporting stores. An embodiment of the invention includes a minimum of three channels for digital computation in Primary Flight Computers and four channels for digitalanalog conversion in Actuation Control Electronics. The male clip is loosely inserted through the insertion hole and engaged with the female clip around the insertion hole via an abutting brim, thereby producing a gap between the insertion hole and the male clip, thus increasing the degree of freedom of positional adjustment, reducing the steps for mounting and controlling the accuracy of the attachment, reducing the overall cost.

1459827706-3c94ab2a-f719-4719-8f32-38cc340de3d3

An apparatus for generating pressure pulsedshock waves is disclosed which comprises a pressure pulsedshock wave source, a housing enclosing said PPSW source, and an exit window from which wave fronts of waves generated by said PPSW source emanate. The tread band also includes a first portion of a first elastomeric compound having a first modulus of elasticity between about 12 MPa and 16 MPa, measured at 23 C. The data processing unit generates status data of the data processing unit, including the notified management data. Non-magnetic material is photolithographically defined to produce gaps above a spacer.

1459827706-566d8c18-bd9c-44e3-bf50-76f417907917

A complete power management system implemented in a single surface mount package. The composition can be used to prepare foundry mixes. The network controller also includes a 101001000BASE-T IEEE Std.

1459827706-8cbb9e46-659c-459a-abea-d7989cd1939b

A method for charging an implantable medical device includes charging a lithium-ion battery provided in a medical device, the lithium-ion battery having a negative electrode with a lithium titanate active material. The array of LEDs is formed by dividing a multilayer epitaxial structure having a N-sided polygonal cross-section where N is an integer equal to or larger than 6. The rules may include one or more syntactic rules or conflict rules. Real time dynamic enrichment of the decision making context occurs by retrieving additional information required to evaluate the rules. A switching system including valves 90, 92, 94, 96, 98 alternatively

provides first or second scrubber solvents to the absorber tower and returns the used solvent and sorbed material to the carbonylation system to accommodate different operating modes. In other embodiments, a network-based e-commerce environment includes offering the client participation in an accrual of credits at a predetermined multiplier of the periodic flat rate paid whereby such credits are accrued over time and may be redeemed to offset legal fees otherwise payable.

1459827707-4f858b99-ef86-4a94-ac06-8983c959b524

A method and network node are presented to route a signaling message in a SS7C7 national telecommunication network between a Border Node within a first licensed operator network and a destination node within a second licensed operator network. The body is configured for receiving the picked table tennis balls therein. An oil mist inlet may be positioned adjacent to a first side of the bearing mechanism and be in fluid communication with the bearing mechanism. The methodology further involves using the mobile communication device to communicate the physiological data to a network server. The signal filtering is preferably used for medical measurement signals, preferably in the area of pulse oximetry and for measuring blood pressure or determining the heart rate.

1459827707-8025138d-aaa4-42ec-a85a-f690cba28293

A method of forming a resist pattern on a semiconductor substrate, includes forming a resist film on the semiconductor substrate, and supplying a developing solution on the resist film to remove the resist film, wherein a portion of the resist film remains on the semiconductor substrate. The scheduling method for a node B in a wireless communication system supporting a plurality of carriers includes determining a delay weight for each of a plurality of user equipment according to a preset weight application time point. In some implementations, the user may upload playlists to the network in order to permit other users to view the playlist and, if desired, watch the playlist's contents.

1459827707-cf381884-ae18-4296-82b2-9cfd4b8bc51b

A system and method of processing a test current for an analyte measurement in a fluid using a test strip and a test meter are disclosed. The disclosed organic electronic device show excellent characteristics in terms of efficiency, driving voltage and stability. After proceeding a photolithography process, developing processes, the cathode ramparts and the insulating layer are formed simultaneously and the first display electrodes are exposed partially. Each half of the blind includes a plurality of slots through which a gun barrel can be inserted or through which an arrow can be shot. The magnetic flux lines can be oriented longitudinally and/or transversely with respect to the device. The undergripping projection is located on the upper side of the ring and sits against the latching projection when the ring is in an unflexed position.

1459827708-95262bb6-b050-4f5f-ac34-ead95f934d75

Crystals of 5-2-amino-4-pyrimidin-5-yl-1-methylpyridin-2-one having a diffraction peak at a diffraction angle of  $\theta$ . The memory cell includes an anti-fuse storage element and a selection transistor. One or more fins adapted for dissipating heat produced by the LEDs may be disposed on the support structure. The vehicle body structure of the present invention makes it possible to further effectively utilize a sidewall surface of the vehicle body so as to desirably enhance a function of the sidewall surface as a whole. Finally, duplicate results are removed and remaining results reduced into a result set for the problem. A plurality of support members extends through the catheter, essentially parallel to its axis, exits the catheter at a defined distance from its distal opening, and is attached at the catheter in proximity to its distal end.

1459827708-9aa04035-acc1-443f-a529-2feb03567efb

A method which allows standard telephone users to audio conference with video conferencing participants over IP networks in a private secure environment. The

cross-section can have a filament factor of about 2. The ratio of the thickness of the nonconducting layer to the thickness of the outer conducting shell is determinative of the wavelength of maximum absorbance or scattering of the particle. In response to the command received from the cellular phone, the receiving facsimile machine either forms an image based on the facsimile data on paper or forwards the facsimile data to another facsimile machine near the recipient.

1459827708-b95c32d3-e591-4f5f-9f85-82fdced1dd40

A method for forced regeneration of a catalytic regenerative particulate filter is disclosed. A portion of the waste water stream is electrolyzed to provide a solution containing hypochlorite ions, a quantity of which is mixed with the suspect water in sufficient quantity to sanitize the suspect water and maintain sufficient residual chlorine to prevent re-contamination. The vehicle information interface collects vehicle velocities, acceleration and deceleration, and mileages and provides them to an electronic control unit. Second, the brackets are provided with a vertical member which engages the shelves. The N-type electrode part is formed of a second inorganic solid powder including only the first powder.

1459827709-1ccda25f-b75a-46b4-8111-4defe15e955a

A communications channel comprises a seed selector that selectively removes X M-bit symbols of user data from a seed set comprising Y M-bit symbols and that selects a scrambling seed from Y-X symbols remaining in the seed set, where X, Y and M are integers greater than one. Also set forth are their preparation by reacting the icosahedral boranes closo-B<sub>12</sub>H<sub>12</sub>, closo-1-CB<sub>11</sub>H<sub>12</sub> and closo-1,12-2-1,12-C<sub>2</sub>B<sub>10</sub>H<sub>10</sub> with an acid anhydride or acid chloride to form the ester or an alkylating agent to form the ether. An output responsive to the data signals and to a first clock signal indicates whether all of the data signals represent logical zero data.

1459827709-40b150cc-4e5f-4c5d-94f2-cf684754957f

A method is disclosed for making a high crystalline quality layer in a surface region of a wide bandgap material substrate. A virtual view is defined on top of the common star or snowflake data warehouse schema. In the polymerization process the monomer is metered continuously or discontinuously into the said initial charge. A portion of the contact etch stop layer and a portion of the dielectric layer are removed to expose the top of the gate structure. A removable cover can be disconnected and connected as each expansion collar is added.

1459827709-5ecf2203-434c-460c-8f67-1ebb6a1a4722

An information processing system has a portable information terminal and an information processing device that allow communication therebetween. A second request for access to a second data segment corresponding to a second address included in the second request is received during a second clock cycle. The measurable capacitance is allowed to share charge with a passive network. A clamp attaches to the first block for holding pipe sections and lowering pipelines after the pipe section connects to the pipeline.

1459827709-753e0be5-db4f-4349-93b8-caca3cdb4450

A generally spherical turbine configured to rotate transversely within a cylindrical pipe under the power of fluid flowing either direction therethrough is operatively coupled with a rotating machine or generator to produce electricity. A data write circuit sets the other end of the selected bit line and the other end of the current return line to one and the other of a power supply voltage and a ground voltage in accordance with a level of write data via one of first and second data buses and an inverted data bus, respectively. The surface layer can be removed by abrasive particles embedded in the polishing pad, or a thin inorganic layer coated on the polishing pad. The electrode comprising can include a noble metal connected to the glass layer by an adhesion layer comprising Ta<sub>2</sub>O<sub>5</sub>.

1459827710-80ae47b0-c5f4-442e-8eeb-6f4256381a9c

To provide a machine tool in which positioning accuracy of a ram is ensured, realizing improved machining accuracy. The method includes storing, by a cloud infrastructure system including computing devices, notification templates. When the count value is below a predetermined threshold, the outputs from the GPS receiver are treated as abnormal, and after it exceeded the threshold, the outputs from the GPS receiver are treated as normal. The RC extraction tool is configured to extract the first parasitic capacitances inside at least one region of the plurality of regions using a methodology more accurate than that for extracting the second parasitic capacitances. A cooling unit is disposed inside of the intermediate transfer medium to cool a backside of the intermediate transfer medium to in turn cool the intermediate transfer medium.

1459827710-bc3fd8f8-192a-423c-a917-7f1b8ae6096b

A device comprising a doped semiconductor nano-component and a method of forming the device are disclosed. The magnetic field generating member 25 constitutes a multiplex ring structure in which a magnet 25a and a support ring 26 are integrated together, whose faces opposing the diaphragm 20 have respectively magnetic poles of the same polarity. The exterior surface contacts the opening of the anomaly and closes the anomaly. Various decorative detail may be added to the fabric cover and/or the extensions, such as embroidery or cut-outs, which may be left open or have an insert extending across part or all of the cut-out. The invention further relates to a method for ether fumigation of the combustion air in a self-igniting internal combustion engine for vehicles.

1459827710-cee36303-62b1-422f-b53e-9643d5558161

The invention is directed to preparation of stem cell and physiologically acceptable matrix compositions. The coating composition combines solids content of greater than 30% with good runnability. In one embodiment, the day can be divided into different time periods by the user. The catalyst and methods may be used for the concurrent in situ and ex situ conversion of organic compounds.

1459827711-40596fe8-845e-46a1-89d6-d683ab7a62ad

An antenna structure used in a folding portable radio terminal, has. Since unreliable data are adequately avoided from the data accumulation, the reliability of the accumulated data is assured, and an accurate absorption spectrum can be obtained. 02% by weight of at least one catalytically and/or chemically active heteroatom selected from the group consisting of Al, Ti, V, Cr, Zn, Fe, Sn, Mo, Ga, Ni, Co, In, Zr, Mn, Cu, Mg, Pd, Pt and W, and the catalyst has an X-ray diffraction pattern with one peak at  $\theta$ . When the password policy information for the target user has been collected, the proxy server evaluates the collected password policy information to determine an effective password policy for the target user.

1459827711-5ccab702-935d-487d-be1e-cc33326157e1

An architecture for network layer mobility support, using always on broadband high speed access and a network-based mobility manager, termed as a network server or gateway is disclosed. The nick cutting mechanism includes a first cutting unit configured to form a hole-shaped nick for each cutting area. The non-azide gas generating material when combusted produces inflation fluid which comprises carbon monoxide and nitrogen oxides. The UE automatically initiates the measurement of the CSG cell and/or Hybrid cell when the UE is close to its own footprint area or fingerprint area.

1459827711-87639dd4-b895-4ca2-aa72-c716f8463d8c

A charge recycling decoder shares charge between output nodes when input nodes change state. This lid preferably of transparent material is provided with a filter changing color when it is saturated and arranged in a burn proof ergonomic knob that can be detached from the lid flat allowing an easy cleaning and washing of all its components. On the second pass, the pick indices of the selected primitives are

rendered to a temporary frame buffer area, using a Z-buffer for hidden surface removal so that only the pick indices of the primitives visible within the pick aperture are stored in the corresponding frame buffer portion. An operation rod is rotatably inserted in the body and includes two first paths, two second paths, a third path and two fourth paths. The first and second hinge protective protrusions 36, 43 limit bending directions of the first and second thin-walled hinges 14, 15, on the occasion that first and second covers 12, 13 engage with a clamp main body 11 so as to clamp down a flat cable 60 between the first and second covers 12, 13 and the clamp main body 11. An exit module is configured to assign an exit route to an exit of the defined geographical area to a client machine of the mobile client machines within the defined geographical area.

1459827711-b0c2b5e6-0a4a-43c3-b279-32aef306ad51

Matching circuit for radio antenna that functions on a two-frequency band which are spaced approximately at a distance of one octave, wherein the upper band is broad. With the waveform generating device of the present invention, first performance data are updated in conformance with tempo alterations of second performance data. The undecomposed  $\text{NH}_3$  partial pressure control step and the  $\text{CO}_2$  partial pressure control step are carried out in the atmosphere control step such that  $ac^*$  defined by the following equation is at least 0. When  $V_p$  represents the acoustic velocity in the piezoelectric element layer,  $V_m$  represents the acoustic velocity in the matching layer,  $T_p$  represents the thickness dimension of the piezoelectric element layer, and  $T_m$  represents the thickness dimension of the matching layer,  $V_p V_m = T_p T_m$  holds. The semiconductor region is electrically insulated from the gate block by the gate dielectric region.

1459827711-de886342-d0a4-4e30-be1b-7aed1e27e8cc

Information is coded and segmented into a plurality of sub-packets. The switching mechanism comprises a first actuator plate to operate a first circuit breaker connected to a primary power supply, a second actuator plate to operate a second circuit breaker connected to a secondary power supply, and an actuator. Therefore, it becomes possible to increase the process efficiency of the back-end chip and to reduce the power consumption.

1459827712-26e5b892-5a25-4c60-bde2-36fffab42322

Substrate processing systems and methods for etching an atomic layer are disclosed. Additional apparatus are described. The roughness-sensing device generates an output responsive to a roughness of the polishing pad.

1459827712-2d13ef93-0523-4be2-896a-9ac3946c67a0

The invention provides a method for simultaneously forming a surface texturing pattern on the surface of an FRP product when manufacturing the FRP product by hot-pressing a prepreg material. Signals can be transmitted from the communications gateways to the electronic devices over a plurality of different types of wireline media. One of said central and marginal parts includes at least two segments having two different step heights, respectively, for introducing in said first operating mode two wavefront modifications  $W_{2,1,1}$ . The liner provides a hemispherical bearing surface for a head at an upper end of a femur. The band encircles the wearer's head between the mask straps.

1459827712-a8cbe14a-43c3-4570-b594-f8a5a22e05a4

Provided is a system for fixing a seat in an aircraft, the system including a movable base and slide. The image forming apparatus further includes at least one cleaning unit including a backup roller which abuts against and presses the heat roller in order to remove remaining toner attaching to a surface of the heat roller. Finally, the invention relates to a plug link for such a connecting terminal. When an explosive blast occurs in the cargo container, the structure is flexible and utilizes membrane strength in the entire container structure, whereby the cargo container is capable of withstanding the explosive blast. The button is

operatively coupled to the motor. Also presented is a catheter designed for wounding the epithelial layer of the utero-tubal junction, and a method of using the catheter to form a long yet shallow lesion in the utero-tubal junction.

1459827712-b9e518c5-3eb1-40cf-afdf-7ec8b023847e

A compact, robust, multifunctional and highly manufacturable rechargeable cylindrical electrochemical cell is provided. A representative system includes a substrate having a display region and a peripheral region, and a mosaic color filter pattern formed in the peripheral region. 2 MPa or more and 5 MPa or less. If the date and time when the another apparatus was assigned the IP address is earlier than the date and time when the apparatus was assigned the IP address, APIPA is executed to decide the IP address of the apparatus. Hence, the rated static load capacity is improved in upward, downward and lateral directions.

1459827712-dbf71941-80cb-4ef1-b024-30851f0bedf5

A method or process for substituting an inert gas or blend of inert gases for ambient air in the head space of a container filled with leftover oil-based finish prior to sealing the lid. The AQM process is queue based and involves applying at a queue size threshold congestion notification to communications packets in a queue of a link via packet dropping; and adjusting said queue size threshold on the basis of the congestion level. The design of the incomplete incurving ring allows keeping the capsular bag open and tense to allow a greater displacement of the optic, and the incurving tabs provide a greater accommodation power by curving the optic and increasing its thickness.

1459827713-14f2eff1-2e98-4e8b-bd32-9b88e4f35649

A method for the production of 6,6,6-trihalo-3,5-dioxohexanic acid esters of formula :in addition to the enols thereof and  $\text{E}$  and  $\text{Z}$  isomers, wherein X independently represents fluorine, chlorine or bromine and R1 represents alkyl, cycloalkyl, aryl or aralkyl. The at least one lane is connected with the first interface. The box is internally tapered to match an external taper on the battery, and has guide rails to facilitate insertion of the battery. By reciprocating the plunger, a user can individually dispense a pill through the lower end of the housing.

1459827713-33c1ad22-adc1-44ba-b308-47848a5a1969

The resorbable cryoprobe device and process is a novel approach for treating localized disease allowing for the precise combined application of freezing temperatures and cytotoxic or cryosensitizing agents within a self-contained matrixpackage for optimized tissue destruction. The vehicle occupant sensing system includes a base, an upper slide member supported for movement toward and away from the base, and at least one guiding rib. As disclosed, the layers may comprise leads, dice, bond pads, or other substantially planar semiconductor package surfaces. Information relating to the assets is then displayed to a user of the system. Thereafter, swaging is performed to bring the insulating material into a highly dense state thus fixing the electrode lead-out wire and an electrode lead-out rod in the metallic outer sleeve.

1459827714-8f62b19c-5fa9-451e-a2f2-d3f721c888be

A method is provided for extracting a foreground object and a background sprite, wherein a provisional sprite is generated, the foreground and the background is separated on the basis of the provisional sprite, and the background sprite is generated. The printing system comprises a processor configured to perform a first digital halftone process on a first portion of the image and a second digital halftone process on a second portion of the image. A write request is received including an updated source track for a point-in-time source track in the source storage in the point-in-time copy relationship. The subset of base stations may correspond to a network active set of base stations associated with the mobile device.

1459827714-9261e309-df59-412f-9cd8-91f433c4a5df

The techniques of this disclosure are generally related to parallel coding of video units that reside along rows or columns of blocks in largest coding units. The invention also refers to adhesive compositions comprising the resin composition. A resource allocation of the at least one controlled resource is adjusted to effect a desired system goal expressed in terms of the at least one dependent parameter. When the half-bodies are closed, the two upper half-portions form an enclosed lower cylindrical body designed to loosely capture a mounting plate fixed to the lower surface of the machine's tool head. By engaging the plurality of engaging portions of the opening rim with the engaged portions of the lamp housing section, the light source lamp section is secured to the lamp housing section of the body.

1459827714-a46889f7-a571-483e-bd47-4eea6a6cec7f

The present invention provides a noise barrier apparatus for inhibiting external noise from causing the presence of noise in an audio chamber defined by a noise barrier device and including the user's ear canal. The motorfan assembly is positioned above a chassis wall. In this manner, an intravascular medical device may be implanted at a location remote from final placement, delivered via the vasculature and anchored at the initial entry point. For example, upon the first actuating element being actuated, torque can be exerted on the first pivot lever. Based on the calculated LPGA, the timing constraints of the blocks are updated. A demand over lead-time is computed for each part at each location using the availability lead-times for the part.

1459827715-15258959-8f75-425a-9394-1e90fe5d1d5e

A lacrosse head having a wide catching area and channeled thongs. For example, when liquid refrigerant is compressed within a compression chamber, the inlet valve 21 receives excessive load which is about to bend the inlet valve 21 largely toward the suction chamber side. The first organic compound layer is formed using a mixture formed by mixture of the plurality of evaporation materials in advance. The processing includes granting access to a system resource exclusively for the set's respective message responsive to the lock acquisition node processing its respective message. The different orientation of the semiconductor memories makes it possible to reduce the height of the printed circuit board while enabling the rectangular housings to keep the same physical form. The cap has a punch holder extending downwardly therefrom.

1459827715-646b87d2-c607-4a1a-b165-c7b867be4629

A driving unit of an image forming apparatus is configured in such a manner that an engagement noise frequency is larger than an image-quality assurance frequency and that the engagement noise frequency is less than or equal to an upper limit frequency of a one-third octave band frequency range including the image-quality assurance frequency. 500 or LDAP, to a relational database, a database design and use of the database to perform such services. The concentrated thermal radiation can be utilized locally or remotely through optical fiber systems.

1459827715-78342a5e-a3ce-43c1-aff7-9f207035e2bf

The field of the present invention relates to the field of batteries and of polymer electrolytes for batteries and more particularly to the field of lithium batteries. The publication-dispensing apparatus permits travelers having a subscription to a newspaper, magazine, or other publication to obtain a copy of the subscribed publication, or a copy of an individual article from the subscribed publication, without paying the full cost of a new copy. The engaging protuberances of the inner cap and the engaging protuberances of the outer cap are engaged with each other and rotate the inner cap when the outer cap is rotated while being pressed toward the inner cap. 17 is satisfied where J is relative jitter with respect to a basic clock T0 and M is a degree of modulation of recorded signal. The second PWM signal has a second duty cycle, which is determined in accordance with the duty cycle reference

voltage.

1459827715-ea37a276-23f5-4dd2-a8ae-972f49a9e28e

A multi-tiered building structure. The system includes a central base with a motor which moves a rotating member of the base. The water inert polymer may be a polymer such as an emulsion polymer or a latex polymer.

1459827716-1e56be19-6fb2-427f-a087-23fbaac620af

A system and method of scheduling photograph print jobs is provided. The tongs comprise a pair of tong members pivotally connected together and biased away from each other to define an opening angle therebetween. The die defines a slot extending inwardly from a perimeter for receiving a distal end portion of the elongate band so that the gasket does not unwind. The arrangement of the elementary surfaces and the surface portions in the matrix form an item of concealed information which is not perceptible to the naked eye, in the form of graphic or alphanumeric characters which however are reproduced in a color photocopy with a color or gray value contrast which is perceptible to the naked eye.

1459827716-630491ed-0cb1-42f8-a0ce-8cd37ecc1c34

A method and apparatus for backing up data in response to detection of an imminent threat to the integrity of the data stored on the storage component a computing device is disclosed. The optomechanical transducer provides a large operating bandwidth and high efficiency while simultaneously having a small size and minimal power consumption, enabling a host of transformative phonon and signal processing capabilities. The controller calculates an optimum flow amount of refrigerant corresponding to the optimum heat collection amount, so that a maximum driving power is generated at the expansion device. The method further comprises generating a snapshot of the data stored in the storage system in response to the command. As the runner progress along the course, the RFID tag is triggered at each mat and race data is displayed on the device.

1459827716-c00351f8-6c73-4d09-8615-0f1342cd71d5

A current mode PWM buck regulator is provided. In this method antenna beams are directed to be adjacent so as to set at least one of the estimated directions of arrival of the received signal within the range between antenna amplification maximums of the antenna beams and signal is sent using said antenna beams. The formatted data is transmitted through, e. For example, the flow control turbine is operable generate a greater pressure drop in water produced therethrough as compared to oil produced therethrough due to differences in the density, viscosity or other property of the produced fluid. A back metallization is on the second chip face, on sides of the frame structure, and on sides of the cover. The present invention also includes a variety of methods of treatment using these inventive sodium channel blockers.

1459827717-24ce58cf-1f18-4f67-ba79-9aceb056f48c

An automated balloonsonde launcher and a method for an automated balloonsonde launch are disclosed. The tower structure may be a tapered monopole tower, a step mono tower or a lattice tower. The image data may also undergo enhancement processes to increase the quality of the printed image.

1459827717-56dbe3c1-1d7c-45eb-b811-114b49aa74eb

A coupling for a molten metal processing system to provide coupling for rotorshaft systems which has a heat break to prevent heat flow to a motor. The closure is fixed axially by a positive engagement with the cylinder up to a temperature threshold and the closure can carry out an axial movement for relieving pressure above the temperature threshold. The first portion has an edge located in the medium facing surface, and the second portion is located farther from the medium facing surface and from the substrate than the first portion. In another embodiment, a presentation vehicle is employed to display a first content

responsive to a first end-user behavior. The CPU produces a divisor based on the fill level. The semi-cylindrical shielding parts are arranged in corresponding recesses of the remaining shielding parts by means of the envelope surfaces thereof, such that the recesses in the envelope surfaces form air channels between the semi-cylindrical shielding parts and the remaining shielding parts.

1459827717-891a8d5f-9934-4a0f-8dae-b93e7faef9db

A camera is made compact with its internal temperature adjusted to a more appropriate temperature. A plurality of flexible bristles is secured at ends thereof to a wall of the chamber and extend into the chamber such that particles carried in an air stream entering the inlet port contact the bristles. Therefore, multiple processes, which could be processors, tasks, or threads can access the cache during any cycle.

1459827717-e477bc88-8ed0-44c2-873a-f6047005d96f

Implementations include systems and methods generate data for training or evaluating semantic analysis engines. The variation coefficient of equivalent-circle diameters of all the silver halide grains is 40% or less. Branches of the power distribution system which are not desired to be in use can be operated at zero power and be brought back on line within milliseconds, when needed. The closure unit is hingedly mounted to said box and has openings covered by a netting material and also has a plurality of collapsible support arms to support an open position.

1459827718-17ee9ff3-0577-47a4-a82f-f267dc7ae107

A story interactive grammar teaching system and method. The customers engage the customer activities while holding in a queue where the customer activities reduce the boredom, frustration, and perceived hold duration associated with holding to speak to a live agent. First and second connectors are mounted in the base and extend into the body cavity. The object is temporarily held at an elevated location relative to the mailbox housing. Compounds of the present invention are useful as inhibitors of trypsin-like serine proteases, specifically factor Xa. An example of a method for user-assisted segmentation of a 3D point cloud described herein includes obtaining a 3D point cloud of a scene containing a target object; receiving a seed input indicative of a location of the target object within the scene; and generating a segmented point cloud corresponding to the target object by pruning the 3D point cloud based on the seed input.

1459827718-4a71e93c-5992-4131-9a29-78c5566b2727

A cleaning system 210 having nozzle assembly 10 for a pressured fluid stream entrained with abrasive that includes a pressured fluid receiving portion 15 adapted to accommodate a pressured fluid dispenser 20. The tool has an opening placed in it. A second record is sent to the billing system indicating that, at the given time, a given wireless terminal was a member of the multicast group.

1459827718-688c18df-3f23-4e30-9609-f2a57a3286f0

Disclosed is a noise current compensation circuit. The support frame is movably attached to the truck frame via a plurality of extendable lifts and support links, which allows the debris collection container to be lifted up and rearward from the truck frame. At a substantially higher delta VT, programming of the first bit of the memory cell causes the second bit to program harder and faster due to the shorter channel length.

1459827718-6d807c86-d311-4085-a7da-246c8b4d0141

This invention comprises the novel compounds of formula wherein r, s, t, Y1, Y2, Z, R1, R2, R3, R4, R5, R6 and R7 have defined meanings, having farnesyl transferase inhibiting activity; their preparation, compositions containing them and their use as a medicine. Embodiments of the present invention also provide methods for producing such composite bodies. The externally provided second sensor signal is

provided by a remote node that includes a second fiber Fabry-Perot interferometer sensor unit for receiving the optical signal for temperature monitoring to generate the second sensor signal according to temperature, and a waveguide grating router unit for transmitting the second sensor signal to the optical line terminal.

1459827718-a1ce0257-d825-44f6-9536-18beeff35db6

An integrated device for enhancing signals in Surface Enhanced Raman Spectroscopy. The suction head includes a sleeve-like body having a connection to an under pressure source at one end and an opening for picking up articles at the other end thereof. The fluid channel formation substrate has a plurality of separate flow channels that include at least pressure generation chambers demarcated by partition walls, each of the pressure generation chambers being in communication with a nozzle opening that ejects liquid drops. The misfire determination means calculates a predetermined function based on the ion current detection value and determines that the condition is combustion when the magnitude exceeds a threshold value.

1459827719-0d314c21-b961-4c03-a2bc-894622129683

At least one embodiment of the invention relates to a method for the reconstruction of image data of an examined object from measuring data, wherein the measuring data were detected by a detector within and outside of its Tam-Danielsson window during a relative spiral movement between a radiation source of a computer tomography system and the examined object. In one embodiment, a plurality of MR volumes is received. An associated computer usable medium and a wireless communication device are disclosed. The AMAC is a probabilistic checksum based on a shared key.

1459827719-50ed2042-dda3-4078-907e-49724a9323d3

An apparatus for combining light from multiple laser sources has a first laser array to emit beams of a first wavelength in parallel and in a first plane and a second laser array to emit beams of a second wavelength in parallel with emitted beams in the first laser array. Each oil mist collector preferably includes a vertical spiral coil wall defining a spiral flow path into which the mist is directed, the oil droplets collecting onto the spiral coil wall and draining into a collection chamber below the spiral coil wall for return to the associated machine tool via a drain line. The method may also facilitate communication with a contact using online communication mechanisms. This assembly results in a variable rate moment arm and continuously increasing leverage when the suspension air spring is overinflated to lower the system for transfer of the trailer from a highway tractor to a rail bogie, thus enabling use of a less robust air spring.

1459827719-5474bfd2-0821-42db-a444-083e4a01a182

A front end module for an optical receiver is disclosed. An internally threaded retainer nut with integrally molded test cap is threadably engaged over the overflow elbow cylindrical fitting to compress gaskets against both the inside and outside surfaces of the tub. The demodulator may further generate channel estimates for the unknown data portions based upon the desired time-domain interpolation filter and the desired frequency-domain interpolation filter, and determine the unknown data portions based upon the channel estimates.

1459827719-89d5a1af-01c5-43e2-a511-3b0f3c7c4294

A pachinko machine board includes a game board on which nails, a start chucker, a big prize winning port and prize winning ports are fixed and a projection mechanism formed for projecting projection light from the rear surface of the game board to display images for a game on the game board. The optical sensor comprises at least one measuring head. An ECU demodulates the return signal into frequency and amplitude components. The adaptation unit generates a flag when the adaptation unit generates a coefficient, and the coefficient is entered into the first one of the coefficient delay elements when the shift register receives the flag. In this manner, the output bit produced by the instruction execution unit executing an instruction may be selectably stored in memory to facilitate efficient processing

of conditional emulation operations.

1459827719-e99fd757-4b49-42e3-8bb9-7b7347820a83

A method utilizes sputter transport techniques to produce arrays or layers of self-forming, self-oriented columnar structures characterized as discrete, single-crystal Group III nitride posts or columns on various substrates. Such corrosive effects are especially inhibited in the treatment of sour wells where H<sub>2</sub>S corrosion is a potential problem as well as conduits used during the treatment of subterranean formations. The detector arrangement is positionable such that a section of the detector arrangement is torque-free. Each of the at least two versions is evaluated using a plurality of operating conditions. The compounds are useful for the treatment and/or prophylaxis of diseases which are associated with the modulation of CB<sub>1</sub> receptors, including obesity. A hitch assembly is removably connected to a vehicle and includes a docking structure for removably connecting to an upper portion of the power chair to permit the drive assembly and wheels of the power chair to be raised while the chair is in a docking position.

1459827719-fe910a43-f2d3-40d2-b7d6-e9e7f8338d63

A spacer for a fuel assembly of a boiling water reactor has a frame formed of outer webs and inner webs disposed crosswise relative each other. The tower is provided with a pair of spaced-apart guide rails positioned at one side thereof which extend from the lower end to the upper end of the tower. The SCR analysis module estimates an NH<sub>3</sub> rate of change based on the NH<sub>3</sub> slip, conversion, supply, and oxidation rates and estimates an NH<sub>3</sub> storage change based on the NH<sub>3</sub> rate of change.

1459827720-42fffcac-5679-4b19-841a-445a3fdd4275

1,3-butadiene is obtained by extractive distillation with a selective solvent from a C<sub>4</sub> cut comprising C<sub>4</sub> acetylenes as secondary components in a dividing wall column having a bottom evaporator, in which a dividing wall is disposed in the longitudinal direction of the column to form a first subregion, a second subregion and a lower combined column region. A service-provider maintains a master index of the digital media objects and a playlist-resolver server. Each magnetic strip activates a different feature of the card. Further, user input is received from the foot-based interface and mapped into a command. The sampling tube extends a predetermined distance within the sampling chamber, and defines a fluid pathway between the inlet and the sampling chamber.

1459827720-9a45274c-4b05-4002-9bf4-7bd448fd0f83

A distinct cultivar of Chrysanthemum plant named Foxy Yopatricia, characterized by its upright, outwardly spreading and mounded plant habit; freely branching habit; uniform and freely flowering habit; decorative-type inflorescences; red-colored ray florets; and natural season flowering in late September in the Northern Hemisphere. The barrel portion includes one or more first cross-sections having a first stiffness and a plurality of second cross-sections having a second stiffness. The API provides placement directives that can be called from the HDL code that defines functional characteristics of the circuit. A recess part 53 for enlarging a distance between the base end parts 51 is provided on at least one of inner walls 50 of the base end parts 51 of the arm parts 31 which are opposed to each other. Each of the heating plates is formed to have a rhomboid sectional shape, a predetermined thickness, two parallel side surfaces each inclined at a predetermined angle, and a joint prominence corresponding to a joint depression in a body portion.

1459827721-60b6e6be-13a9-407b-b88c-33cc3248c91c

A submersible LED illumination system may include an array of LEDs, with a first portion of the LEDs capable of emitting white light and a second portion of the LEDs capable of emitting light of a single color. The internal diameter and length of each tube control the gas flow rate to the respective port. A layer of metal is added to the wafer. This object is achieved in that the piston includes at least

one portion with a fold shaping, where the thickness of the piston wall or of the bottom is increased compared to the thickness of the remaining piston wall or of the bottom and corresponds to several times the wall thickness of the metal blank. The platform retention assembly also includes firm features that contact firm mating features on the binding support platform to prevent translation of the binding support platform relative to the platform retention assembly in the plane of the snowboard. The apparatus includes: a tubing string; a contacting structure at the upper end of the tubing string for engaging a stop structure in the well casing such that the tubing string is held in suspension; an exterior sealing element for sealing against the casing wall; and an internal check valve.

1459827721-c6b08d07-f196-4c0e-917b-02a7161240bb

Various technologies and techniques are disclosed for generating project milestones. One of the locking means is hook profiles with a receiving hook and a locking hook. The first terminal electrode is disposed across the first omitted peripheral surface, a part of the bottom surface in a region connecting the entire first omitted side to the entire third omitted side, and the third omitted peripheral surface. The first ESD protection unit is disposed in the LCD panel and is coupled between the first end of the lighting module and the ground of the flexible printed circuit board. Variable pitch pulley adjust a serpentine belt which adjust the rotation of the planetary gears to adjust the output shaft. A body attaches to the skate board and an axle extends rotatably through the body and terminates in a pair of wheels, respectively.

1459827722-13ffa626-ebfa-433d-a3da-c97d12cb4190

Disclosed are techniques and systems to provide a narration of a text in multiple different voices. The system stores changes in mobile service providers and an address of a Network Provider Database in the service network which is presently providing the mobile subscriber with mobile service. A provisioned application is associated with the personalized secure element in the mobile device and works with a set of keys that are generated in accordance with a set of keys from the personalized secure element. A passive technique for interferometer drift compensation using non-sensing FBGs is included in the system. The device can be stretched into a double wire or single wire configuration for easy deployment into the vasculature.

1459827722-2798f475-2287-45c6-95d6-0f90d1e75e03

The present subject matter includes a hearing assistance device connection system for a user having an ear canal comprising a housing, electronics disposed in the housing, a cable electrically connected to the receiver and at least one conductive silicone component to electrically connect the electronics to the receiver. Relatively high light transmissivity of greater than about 72% and satisfactory color characteristics are achieved. Meanwhile, the compression strip is downwardly swiveled to move the piston in the same direction responsive to the removal of the coupling element from the blocking position of the coupling element when the push knob is shifted against the resilience of the spring.

1459827722-28b9197b-3b73-4962-ab63-cdb0959d2395

Embodiments in accordance with the present invention are directed to poly compositions that are useful for forming temporary bonding layers that serve to releasably join a first substrate to a second substrate as well as methods of both forming such a temporary bond and methods of debonding such substrates. The system includes a tag cache in communication with one or more cache devices in a storage hierarchy. The list can be based upon the recency and frequency with which a user accesses items associated with the links. A pocket implant or CMOS standard LV N-LDD is formed under the second transistor to enhance CHE programming. The humidity devices, the standard capacitance device and the CV converter circuit are disposed on one side of the substrate. The system and method conduct read and write operations to the SRAM unit by avoiding simultaneously reading and writing to the

same memory address.

1459827722-2aa2cb4d-28e1-49fc-92cc-701fed16880c

A hybrid aircraft having a fuselage extending longitudinally along an anteroposterior plane of symmetry from the rear of the aircraft towards the front of the aircraft. The relative angle of the putter face with respect to the linear marking is adjustable in order to compensate for inherent inaccuracies in a player's visual judgement when putting. Embodiments herein greatly decrease the amount of data that must be transmitted and stored for faster checkpointing and increased efficiency of the computer system. The method includes forming a masking layer over the dummy gates. This diagnosis mechanism may improve the reliability of the host controller operation. As this is done, the first ramp portion is depressed by the web of the tubing so as to permit the tubing to pass thereover until insertion is arrested by the end of the tubing coming up against the stop surface of the second ramp member, at approximately the mid-point of the connector body.

1459827722-437f5f66-cef0-484b-a559-badb13ac6c21

A glasses type display that is connected to an information communication terminal via a wire line or a wireless line, in which the operation by the user is made simple by preventing error operation and the power consumption is decreased by not consuming the unnecessary power, is provided. A second substrate is exposed during the period of time while the first substrate is being repositioned by altering the optical path to divert the light from the light source into a secondary optical path that will expose a region on the second substrate. The methods may also include patterning the first and second barrier layers and the quantum well layer to form a first quantum well channel structure in the first region and patterning the first barrier layer and the quantum well layer to form a second quantum well channel structure in a second region. A magnetic separator is arranged above the gap in the upper trough so as to pick up free metal.

1459827722-59670447-b378-4a7e-aa96-16f2d81cbea0

A process and a device for electromagnetic guidance of a craft, applied in particular to the tracking of targets. The polymer may be used, for example, within a sub-200 nm photoresist composition. The colorant is then absorbed into the substrate to create a translucent image on the substrate. Hydrocarbon vapors present in the air induction system after engine shut-down are substantially retained in the adsorbent member until air flows through the air induction system after the engine starts. A power switching arrangement including at least one power switch is connected to the power cell input and a DC bus, and a switch controller is connected to the power switching arrangement and the power cell input.

1459827722-f875d633-2925-4980-994b-acd929e68709

A lifting cap for attachment to a handle of a laryngoscope for facilitating oral endotracheal intubation. A cable rack is coupled to the chassis and backplane. The detection unit detects an amount of change in a vertical period of an input video signal by comparing current and previous vertical periods of the input video signal.

1459827723-02502efe-c9db-4a69-b305-0795a0944a36

A catheter-based annuloplasty system for use in repairing a heart valve having leaflets and a valve annulus, includes a delivery catheter having a proximal end and a distal end, and an expandable stent disposed on the distal end of the catheter. The independently-recorded location data is sequentially associated with the image recordings and can be used subsequently to retrieve corresponding photos from a photo archive. A holder 14 is formed with a tapered surface 14a to assist in allowing an elastic deformation of a reaction disc 15. Thus the person who takes blood pressure measurement can always get the most accurate measurement. The invention also relates to methods for producing other soybean cultivars, lines, or plant parts derived from soybean cultivar 12133031, and to the soybean plants,

varieties, and their parts derived from use of those methods.

1459827723-8dba0a43-4e8b-4742-b178-bd5399c16018

A distributed computing system can be operated in a fault tolerant manner using a collection of auxiliary computing devices and more main computing devices than the number of faults the system can tolerate. An operating temperature of the crystal oscillator is measured. The messaging system may be a texting service like Twitter\u2122 that captures the messages and then re-broadcasts the messages, e. The method also includes extracting a third set of raw data from the legacy system relating to telecommunications wavelength division multiplexing data via a third routine of the network planning application.

1459827723-d8f2cfea-0624-403d-8b64-9f923783b814

A method for damping torsional vibrations in a rotating shaft. The reception unit receives a broadcast signal, out of a plurality of broadcast signals that can be specified by conditions made up of broadcast frequencies and other items such as reception areas. An instruction is retrieved from the database based on the page number, and the request is completed based on performing the retrieved instruction.

1459827723-f7ce4847-0cc2-4314-8b33-4c79c12b7a28

A film adhering mechanism includes a base, a film adsorbing platform, at least two flexible members, a vacuum generator; and an electromagnetic valve. The method includes strengthening the valve or valve housing using various methods. The device is advanced through tissue to cut a strip of tissue of approximate width W. The ratios are compared to a validating threshold and if the particular ratio is within a selected range, a moving average is calculated with inclusion of the present R\u2014interval. The energy-band modifying layer may include at least one non-semiconductor monolayer constrained within a crystal lattice of adjacent base semiconductor portions so that the superlattice channel may have a higher charge carrier mobility in the parallel direction than would otherwise occur.

1459827724-1e0e99bc-3e07-4368-bf79-0f84ad226a51

A system and method for providing a graphical document are provided. This enclosure has a cinchable opening for ease of attachment and removal and for tightly fitting about a propeller. In response the roll can be pull and cut by the blade. Crosslinked polymer carrier fluids are identified that are not damaged by contaminants present in the fibers or by degradation products released by premature degradation of the fibers. A single multiplexer is used to select which signal is processed by the Analog to Digital Converter. For instance in techniques based on fluorescent resonant energy transfer, the drive current to two or more different LED sources may be frequency modulated, or pulse width modulated, according to different modulation regimes.

1459827724-6e41aa16-3d7c-4d4f-b775-39b06cdbc7ba

An operating device for operating at least one vehicle electronic device includes an image display device connected to the vehicle electronic device, a controller including an input device for operating the electronic device, and a sensor for detecting one of a touch and an approach of a user at the input device. Certain aspects of the invention provide alternative probes, probe cards, and methods of testing microelectronic components. Image recordable materials can include, for example, printing plates. The buffer contents define a window within an accessed display screen.

1459827724-b21fd093-56cd-4d55-8568-1c64d283f59d

The present invention relates to a process for preparing a polymer composition by using a masterbatch, as well as a process, wherein said polymer composition is used for preparing an article, preferably a cable. With this circuit, a clocking circuit providing a first clock signal at a first clock frequency is coupled to a counter. A first stimulation operation is performed in the stage that is associated with the

first plug; and a first agent is communicated into the well to react with the first material to remove the first plug.

1459827724-bcd3b3bc-0a79-40c7-abde-a20f7a508684

A yarn lifting element, which is provided on a positive thread regulating wheel, comprises straight yarn-bearing surfaces whose position cannot be displaced by the yarn, enabling the yarn to slip in relation to the thread feeding wheel when required. The electromotive drive device is provided with a bidirectional converter which decelerates the motor-generator to an idle revolution speed when X seconds have elapsed in a state in which the plurality of directional control valves are all not operated. A comparison circuit compares the location with a predetermined handoff area within the region and provides a control signal in response thereto. The first skin layer can be contacted with a water-based adhesive to affix the label onto a particular product or product container. After partial drying of the pretreated anodized aluminum plate, CTP liquid is deposited onto the surface to form an image. An apparatus for packaging a beverage in a spheroidal container and the method for using the same, comprising the apparatus for orienting a spherical container and further comprising a filler for receiving the spheroidal containers and filling the spheroidal containers with the beverage, and a sealer for sealing the beverage in the spheroidal containers.

1459827727-2fd72a96-1e16-49c0-8467-4eb292949f6a

The disclosed vehicle, control method, and program lead to improved fuel consumption, durability, and stability. A second speech index is also generated using a more accurate, but slower, automatic voice recognition engine such as a large vocabulary speech recognition engine. Furthermore, the illustrative embodiment avoids the possibility of bent connector pins, which would make mating between the electrical connectors. In one embodiment, the TPUs of this invention are the reaction product a hydroxyl terminated intermediate, a polyisocyanate, a saturated glycol chain extender, and a glycol chain extender containing carbon-carbon double bonds, such as the allyl moieties present in trimethylolpropane monoallyl ether. The blade includes a flexible guide portion which protrudes further in a forward direction of the blade than the cutting portion. In one embodiment, the apparatus includes a sensor configured to provide data concerning one or more flight characteristics of the arrow in flight and a communication link coupled to the sensor, the communication link configured to communicate the data to a device external to the arrow.

1459827728-2b14a106-0863-4107-b81a-5c1734abc2c1

An implantable system senses a pulmonary artery pressure signal using an implantable sensor placed in the pulmonary artery and isolates a plurality of signals from the PAP signal for diagnostic and/or therapeutic use. If the temperature difference between the engine coolant temperature  $thw_1$  and a heater inlet coolant temperature  $thw_2$  occurring after the changeover valve opens is less than or equal to a predetermined value, the apparatus determines that the engine coolant temperature sensor is normal. The first side surface of the light guide plate has, in a portion thereof near the hole, a prism having a saw-toothed shape in a cross-section thereof parallel to a front surface of the light guide plate. A support portion extends upwardly from the upper surface of the lower plate thereby allowing liquids to be removed from the inner portion of the suction cup of the plunger.

1459827728-73d3c6a0-a40c-4ff1-92d4-987e9699df27

Classifying electronic mail based on content and predefined categories. 1 wt % aqueous solution of the surfactant at 25°C. Relationships among the identifiers imply related keywords that can be used to improve search, navigation, and integration. The method of the present invention also verifies that neighborhood contain the same focal points.

1459827728-7bf1a1b4-45a4-411e-ad0b-a7386700d966

Systems and methods providing resampling of a sampled data transmitted through a communication channel. A tether affixed to the receiver and anchored to the housing functions in this manner, and also improves the stability of the receiver inside the housing. A first biasing member has a predetermined spring constant and biases the member to be driven via the arm member. Hydrogen is produced in a catalytic steam hydrocarbon reformer. An adjusted value of the parameter for each tile is determined taking limits into account, iterating until variation is below a threshold value.

1459827728-88871490-9475-4ad9-9e89-4c6a705f1a64

This invention provides methods for attaching a nucleic acid to a solid surface and for sequencing nucleic acid by detecting the identity of each nucleotide analogue after the nucleotide analogue is incorporated into a growing strand of DNA in a polymerase reaction. The dies grip and confine the needle in the area of the suture receptacle. The theater seat assembly may also include a molded cover attached to at least one of the seat frame and the back frame and being injection molded from a fiberglass reinforced co-polymer. In some embodiments, slits are formed in the textile.

1459827728-e7c2be30-032d-4e3a-96bc-dcce1dad3619

The present invention provides a pressure bulkhead for subdivision of an aircraft or spacecraft into an internal and an external pressure region. Noise filtering of the standard correction term  $\frac{1}{F}$  is implemented and subsequently the noise-filtered standard correction term  $F$  is added to the logarithmized measured total projection data  $ps$ . A rotational switching mechanism is configured to switch between an activated state and a deactivated state. The ECU limits a maximum speed of the vehicle when it operates in the reverse direction. When a CPU becomes available, the dispatcher gives at least some relative priority to a thread having a preferred CPU in the same node as the available CPU over a thread having a preferred CPU in a different node.

1459827729-07d2c6bf-b671-4f5e-b169-e8ee838a8b4c

A method for creating an electroconductive joint in connection with conductor rails made of copper or copper alloy, in which method in between the conductor rail elements to be joined, there is applied soldering/brazing agent, whereafter at least the junction area is heated, so that a joint is created. The apparatus further includes a first control system which includes the first element and feedback-controls a position of the first element, and a second control system which includes the second element and feedback-controls a position of the second element. A conductor is received in, and extends along, a lumen. The second passivation layer having an aperture is formed on the first passivation layer, and the aperture relatively to a pre-designed line exposes the surface of the conductor.

1459827729-13e4179b-eb2d-41ca-b571-fd2b093fb3fc

A fuel injector has a chamber between a valve body and a plate in which a plurality of through holes are formed. A color shifting optical coating is formed on the substrate such as on the opposing second surface, with the optical coating providing an observable color shift as the angle of incident light or viewing angle changes. The cold cathode device and the collector are positioned symmetrically relative to the anode. The system provides the plurality of isolation stages to be automatically compressed between impactor stages to isolate each impactor stage from at least one adjacent impactor stage. When a second travel amount is less than the first travel amount, the operation display section informs that the number of the document sheets in the document sheaf exceeds a maximum sheet number. The azimuth spacings, lengths, and surface densities of the conducting elements can be functions of meridian angle.

1459827729-dc3e714e-26da-4fb4-bce8-40daa1a1d371

The invention relates to a floor cleaning appliance comprising a housing, on the underside of which is arranged at least one drivable cleaning tool for removing dirt from a surface to be cleaned, and further comprising a suction unit for vacuuming-off the dirt and a dirt container for receiving the vacuumed-off dirt. The doorbell transmitter has its RF source and antenna enclosed within a metal case which is designed so that the effective operating range of the transmission of the RF signals is not reduced to unacceptable levels and whose finish, such as polished brass, presents an attractive appearance which can be made to match the decorative trim at the entranceway to a building, such as a residence. The imaging polymer is preferably a cyclic olefin polymer. The peak cancellation signal thus generated is scaled by a scaling factor and added to the received signal to reduce the PAR of the received signal. The high density plasma source can also be used to extract an electron beam that can be used as a plasma cathode neutralizer for ion source beam neutralization applications.

1459827729-fa9754b7-312f-4f05-8dd9-aad169c2b6d2

This invention provides a semiconductor memory device and its data writing method capable of saving the needed time to a minimum even in repeating a data write operation maximum number of times. The external force applicator is adapted for engaging the specimen for test purposes. The catalytic converter is laid out for complete conversion if the reagent is introduced stoichiometrically.

1459827730-3d6e94be-ba6a-415f-afa6-8743d6d0c08f

An oscillator of frequency switching type according to the present invention is adapted to select and output any of a plurality of high frequencies. A light path through the cassette is aligned with a light exit opening of the luminaire. The server receives the transmitted current data and, based on the received current, assesses whether a failure has occurred in a first component of the plurality of components of the HVAC system and assesses whether a failure has occurred in a second component of the plurality of components of the HVAC system.

1459827730-685fe1fc-c468-4db5-a084-bd3914b0e161

This invention generally covers a ringed-mesh intravaginal device and applicator therefore wherein the ringed-mesh comprises a composite ring comprising a flexible matrix containing one or more bioactive agent or agents and needed excipients or modulators, and the said matrix is reinforced with a fibrous construct to provided needed initial and in-use biomechanical stability. One method may include receiving a plurality of wireless signals via a plurality of frequency channels, storing representations of the plurality of wireless signals in a signal buffer, and receiving a trigger request for a signal of interest. In an embodiment, the first brake is a power-off brake that is active when power is removed from the brake.

1459827730-6c3d59fe-aa06-4309-bbfc-57c5a44c426e

A method for repairing a neighborhood of rows in a memory array using a patch table is disclosed. The method can be executed by first selecting a target track and then recording a test signal along the target track. In this way, the capacitance and the resistance will have a closer contact point to the electrical component. These are compared with the host identity and access session time in an access session record, if they match, then the private user identity in the access session record is returned, and it is stored as the private user identity in the application session record. The adjustability of the vertical support assembly further provides for greater positioning thereby increasing the general comfort of the patient while providing for the patient's medical needs.

1459827731-307d4ffd-e337-46c6-86b5-1f38816f963c

A seal for a container opening includes a backing layer and a seal layer for connecting to and covering an opening of the container. The method includes associating a relevance weight on a per user basis with content items to indicate a relative measure of likelihood that the user desires the content item. The flexible

seal engages the dispenser body assembly and includes a downstream end. In the connecting section 40 there is provided a protruding protrusion section 48, and the protrusion section 48 interferes with an interference section 53 on the connecting section 41 side when the stator core 30 is forced towards the direction in which the stator core is split. The calculated significance factor may then be used to lengthen or shorten the temporal duration of the phoneme in the audio signal according to its significance in the spoken word. The circuit comprises a thermistor to sense temperature around the light when the light is on, an electronic switch controlled by the thermistor, and a relay controlled by the electronic switch to turn off the light when the electronic switch is turned on.

1459827731-458442bd-554a-49df-99bc-b358182ddf10

A ball cock assembly includes a water supply riser with a valve for controlling water flow into a toilet tank. The feeding strip is connected integrally to the ground plane. Additionally, warming the air forces the diameter of the aerosol particles to be in the range required for systemic drug delivery independent of ambient conditions. The polarized frequency modulated optical signals are coupled to an optical receiver which converts the polarized frequency modulated optical signals to an electrical signal. For example, the active ingredient can be triethylene glycol.

1459827731-b7080b56-b77d-4e9f-a527-02c05c3193f9

A frequency controlled oscillator is manufactured using an array of mechanically interconnected oscillator bases having component cavities and wiring patterns therein. and which has a shroud with a diameter less than 2 ft. The container also includes a pierceable wall located on an opposite side of the passageway relative to the storage chamber, and a first connecting portion for connecting another component thereto. Accordingly, the portion in which the metallic film is surrounded by the transparent conductive film, the insulating base film, and the protecting film to which it is in contact with, can be avoided from exposure to air because the side surface of the metallic film of the connecting wiring is covered with the protecting film.

1459827731-b9b106ff-62d2-4df7-8c88-0d88c2582609

A method is disclosed for operating a well logging tool having a controllable radiation source operatively coupled to a power source. The signal accessory comprises a signal accessory mounting having a bottom mount and a top mount coupled to the bottom mount with the top mount configured to receive a switch and engage the breaker cover in an accessory socket. Then a flip-flop retrieves the request from the command decoder at the clock timing from the clock phase adjusting unit to supply it to the memory cell array.

1459827732-3443fc6b-4d72-48d7-b6de-664b3a558b7b

An electric grill comprised of a primary cooking unit that includes a ribbed grilling surface adjacent to a planar cooking surface with a containment wall around the unit and an adjustable food divider that is used to keep unwanted liquids such as fat and water separate from other foods. The optical emissions are processed by an optical spectrometer to obtain a spectrum. The control windings are configured in such a way that a biasing magnetic flux arising from a control current flowing through one of the plurality of control windings is substantially equal to the biasing magnetic flux flowing into a second of the plurality of control windings. Therapeutic outcomes are improved when the copper-pigment complex is enclosed within submicron liposomes.

1459827732-c03d41d8-1c8b-420d-9e87-776140bf053e

A device for manipulating intrathoracic pressures comprises a compressible bag structure, and an interface member coupled to the bag structure. When a switch is activated for raising or lowering the lifting device, a corresponding signal is transmitted wirelessly to the lifting columns and additional signals, which are

representative of the individual lifting movements, are transmitted to a control device. The noise-filtered condition indicator values may be used in algorithms to determine the health of the component.

1459827732-dcd57ab2-89e5-4013-9475-a320f0d1bddf

An apparatus and method for wrapping a napkin around one or more utensils. The gearing member is connected to a hand crank and transmits a rotation of the crank to the sharpening member. Each switch also has two differential outputs, each driven by an equalizing mux.

1459827732-ed1122ca-c13a-41f4-a89c-01538ad554fc

The present invention relates to the use of the S1P receptor modulator 2-amino-2-ethylpropane-1,3-diol, administered at a daily dosage of 0. Portions of the polycrystalline silicon layer exposed in the plurality of openings can be oxidized to form a plurality of poly-oxide regions, and the first mask layer can then be removed. Tubular gaskets run between the top and front covers and the body, thereby providing a watertight seal. The support structure also includes a primary support member including the primary support connector and a hook member. Further, information from malicious nodes is identified and can be disregarded by maintaining information about prior communications that will require a future response.

1459827733-1e401f07-e904-42e8-8fb7-47c47dfc7616

The present invention is directed to a rubber composition comprising a diene elastomer, a reinforcing white filler, and a coupling agent, which is bifunctional and which can be bonded to the elastomer by means of a function X. The storage unit records logical volume information associated with an identifier of a logical volume, an updated time of the logical volume, information indicating whether the logical volume is allocated to a cache, an identifier of a physical volume storing data of the logical volume, and information indicating whether the physical volume are mounted in a physical tape drive. Thereafter, an acid etch operation may be performed to remove a residue, such as tungsten, collected on the semiconductor wafer as a result of the chemical mechanical polishing operation. In addition, SCF fibers can be useful for the delivery of bioactive agents in association with the fibers. The plenum may be formed when the fuel reservoir and the first fuel cell portion are coupled or by one or more flexible fuel cell walls.

1459827733-3bc94bfe-e571-41f8-b688-e568a4d2a22a

Electronic spirit level for measurement of inclination from 0 to 360 degrees. Received signal data are transformed into second signal data within a Stockwell domain based upon a sparse approximation of a S-transform of the signal data. The greatest last acted-upon time includes disks that have no prior last acted-upon time.

1459827734-1c40025c-7520-42dc-a464-c593358cd4cf

A diving helmet bubble diverter comprises a front skirt portion and a rear skirt portion attached to the front skirt portion at one end. After the gradation exposure, development processing is performed on the insulating layer such that a recess is formed in a portion of the insulating layer that has been irradiated with the exposure light through the partial light-transmitting region. If the lamp does not restart after multiple restart attempts and cool-off periods, the system determines that a fault condition exists, and may provide a fault alert. A mounting wire extends through the body and is connected to the trigger. A telephonic signal is received at the second network location via the communications channel. At least one coupling toothing is associated with the coupling element which can rotate about a rotational axis with respect to the shaft and a counter toothing corresponding to the coupling toothing is associated with the sliding sleeve in a rotationally fixed manner.

1459827734-3f24ae68-dfc8-4370-9530-f932bf33a6f0

An oscillation limiting mechanism is integrally provided to an engine mount of a power plant mounted on an automobile in a traverse mount fashion. The gripper end has a grip region dimensioned to substantially accept a user's grip. The insulator includes a polymer or an insulating oxide compound. It can also provide access to information stored in the database and/or provide upload of stored information to a remote system for remote access to such information. The algorithm then maps the octet type bits for the eight mapped information bytes of the character sequence to the ninth octet of the contiguous SPE octets of the SPE octet sequence. The ranking module ranks the first set of two or more electronically noted items to generate a second set of two or more electronically noted items.

1459827734-65a16c4d-e5e0-480b-b2a1-64088baad9f5

A method including causing, at least in part, display of selectable objects on a graphical user interface, where each of the selectable objects corresponds to data or an application accessible via the graphical user interface. 5-D graphics planes to be exposed to high level processes executing in a computing environment in a fully portable manner. The one or more real-time voice content-to-text content transcriptions may correspond to voice content of a second collaboration session participant in one or more collaboration sessions including the first collaboration session participant and the second collaboration session participant. Curve data defining a desired curve in the independent reference system, corresponding to the preset shape, is determined at least partially on the basis of the position of the at least one identifiable point of the preset geometrical shape in the independent reference system.

1459827735-12ea786e-5394-41fd-ae52-eb5492bf687a

An electrically conductive fabric plated with a metal is disclosed wherein a percent fabric surface occupancy of warp as a constituent of the fabric is 90% to 110% and that of weft is 40% to 80%. The PWM drive signal has a plurality of \u201con\u201d portions and a plurality of \u201coff\u201d portions that define a first duty cycle for regulating, at least in part, a flow rate of a pump assembly. An inner barrier of a hydrophobic material is arranged around at least one electrode, whereby said inner barrier prevents an electrolyte path from one cell to another cell, and a frame is present to provide predetermined cell spacing between each biplate and/or biplate and end terminal. The polyline is separated from an ideal function curve for transforming the image by an error value that is within a pre-determined threshold. Varying the current to the coil alters the magnetic field upon the magnetorheological fluid, which can be used to tune the yield stress of the sliding engagement.

1459827735-33f27ec6-843c-428f-a7a9-5d4a31bab72d

Provided is a liquid crystal device and method thereof. The film thickness of a layer constituting the external terminal is designed so that when the thermal expansion coefficient of the ceramic constituting the member is  $\alpha_1$ , combined expansion coefficient  $\alpha_k$  of the member and the external terminal satisfies a relation of 1. The receiving computer periodically receives information allowing it to decrypt received documents and to encrypt billing information for the receiving computer.

1459827735-3878cf2d-b858-4ae9-b91f-d765475956a9

The present invention relates to the use of the distronium salt of 2-N,N-diamino-3-cyano-4-carboxymethyl-thiophene-5-carboxylic acid in obtaining medicaments intended for the treatment of gastro-duodenal pain. A first hinge portion is integrated with the frame member and that has a first profile in a plane that is parallel to a plane defined by the front fork member. The contraction means, when activated, is operable on the support body to cause the support body to be contracted to a radially contracted condition. In another example, a lift-off process is shown.

1459827735-8c00344d-c91c-4d93-93c0-a66ad23fedcf

A method and circuitry for adjusting the delay of a variable delay line in a delay locked loop or other delay element or subcircuit on an integrated circuit is disclosed. The compensation circuit includes a signal generator, a first code generator, a second code generator, and a mapping module. to transfer the SOI wafer to an atmosphere containing hydrogen or water. A name tag identifying the type of wine being dispensed may be placed into a nameplate slot centered on the upper front panel. The architecture is also expandable to support non-linear predistortion.

1459827735-ced980c6-b573-4722-b9a1-17717b6b87b6

A method for creating an install program involves selecting a plurality of icons, defining the install program by placing and arranging the plurality of icons onto a workspace to obtain a defined install program, and building the install program based on the defined install program. A first process may create a first thread. The substrate is extruded in an extruder. The wireless station computes an error between the clocks, and extrapolates the error for a sleep interval to compute a wake-up time instant. Squarylium compounds represented by the following formula : . The plurality of components flow down the steps as they move along the tray.

1459827736-470f9285-6c0d-411c-84f4-444e43f72508

A multi-hop relaying method and apparatus used in a cellular network. The invention also relates to processes for production of the conjugates and to intermediate compounds that may be used in production of a specific class of cell targeting conjugates. Hardware samples are used to identify SRs that contain the hot code of a client process without requiring any static program information. Thus, bias is used to influence the positioning of connectors on additional wires in the full circuit. The algorithm can be incorporated into an imaging device, such as computer graphic programs or cameras, to solve problems of defect detection, say in gems, or object detection. The memory cell array responsively loads the output of the program voltage generator circuit an amount that varies in correlation with data applied to the memory cell array.

1459827736-7e03e6f2-e3a0-4634-a05d-acd5dfe5d51f

A Pre-Aligned Metrology System comprising a number of Pre-Aligned Metrology Assemblies and Pre-Aligned Metrology Modules for measuring a target on a wafer. An entity on the client that communicates with the host is identified. According to such a constitution, the signal light power per one wavelength included in the output light of each of the optical amplifying devices can be kept constant, irrespectively of the number of wavelengths.

1459827736-81033108-34da-4030-ac47-59396268f669

A new and distinct cultivar of Hypericum plant named \u2018Seigre\u2019, characterized by its yellow-colored flowers, large, yellow green-colored fruit, dark green-colored foliage, and vigorous, upright growth habit. A first port coupled to the packet processing pipeline is configured to receive a packet that does not comply with the recognized communication protocol and has a header that conforms to a second communication protocol. Flocked sheets are attached to the surfaces of the respective PET sheets opposite the electrically-conductive roller, and contact the electrically-conductive roller. The border on the frame of each unit is protected by a guard that pinches the foot of an elephant attempting to cross over on the butted edges where two units meet. This process may be repeated for different sizes of the at least one sleep transistor to determine an optimum size of the at least one sleep transistor to optimize at least one parameter of the logic circuit.

1459827736-893b581e-7aba-4c94-88dc-f54dfa4031b6

Nucleotide sequences for seven genes, tccC4, tcdA3, tcdA2, tcdB2, tccC3, tcdA4,

tccC5, from the tcd genomic region of *Photorhabdus luminescens* W-14, are useful in heterologous expression of orally active insect toxins. A media gateway converts between a pulse code modulation format used in a circuit-switched telephone network and a real-time packet media format used by the distributed service node. When the air-fuel ratio of the exhaust gas which flows into the exhaust purification catalyst should be made rich, if the speed of the vehicle is lower than a predetermined speed and the gear position of the transmission is at a predetermined low speed gear position, exhaust rich control is used instead of cylinder rich control. The chamber is useful for allowing wet samples including living cells to be viewed under an electron microscope.

1459827737-9a57fa9d-4ba0-43da-b95e-333d9aed351d

Slot machines utilize one or more pay lines on which a combination of symbols are lined up to determine whether a particular pay line wagered is a winner according to a pay table that shows winning combinations with associated pays. Whether or not each register line has defect is examined by detecting an output of a last register of each register line, then the register line having defect is detected by the examination, a normal register line is selected by a shift register selecting switch, and the serial-connected registers of the selected register line are used in the shift register circuit. To seal the package, the peripheral area of the two cardboard sheets is subject to sufficient pressure to crush the corrugations inside the cardboard sheets and flatten them in that area. The distal region terminates at a free end. A route is calculated using the normalized value. The system makes use of an engineering model views module that provides a syntactic and semantic interface between the client tools and the central database so that health management data communicated to the client tools is presented in accordance with a specific view required by each specific client tool.

1459827737-c2060b26-0b25-42b5-96b6-dc6131ede8fb

An architecture for measurement of per-hop, one-way delay includes a input observation circuit at the input interface of a node and a output observation circuit at the output interface of a node. Non-biodegradable solids are first removed from the sewage for separate disposal. Further, the interlayer insulation layer ILI is coated with a resin material having fluidity, and flatness is improved as a whole.

1459827737-e23a28e3-8869-40bc-8d6c-c5f9d17ad691

Chelating agents of the general structure: . Explosive charge weights can be modified to meet the users needs without introducing inert materials or other more labor intensive alternative. The downlink timing information represents timing information for communication between the central node and the secondary node, and the uplink timing information represents timing information for communication from the secondary node to the central node. The tongue length error is compared to the estimated tongue length to become a corrected estimated tongue length for a next computation period.

1459827737-f69ee9f6-946c-48ff-8fb6-282adc026117

A high security adjustable keyless locking contrivance for preventing the forced opening of a hinged door of unoccupied homes or buildings. The controller performs the beam-to-beam spacing error correction analysis, determining whether or not a correction is necessary, and if so, which optical element to adjust and the magnitude of adjustment. The teeth of the link plates function as a silent chain. The MOS is comprised of a gate, channel, source, drain and offset drain. The gamma voltage controller corrects luminance in high and low gradations according to a color mode of a display panel, and generates a plurality of gradation voltages through inflection point adjustment, thus minimizing gradation mismatch between color modes.

1459827738-19926cb5-9732-4544-9ac1-b98620362f8d

Methods and systems optimize travel costs both on and off a sequence of one or more networks used to represent travel, communication, or transport of anything within a spatial medium. In one embodiment, images of a sample are recorded before and after the application of a staining reagent and a decolorization reagent. A system and method in another embodiment includes a first bar code reading device configured to initiate a command to print a bar code symbol which when read by a second bar code reading device can cause the second bar code reading device to operate in the manner of the first bar code reading device. In some embodiments, the first and second transparent polymer layers are transparent, radiation-cured polymer layers. Other moveable restraints may be lateral restraints which move forwardly from the backrest of the seat to be located to either side of the torso of a child occupying the child squab and head restraints which may move forwardly from the head rest.

1459827738-2f3ab3d2-f930-488f-8009-8d3c41960cb3

Aspects include a mechanism of entitling users to transacted-for digital content access, indicating download authorization with discrete authentication URLs, and validating download attempts using each such URL. A support element with a tine contacting surface protruding vertically down from the lower ground facing surface of the support deck partially into the pallet cavity but not below the ground contacting legs may be present in some embodiments. The intermediate portion includes an arcuate outer surface section that has teeth to be releasably engaged with the retaining mechanism, allowing the head to be pivotally moved to a desired position relative to the handle and retaining the head in the desired position. An observation data input unit inputs new observation data, and an analyzing monitor unit controls the data processing unit to generate modified analyzing data by using the new observation data, the observation data and the geographic information, and readjusts the analyzed result based on the modified analyzing data. By allowing the tool lifting device to double as a drive device for causing the forcing member to move relatively towards and away from the knife member, the necessity of the actuator of the ACF tape cutting device which is needed in the related art tape adhering device can be obviated. Also disclosed is a method for self-construction of a cluster tree structure-based wireless sensor network.

1459827738-f1db49df-f6cf-4db2-8b21-192d6690119a

The present invention relates to compounds of formula, a process for the manufacture thereof, their use for the preparation of medicaments for treating CNS disorders and pharmaceutical compositions containing them. The stopper member is made of an elastic member which is elastically deformed only in the radial direction and is hardly deformed in the axial direction. The perforations have diameters between 10  $\mu\text{m}$  and 25  $\mu\text{m}$ .

1459827739-7de8ebd0-1c0b-4c26-aaaf-1a19cf5a93c0

A source driving circuit includes an output buffer circuit to compensate for slew rate of signals used to drive a display device. A mail flow pattern is extracted from a mail transmission audit data storage unit, and a flow definition comparison part compares the mail flow pattern with the flow definitions stored in a workflow definition storage unit. It has groups of probe needles provided to contact semiconductor integrated circuits arranged in two columns and at least two rows. Further, windowed averaging can be performed prior to generation of the composite image so that the composite image incorporates weights given to image data in focus.

1459827739-a8f4dcfe-4337-4865-9399-272597c090f9

An electronic pressure sensing device includes a pressure sensing transmitter module including at least one pressure sensor having a pair of opposed sensing elements, and a pair of inlet port on the module to supply fluid under pressure to the sensing elements. The futures contract segment of the exchange device is the duty to purchase the underlying options contract at a specific time. Cushioning is on one side of the base frame. The method then includes retrieving index entries to

determine relationships between search result entities and providing the relationships in search results. According to the invention the number of copies of data packet transmitted simultaneously by a user within one frame is varied. The solid golf ball of the present invention comprises a core containing at least one layer which is molded by vulcanizing the rubber composition including: a base rubber, a co-crosslinking agent, an organic peroxide, and a polysulfide compound represented by the formula: wherein at least one of R1 to R5 and at least one of R6 to R10 are each Br, and n is an integer not less than 2.

1459827739-bc4a044c-c196-479d-aaa8-836d10e4a38c

Provided is a method for manufacturing a sulfide-based solid electrolyte including preparing a precursor comprising lithium sulfide, germanium sulfide, aluminum sulfide, phosphorus sulfide, and sulfur, conducting a mixing process of the precursor to prepare a mixture, and crystallizing the mixture to form a compound represented by Li<sub>9</sub>. A query is received and may be modified before being compared to queries in a query log of previously-issued queries. The bore has a first portion of a first diameter and a second portion of a second diameter larger than the first diameter. The PHG has a transceiver for wirelessly receiving the data packets transmitted by the PHAST and for transmitting the data packets addressed to the client device in accordance with the packet hopping protocol, and a network interface for establishing communication with a server. 899 gcm<sup>3</sup>, the relationship between a vinyl group amount and MI<sub>2</sub> of the polymer satisfies the following expression: \u22660.

1459827739-f2fc61fb-5e4a-48cb-b2f2-bda6fcda9279

A force measuring device and method for determining a force required to move a cart. The airbag system includes a crash sensor system that detects a crash involving the vehicle, a driver side airbag module mounted to a steering wheel and including a driver side airbag that inflates to protect the driver and a gas generator that generates inflation medium to inflate the driver side airbag. The discriminant function may be evaluated using the preconditioned conjugate gradient process.

1459827740-1891126d-d69e-47a9-be31-7033745b67d1

A system and method for automatically adjusting floor controls based on conversational characteristics is provided. An enzyme-stabilized formulation is disclosed comprising an alpha-hydroxy-mono-carboxylic acid or the salt of an alpha-hydroxy-mono-carboxylic acid, a boron containing compound capable complexing with an alpha-hydroxy-mono-carboxylic acid, the complex formed by the boron compound and the an alpha-hydroxy-mono-carboxylic acid, and an enzyme. , when two such content portions are to be presented concurrently at the network node, at least one is delayed until the other such portion can be presented concurrently therewith. This enables the retransmitting node to start retransmitting a message received from the preceding node to the following node before completing receiving the message.

1459827740-1e358459-90f1-4fbd-ade5-1eba6a904456

A system and method of producing an integrated circuit using abutted cells having shared polycrystalline silicon on an oxide definition region edge includes modeling inter-cell leakage current in a plurality of different cells. The feeding device encompasses a conductor which is guided in a vertical direction and is insulated through the base area of the reflector and terminates at a feeding point on the metallic patch sheet. A first program voltage is applied to the first non-volatile storage element.

1459827740-92c34819-9551-4b7c-b762-0aa869172f39

A retainer assembly for locating a medical device in a container having a wall with a vent hole. The control circuit detects a difference voltage between the input voltage and the output voltage or a difference voltage between the input voltage and the set target voltage, and causes the switching device to be in an ON state

when the difference voltage is lower than or equal to a predetermined voltage value. The terpolymer in one embodiment is a polymer comprising at least 65 wt %, by weight of the terpolymer, of propylene-derived units, within the range of from 5 to 35 wt % of ethylene or other \u03b1-olefin and a diene such as ethylidene norbornene, and in certain embodiments having a Mooney Viscosity @125\xb0 C. The developer manifold and the rinse manifold can be staggered so as to reduce an external width of the nozzle compared to a nominal external width of the nozzle achievable without either intersecting the fluid manifold and the another manifold or staggering the fluid manifold and the another manifold. The methods and systems minimize the delta pressure across the pump with a control strategy for positioning the electronic throttle and supercharger bypass valve in a coordinated manner to deliver the required amount of fresh air flow into engine, while, at the same time, minimizing the power consumed by the supercharger pump for best fuel economy.

1459827740-9715522f-639a-444b-a59a-83f66cb75892

This invention has building members which include an image sensing portion, an optical member for forming a beam from an object to be sensed into an image on the image sensing portion, a positioning portion which positions the optical member, and a support member which holds the optical member and to which the positioning portion is fixed. The jug has an interior portion, and the lower portion has a profile that includes an upwardly reaching portion conforms to the blade shape of the cutting assembly to reduce food accumulation below the main blades. The RRAM of the invention may be programmed in a single step or a two step programming process. The switching means is for controllable coupling the first conductor of the transmission line to a second conductor of the transmission line at a first end of the transmission line, with the second conductor of the transmission line being coupled to a fixed voltage potential at a second end of the transmission line. The formulation additionally comprises a fluid carrier and a stabilizer. The anvil has a channel containing detent notches for aligning the wire terminal seat with the bolt.

1459827741-01a2a0a4-8575-4e29-8d96-fc27817c03da

A method of texturing a surface of a crystalline silicon substrate is provided. A surface of a core metal produced from a metallic salt, a metallic oxide, or a metallic hydroxide and having a particle diameter of 1 to 100 nm is covered with an organic compound including a functional group having chemisorption capability onto the surface of the core metal. The first coil element and the second coil element are wound and arranged such that winding axes of the first and second coil elements coincide or substantially coincide with each other and directions of magnetic fields generated in the respective first and second coil elements are opposite to each other. The needle is then inserted at the located point, with or without the needle path being guided by the bore. When the document is stationarily placed on the static-document reading section to read the image, the shutter member is positioned at the shading position. In one embodiment, the alcohol is a compound of formula :wherein R3 is a protecting group.

1459827741-33b6a61c-72e2-483b-9519-59a67696a584

A radioactive static eliminator gun has a cartridge connected to a high pressure air supply. A motor and crankshaft combination is connected to each section of the lattice for generating in each section of the lattice a cyclic movement including, in the upper portion of its travel, a rearward movement of translation. The server holds the connection until the server receives information for the gateway. If the two group membership fields match, the current task is permitted to use the translation. Such a digital switch matrix may be applied to either the receiver or transmitter components of an advanced multi-band, multi-channel digital transceiver system, and is compatible with routing of signals with different clock frequencies simultaneously within the same switch matrix.

1459827742-08fbb03e-2b41-47a7-b134-d51b2a92bc8c

The present invention includes a circuit-level system and method for preventing the propagation of soft errors in logic cells. The bracket mechanism consists of integral mounting bosses on the hose reel enclosures, a mounting bracket, a tube and a constraint device on the tube. A pair of oil pumps are mounted on opposite ends of the housing inboard of the weights.

1459827742-5af0c3b5-ade7-47d2-bcb7-aaf698c3933a

Provided is a DA conversion apparatus comprising a capacitor array DA converter that outputs to an output line an output voltage corresponding to a digital value input thereto; and a load changing section that changes a size of a load capacitance connected to the output line. In one aspect, a method for an access point for transmitting service information on a network is disclosed. A slave plunger is mounted in the barrel for longitudinal movement therein, and is located between the master plunger assembly and the second barrel end so as to define two chambers. Alternatively, a random determination is made whether to increase the at least one progressive jackpot by a predetermined increment amount and, in response to a determination to increase the at least one progressive jackpot, the at least one progressive jackpot is incremented by the predetermined increment amount.

1459827742-8383169d-338d-43b7-8cfe-52189c0af7e4

The present invention is a new and unique variety of *Calliandra californica*. Displaying targeted advertisements during content viewing and web browsing and tracking the rendered and displayed advertisements for payment based on completion of viewing using means for keeping count, with verifiable IDs, of beacon execution using the operating system capability to verify application activity. The back surface of the first substrate is provided with a plurality of external substrate connection terminals.

1459827742-8948a4ee-da54-40f4-8569-d8c6615c68ca

An agent of a storage area network generates a first checksum value for a first set of zone configuration data used to at least initially configure the storage area network. The method uses a combination of dry and wet etching to create nanocolumns consisting of layers of non-polar III nitride material and other insulating materials or materials used to grow the non-polar III-V nitride materials. The sound may be further shaped based on other states of the zone player in addition to orientation.

1459827742-d4137fb0-9bac-4272-8106-66eb5e95b2eb

A pump assembly particularly for use in high pressure operations is disclosed, which pump assembly is a barrel casing cartridge pump assembly which includes a pump cartridge having a plurality of impeller stages, and a barrel body casing which encases a portion of the pump cartridge. Circumferentially spaced channels are provided on the walls of the base which receive removable inserts which not only secure the bottom against upward movement relative to the base but also provide landings to support insert trays received within the container. The two part-windings are capable of being connected in parallel with the switching device during operation of the electrical machine. Each item then has third party content or advertisements associated with the item based on the unique identifier. A second dielectric layer is conformally formed on the first dielectric layer to close the entrance, thus forming a void buried within the trench. Salesperson access to the system and customer access to the on-line communication channels requires authorization.

1459827742-ec770598-17a0-4853-8fe1-4ebbc31f96d8

There is provided an image forming system that are capable of preventing a user or operator from forgetting to carry out a maintenance operation based on required sub-maintenance items after execution of a maintenance operation based on an associated maintenance item, such as component replacement, cleaning, or adjustment. Transmit circuitry can include a transmit coil operatively part of a

transmit resonant circuit exhibiting resonance at a transmit resonant frequency and an unloaded Q value of at least about 20. zero volts, without causing permanent damage to the battery.

1459827743-44e249f6-7e65-4e8d-937f-dfbca55555ea

A method and apparatus for the production of a workpiece of exact geometry and high surface quality, such as, for example, a forming tool, are disclosed. Corresponding methods, systems, apparatuses, and computer-readable media are also described. , a reduced propensity to shed glass particulates. In one embodiment, the data includes both sensed intrinsic cardiac events and paced cardiac events. The method includes processing at least one collected image so as to calculate at least two positions of at least one body part of a user, and to determine an area defined by said position; and generating a signal suitable for the control of the field of view of a camera in dependence upon said determined area. The inner portion of the first-type well region is positioned within the center of the first-type contact region.

1459827743-51b95cc4-6bf9-4ffd-9788-a8fde256ff16

A direct memory access system consists of a direct memory access controller establishing a direct memory access data channel and including a first interface for coupling to a memory. The receiver comprises a plurality of receive antennas and collection circuitry for collecting a plurality of signal samples with at least one symbol and interference effects. According to a signal processing method and apparatus of the present invention, after a first signal has been decoded by a first coding scheme, the first signal is adjusted using modification reconstruction information for reconstructing the first signal modified in time domain in performing encoding. 4519 relative to the D line of the sodium vapor lamp. The resilient coupling link has its upper end coupled to the oscillator and has its lower end which is farther away from the inner cutter than the oscillator and is anchored to the shaving head.

1459827743-73c5e75b-b2a5-40a6-b23b-abc77876e79b

A method of automatically selecting a number of secondary images and a display template for display with a primary preselected image based on analyzing the primary image's attribute information and comparing the secondary images attribute information and the templates image attribute requirements. The aiming mechanism includes a screw insertion hole and an aiming screw operable to move the reflector by pivoting the aiming screw. The slide mechanism includes V-shaped guiderails vertically aligned with opposing V-shaped guiderails on the mounting bracket assembly.

1459827743-ced1132e-b61d-4ee1-8a58-3634c159ac09

An electrosurgical stapling apparatus is provided which uses thermogenic energy as well as surgical fasteners or staples for strengthening tissue, providing hemostasis, tissue joining or welding. The high-speed output transconductance amplifier configures a cross-coupled circuit with programmable switches to offer a high-speed receiver capable of operating at lower voltage and normal voltage, for example, a receiver can be operated in both for SSTL-3 and SSTL-2. Connecting elements wire the semiconductor chips, the intermediate plate and external terminals to one another. From the evaluation the type of wait treatment to use for the customer is determined and is provided to the customer. The host PC obtains internal information from the first and second microprocessors via the first and second debug IF devices and compares internal information from the first and second microprocessors to perform failure analysis.

1459827743-ee4f396b-44bf-4599-8f32-ff7ba2be9347

A fiber to chip coupling connecting an optical fiber to an integrated circuit. The housing is partitioned by an internal wall into a chamber containing the hydrostatic transmission and a chamber containing the other transmitting mechanisms. An acidic material is added to the cellulose acetate solution, and the

filtration is preformed.

1459827744-37ec0b10-9d22-4dff-a9a1-6ad4cc7aad6e

A cable that includes a first optical fiber in a center, a first layer with a plurality of metal wires and a stainless steel tube surrounding the first optical fiber, a second optical fiber inside the stainless steel tube, and a second layer with a plurality of metal wires surrounding the first layer, wherein the first optical fiber is directly exposed to the outside environment. The wheelbase has box frame including a pair of wheels pivotably connected to the frame. An IO interface sends a dataframe to the IO shim.

1459827744-8f681dfe-a552-495a-93b4-0266e240c4e3

In various embodiments, methods, systems, and computer program products for processing digital images captured by a mobile device are disclosed. A transistor of the comparison circuit receiving the bias signal is connected to a corresponding transistor in the bias generator circuit, in a current mirror configuration. , are varied accordingly in value.

1459827744-98ac086b-4a0f-40b5-8a91-8b7f54d5e070

A portable operation section of a controller has an impact sensor. The method comprises a hierarchical transaction commit rule allowing access to the data associated with an action in the schedule according to a transaction boundary and the state of the action. For example, density and porosity measurements can be affected by the presence of casing or drill pipe, and thus such measurements can provide an indication of whether the tool has been deployed below the drill pipe. The whole operation process is convenient and rapid. An iterative process for determining the cost of transfers between the plurality of cost groups is performed based upon the processing sequence. There can also be included a power switching unit for enabling switching between forward driving which allows the first electrode and the third electrode to serve as an anode and allows the second electrode to serve as a cathode, and inverse driving which allows the first electrode and the third electrode to serve as a cathode and allows the second electrode to serve as an anode.

1459827745-2be76ac7-c507-4661-96ae-c1d14a51f407

NAND memory devices utilize sensing devices for sensing a programmed state of a nonvolatile memory cell or writing a data value to a nonvolatile memory cell. The method includes the steps of adding to whey an amount of a whey-soluble zinc salt and adjusting the pH of the whey to be less than 6. The system further comprises a trigger-actuated latch mechanism including a detent engageable with the keeper for latching the door in its closed position and a trigger operably connected to the detent in a latched position. Parts of cartridges mounted to a lower one and the next higher one of the mounting portions overlap, as seen along a plane perpendicular to the phantom plane from an upstream side with respect to the mounting direction.

1459827745-3daf45fe-3b75-4e3f-84b9-a98c5980c7b1

An illumination device in one embodiment includes a housing comprising a bottom cavity; a battery powered light emitting assembly disposed in the housing and comprising an exposed light source; and a magnetic assembly comprising two separate magnetic members each having an inner inclined flat surface, the magnetic members being secured to the cavity. A controller in accordance with an illustrative embodiment of the present invention may include an interface for programming a service event display mode in the controller, and a display unit configured to display servicing information when a service event is detected by the controller. Surfaces are formed at the ends to slope toward the internal space so that the disc is located in an upper portion of the internal space and the pair of elastic protrusions supports the disc. A corresponding method is also provided. Once the score is calculated, the file can be further processed based on the score. As a

result, a valve phase when the engine stops is reliably brought to the target phase that is suitable for next engine starting.

1459827745-659dcbf2-d5e5-4dd8-871f-a8541eaa8cbb

A portable and temporary rail transition system for installation on a main track to guide rail equipment from parallel rails of the main track and onto parallel rails of a turnout track. The bearing material has about 8 to 12% by weight tin, about 1 to less than 5% by weight bismuth, and about 0. The nanowire structure of the semiconductor material has a bandgap that is indirect in a first strain state. The quiver may also include an arrow gripper having a plurality of fingers whose sides define expandable oval slots between adjacent fingers into which the arrows are loaded.

1459827745-871215d1-93da-4aec-81f9-9eed6d3c8590

The present invention is directed to the isolation and use of super-infective, tumor-specific vectors that are strains of parasites including, but not limited to bacteria, fungi and protists. Some embodiments create a physical design representation based on a behavioral representation of a design for an integrated circuit. Once the client is connected to one member, the member sends to the client a list of all active members and their respective workloads. Further, a wind energy system is provided that has a rotor with a rotor brake and a calculation unit adapted for comparing two threshold values for time and torque to the actual values of time and torque, alternatively for comparing two threshold values for time and actual power to the actual values of time and actual power.

1459827745-a009f198-7b1e-47ae-965f-62f8c5579903

Echogenic strands and spacers are provided for use in brachytherapy. The spokes have pairs of mutually opposite curved recesses mutually connected to form clamping channels for an annular ring with a notch. The hierarchy tree structures can be constructed dynamically as required, thus the occupied amount of a memory can be seduced and users can view the profiling data freely. The sliding board is slidable mounted to the main board.

1459827745-bdc6f60f-866a-4da5-a9a0-ab741d4eee56

A bundle pack includes a tray having a bottom, a sidewall, and a tray longitudinal axis. An umbrella frame assembly includes a reinforcing assembly connected thereto in a supportive, operative orientation thereby providing a stable support for an umbrella canopy which can remain open even during travel of the boat. Accordingly, additional information for the associated product can be displayed, enabling the user to learn more about and purchase the product from the electronic marketplace through the portable computing device.

1459827746-9ce56198-0777-4078-8835-f198cd2562ed

The present invention provides a stent comprising a tubular flexible body having a wall with a web structure that is expandable from a contracted delivery configuration to deployed configuration. The horizontal \u201cbutterfly\u201d throat is located at the rear of the enclosure and expands vertically, and the vertically arranged bifurcated horn terminus exhausts in a mostly forward direction on opposite sides of the back chamber which is reflex-ported; said ports arranged to each exhaust into the channel folds at each respective corner of the terminal horn channel. From within the 3D image object, cross layer planar views spanning various depths of the 3D digital slide are constructed as well as 3D prisms and other shaped image areas. The filters may be temporal noise shaping filters. The hand also has a holder which holds a dummy portion which is at an edge of the substrate. The polymer produces a gas when the thermite reaction occurs, the gas slowing the thermite reaction.

1459827746-aa8a31d3-5789-4e27-9611-c7671c68ca75

A method and system of conditioning human skin and hair using a hand-held skinhair

conditioner having interchangeable interface conductors that are contoured to enhance electrical conductivity between the conditioner and a variety of body areas. , the melting point being defined as a top of a peak observed on a highest-temperature side in a melting endothermic curve obtained by a differential scanning calorimeter when a sample is held in a nitrogen atmosphere at  $\sim 2210^{\circ}\text{C}$ . The display screens may include a plurality of predefined adjustable edge portions, such that each edge portion is designated as a rocker edge portion. The first heavily doping region and the second heavily doping region, which are separated from each other, are disposed in the first well. A length, in a first direction intersecting a penetrating direction through which the eccentric pin penetrates, of the first concave groove is greater than a length, in a second direction intersecting the first direction and the penetrating direction, of the first concave groove.

1459827746-d5115ee3-a66a-4eb8-9450-a1fef68e2d37

The present invention relates to the field of radar level gauging systems, in which a level of a surface of a product stored in a container is measured. The biliary catheter includes an elongate shaft having a proximal portion defining an ancillary lumen and a distal portion defining a common guidewire and ancillary lumen. The control unit memory stores a plurality of system management interrupt processes. In accordance with one embodiment of the invention when in an inoperative position, the free end of the latch member is aligned with a blocking surface of the lighter body, thus, preventing inadvertent lighting of the lighter. The time marks are in any increment of time needed. With this configuration, the present invention provides a portable computer improved in a mounting structure of a wireless LAN card doing not have an antenna.

1459827747-6c2b0873-d7cc-4f88-b5b0-20f0c55d563d

Embodiments of the invention describe hermetic encapsulation for MEMS devices, and processes to create the hermetic encapsulation structure. The system determines a threshold bandwidth based on the receiving capabilities of a client device. An interface is configured to receive auxiliary instructions from the processor, select the hardware blocks for the requested tasks in response to the auxiliary instructions, notify the hardware blocks of those tasks, and arbitrate access to the memory controller among the hardware blocks. A body portion housing chamber housing a body portion of the fluid coupling and the differential pressure generating chamber are structured as oil chambers independent of each other. One or more of a resonant exchange of energy between one or more electrons exchanged by the metal and the electrolyte and vibrating bonds of a molecular analyte, for example, may be sensed by measuring small signal conductivity of an electrochemical interface. In certain embodiments, the one or more segments are held within the receptacle via the container or via the material piece.

1459827748-26a8de05-a780-44ba-980f-9f6972e56af8

A laser system serves for corneal grafting by photodisruptive laser cutting. A tray configuration is also provided for use with the carrier or in a separate manner, and a dispensing system for use with the carrier is set forth. The cleaning section has plural cleaning lines for cleaning plural substrates. A plurality of flexible electrode assemblies may be coupled to the expandable member. By avoiding the need for many external connectors, the nozzle design is compact and the VLSI fabrication techniques are relatively low cost with high yield.

1459827748-2c0df47c-eeff-429c-be25-f92124954c73

Diesters of dianhydroglycitols can be prepared by esterification of dianhydroglycitols, anhydroglycitols and/or glycitols with alkylcarboxylic or arylcarboxylic acids in the presence of an acid catalyst, the acid catalyst being a macroporous acid ion exchange resin. The method comprises detecting a fault associated with a processing tool capable of processing one or more workpieces and operating the processing tool in a degraded mode in response to detecting the fault. As a result, the system and method of the present invention is easily

scalable to support an arbitrary number of participants to a conference by merely adding the appropriate number of server computers to the system.

1459827748-49e64823-c7d5-4706-aa7d-fb5656e5843e

Methods and apparatus for embedding a watermark are disclosed. The resulting video stream looks better upon subsequent viewing, and can be more efficiently transmitted and/or compressed for transmission or recording. The first etch extends to a depth in the masking layer that is less than entirely through the masking layer.

1459827748-684aebcc-a855-4686-8164-27203552d8bf

A turbomachine combustor assembly includes a combustor body, and a combustor liner arranged within the combustor body and defining a combustion chamber. A pivot lock mechanism inhibits the seat back from pivoting with respect to the seat bottom when locked. The inventive method allows reduced gas consumption and reduced waste.

1459827748-e20479e1-d52d-4bb0-8bc0-a321dc90e503

A method for providing fault tolerance to multiple computer servers is disclosed. The process includes in a semiconductor layer forming a gate structure above the semiconductor layer; forming a first doped region within a first surface portion of the semiconductor layer; and irradiating the first doped region with electromagnetic radiation, to carry out annealing thereof. The method further includes estimating current flowing in the DC motor based upon the replica of the output of the power amplifier and the model of the DC motor, and generating the correction signal proportional to the estimated current. The design allows for transportation through household doorways and provides anti-tilt arms with threaded level mounts for use on non-level surfaces. The control panels are provided at the top thereof with corresponding identifications, for example in the form of symbols. In a preferred embodiment, an antimicrobial composition comprises an enhanced synergistically effective antimicrobial mixture of PCMX, carboxylic acid, glycerol, isopropanol, and sodium dodecyl sulfate.

1459827749-3cbdb9aa-078b-4bb9-a6a8-cba5cbb348a7

A dual clutch transmission having radially nested clutches including an outer clutch having first inner and outer clutch disks that are interleaved between each other where the first outer clutch disks are operatively mounted to a first outer support carrier. A first coating with a low coefficient of friction is disposed on the proximal portion of the mandrel. The holding device can also be formed by two non-parallel guides for varying the position of the windshield in terms of height and/or inclination, when it is moved along the guides. An aperture may be disposed at or near the distal end of the medical instrument.

1459827749-4070dbf4-3548-4e4e-a75e-25c2466243de

Injection-molding nozzles having any one or more of improved heat transfer, wear resistance, and melt transfer from a manifold to a mold. The main body includes a first surface and a opposite second surface. Organized compartmentalization and insulation of system components controls storage, distribution and release of heat energy during operation and shut-down for increased efficiency and reduced pollutant emissions. One classification procedure analyzes the metadata to perform a high level determination as to whether the image is of a place. A pressure sensor observes the gas pressure in the riser base, and if the observed pressure exceeds a predetermined control pressure value a three term pressure indication control causes the first valve to be operated to open to an extent that increases the gas outflow through the pipe, and thus increases the velocity of gas in the pipeline to avoid occurrence of severe slugging in the riser. When the transconductance gain varies, the bias current varies in proportion thereby maintaining a constant offset voltage.

1459827749-cd67aee6-7973-4e40-8693-e5dcc8766386

Methods, computer readable media, and apparatuses for dynamically scalable real-time system monitoring are presented. The logic function can be programmed dynamically, by adjusting the operating parameters of the resonator. In one embodiment, the display time difference between a current video picture and a nearby video picture is determined. In another aspect, the product includes both polydextrose and cream, optionally in combination with tricalcium phosphate and/or karaya gum to produce a low fat frozen confection with good organoleptic properties. The devices, methods, and compare the self-contained navigation track with the GPS track to acquire a first correction amount for obtaining the highest degree of coincidence between the self-contained navigation track and the GPS track and then correct the self-contained navigation information using a second correction amount that is smaller than the first correction amount. The communication device includes a processor and instructions stored in memory.

1459827750-2ad17424-1022-4fa0-8a54-0525e87092bf

The present invention provides a loop thermosiphon including an evaporator and a condenser interconnected in flow communication by a vapor conduit and a condensate conduit. The first transfer path and second transfer path are disposed to be displaced in parallel such that a center line of the first transfer path and a center line of the second transfer path do not overlap on the same straight line. A plurality of fusible links selectively connect the plurality of capacitors to one another and selected ones of the capacitors to the contacts.

1459827750-438e2341-2634-4b19-a204-5cdb0109c114

A table game has a center piece and a plurality of end pieces that removably attach to the center piece. The base includes a plurality of downwardly extending rods and a mass of concrete around and in between the rods to anchor the assembly. The spectator experience enables users thereof to observe an augmented version of the game or event, such as by implementing enhanced viewpoint controls and/or other spectator related effects. The connector has a connector body unitary with the case and has a connector terminal that is exposed to the inner room at one end and exposed to an outside of the connector body at the other end. The method includes performing a write operation in a predetermined direction when writing the first-state data and second-state data, making a determination with respect to success in target data through verification, and attempting an additional write operation through a path reversed from a write path of corresponding data according to a result of the determination. The nacelle includes a displacement mechanism displacing on request a portion of the nacelle wall to modify the passage section of the flow outlet through which a major portion of the flow escapes, the displacement forming in the nacelle wall at least one opening through which a small portion of a leak flow, naturally escapes.

1459827750-48e5486e-9165-4305-a8e5-ee0a09add35a

An organic electroluminescent device is disclosed, which can obtain high luminance and high efficiency. When the lever is rotated, a protruding part provided on one end of the lever protrudes into the lower guiding groove and engages with a fixing boss provided on the process cartridge, thereby preventing the process cartridge from moving in a direction opposite the direction in which the cartridge is mounted in the main casing. A second 3D image data record is obtained by the computed tomography including data relating to the subarea of the object and is registered with the first 3D image data record. The first charge pump circuit is electrically connected to the loop filter.

1459827750-a3185fbb-fb6f-45cb-9fc5-94eadd7c00dc

To provide an antifuse element comprising a gate electrode, a depletion channel region, a gate insulating film between the gate electrode and the channel region, and a diffusion layer region forming a junction with the channel region. A tread and shoulder of the tire are joined along a shoulder edge. After the substrate is molded, the grooves are filled with an optically transparent material to optically

couple and align the plurality of lenses and the plurality of grooves respectively. The information is used to define a cross-connect mapping through a node of the network between respective local endpoints of the first bearer segment and a second bearer segment hosted by the node. When the clipping portion is engaged with the receiving portion, the hooking component catches one of the positioning components for fixing the clipping portion. A first stall divider module is attached to the truss module and a positioning fixture is used to properly align a second stall divider module relative to the first stall divider module.

1459827751-5dfb7190-f974-46f6-b9d5-2afbde4f99d8

An optical fiber connector includes a pair of optical fibers and a seat defining a pair of lenses at a front edge thereof and passageways aligned with the lenses respectively and receiving the optical fibers. The detector includes a first correlator that is configured to provide a first plurality of correlations corresponding to similarity between data as received and first information, e. The exposure time and the gain are associated with the first flash device in response to the indicator indicating the presence of the first flash device, and the exposure time and the gain are associated with the second flash device in response to the indicator indicating the presence of the second flash device.

1459827751-78dd235f-804d-4fe5-b1a4-50587a418016

A modular mobile phone includes a printhead and ink supply module that is received and retained into a support chassis. The intermediate character information generating section generates intermediate character information indicating a certain character. A respective at least one sensor can be present at the individual sensor nodes for the spatially resolved detection of vibrations and/or acoustic waves of the rotor blade and the sensor nodes can be connected via optical fibers to a central supply and reception unit.

1459827751-bb6a80fb-15b7-47c1-aace-f4e0ccee650b

A process for the preparation of coated polymer particles containing superparamagnetic crystals, said process comprising reacting porous, surface-functionalized, superparamagnetic crystal-containing polymer particles of diameter 0. Said measuring device comprises a guiding means for the curved rigid guidance of a first partial section of the fat fiber. The substrate panel has indexing holes formed therein so that the substrate panel is capable of being indexed by lead frame handling equipment. The reactive barrier layer includes an oxide having an element with more than one valence state, wherein the element with more than one valence state has a molar ratio of the molar amount of the element that is in its highest valence state to its total molar amount in the barrier of 50% to 100%. The invention further includes methods of forming semiconductor logic circuitry, and includes semiconductor constructions, such as, for example, semiconductor logic circuitry constructions.

1459827752-0236fd08-0e3f-4c6c-a215-b7e24695f88c

A method is described for controlling a micro-fluid ejection head that includes first and second heater chips disposed in a staggered overlapping arrangement, where a number of the nozzles of the first heater chip are substantially aligned with a corresponding number of the nozzles of the second heater chip in an overlapping region that includes N number of sub-regions. The second adjustment plate has at least a front end portion housed in an indoor unit front portion outside a blowing path when housed. The accessory can be worn on either the left or right side of the wearer. The method includes inducing a single impact wave in an impact table where the impact wave is induced across an area approximately the size of a person.

1459827753-1793e4b7-4081-4c51-8b58-6e8db5267262

A gate driver circuit includes a driving section and a wiring section. The terminal unit includes a positive terminal, a negative terminal, a control terminal, and a

temperature detection terminal for outputting temperature data. The invention also provides an antibody which specifically binds a human TIE-2 ligand. A spectrally-encoded label system further comprises an optical detector sensitive to the output light emitted from the label, and a decoder operatively coupled to the detector for extracting the label information according to the spectral encoding scheme, and may also include a light source providing the input light for illuminating the label.

1459827753-bae665d1-fbf9-464e-85fe-13fcbd16fa4d

A sheet feeder includes a roller configured to feed a plurality of sheets one by one in a sheet feeding direction to a feed path, and a motor configured to drive the roller. A distributed loop antenna may be formed on an elongated dielectric carrier and may have a longitudinal axis. The first and second resistors have variable resistances. The laundry treating apparatus can prevent moisture from staying in the interior of the laundry treating apparatus for a prolonged period of time, thereby preventing a failure of the laundry treating apparatus, generation of an offensive odor and propagation of bacteria in the interior of the laundry treating apparatus. , around 5-50%, larger than the diameter of the article being cleaned, wherein the cleaning liquid is supplied to the boreholes in such a way that it fills them completely. A first time delay permits the engine to warm up sufficiently at a run speed before switching the engine speed to an idle speed.

1459827754-0deb2aa2-e7cd-46bd-9fa2-cbf6871be265

A method and apparatus for converting a method call to a function call. The one end of the front element can exert traction on the front element and front magnet in a direction toward the one end. The base may be configured to engage the sleeve in a locked configuration so as to prevent removal of the sleeve and the tablet computer from the base and to disengage the sleeve in an unlocked configuration so as to allow the sleeve and the tablet computer to be removed from the base.

1459827754-358ea5e7-72fe-4bff-9668-c9ba803f3a2d

Storage optimization selection for virtual disks of a virtualization environment, where the storage optimization can be selected based in part on the disk type of a virtual disk included in a virtual machine. In various embodiments, the method provides accurate image data at best focus anywhere in the exposure field, image data covering an exposure-dose based process window area, and a map of effective focal plane distortions. The processor may enter a deadlock recovery state if the timer reaches a timeout before a resume message is received that indicates that the packet transmission can resume.

1459827754-6bb8f22e-216d-42e6-9280-cc0c64a5bbaf

\u201cTora\u201d is a classical strategy board game, constructed as a two-tiered, three-pronged, battlefield simulation. An intersite sensing interval is determined based on an intersite pacing delay and an intersite conduction delay associated with first and second pacing sites. The approach also involves determining the presence of the first sheeted substrate at a fusing position. In use a user squeezes the exterior surface to latch the switch to cause the apparatus to light, and may then safely handle the apparatus. The battery system further includes first and second bus bar members disposed in the first and second grooves, respectively. A correction value is calculated based on the determined positions of the compensation patters.

1459827754-c0a7ce0d-1f67-42cc-9de1-2d2da6fe1aef

A method and system for identifying a lost or stolen device is disclosed herein. Each support bar enables the transfer of power signals and control signals to each of the AV components. The frequency syntonization module can be configured to syntonize a frequency of a source signal from the source and a frequency of a display signal to be displayed on the renderer. The extruded components perform fence component positioning and establish pre-determined dimensioning and locations of the accompanying parts and pieces of the complete fence system and provide for

component attachment that is not visible when the fence installation is completed.

1459827755-47811f69-25c6-43c5-ba96-13e93e9feb6f

Provided is a cryptographic device implementing an S-Box of an encryption algorithm using a many-to-one binary function. These compositions comprise a Group 8-10 metal complex comprising a bidentate or variable denticity ligand comprising one or two nitrogen donor atom or atoms independently substituted by an aromatic or heteroaromatic ring, wherein the ortho positions of said ring are substituted by aryl or heteroaryl groups. Multiple independent hardware accelerators can be configured on a single circuit card assembly that is coupled to a computing device. The adhesive covers the side wall barrier structure and is located between the substrate and the releasing film.

1459827755-993097cd-1bb1-4df8-9a81-ad3f1d3f8ae6

Novel copper alkoxide compound based ink formulations and their chemical syntheses are disclosed. The duty cycle correction circuit includes a modulator of an inverter structure having at least one or more transistors. The second RF coverage unit is configured to communicate with the RF devices according to a second communication protocol different than the first communication protocol. The fibers can be cross-linked, if desired.

1459827756-1e839f09-5591-4270-bb15-1e540b4b8f35

Alarm tests are disclosed which use alarm test signals to assess alarms provided by medical devices. The device includes a memory for storing a plurality of frame data, a controller connected to the memory, a first motion estimation processor for performing a coarse-tuning operation and a second motion estimation processor for performing a fine-tuning operation. A logic circuit is coupled to the wordline to delay or gate the wordline signal until an enable signal has arrived at the logic circuit. At least some of the conductive structures are aligned with at least some of the bond pads of the first semiconductor die. The applet is capable of executing in the browser program at the second computer to display a desktop interface at the second computer and establish a connection with the shared file system.

1459827756-6100d793-f85e-497c-95c9-b111c5fa430c

A control module for a water heater includes a switching module that receives a voltage supply and outputs the voltage supply to the water heater. At least one of the isolated islands has an end apart from the boundary of a drain diffusion region of the ESD protection device, to form a gap between. Additionally, the method further comprises determining a vehicle identification number based on the registration request signal data and updating a vehicle tracking database with the vehicle transmission location and the registration request signal transmission time. The different-purpose identification hole may be a hole intended for the identification of a cleaning cartridge. Cells may also be pre-identified as being part of a well; in this case the algorithm will also establish well connectivity.

1459827756-677e3a84-f683-4836-9b9f-5d2d9dd05dbf

Various embodiments are directed to a system for managing an inventory comprising serialized products. The free acetic acid concentration in the bioreactor is maintained at less than 5 gL free acid. The samples of the received signal and the replica are shifted relative to each other for each correlation phase that is to be checked. The second plane may be parallel to and spaced-apart from the first plane. PCR products of selected regions of all known genes either binding to this sequence or whose expression is dependent on this binding, as well as genes interacting with E-box-binding genes and control genes, are arrayed on a nylon membrane or other appropriate microchip substrate, which is then used as an E-box-specific microarray.

1459827756-9474ba1d-7b58-4cdb-8b2e-18f1dc430e0c

A method of controlling a network system is provided. The body includes a pair of

side walls, and top and bottom walls respectively connecting between the side walls. A cell array block including a phase change resistance cell is arranged where a word line and a bit line intersect.

1459827756-c955e2ee-3ea7-478a-a9ef-c06db6a3e05f

The invention relates to a wireless manual pulse generator that includes a central processing unit, a magnification selector, a pulse generator, an axis selector, and a wireless transmission module. An optical transducing element, such as a layer of light absorbing material, is located in proximity to the in-fiber optic component. The optical system further comprises a lens holder including a lens, and one or more alignment features arranged on the lens holder. Based on this P\_Key mode, one or more P\_Keys from a P\_Key table associated with the logical port from which the request was received are written to one or more P\_Key registers allocated to the queue pair. The appropriate medical data is also routed to the distribution center for use in filling the prescription.

1459827757-1e9f15d3-f700-4508-8eda-eff09758ba6c

The Johnson ATV Safety Bar including an articulating adjustable roll bar, a seat back, a safety seat belt, an adjustable foot and leg guard and an articulating adjustable mounting bracket. 01 to 10 m, and surface roughness RzD2 of the intermediate transfer body is set to 1 to 30 m, moreover being RzD1RzD2. Further, the invention provides methods and systems for using a modifiable resist layer that provides a first set of optical properties before exposure and a second set of optical properties after exposure. This flexible member is inflatable to a pressure for supporting a person. In one example, the material of the second edge of the cuff portion is frayed to better engage the vessel walls and promote thrombus and/or tissue growth.

1459827757-8fc2c10c-3b4c-4f9a-a92a-e0a201ac721d

A data transceiver including a self-test data generator for generating test data, which includes a first pseudo-random number generator programmable so as to allow the operator to input the test data values. Each support member assembly comprises end members and a tubular support, the end members being movable in the tracks. In another implementation, a WCD may receive a signal from an in-vehicle femtocell and in response to the signal, the WCD may register with the femtocell to be served with wireless communication service by the femtocell. Cylindrical U shaped loops offset from each other and formed on opposite sides of central cylindrical rod placed under the flanged nail head for securing or anchoring objects attached to the anchor device. There are cross members with smooth sided upper support surfaces in front of and behind the mid floor beam, and cross members with smooth sided upper support surfaces in front of the rear floor beam. A circuit may be included for sensing when a voltage on an input to the oscillation circuit exceeds desired levels.

1459827757-f24a67a2-80a3-4f05-b631-2691583cb0a8

A connection system for connecting a supporting arm to an axle body comprises a first and a second supporting element each having a reinforced region, wherein the first and second supporting elements cooperate to substantially enclose the axle body, and wherein contact regions created between the first and second supporting elements are substantially vertically aligned. A silicon intermediate layer sandwiched between a metal aperture layer and a dielectric layer has been found to offer a good combination of low optical loss combined with superior mechanical properties. In other words, as the dog move in different directions the waste bag holding device is able to adjust its' position by swiveling about the device attached to the leash allowing the walker to have their hands free. The color and construction of the sheet also provide for insulation against ambient heat and reflection of some solar energy.

1459827758-84b4b44e-235d-4900-8657-5cc60fe84259

An integrated circuit having an SRAM cell includes a pair of cross-coupled inverters with first driver and load transistors connected to provide a first storage node and second driver and load transistors connected to provide a second storage node. A cache is established containing program code segments including library calls and application program interfaces that require security permissions at runtime. Fluid to be filtered flows through the main filter element from an upstream dirty side to a downstream clean side, and flows axially in the hollow interior. As a result, the present invention eliminates the need for separate processing stations for depositing the conductive material and cleaning the wafer. In a specific implementation, the selected keyword information is provided by an entity other than the end user.

1459827758-a833d837-45ca-4b50-b676-5fe536e26579

A method for processing data includes receiving a depth map of a scene containing at least an upper body of a humanoid form. A trolley is supported for movement relative to the guide track and has an elongate boom. When a new network device with IP forwarding capabilities is discovered, that network device is added to a list of discovered network devices. A second gas port is formed by a gas collecting ring channel incorporated into the valve body, wherein it surrounds a nozzle shoulder surface of the nozzle and is itself surrounded by an outer shoulder surface of the valve body. The particulate fillers may also function as anti-blocking agents when liner-free label media are tightly wound in a roll.

1459827758-c18d7977-8ced-4d57-9925-d4b00c9afe9c

A system and method of providing a voltage to a non-volatile memory. The apparatus includes first and second inputs for receiving traffic units from first and second source points, respectively. Each application server may have a persistent storage device associated with it for storing data. The selected recipient may be associated with at least one transport mechanism.

1459827759-18504b4a-5311-4150-a789-c6714a1ec4be

A wheelchair and an examination table is provided wherein there is provided a connector or connector assembly for connecting the wheelchair to the examination table. The pick and place tool secures a part at first location employing an induced compressive force by the part against a part penetration element of the pick and place tool. The switching member switches an on state and an off state of electric power supply from the power source to the primary coil.

1459827759-1b0033ca-93e4-4a1f-96e6-50185a07c170

An apparatus and method for rapidly loading vehicles or other load carrying compartments has an extensible conveyor attached to a base frame by means of a wheel and track design. The level-shifter circuit receives the charge pump output voltage as its high voltage supply and the charge pump enable signal as its input signal, and transmits the charge pump output voltage from its output terminal when the charge pump is enabled, and zero volts when the charge pump is disabled. When the holding pawl mechanism is moved to its DISENGAGED position, the negator spring members cause the film roll carriage to be vertically elevated, whereas when the holding pawl mechanism is disposed at its ENGAGED position, movement of the film roll carriage lift cable, and the film roll carriage, is effectively prevented.

1459827759-53ce256b-d31a-4abf-8970-8e35773d78b9

A method for erasing a flash memory group is provided, which comprises the following steps. Data collected by sensors on the snow removal unit or data collected from a secondary source can be used to control the operation of the snow removers. In an embodiment, the call agent is a wireless call agent, such as a mobile switching center. The registers are capable of defining an address area such that in use the processor is arranged to permit other partitions to access at least one address area defined by the at least one register and to deny other partitions access to address areas other than the at least one accessible address area. Shadow

areas on the backing are retained and may be transferred to the inserted background scene.

1459827759-92030b81-8674-407b-8f06-d5201e34d861

Disclosed is an electronic information terminal device, which makes it possible to establish an area having an arbitral shape only by performing a simple action on a multi-touchable panel provided therewith. Also provided is an electrospinning process for the preparation of the fiber assembly of the invention and its applications. The side rail pads are positioned on the bed frame with flexible hinges in a manner that allows their alternate movement between a placement that fills the space between the side rails and the mattress when the side rails are in a raised position, and a placement away from the side of the mattress when the side rails are rotated into a lowered position.

1459827759-f9933e84-d10f-418e-9cb8-9e40f04b817a

The present invention relates to a stable, aqueous wrinkle controlling and, optionally, odor-absorbing, composition, preferably for use on fabric. The implant includes a first flexible hinge that couples the upper plate and the intermediate plate, and a second flexible hinge that couples the intermediate plate and the lower plate, the first flexible hinge extending along a first axis and the second flexible hinge extending along a second axis that traverses the first axis. A circulation system draws fluid from a reservoir and fills the bladder with the fluid.

1459827760-72773383-fbc8-41e0-b6ce-ae488bba5ce3

A power system having a DC electric motor is disclosed. And a hitting panel, in a periphery of a rear side of the hitting panel is disposed an annular wall, and the hitting panel and the annular wall are retained in the annular groove of the body respectively. After passing through the DCCC, the air is saturated at a temperature equal or close to that of the water. The control-triggered stage is connected in series to the one or more auto-triggered stages.

1459827760-8f1b7f0c-a297-4477-9cb0-8144275e7322

A short arc mercury discharge lamp including an arc tube filled with at least mercury and a rare gas, a cathode and an anode positioned opposite to each other within the arc tube, the cathode having an tapered area which tapers in a direction towards the anode and a projection which protrudes from the tapered area in a direction towards the anode. The length of optical waveguide can comprise at least a first waveguiding region configured for propagating spectrally broadened light in a forward direction toward the output and can be further configured for receiving backward propagating light responsive to the forward propagating light. Either the first or second electrode is electrically connected to an electrical bias source regulated to set a resistance phase of the MIT material.

1459827760-b8a6010d-cfea-4591-9858-6c91a061e8fb

Provided are a virtual multi-antenna method for an orthogonal frequency division multiplexing system and an OFDM-based cellular system. The multiple disk units include a master disk unit and a one or more data-mirroring disk units. R1 is alkanoyl group or aroyl group, and R2 is hydrogen atom, alkanoyl group or aroyl group, or R1 and R2 may be combined together with the N atom to form a cyclic imido group, which is useful as an intermediate of medicines, etc.

1459827760-bde67871-2c24-451c-af75-fe0283346091

A linking ligand compound includes three bidentate chemical moieties distributed about a central chemical moiety. The system includes first asynchronous encoder logic and second asynchronous encoder logic for controlling the state of the communication system such that bi-directional communication is enabled without a direction control line. The resistive memory element stores information based on a resistivity of the resistive memory element. In addition, the holding member has:

and a holding portion that disposes the light guiding member along a main scanning direction, and positions and holds an end portion on the light emitting portion side in the main scanning direction.

1459827760-ca613977-1eb8-4652-9b8a-ae99afb3951a

A method and system for providing real time scratch-off lottery like games over a wireless network. The device may be used to increase the blood flow in a local region of the body, and in preferred embodiments provides a device for regulating the core body temperature of a patient. Preferably the deflector deflects substantially all of the light from the reader, so that none of the light from the light source directly illuminates the bar code. The first energy barrier is higher than the second energy barrier.

1459827761-0e30a581-26cf-45a3-9416-08ec06b03d54

This invention relates to a chemically unmodified hyaluronan product which has a high molecular weight of 9-25 million Daltons and a zero shear viscosity from 0.60, and a low refractive index layer with a refractive index of not more than 1. If the ID code represents a safe shipment, the shipper or third-party returns an acceptance message. Hybrid maize seed, plant or plant part produced by crossing the variety PHGC2 or a trait conversion of PHGC2 with another maize variety.

1459827761-5ca0e5a4-891a-4b76-95a9-47abfda642e5

A tunable bridge for a string musical instrument is provided to enable a user to rapidly switch between two pre-selected string tunings simply by movement of an actuator arm. The key is to insure a specific combination of liquid crystal inducer and of modifier so that the isethionates will be stable at low and high temperatures. The refractive index of the first layer 30 is set to be 1. Techniques are disclosed that apply different read parameters depending on how many times a block has been programmed/erased. Additionally, the stimulation device inhibits unnecessary back-up stimulation and threshold tests when fusion occurs, and provides appropriate adjustment of stimulation parameters based on confirmed fusion detection such that fusion re-occurrence is minimized.

1459827761-b5e0e61e-adda-4a34-86b0-db65b3d1d240

A NMOSFET semiconductor device is formed having an LDD structure by simultaneous co-implantation of arsenic and phosphorous to form an N layer. In another aspect, a fluid warming system increases or decreases power to a heater assembly to adjust the fluid temperature to ensure that the fluid is at an appropriate temperature when it reaches the patient. The first cardiac region is paced to maintain at least a minimum cardiac rate, and the second cardiac region is paced to maintain at least the minimum cardiac rate when a pace in the first cardiac region is inhibited. At least one first electroacoustic transducer comprises a series circuit of a number of partial transducers, wherein each partial transducer has an individual aperture that is reduced in relation to the overall aperture A0, and wherein the individual apertures add up to the overall aperture.

1459827761-bef66106-9fdb-4253-9ee9-4dee4df97565

An embodiment of the invention provides a system and method for displaying the scheduling availability of a user. The pressing member has a periphery provided with a mounting seat which has a fixing recess to receive a hanging rod of a support rack and to abut a surface. The signaling information is sent in each repetition period to allow wireless devices to quickly obtain this information.

1459827762-574d3155-485f-45a0-88cd-02c2106be95d

An investment casting pattern is formed by installing a first core to a first element of a molding die to leave a first portion of the first core protruding from the first element. The relay has very low contact resistance when the relay is in its ON state and enhanced contact-to-contact isolation when the relay is in its OFF state. The control circuit continuously monitors the voltage on the input capacitor

and automatically decreases the maximum allowable conduction time of the semiconductor switch when the voltage falls to a level that will not guarantee proper operation of the power supply. The optical fiber achieves reduced bending losses without significantly increasing numerical aperture. The pigmented toner image is applied using the segmented roller and is then transferred to a receiver sheet. A tail part of the tab holder of the zip fastener slider extends outside the slider body and a throat such that between the tail part of the tab holder and the end of the top plate of the slider body there remains a threading gapthreading point through which the pull tab can be threaded into connection with the tab holder.

1459827762-ac2c9373-0cc9-41b6-a0ff-b9b27267704b

A power steering fluid refilling and draining device according to the present invention includes a frame mounting with a fresh fluid tank including an output pipe connected to a first three-way valve and a refilling port. In this method, a sequential update block is provided and a write command is received to write data. A modulator capable of varying laser attenuation with a voltage is disposed so as to precede the laser, thereby the laser noise when reading data from the optical disk can be reduced without lowering the laser power when in writing.

1459827762-b8c72831-c0c5-4a89-a2ee-a3cbb3bbbbb5

A calculation system for calculating the control signals which are designed to perform a frequency-dependent weighting of the angular velocity signals and the angular position signals. The angular rate detection apparatus includes at least a gyro sensor detection circuit connected to an oscillator, an AD converter, a digital calculation device, and a reference voltage generation circuit. A method of dissipating heat generated by an LED-based lighting system includes configuring a PCB with conductors on a front-side of the PCB, such that when one or more LEDs mounted to the conductors generates heat, the heat dissipates from the one or more LEDs to the conductors. In this manner the corrosion resistant material prevents corrosive substances from penetrating the connection. A filter may be fluidly connected with the fluid passage for filtering out one or more contaminants present in the fluid. The read signal processing section has an interface section which transfers, when the command requesting execution of an application is set to the interface section, the command to a command register.

1459827763-09a6778c-31c1-4537-a058-839ddfacc72f5

The invention is a method for using a payment and inspection service to purchase merchandise on an online sale website. One of the power amplifiers is operatively coupled with each of the transmit antenna elements and mounted closely adjacent to the associated transmit antenna element, such that no appreciable power loss occurs between the power amplifier and the associated antenna element. A synchronization detector detects symbol synchronization. For each pair of code modules, the first code module and the second code module may collectively implement a function in the test instrument. A simulation of the system is executed using the model of the system and the models of the individual components of the system.

1459827763-49207c95-f86f-48f8-a872-644793d2f0f6

A method and circuit for achieving minimum latency data transfer between two mesochronous clock domains is disclosed. A fluorescent-label binding-substance in an amount corresponding to the amount of a detection-target-substance in a liquid-sample binds onto the sensor-portion. The predetermined event can be related to deterioration or improvement in network performance, and the device can respond by correspondingly decreasing or increasing the service quality of the packets being formed. Alternatively, a content inventory list is downloaded to each content server that indicates which content server is to download each content file and which content servers are to receive the content file.

1459827763-49af2731-836f-40ac-8888-360093443ceb

An electronic display strip is attached to the shelf front of retail shelves, each shelf having an address code assigned through a control computer. The invention also concerns an NMR resonator with at least one RF coil, wherein superconducting conductor structures of the NMR resonator are disposed at a radial separation from the measuring sample with the superconducting conductor structures extending beyond the RF active part of the measuring sample in the z direction. An underfill material is deposited over the wafer. The adjustment rod is made of an electroconductive material, and its insertion depth is adjustable in the axial direction of the adjustment hole. The intermediate protograph is then lifted via a circulant matrix to the expected codeword length to form a protograph-based low-density parity-check code. Interfaces can enumerate modeling elements and their relationships, add, delete or change connections between model elements and states, and initialize the surface, including loading an existing diagram such as saved as an HTML document.

1459827764-063f4a24-7b52-4a54-b98f-177c216739ef

A method and system for designing a dummy grid in an open area of a circuit adjacent to at least one metal line comprising the circuits is disclosed. The method, system, and computer program product provide for receiving a query for optimizing, collecting statistics specific to the query prior to generating any access plans for executing the query, and generating an access plan for executing the query based on the collected statistics. For any given set of choices of numbers of pistons and sizes of pistons, disks, and gears, there are disclosed dimensional constraints useful for more efficient functioning of the engine. Real time and archived events are utilized, in some embodiments, for root cause analysis and/or process and/or performance improvement. Internal wiring of the probe extends from the socket and connects with the two conductors of the tip.

1459827764-d70a4a0a-b57f-4fb7-a40a-cd9c2f973099

A system and method are described herein that prioritize users into waiting queues based on the previously measured end user response time for each user or a user's expectancy for a shorter response time. The container may be made from a tube of biodegradable or non-biodegradable material. By adding the harmonic compensation circuit to the PFC circuit, the distortion of input current is decreased and the power factor is enhanced.

1459827765-4ab60a2d-acf4-4503-97ff-e23078ee1571

A parallel connected double-phase full-wave brushless dc motor includes a first drive member, a second drive member, a first sensor member, a second sensor member, a first motor coil and a second motor coil. The package includes an element which itself comprises a film tightly wrapping the portion and in contact therewith, and tear-initiating member for enabling the sheet to be torn along at least one tear line when a gripping tab of the element is pulled. The toggle end of the shaft is passed through the passage and the toggle is rotated into a locked position preventing removal of the shaft.

1459827765-86bf6972-3ca4-4f1e-a5ae-d7170f5f9677

A method and system of verifying proper execution of a secure mode entry sequence. The presentation tool automatically creates and presents the progression graphics for viewing by the presenter and the audience. The sets of coordinate values are determined using responses to a plurality of questions. The substrate can be provided in a composition which demonstrates unexpectedly long storage stability.

1459827765-88c7920c-11b8-4dd7-b3fd-8122ae996b87

A customer compatible software is electronically provided to a customer based on a customer specification provided through a web interface. In the method, a first gesture input is received at a first mobile computing device. Preferably, the survivability gateway is configured so that if a network failure occurs, the user does not experience service degradation, or at least significant service

degradation. This reduces the number of files that need to be considered when performing an index update. The first and second ends of the rigid member are then decoupled from the steel receptacles of the joist/slab and column, respectively.

1459827765-9452d4c9-5d8f-4dc0-9624-4cb80c140de5

Wrist and upper extremity motion systems and method may include positioning a subject's wrist or upper extremity in a motion device, and actuating one or more motors associated with the device to provide at least one of assistance, perturbation, and resistance to a wrist or upper extremity motion. A standardized data collection method enables IP assets to be characterized, rated and valued in a consistent manner. An operation controller controls an image carrier at a speed so that adjacent dot images in the sub-scanning direction overlap. Also disclosed are compositions containing the compounds of Formula and a method for controlling plant diseases caused by fungal plant pathogens that involves applying an effective amount of a compound of Formula. The substrate is separated from the suspension.

1459827766-95a01b85-3361-4186-8358-2dcc48e53907

A method and system for guiding a vehicle comprises a location module for collecting location data for the vehicle. A p-type well region is formed beneath part of the partial oxide film which isolates NMOS transistors from each other, and an n-type well region is formed beneath part of the partial oxide film which isolates PMOS transistors from each other. An inlet operates as an RFID tag, includes an antenna and an IC chip connected to the antenna, and is mounted on the inner surface of the folded portion in conformity with the position of the slot. The data management table indicates an application read priority level for each title.

1459827766-db0854e8-8a0f-457f-b6dc-fd0f013aa451

A pulse circuit, a plasma generator, and an excited atomic molecular state generator useful in an electric oxygen iodine laser of the present invention. The amount of the acid-stable particles in the coating composition is from 0. The magnetic element further includes a package body for enclosing the pair of coil sets therein. The status information can then be used to determine the network device with which the user is most likely in the vicinity of. The product can be composed of either one or a number of beads in a dosage form, including either capsule, tablet, or sachet method for administering the beads.

1459827766-dc5667ed-59d8-436f-b0c2-d09ff11290ab

To improve reliability of interlayer connection of a multilayer wiring board. Updating price information in a local POS product price database causes a DDU control computer to communicate the price information to the DDU. The cloud point monitoring device design allows it to be made small enough to be mounted in a fuel system of a vehicle. A hitch assembly joins adjacent ones of the carriers. The films are dimensioned in conjunction with the ion implantation operation to enable the desired dopant profile and concentration to be formed in the channel substrate material.

1459827766-fa22c5d5-4595-4239-b628-dabcdd65b070

A laser apparatus that includes a laser light generation section, an optical amplification section, a wavelength conversion section and a suppressing section is provided. The thermal adhesive has a melting point of higher than about 150°C. The at least one metering element has a rectangular portion for producing improved control stability, a tee and slot portion for controlling thrust during a start transient engine phase, and a fixed turbine bypass portion for accommodating a retainer.

1459827767-42bff3fe-5cf5-40c9-b5dd-423a552c7621

Management of move requests from a factory system to an automated handling system is provided. The invention further relates to a method for painting a substrate,

such as the housings of cellphones, in which said paint is applied on the material and is made to undergo cross-linking by means of exposure to ultraviolet radiation. A reactor comprises a reactor solution comprising an oxidant in fluid contact with the cathode electrolyte. In this system the possible irritants and contaminated crawl space air, basement air, or attic air is not vented into the habitable living space of the building, thus providing a healthier living environment for the inhabitants.

1459827767-fb689aa2-4032-4870-87f6-54ff9508810f

A nozzle assembly includes a first needle and a second needle controlling respectively fuel flow towards a first series of outlets and a second series of outlets. The system also collects from a plurality of users, trustworthiness ratings for various information units. The robot chassis carries a supply of cleaning fluid and a waste container for storing waste materials collected up from the cleaning surface. Movement of the 6-degree-of-freedom stage is caused, at least in part, to be controlled based on the position information, the attitude information, or both the position information and the attitude information.

1459827768-33191427-c05e-42b4-8708-949b51dffe99

Process for the production of alkoxysilanes of the formula  $\text{HSiR}_3$ , where R is an alkyl group containing 1 to 6 carbon atoms, and/or alkyl orthosilicates of the formula  $\text{SiR}_4$ , where R is an alkyl group containing 1 to 6 carbon atoms. This controller detects either changes in rate of rise in liquid in the collecting tank and/or water level in the well when the pump is in a run cycle. Each timeslot's data is stored into a predefined location in buffer memory. The third and fourth switching valves each perform a substantially same oil pressure transmission when the state of the second and third actuators is reversed with respect to the first switching and second switching valves, respectively. The first test pattern is read at location t and the error rate of the signal is measured. An isolator which insulates and separates the transceiver and application controller includes primary and secondary side circuits insulated from each other on a substrate and a capacitive insulating means to transfer signals between the primary and second sides while insulating and separating the primary side circuit from the secondary side circuit.

1459827768-3d1715fe-b22e-4597-b2ef-76a6b39424fd

A semiconductor apparatus includes a semiconductor substrate of a first conductivity type, a base region of a second conductivity type formed on a principal surface of the semiconductor substrate, a trench formed in a periphery of the base region, and an endless source region of the first conductivity type formed on a surface of the base region along the trench. Due to a reduction in the number of lines involved and an elimination of battery back-up, a reduction in size is achieved. The member is resiliently deformable from the default shape to conform to at least a portion of the container and is attached by the resiliency of the member. The panel has at least one control mechanism mounted thereon. The undecomposed  $\text{NH}_3$  partial pressure control step, the  $\text{CO}_2$  partial pressure control step and the  $\text{H}_2$  partial pressure control step are carried out such that the partial pressure of hydrogen in the heat treatment furnace is at least 0.

1459827768-f3eed10f-69e3-4a41-847e-2e75db355784

A dual band antenna unit for a mobile device may include an antenna receiving part, a first antenna part having a first contact point and a second contact point, a second antenna part, a first feed point and a second feed point. A mean-variance efficient frontier is calculated based on expected return and standard deviation of return of each of the plurality of assets. The sensor may be calibrated using a calibration set of one or more matched sensor and reference analyte data pairs.

1459827769-0af23800-18b4-4180-948e-783f2010246d

A thermally conductive polymer molded article formed by molding a thermally

conductive composition which comprises a liquid crystalline polymer and thermally conductive filler having magnetic anisotropy, wherein the liquid crystalline polymer and the thermally conductive filler are oriented in a predetermined direction by a magnetic field. The operator may receive signals from a wireless or wired wall station transmitter, a wireless keyless entry device and/or a portable remote transmitter device. A width  $W_2$  of a connecting portion at an end portion thereof is larger than a width  $W_1$  of a connecting portion at a center portion thereof.

1459827769-65f6b7f9-ec47-4ab9-9482-4958090e48b3

Disclosed are a touch screen integrated organic light emitting display device which has a thin profile and is implemented in a flexible type and a method for fabricating the same. In order to ease wirebonding requirements on the controller die, the controller die may be mounted directly to the substrate in a flip chip arrangement requiring no wire bonds or footprint outside of the controller die. Consequently, the swivel snap hook can be molded such that the front-end outside engaging face of the stopper piece is closed to the front-end inside engaging face of the hook body. The processor and the display are cooperatively configured to display right channel content on a first subset of the plurality of pixels that are viewable by a right eye of the viewer through the apertures and display left channel content on a second subset of the plurality of pixels that are viewable by a left eye of the viewer through the apertures.

1459827769-754ff00a-d4e7-4e6e-948f-695d4b1b9c55

There is provided a coated zeolite catalyst in which the accessibility of the acid sites on the external surfaces of the zeolite is controlled and a process for converting hydrocarbons utilizing the coated zeolite catalyst. The method embodiment comprises building a training corpus comprising a broad stylistic coverage of web pages, segmenting a web page into information blocks, identifying semantic categories of the information blocks using the training corpus and applying the identical semantic categories in a web-based tool. , in the case where only three of a spacecraft's four ion thrusters are available. Distributed microprocessor controllers established in a network configuration utilizing controller network protocols reduces the wiring and connections necessary for the assembled system. Finally, a third disclosed embodiment addresses desensitizing the lamp from various deleterious parasitic capacitive effects associated with the power delivery to one or more lamps. At the end of the POST configuration code, the register values are stored in non-volatile storage.

1459827769-7c02ea37-7059-4980-9c85-9ff2ddb45e57

A reporting system is described herein that allows a report author to declare data reporting structures that specify to a reporting application how to dynamically categorize data with changing or potentially unknown characteristics. A compression element is also provided that is attached to the internally-threaded rotatable nut. The light-emitting pattern surface includes a light-emitting part in which the light-emitting patterns are formed; and an edge part which extends along the four edge surfaces to enclose the light-emitting part and in which at least one fixing groove is formed to fix the LGP. A control moves the blotting away from the carrier depending on a change in the detected optical properties. The switching unit switches cylindrical coordinate control for controlling the arm unit such that a trajectory of the hand overlaps with any one of lines radiating from the rotation axis and rectangular coordinate control for controlling the arm unit such that the trajectory of the hand overlaps with none of the lines at a predetermined timing. The antenna elements are coordinated to function as an active phased array capable of finding and executing a resonate mode of a target.

1459827770-0c932f8a-5a5a-4a19-85a2-d0c091527d07

A phase change ink composition suitable for ink jet printing, including printing on coated paper substrates. The light bulb speaker can be screwed or secured into a

standard light bulb socket. At least one surface of the structure is covered with a covering layer formed by a deposition process. In the locked position, the cap is raised and rotated so the knives are inside the cap and inaccessible. % of an anionic surfactant, wherein the laundry treatment composition provides sufficient softness and anti-static benefits without minimized formation of non-soluble flocs.

1459827770-42ec4705-1f24-49b3-88a8-df6bd9c4e14d

A memory device is obtained in which stable recording of information can be performed and a period of time required for the recording of information can be shortened. Systems and methods for processing emergency calls to eliminate emergency callback failure in response to an emergency call being disconnected are provided herein. The device also includes cover members having a front portion and a back portion. Criteria to determine which of the control information items is to be included in the first common control signal are updated in accordance with a statistical tendency of the delivery request signals from the terminal apparatuses. The corrosion-resistant magnet of the present invention as a means for achieving the object is characterized by comprising a chemical conversion film containing at least Zr, Nd, fluorine, and oxygen as constituent elements and not containing phosphorus directly on a surface of an R<sub>2</sub>Fe<sub>2</sub>B based sintered magnet, wherein R is a rare-earth element including at least Nd.

1459827770-ad55f0d2-e089-4cc9-b908-490b60d2cdc2

An ink containment system for an inkjet cartridge, for storing ink for printing, comprises a rigid basin member and a rigid moveable plate. The difference between two voltage values output from the CDS circuit 20 is obtained by a difference arithmetic circuit 30 and held by a S-H circuit 40. The second headband element includes a second pinion rack. The method may further include the operations of setting a flag to designate selected portions of the database, and writing the selected portions of the database to the primary storage device of the computer system. That is, they must swing at some pitches earlier than others, depending on the location of the pitch.

1459827770-b6e40aa0-8639-4efa-9e62-30f704def05f

A system and method that includes the use of a bank checking account that can be connected to insurance coverage. The invention is intended to make it possible to test pressure sensors still in a wafer compound for their function. In the beginning, a first data point with greatest illumination intensity is selected from the interference data points on the waveform. The software patch is applied on the one or more software components running on an application server node of the second instance of the cluster.

1459827770-ff309f18-b205-49ae-923d-ba6c6a729459

An SOI FET comprising a silicon substrate having silicon layer on top of a buried oxide layer having doped regions and an undoped region is disclosed. An ultrasound transducer for generating ultrasound energy is carried by a transducer housing that seals the transducer and may also include a positioning element for positioning the transducer proximate an application area to which generated ultrasound energy is to be applied. A method of dampening low frequency vibrations associated with telematic antennas is also disclosed.

1459827771-232178d1-f218-4100-be15-2aef4b824a01

A mobile terminal having a first body, a second body pivotally attached to the first body, the second body being movable between an open and a closed position, and an input device at an exterior surface of the mobile phone that is exposed when the second body is in the closed position. A second sealing strip comprising elastic has a first mounting element on a first end which defines a first inner space for retaining the second axis, and a second mounting element on a second opposite end which defines the second inner space for retaining the first axis. Additionally, the color contrast adjuster can store multiple problem and preferred

color combinations for each user.

1459827771-29ad1e5d-8187-4d70-b3f1-c0cad055e8fd

A sample thief comprising: an outer hollow rod with an open end; a piston with a plunger end inserted within the outer hollow rod; and the outer hollow rod having an adjustable means. The lower electrode is adapted to support a substrate and coupled to a RF power supply. The invention may be implemented in any licensing model in which the use-information is important, like a Try before you Buy model, renting a program, and so forth. The spectral generator also includes a spectral calculator that is in communication with the covariance matrix calculator to calculate a high-resolution spectral vector based on a location matrix and a noise subspace matrix estimate. An article such as a high-efficiency photovoltaic cell is formed by a process of deposition of the lead-free paste composition on a semiconductor substrate and firing the paste to remove the organic vehicle and sinter the metal and fusible material. A detection unit compares the first low-exposure image with the second low-exposure image to detect a motion of the subject.

1459827771-b89039a4-ed11-42c9-9c33-7d8bd0ea895d

The panel includes a water resistant barrier layer secured atop its outward facing surface. The system and method also provide for disposal of contaminants associated with the conversion process using a combustion chamber of at least one gas turbine. One or more servlets are initiated in the gateway server. The retractor can expand from having a very small diameter to a very large diameter. Such graphical representations provide the practitioner with valuable information characterizing the high order optical errors of the eye for use in diagnosis and treatment of abnormalities and disease in the eye. The invention allows for high joint torque levels with low frequency content, thereby enabling rapid arm movement without induced oscillation.

1459827771-d9a0fe59-79b9-4d79-bf1f-84ec8d060174

A duplexer formed on a piezoelectric substrate includes a low band side filter and a high band side filter, and has an improved isolation characteristic in a pass frequency band of the high band side filter. In a preferred embodiment, temperature sensors capable of measuring the temperature of body tissue and transmitting the temperature data digitally are incorporated in a catheter or probe ablation system that also includes electrodes in operative contact with the sensors. The dynamic signal is obtained by not sampling the voltage reference on every sample. The low-pass filter is used to filter the high-frequency signal portion off the power-amplified signal and output an output audio signal. Both of the gate electrodes of NMOS transistor Q11 and NMOS transistor Q21 are formed by the upper-layer electrode-use polysilicon layer 107. Also disclosed is a process of releasing hydrogen from a storage material including the steps of: providing a complex metal hydride; combining the metal hydride with an ionic liquid in a desired amount forming a mixture; and heating the mixture to a temperature releasing hydrogen wherein the temperature is lower in comparison to the complex metal hydride alone.

1459827772-23edb744-372b-4832-a8f3-d0ba8617e62d

A method of recovering overerased bits in a memory cell. The peripheral pixel state determination module determines a state of a flat area and an edge area at a periphery of a filtering target pixel in decoded image. A printer/copier includes a line cord connecting the printer to an AC power source for providing line current to the printer for printer operation.

1459827772-321ef904-7c0d-48b1-8f0e-162a07bdb7c3

Chilled coolant is prepared by liquid coolant utilizing the latent heat generated by a gasification of liquefied propylene, for example, and this chilled coolant is used in heat exchangers which are used in a process for production of acrylic acid or acrolein. The training system includes a server. A stacked semiconductor

component includes the semiconductor substrate, and a second semiconductor substrate stacked on the substrate and bonded to a through wire interconnect on the substrate. In use, the lock assembly prevents movement of the container opening assembly when the lock assembly is in the first position and allows movement of the container opening assembly when the lock assembly is in the second position. The combination of the grid and bias potentials corresponds to the desired ion implantation depth profile in the workpiece.

1459827772-5b68f12c-02e5-4ec6-af4b-3b0dddc914a8

The composition that permits spray dyeing of a cellulosic, such as cotton, fabric or garment. Summary statistics, such as the means and standard deviations of the differentiation metrics are used to describe a set of known image colorimetry classes. The controller can be malleable and symmetrical, and user interaction with the controller can be provided with substantially arbitrary orientation. Therefore, difference in thermal conductance is produced in the axial direction of the cylinder liner.

1459827772-8c21b4d9-bf63-4f16-9e42-480653cad6ee

The invention relates to compounds of formula :processes for their preparation, pharmaceutical compositions containing them and their use in the treatment of conditions or disorders which are mediated via the GPR38 receptor. Data generated is used to control the True or Apparent Density or Entrained Air content of liquids within optimum ranges, e. The driving skids are displaceably guided on two guides which are spaced from each other in the z direction. The switching transistor is turned off by application of a voltage to increase a channel resistance so that a current flows in the internal phase change material to operate the memory. Since the silicidation blocking layer consisting of PE-SiON is formed at a low temperature of less than 400 Celsius Degrees, it is possible to prevent diffusion and redistribution of impurities in gate and sourcedrain regions of a transistor during the deposition of the silicidation blocking layer.

1459827772-bfc08599-eccf-4ede-805e-8091aa68c5cc

Bisphosphonate compounds and related methods of making and using are disclosed, including pyridinium-1-yl, quinolinium-1-yl, and related compounds. The antenna weights are determined using an input covariance matrix, and the input covariance matrix is determined subject to a predetermined power constraint and a predetermined, non-zero interference constraint. By changing the intensity of an applied DC field the permeability of the artificial electro-ferromagnetic can be properly varied over a particular range of frequency. The protein concentration of protein solution is simultaneously measured, and the solubility, of protein is determined from the observation results of interference fringes together with the measured protein concentration and precipitating agent concentration. Furthermore, a composite assembly for processing a plurality of printed circuit boards and also a use of such a method and composite assembly are provided.

1459827773-2344ef08-f015-4a3e-8f28-795e73850b8d

A method and apparatus for enabling the non-invasive acquisition of physiological parameters of a mammal, while allowing the mammal to move around a predetermined area is provided. The plurality of baluns and the capacitor are built into a single chip. The administration of such molecules provides supplemental Creatinol with enhanced bioavailability and having additional benefits conferred by the specific fatty acid.

1459827773-2a55db9a-f6e4-4cfe-9565-013e54abf8f4

An apparatus to sense an SCR short circuit failure and prevent overheating of solid-state power supply equipment, such as a welder, during an occurrence of the short circuit failure is provided. The piezoelectric-resistor has at least one bend, and a metal wiring is located on the insulting layer positioned at the bend. The outlet portion of the channel introducing the second fluid to the space between

the treatment planes is provided with a plurality of split channels. Finally, a Fischer-Tropsch catalyst selected from the group consisting of cobalt, ruthenium, iron and combinations thereof is placed upon the second pore surface area. It thus may serve as an aid to law enforcement officials in identifying stolen property and prosecuting theft thereof. Three-dimensional conductor carrier layers can be easily produced by means of the inventive method in such a way that electronic components of different thicknesses can be introduced into the chip card body without entailing problems.

1459827773-cd72feaf-8ba5-4243-b556-e503a1e7bfef

A control device pivots an X-ray arrangement repeatedly between two final angular positions about a pivot axis. The braking effect of the first brake is adjustable with the aid of a first adjusting device which is turnable about an axis parallel to the axis of rotation and the braking effect of the second brake is adjustable with the aid of a second adjusting device which is turnable about an axis parallel to the axis of rotation. Each of these sets of values may be sorted, for example, by recent modification date, for presentation to a user. The position of each region is judged by determining which of a plurality of sections each image region is included in.

1459827773-ef5e27cd-ce92-4bbd-85a7-d96bc47d59b0

The present invention provides an apparatus and method for accessing data values in a cache and in particular accessing data values in an \u2018n\u2019 way set associative cache. The cleaning element is an abrasive material that is affixed to the underside of a weighted chassis that is suspended from a pair of articulating arms connected to the respective wheeled trucks. The presser is dismountable as a result of removable shaft.

1459827774-15c0c560-f6f4-412b-8ff6-aae57fe8e1d9

A mobile ad-hoc network may include a plurality of nodes for transmitting data therebetween and a policing node. The cell includes a first transparent cover that is placed on a first surface of the block and defines with the block of the cell a first recess groove of a first electrically conductive wire element. The halogen free flame retardant composition is a mixture of 20 to 90% by weight of magnesium hydroxide and 90% to 20% of powder B. This can be decoded using a diagonal matrix containing frequency domain channel coefficients on its diagonal entries after FFT. The metal inhibitor contains one or more types selected from the group consisting of aromatic compounds having a triazole skeleton and one or more types selected from the group consisting of aliphatic compounds having a triazole skeleton and compounds having any one of pyrimidine skeleton, imidazole skeleton, guanidine skeleton, thiazole skeleton and pyrazole skeleton.

1459827774-ac6520c6-dbf0-44d0-a7b8-d51ae89c2877

Energy efficient methods and systems for using multi-dimensional activity sensors with implantable cardiac devices are provided. A printer resident in a gaming machine is provided and has at least one communication port for communication external to the gaming machine. The device measures angle directly, avoiding the integration of electronic errors and allowing for higher performance in attitude measurement. A mastication iteration counting unit 41 detects peaks in periodical changes of  $S_d$  which is the difference between the output  $S$  and the moving average value  $S_{ma}$  of the output  $S$  and counts the peaks in periodical changes of  $S_d$  as the mastication iterations. The device has a top, a bottom, sides and a plurality of terminals, including a non-top terminal.

1459827774-ed91a571-bebd-4c73-b964-c720899c2696

An organic light emitting device includes a transistor having gate, source, and drain electrodes, and first electrode connected to one of the source or drain electrodes. The oscillator may include a first buffer stage a second buffer stage. The drive assembly includes a drive motor, a drive drum rotateable by the drive

motor, and drive cable connecting ends of the guide bracket with the drive drum. The processor electrically connected to the transceiver calculates a next report period, estimates a next reference signal received quality and adjusts a first threshold according to a variance of a reference signal received quality. The first backplate and the second backplate are electric disconnected and have venting holes to connect the cavity and the chamber. There are many advantages associated with the cup dispenser of the present invention.

1459827775-1671ffe7-fd0e-4a1b-80be-d0e55f6c2566

A method for managing a display space for a 3D environment is provided. During an impact, data from various sensors including lateral acceleration sensors are stored in the memory. The user feedback parameter for a given record may be selectively updated in response to detecting multiple accesses thereto by a user and/or in response to detecting that the record is the most recently accessed record in the result set.

1459827775-37700719-cc00-4b19-9d03-327e402e594a

A rosin composition includes a gum rosin, an emulsifier, and a randomizing additive. An extraction section 51 extracts one picture from each GOP. The angle of the V may be approximately  $115^{\circ}$ - $130^{\circ}$ . The storage assemblies are selectively coupled together. At another step, a firing chamber is etched into the orifice layer.

1459827775-ac4da6a3-06ad-414d-9efb-b40538c0e2b9

A trimmable resistor for use in an integrated circuit is trimmed using a heater. The system includes a processing unit and a storage device coupled to the processing unit. Each first coil has a first connection portion and a first coil portion connected to the first connection portion and extending along a first direction. If the judgment is YES, loss of fine texture in the image by dynamic range compression is significant. Ar1-Ar4 each independently represents an aryl group or a heterocyclic residue group.

1459827776-194e919d-fbbc-4fa6-b2c9-8f7624d7c05e

This invention uniquely partitions the pBIST ROM for storing program and data information. The plug housing has at least one plug-type connector with at least two plugging elements. , a finlike structure can suffer structural damage during chemical mechanical polishing steps. The signal is filtered with a filter having at least one high-pass filter and one low-pass filter connected in parallel. In a third control state at least two of said LEDs are connected in parallel while also at least two of said LEDs are connected in series. It comprises saponification of said alkylene terephthalates with an aqueous sodium solution, adding a sufficient volume of water to ensure solubilization of the entire alkaline metal terephthalate produced in the reaction medium liquid phase and crystallisation of the sodium terephthalate by concentration of said liquid phase.

1459827776-36f36b91-5c32-466a-bb0e-c2cb46a34f3f

Serial data transmitter circuitry on a PLD includes a number of features that enable the transmitter to support many different communication protocols under a wide range of circuit conditions. In an exemplary embodiment, the offering generated is generated for a secondary product or products which are associated or bundled with the primary transaction. According to the invention, the electrolyte matrix or electrolyte layer is applied to one of the half cells and sealing elements are provided on the sides of the current collectors laterally surrounding the above in a sealing manner, whereby an insulating layer electrically insulates each sealing element of a half cell with respect to the other half cell. In particular embodiments, the invention is a method for treating a patient infected with HIV. In the third laminated portion, the refractive indices of the high refractive index layers become gradually lower, and the refractive indices of the low refractive index layers are substantially equal to the lowest refractive index

of the low refractive index layers constituting the second laminated portion. Access, in part, is provided by a light baffle track system inside the light system that turns a flexible light baffle within the service box from a substantially vertical orientation to a substantially horizontal orientation as the flexible light baffle is removed and reinstalled through the service box and front access door.

1459827776-389be383-5b9f-4596-a08f-f00bdb94c381

A system and method for modifying images has an ability to assign color intensity values to pixels exposed during image manipulation operations. The composite can be used as a catalyst for the isomerization of an olefin or for the oxidation reaction of an alcohol. A high-definition pattern film having a desired pattern and a sharp edge can be formed with high productivity. When the damper closes it prevents convective outflow through the housing outlet of flue-heated air.

1459827776-7c3494d7-f87a-4efb-a4d1-19396e9e37d1

A speaker has a frame made of resin, a diaphragm provided in the frame, a voice coil mounted on the diaphragm. As an example, the removable component can be an ear tip. At least one attached biasing element urges the locking element toward the stationary jaw. The rotor seal may be laterally captured by a ring to prevent movement or creep due to heat absorption during operation.

1459827776-fd956617-ef95-4c63-a77a-739a703fb28c

A controlled free-radical polymerization process for forming end-functionalized polymers is disclosed, particularly by degenerative iodine transfer. The end wall remote to the scrap discharged opening of the chute slopes at an acute angle to organized scrap entering the discharged opening. As a result, switching is smoothly performed without involvement of occurrence of a variation in the output voltage before and after switching operation. The switch unit manages a table including an entry which includes an address, status data, and an identifier of a port.

1459827777-23be0c52-a2d7-442c-81a7-9933228484f0

An overlay filesystem is described. The inverter has a control unit which outputs an operation frequency to an actuation unit to divide the pulsating current to a plurality of electric pulse waves to drive a transformer to perform voltage transformation and drive a load. A cylinder block may be customized by the provision of an apron having appropriate components attached to the cylinder block, so that a single cylinder block can be used for a number of different engines. The polarization adjusting layer is formed and then etched to a thickness that repositions an optical signal within the active region such that the gain of the optical signal is independent of the polarization of the optical signal.

1459827777-ce07ca18-da27-4425-bdc9-b5e8c9e9dfc9

A tape feeder and a method of controlling the same are disclosed, in which an automatic feeding tape and a manual feeding tape are selectively fed to a binding device. The methods and apparatus include new ways of estimating bit decision boundaries and may also include new ways of estimating soft bit values. Both valves are shut to suspend patient ventilation for a period of time. A plurality of thin flexible elements are located between the back cushions and the structural shell, each flexible element being attached to the structural shell. The valve actuating member is supported by the rotor so as to be capable of making a translational movement of the valve actuating member in the axial direction with respect to the rotor, while a rotational movement with respect to the rotor is regulated. A method is described for assembling the stator core assemblies using discrete core component pieces in conjunction with back iron linking components or pieces.

1459827778-0808d026-e2fb-48c2-95c5-26cf1777310a

Provided is an architecture for an authentication engine to increase the speed at which SHA1 multi-loop and/or multi-round authentication algorithms may be performed

on data packets transmitted over a computer network. The pads  $P_i$  receive the continuous web  $W$ , and the cutter 30 cuts the continuous web  $W$  into a cut-off web  $W_2$  together with the anvil  $A_i$  positioned at a first relative level  $L_1$ . First and second digital output signals generated based on output oscillations from the first controllable oscillator and the second controllable oscillator are combined. This allows a standard MPLS switch to provide web switching functionality without terminating TCP connections. The unitary absorbent core is positioned between the first web and the second web.

1459827779-619324a2-3fa1-4ccc-9905-05dfa2743382

A circuit for a parity tree is disclosed. If the quality of the communication session degrades, the primary mobile station may involve a secondary mobile station by establishing a short-range wireless communication link with the secondary mobile station, e. The package body includes a material having thermal conductivity lower than thermal conductivity of a material constituting the encapsulation layer. Magnetic materials, which are formed on the insulated resin layers, sandwich the coil pattern. As the circuit components are encased inside the power module, it features a low profile, an increased mechanical robustness and EMIRFI immunity. Based on the discovered hidden concept layer and the corresponding conditional probabilities, the image annotation and the text-to-image retrieval are performed using the Bayesian framework.

1459827779-e71591a2-28d9-4576-b5f9-80923b894b1a

The present invention relates to a grain buggy assembly. Employing cryptography, for confidentiality or authentication purposes, when including a received message that has been incompletely received can lead to lack of context on the receiver's end. % B over closely spaced apart non-volatile transistors and heating during and subsequent to deposition to complete flowing of the B- or BP-HDP oxide into and filling the undercut regions on the sidewall spacers and to densify the B- or BP-HDP oxide.

1459827780-1dbc1894-4937-4d00-8bf8-d84213999237

Improved polys with superior melt stability, lower gel content and lower color and a new process for their manufacture. The laser machining systems and methods may be used to scribe one or more lines in large flat workpieces such as solar panels. The present invention also includes methods for cloning an expression vector containing the DNA fragment or a portion thereof and for producing the recombinant enzyme. While the socket is completely accommodated in a socket accommodation chamber, each first protrusion is positioned below the corresponding first engagement projection.

1459827780-ef03aeac-ee7e-4152-99eb-64d6a0b0ca45

A maintenance cart for use in an aircraft interior is disclosed. In one embodiment, the cutting chain can include chain links having a debris trap for hindering the entry of debris onto bearing surfaces. The AGP uses a graphics address remapping table for mapping memory. The system includes a plurality of measurement zones arranged in series along a process direction of the machine. In the displayed compound diagram, the graphical data flow diagram may be connected to the system diagram, e. In one embodiment, the circuit includes: a switch coupled between a voltage source and the node, a pulse generator coupled to the switch and configured to generate a pulse to control the switch and a detection circuit coupled to the node and configured to detect a signal level at the node on closure of the switch.

1459827780-ffd4d3b6-de80-42d2-972e-43b31e7d5c74

Embodiments of the present invention are directed to a biological marker, the gamma isoform of protein kinase C, which surprisingly allows rapid identification of compromised cognitive, behavioral, and neuropsychological functions under conditions associated with acute, transient hypoxia in humans. A chopper wheel modulates low energy components of the beam while leaving the higher energy components substantially unmodulated. The system may display the document with a

non-secure overlay of the selected security template, add a unique security element to the document according to the template, and cause the document to be printed at the selected print device with the added security element without permitting the added security element to be fully displayed or printed on any other device.

1459827781-2772d157-880c-4f2d-bb2f-fee054ec030f

A machine for filling containers, including a plurality of filling spouts, and a cleaning device comprising a plurality of individual tubular collecting elements rigidly mounted on a collection tube, and a device for moving the collection tube between a retracted position and a service position in which the collecting elements are in contact, via the upstream ends thereof, with the filling spouts. The container is supported by the platform on tables that are automatically positioned and maintained in operative alignment with the crane spreader bar through which the container is transferred to the crane boom in response to location indicating signals from a sensor grid on the platform. The body may be configured to rotate about the axis.

1459827781-a49ae348-8239-44d0-b8b4-b5a618793adb

A serializer-deserializer instantiated in configurable logic of an integrated circuit is described. The wastes are gasified in a fluidized-bed reactor at a relatively low temperature. A first heat treatment is then performed to reduce the hydrogen atom concentration of the amorphous silicon layer. In some cases, it may be used to dilate existing microchannels within occlusions.

1459827781-e2af0874-1342-4673-b55c-783688e481de

A device, method and system for sensing the temperature or temperature change of an environment. Remote controller makes RF communication with the display device so as to obtain device information and includes a display panel that displays the device information. The slider is formed using three etch depths.

1459827782-3986d30c-a242-4a75-8fda-80cd4392864c

A drill head for rock drilling comprising cutting edges made of hard material, which is detachably connected axially, over a bearing surface, with a drilling shaft with at least one radially projecting driver blade by a bayonet-type connection slot, wherein at least one connection slot is present, which forms two axially opposing undercuts, within which the driver blade has limited axial movement. The invention provides a constant current device that maintains a constant current over an applied voltage range of at least approximately 700 mV. In this embodiment, the identity provider element also authenticates a second endpoint of the push pathway, determines an authentication token associated with the second endpoint, and determines a handle for the push pathway in response to a successful validation of both the authentication token associated with the first endpoint and the authentication token associated with the second endpoint. Embodiments using multiple filter media and embodiments achieving a low pressure drop are also disclosed. The file-type of the file is updated if input/output operations occur within the first position of the file.

1459827782-3fc91888-36bb-4439-a258-a505e6618e7d

A calculator for calculating an opened amount of a throttle valve with high accuracy regardless of voltage fluctuation and noise. The input operation section of the input device is not only for data entry by users, but also for transmitting sound vibration. Working of the macromolecular crystal is performed by means of ultraviolet short-pulse laser light that is focused on and caused to irradiate the surface of the macromolecular crystal 8. To this end, a component of the suction air flow, which is located in the direction of extension of the dosing chamber, empties said dosing chamber.

1459827782-84229383-76aa-4b47-89ec-6adf9640e460

The present invention is directed towards shock protectors for a pedestal suspended

over a lower surface by a plurality of gimbal springs. The data communications signal line is in a high impedance powerless state when idle. The terminal client further comprises a connector component configured at least as an interface between the distributed client component and a network infrastructure suitable for forwarding and receiving messages.

1459827782-baf1a3cc-ab6b-427b-90cc-7b10ce3f3218

The present invention provides for a linear lighting apparatus. A substantially elongate and substantially rigid first member is spaced apart from and coupled with the first fabric via the second fabric. A breach of a resource may be the failure of the resource, the unavailability of a resource, the underperformance of a resource, or other problems with the resource.

1459827782-d6611a47-483b-4c54-ac48-61d2f80d34a4

A system and method for enabling a network device to resume network activities in a secure manner on a communication network when network activities are generally blocked by protective security measures implemented by network security modules is presented. The WASP system includes a host computer system connected through a serial bus to a remote device. The x-ray source is pulsed at selected angular location, e. The invention includes, in addition, processes for the preparation of the solid and liquid formulations, and their use.

1459827783-00c6911f-3dda-4696-8179-0e2201aa3f1d

A grooming switch comprises plural input ports for receiving multi-time-slot input signals and plural output ports for forwarding multi-time-slot output signals. After the insert has been secured within the arrow shaft, an arrow head can be secured to a connector on the insert. A floor of the cargo carrying portion includes a movable cover to provide access underneath the cargo carrying portion. A memory substrate 12 present inside can be visibly observed from the exterior through these notches 19A and 20A and the transparent substrate holder 13. A video signal voltage is applied to the cathode, and a variable voltage is applied to the grid electrode or accelerating electrode. From the combination of the three air streams the nozzle can produce fine water droplets that are suitable for many uses and more importantly creates a tailorable water mass profile.

1459827783-84d61258-bcb4-402a-93ce-22c39526353e

A memorialization casket comprises a shell, a lid closable upon the shell and an alcove structure mounted to an under side of the lid. Sometimes, when desired playback speed is faster than normal, a DVR is forced to select some pictures to play and some pictures to skip. The call is placed on hold in a hold queue until a representative of the call center is available to answer the call. The flow-splitter tank divides the incoming wastewater flow into two streams, which are conducted to the first and second wastewater treatment zones, respectively. Through introduction of the adhesive via the central opening enables a flow to the outside, without interference from the metering needles, when the DVD halves rotate. Including the use of such compositions to clean and/or treat a situs.

1459827783-b1ac241c-1493-4a93-ba24-203a4aa51c41

An anisotropic coefficient of thermal expansion cathode of a solid oxide fuel cell is formed by placing a layer of perovskite powder between two platens, and sintering the layer while applying pressure to the platens, thereby forming the anisotropic CTE cathode. An electrically operated sensor is mounted in the interior of the handle and is connected to the current supply of the vehicle. A first amplifier may be configured to receive the remote control data transmissions from the set top box communication module and amplify the remote control data transmissions on a plurality of remote control communication channels.

1459827784-3b247d47-97c3-46a7-b51f-307387693bad

Optical modules and a method of precisely assembling the modules are provided. This

copy management switch is connected to the computer, a first storage device, and a second storage device over the network. Some implementations of the invention compensate for phase wandering near the laser source and before the output of the laser is directed toward a target. Also disclosed are pharmaceutical compositions that include the compounds. This allows the operator to change the drive motor speed range during travel.

1459827784-6a9b65bd-836c-4f94-97d8-12a886623444

Disclosed is a clothes dryer comprising a drum rotatably disposed in a body; and a roller disposed below the drum, and configured to support the drum. The syringe carrier includes at least one rearward facing abutment member to abut at least one forward facing surface on a syringe. Compounds of the present invention are described by formula I: in which the R-groups are herein defined, together with their pharmaceutically acceptable salts, therapeutic methods for their use and processes for their preparation. The technician then takes the telephone off hook, aligns a speaker of the cellular communication device with a microphone of the telephone, and aligns a microphone of the cellular device with a speaker of the telephone such that the telephone and the cellular device are acoustically coupled. Then, the original corresponding to the first side is read and data thereof is printed on a paper sheet having the same size as the original and the sheet is discharged.

1459827784-8336d9c5-a650-45eb-a9d4-3973949b527b

A method of manufacturing a semiconductor device includes forming a silicon germanium layer and a N-channel transistor and a P-channel transistor over the silicon germanium layer. The multi-channel noise suppression systems and methods are configured, in at least one example, to first detect and suppress wind noise in the input speech signal picked up by the primary speech microphone and, potentially, the input speech signal picked up by the noise reference microphone. The method employs a multi-dimensional approach for the simulation of postulated operational events or an anticipated operational occurrence which produces a transient condition in the reactor such as might be caused by single operator error or equipment malfunction. The treated syngas and a first heat transfer medium can be converted into a synthetic gas, a second heat transfer medium, and a methanation condensate.

1459827784-8dfc8385-c0ea-4f44-a664-46b66cd0bf36

Disclosed is an apparatus for measuring respiratory gas flow, which provides a high accuracy in measurement of the respiratory gas flow and reduces the manufacturing cost of the apparatus, in comparison with the conventional disposable apparatus for measuring respiratory gas. The web is the portion of the corrugation which runs from the peak to the floor of the adjacent valley. Thereafter, the new direction of magnetization of the free magnet is sensed. The first trace is joined with the second trace at the memory controller, the second trace is routed in parallel with the first trace, and the second trace is longer than the first trace. The intermediate gray scale image is rehalftoned and combined with the non-half-tone image to form the repurposed image.

1459827784-e2fefa78-6acb-4c98-a26c-c36bfb3abf14

The present invention is intended to prevent a light-emitting diode from emitting light continuously in the case when the level at an input terminal is fixed high because of software or the like and to avoid various problems, such as battery exhaustion and breakdown of the light-emitting diode, in PDAs, cellular phones, etc. A second adsorbent bed may be employed to more thoroughly remove these oxygenates. The ECDU includes a digitizing display that includes a video display for imaging to participants the various documents involved in the transaction and a digitizer for allowing participants to sign, indicate choices, and otherwise interact directly on documents and images presented on the display.

1459827785-6ca487ec-7b6a-40a2-be42-949b5b40c9dd

A lateral MOSFET according to the present invention has a trench gate structure having a cross sectional shape spreading toward an open end. A connector located between the rods engages each of the rods. The air conduit is movable between a first position and a second position, the fan and motor inflating the inflatable body when the air conduit is in the first position, and deflating the inflatable body when the air conduit is in the second position.

1459827785-a1022a3f-de91-442f-b0f0-a7ab24f8080a

In accordance with the teachings described herein, systems and methods are provided for optimizing distribution of advertisement information. It is preferred that the original agent is presented with a list of the best-suited agents with which to consult, if needs be. The flow is then directed into an open cavity which is in fluid communication with the inlets of the fuel flow fields of the fuel cells, reaching the fuel flow field inlets uniformly and simultaneously. While the latch first input is connected to the first reference voltage, the latch is reset. The latch uses an improved housing configuration in conjunction with improved internal components, allowing for more consistent and reliable operation.

1459827786-7e9eea71-83f3-4bb8-b1e9-39fab70b6d8

A tire carcass to be used with any type of tire is shown herein. The substrate for printed wiring comprises an aromatic polyether-typed polymer having a glass transition temperature, as measured by differential scanning calorimetry, of from 230\xb0 C. The remaining application resource files can be replaced with application resource file placeholders, which can have the appearance of application resource files but are in fact empty files. The bottom plate has a plurality of internal apertures are aligned with the printed circuit board contact pads separated by bottom plate stanchions that are aligned with the device under test contact pads.

1459827786-7ec04022-4e74-4bc9-b3ff-51bdfce237e1

Methods and arrangements for identifying content, and employing such identification, are detailed. The slidable housing receives the mating portion at the first end and the slidable housing is adapted to slide along the mating portion and engage the mating portion. Multiple gun control parameters are stored as unique part coating recipes in the controller and are executable in look-ahead sequence based upon part identification as parts are conveyed toward the spray guns. The spark gap structures may be implemented by circuit board traces, by electronic circuit component leads, by spaced apart structures such as heat sinks or by other discharging components. Techniques include determining wavefront information from the eye of the patient with a wavefront eye refractometer, determining anterior corneal shape information from the eye with a corneal topography device, and combining the wavefront information and the anterior corneal shape information to determine the ablation target shape.

1459827786-c55cc955-fd22-46d2-b06d-523a22a63a64

A power system housed in one or more modules or containers may be located as a unitary structure where desired, for example secured to a locomotive platform, allowing easy retrofits. A body of Jesus is crucified upon the cross, the head of Jesus tilting upwardly whenever the lamp is energized and tilts downwardly whenever the lamp is deenergized. A second sensor unit at the gas inlet provides a second measurement value based on an acoustic property of a gas present in the second conduit. The first set of wires are aligned in one row and have inner conductors electrically connecting with the tail sections of the first set of contacts.

1459827786-ff119282-8d24-48f6-b415-f69b8b646df8

Provided a port member for an infusion solution bag that is capable of suppressing occurrence of gaps or wrinkles in a sealed portion in a manufacturing process, and preventing damages to resin sheets of a bag body during storage or transportation.

A handle is attached to the cleansing cloth to carry and operate the cleansing cloth. Based on the estimated image deformation amount, a deformed image of the first image is generated. A column redundancy selection circuit activates an enable signal according to a block address signal when all row hit signals are deactivated.

1459827787-7be62439-7114-4e15-a317-7cfd317a08e1

The structuring unit is composed of a wall surface member for the construction with a mounting cavity formed therein, such as a stone, and an anchor mounted on the wall surface member for the construction through the mounting cavity thereof. The device includes a belt having a tactile gripping portion for removably adhering to skin. In addition, by improving the robustness of the structure, the reliability of the card reader is increased leading to the ultimate goal of extending its operation life. The deck assembly defines a cavity between the upper and lower decks.

1459827788-312243d5-665a-48c5-bda0-db91d6c45d8f

The present invention provides a method of manufacturing an image display device in which a panel member constituting a panel of an image display device is transferred to a plurality of processing chambers each having a temperature control unit, and subjected to a plurality of processing steps under temperature control. The invention comprises a data-based, model-free, non-invasive method that can automatically detect and quantify stiction present in control valves. The logical input of the inverting circuit is split into a pair of physical inputs. Other aspects of the invention comprise a method for manufacturing the above-described chemical mechanical polishing pad and chemical mechanical polishing apparatus comprising the chemical mechanical polishing pad. In at least one embodiment, an energy storage medium provided for EMC considerations, in particular a capacitor, is energized in a controlled fashion through short-term activation of a switching element even after the respective connected user is turned off, the energy storage medium being thereby discharged. Each disk assembly has a number of disks.

1459827788-49047f5f-50fb-4e72-ac31-a310d6beb09f

A method of driving a polarization switch is provided. The interface provides multiple levels of filtering and screening capability with query parameters presented within a first portion of the interface to permit comprehensive and flexible selection of message entries of interest to a user. The back wall upper portion has a bottom edge and leaves an opening below the bottom edge through which the bottom of the battery can move rearward out of the cavity. This increases system efficiency by more effectively returning oil which otherwise might be left in the evaporator back to the compressor. The lamp driving apparatus of the liquid crystal display comprises a plurality of lamps, and an inverter block having a plurality of inverters that supply a drive current to the lamps wherein adjacent lamps have a different phase from one another. 1x client, an IP packet filtering is configured to redirect a user HTTP request to a local server, and when the HTTP requests are thereby redirected, the HTTP server presents the terminal device with information specifically related to the browser based authentication.

1459827788-5afab57f-a5ee-449d-a680-c51d7cd6e0df

A computing device comprises a memory to store a first version of an eXtensible Markup Language message, a receiver to receive a second version of the XML message, a processor and a display interface. This combination of processes will effect conversion of suspended organic materials into hydrocarbon liquids or gases depending on the mix of the temperature, pressure, and residence time in the reactor. The pseudo link manager includes: a line monitor and a disruptor.

1459827788-8759600b-fb4d-454f-b0fd-259fdb584fa4

Seamless connectivity by a user device between a licensed and an unlicensed network is provided through capturing of MAC address information relating to one or more

access points servicing the licensed and/or the unlicensed networks. The central lumen is maintained in a circular shape without bulges diminishing the useful inter-diameter by using an outer jacket with an elliptical shape and uneven thickness to encase a pull wire. The electrode system can reduce or eliminate motion artifact from an electronic signal that can result in misdiagnosis, prolong procedural duration and inappropriate treatment of a patient.

1459827788-b22a554b-da83-4a67-b9cd-4acd87482065

In mobile communications systems transmission antenna diversity is used. The system comprises three essential elements: a multi sensor, an electronic analyzer and an optional receiver. Next, the re-drawing product is drawn to form a late-drawing product in the shape of an elliptically cylindrical container having an elliptical cross section in which a major axis and a minor axis of the elliptical cross section are reversed with respect to a major axis and a minor axis of the elliptical cross section of the first-drawing product.

1459827788-cc2d6712-3536-4550-865f-22d7ab27419d

A method and system for managing financial risk through the use of postpaid processing during use of wireless services is presented within the scope of the following invention. In one embodiment, a mobility manager can query a subscriber catalog for a current registration status of handset. A carrier carries the carried object in the case. Violations are detected by applying a License Plate Recognition algorithm to the images.

1459827789-6a9c3fde-5991-4918-8726-a0917a82e4b3

This disclosure relates to filter based object detection using hash functions. From the single input, operating parameters for the welding-type process automatically are set or otherwise determined. The network selectively couples content sources to the content processor. Thus the method is especially advantageous for manufacturing a metal cover having a three-dimensional shape. The conductive particles cause the resins to be electrically resistive. Some of the stream parameters are unchanged while others are re-computed for the outgoing video stream.

1459827789-9d446983-950a-4456-90b5-43fc6f7f15b9

A composition for coating an optical waveguide, more specifically, an optical fiber, and optical fibers coated therewith. The insulating layer is provided to impart a relatively large tensile stress to the NMOS transistors. Hand grips flank the removable seat and are attached to a rear accessory panel. The sensor SS is discharged via a discharge circuit having a lower impedance. A second conductor is provided that includes at least one wire formed in a spiral extending continuously through the resilient body, and having electrically accessible first and second ends.

1459827789-b0ac41c3-3b59-4067-bc5a-418cbb694224

A prosthetic tibial component for a prosthetic total knee joint includes two constructs, one being a metal base that engages a bone and the other being a polyethylene bearing that attaches to the metal base and articulates with a femoral prosthetic component on an opposing side of the joint. Monotonic and slowly-varying image regions are detected by analyzing a residual image which is the function of the original image and its smoothed version. On the injector body, for stroke and/or pressure control of the injector, a first slide and a second slide are embodied, offset from one another. The second group moves for zooming on an optical axis, and the fourth group moves on the optical axis in association with the second group for correcting an image position fluctuation incidental to zooming. Conductive layers thus formed and coupled discharge accumulated static charge over the insulating layers inside the device to the outside circuit. A pair of islanded floating gates are disposed on the gate oxide layer at the active area, with a gap between the pair of floating gates and the pair of selective gates.

1459827790-164f8971-b31f-4628-bb0b-c07c44e21b69

A base station for a wireless communications system having a tower-mounted amplifier system with a low-noise amplifier transistor and a thermoelectric cooler that reduces the operating temperature of the low-noise amplifier transistor. The actuator system may include: a first pushbutton configured to turn the rotary member in the first direction; and a second pushbutton configured to turn the rotary member in a second direction, opposite to the first direction. The binding substance may comprise an immunoglobulin antigen binding site and may be a diabody. A large plurality of the daisies can be connected together to form a generally planar element. The vacuum bag is enclosed between a housing and a lid secured thereto, and the lid is removable to allow access to the vacuum bag. The communication server also has a voice-over-Internet-protocol unit connected to the message transfer unit, so that messages are transmitted through the communication server in a VoIP format.

1459827790-4e498218-ac82-4b82-b3b4-528a0a8ca429

An electron beam apparatus prevents a rapid increase of dosage caused by stoppage or deceleration of movement and protects the specimen when the specimen is irradiated with the electron beam while the specimen and the electron beam are being relatively moved. Two vaccinia virus CD8+ T cell epitopes restricted by the most common human MHC class I allele, HLA-A\*0201 have been identified. A combined gain of the one or more gain stages determines a signal distortion attenuation characteristic of the analog segment. The actuation assembly engages the pins as the pins move relatively toward a head block and disengages the pins as the pins move relatively away from the head block. The switching power supply oscillates between charging and discharging the power transformer.

1459827791-1756a140-1d17-4844-b720-d8d7e3f07ccd

Apparatus, and an associated method, for facilitating communication of data in a packet radio communication system to effectuate a packet communication service in which packet data is communicated at a variable, selectable rate. A user interface uses metadata of digital objects to navigate through a data structure that includes multiple containers to organize digital objects, such as digital images. An upper electrode which is additionally used as an upper magnetic shield is electrically connected to the free layer through an upper metal layer. The external guidance system sends location signals indicating a location of the implement frame to the operator. The process can also be used to manufacture articles having cube corner elements in which at least one face of the cube corner element has two constituent faces disposed on opposed sides of a transition line that is nonparallel to a nondihedral edge of such cube corner element. The third generating unit generates, per the first and second ink color data of which the signal values have been corrected, the dot data representing existence of formation of dots to form an image.

1459827791-aef730ab-e11b-448f-b71b-0f8ba59a7fa7

A preferred embodiment of an automotive convertible roof system has a flat-fold boot cover. The filters can be used to remove debris and impurities from the fluid flowing in the pipeline during a pigging operation. A deep trench capacitor and a control gate are disposed in each deep trench successively. This floating gate is placed sufficiently close to the source or drain of the device as to enable band-to-band tunneling.

1459827791-d57dfd62-93f2-4fcb-95cd-1809ba08fd13

A water-degradable welding purge dam for purging a weld zone of a pipe assembly comprising first and second pipes having respective first and second ends to be welded together at a root gap. This flip-flop circuit comprises a first latch circuit including first and second inverter circuits. The pressure in the measuring chamber is changed, the electrical conductivity of the liquid or a variable depending thereon is measured in the measuring chamber at at least a second

pressure value  $p_2$ , and a second measured value  $S_2$  is detected. The first end of the elastic cord device attaching to the lift cords of the window covering device.

1459827792-6d13b3fe-6518-4240-9268-79bdbd22c388

Methods and apparatus for delivering prostheses to body lumens, such as stents and grafts to blood vessels, utilize a delivery device which carries one or more linearized elements. With  $K$  synchronized terminal units transmitting on  $N$  antennas to a base station having  $M$  receive antennas, increased system capacity and improved performance are attained by using a concatenated coding scheme where the inner code is a space-time block code and the outer code is a conventional channel error correcting code. The distributed RC filter is operable to provide decoupled capacitance to the integrated circuit chip.

1459827792-cba44a53-c026-4981-b6e4-3404ed284732

A method of determining the availability of at least one of a plurality of different services in a wireless communication network comprising at least a first station and a second station which are in communication has the following steps. The diffusing portion is disposed parallel to the linear light source and has a grooved diffusion surface facing the linear light source adapted to reflect light from the linear light source toward the light guide portions. The connections are established by configuring, in various of the nodes, mappings for forwarding data frames, such as Ethernet frames. An external surface provides a surface for advertising or other written information. Preferably, to provide structural integrity, the bench step is formed from a single sheet of metal, such as aluminum, with each element of the bench step being formed by means of a bend in the metal.

1459827792-fcc20d4a-46ed-4cbe-afe7-72233067b067

This invention is directed to a printing apparatus and printing medium roll-up state discrimination method of printing using a rolled printing medium while reliably rolling up the printing medium after printing and accurately detecting a roll-up error. Methods of use and control of the device are also disclosed. A first flexible cylindrical sheet in contact with the inflatable tubes has parallel edges that form a first slit sufficiently wide to permit movement of the first sheet in response to pressure variation in the tubes. In an exemplary embodiment, signals are communicated between a cell-site and mobile units using direct sequence spread spectrum communication signals. The user device then displays the adjusted version of the first image resource in the image display environment in place of the expanded version of the first image content item. The first client, using an appropriate network address, links to the first program and receives a copy of several mapping objects, enabling the first client to provide certain map functions independent of the server.

1459827793-4e4f51f6-300a-4342-a4a1-0962b668792d

A telescopic lens barrel which is capable of increasing the assembling workability and advancing and retracting a lens in an optical axis direction of the lens barrel with high accuracy, without miniaturizing of the lens barrel. The digital horizontal/vertical signal generator generates a digital horizontal/vertical sync signal from the data enable signal. The outer conductor part and the inner conductor part are connected to a contact coupling sleeve so that they can be axially displaced in relation to one another. The inverter regulation regulates the corresponding inverter such that the sum between the differential voltage and the differential current is a minimum. The ability to specify the policy for the management of a system and then automatically generate an equivalent implementation greatly improves the quality of software, the survivability of future missions, in particular when the system will operate untended in very remote environments, and greatly reduces development lead times and costs. , idling and/or overrun, a selection signal is supplied; when this selection signal occurs, the sensor signal supplied by the NO<sub>x</sub> sensor is interpreted as at least a measure of the reagent leakage.

1459827793-7179b72d-77f0-490b-91d5-7cd650a2b2fd

The present invention discloses a data storage method, a data downloading method, and a related apparatus. According to an example embodiment of the present invention, a portion of substrate is removed from the back side of a semiconductor chip having a SOI structure and a backside opposite a circuit side. The upper chip surface defines a chip face including a chip former comprising a wall extending downwardly from an elevated plateau to a cutting edge having a plurality of chip forming grooves and a rib formed between adjacent chip forming grooves. A selection unit receives the power indication signal and the adjustment signal. The refractive indices of the lens, the dry mount adhesive, and each removable layer are matched to within about 0.

1459827793-7578dc91-e397-4321-9311-9a7fd8f736c3

A dielectric deposited on a substrate may be exposed to a salt solution. The switching control circuit includes a control circuit coupled to the feedback signal to generate a switching signal. A control unit, which acts on said motor-driven units and is able to control said motor-driven units with a speed that is selectively determined in such a way that the rollers of the array are divided into a first set of rollers, which move at at least one first speed, and at least one second set of rollers, which move at at least one second speed. Such a treatment is extremely durable on such substrates; after a substantial number of standard launderings and dryings, the treatment does not wear away in any appreciable amount and thus the substrate retains its antimicrobial activity.

1459827793-b262f00b-5817-4117-9689-fd679746e3d4

An adaptable audio instruction system and method allows for tailoring and modification to audio sequences used for audio instruction of users. The peripheral has a symmetric key and a copy of encrypted according to a public key of an entity)). The integrated circuit rate converts recovered serial data in one of the clock domains, performs a phase alignment at the converted data rate, and returns the rate converted and phase-aligned serial data to the recovered data rate in response to the recovered clock from the remaining clock domain. The engagement members are only in contact if the airbag is fired. Then, one glyph is selected from the captured character.

1459827794-0e1c99aa-cb3a-4473-bbed-b104f6fb8d22

An information storage medium according to an embodiment of this invention includes a management area for recording management information, and a data area for recording content data. The parameter encoder also generates enhancement bits, which are preceded by the basic bit-stream, from second pulse-related information for odd sub-frames. % of one or more carboxyl-functional components A) and 80 wt. The planting assembly links the forward gauge wheels with the rear press wheel assembly for reciprocal motion to reduce the trench depth displacement when either a gauge wheel or a press wheel travels over an obstacle. The pivot arms are pivotally mounted to the wing frame segments by a rock shaft.

1459827794-c67703d7-7ed3-4d06-b7d7-bc33770d12a4

A magnetic holder for cell phones includes a cup formed of a ferromagnetic material or the like within which a magnet is supported. The system includes a means for tracking the behavior of a person in a predetermined area under surveillance after the activation of an alarm clock, and a means for determining whether the person is motionless for a predetermined time period. The factor identified by the credit bureau is mapped to an internal rejection code. A segment from the plurality of segments is decoded into a sub-image. The media output option may include a plurality of output trays, each output tray having a dedicated light source, user alert display, and sensor. The invention also provides preferred dosage and infusion regimes and pharmaceutical compositions for clinical application of such agents.

1459827794-ea839482-a80b-4fe2-8899-88a67cdb7d03

An intelligent power distribution system including one or more intelligent power strips. The invention especially applies to the domain of skin protection and more especially against cutaneous consequences of oxidative stress. The swing characteristic of the latter allows the plate to be mounted and demounted with the plate generally horizontal, but as the support platform is rotated, it swings up through approximately 90° so that the wells are now substantially horizontal and the plate is now substantially vertical, so that centrifugal force pins the liquid at the bottom of the wells. As a result of structural non-uniformity in the cholesteric liquid crystalline structure, the light that is selectively reflected is diffused. The solids separator includes a solids conduit leading to the annular fluidized bed of the reactor. Interface description documents define the appearance and the behavior of the user interface toward the user, while feature description documents define the interaction of the user interface with the interfaced-to application, both in conformity with a user-interface object model.

1459827795-b230c422-e64a-4182-a756-22a9ced36331

Machine for the production of flexible material sheets comprising at least one folding unit housing at least one cutting cylinder, to which a suction cylinder is opposed, and a gripping cylinder for transversal folding and/or conveying flat products by suction. The financial data file can comprise the complete, original MICR data from an original or substitute paper check. The supporting member can further fix the tool onto the pellicle particle detector. The lighting device, upon being overlaid with a graphic and surrounded by a frame through which the graphic is visible, provides a vehicle lighting assembly securable to a vehicle substrate. Accordingly, low-E coated articles of certain embodiments of this invention appear from the glass side thereof visually similar to the naked eye both before and after heat treatment. The computing task is then performed by the peripheral, thereby saving computer system resources for other computing tasks.

1459827795-cb05185a-3c5f-4b16-8057-5ae714eddb64

A roofing composite comprising a roofing material and an interply material attached to the roofing material. The device comprises an adapting plate which includes vertexes, bores and a traverse opening. The device may measure several tubes at once.

1459827795-ed182216-5158-40ea-be04-9bfd41e7d5f3

Provided is a hybrid passive optical network system. Golf balls of the present invention have at least three layers, including an inner core layer, an outer core layer, a cover, and optionally an intermediate core layer. 1 for the individualized-connection determination of the currently allowed transmission rate of ATM cells is inventively realized with the assistance of list parameters, whereby the list parameters indicate the plurality of current intermediately stored transmission rates and their size relationship relative to one another. Power reduction is accomplished by adaptively truncating active taps in the NEXT, FEXT and echo cancellation filters, or by disabling decoder circuitry portions, as channel response characteristics allow. When water in the pipe freezes and expands, the pipe and the plates are elastically deformed without injury.

1459827795-f2e6eac6-dd6a-474b-bdd1-74c43565cf35

A housing comprising at least one electrical connection through a housing wall that is particularly inexpensive to produce and allows the electronic components located on the internal face and the external face of the housing to be attached in a particularly variable manner. A glare reduction device is connectable to the protective device to provide glare free viewing of the LCD screen. The use of a plurality of distinct gain spectra greatly enhances the tuning range of the tunable laser in the present invention. This provides for convective cooling in an efficient manner, while minimizing the profile of the electronic system.

1459827796-5fd94c80-5f94-4413-9f15-264e738b615e

An advertising system is disclosed which is capable of balancing the degree of specifying geographical areas for advertisements and the number of advertisements being displayed, in accordance with content of the advertisements. According to the method, an amount of the infrared light is directed to be incident into an imaging apparatus attempting to record an image from the screen, increasing a pirating prevention effect. The logical states of the storage elements are decoupled from one another and are read independently. The compositions are useful as molecular sieves, supports for catalysts and numerous other applications requiring an organo group on surfaces of a silica. To guide the breakdown locations within the dielectric, one or more voltage gradients are generated within the antifuse element to concentration current flow. The valve main body includes an insertion hole into which a guide member is inserted and a stopper portion to stop the guide member biased by a pressure of the fluid.

1459827796-e447cee6-6a8d-4fe1-84ea-86bac385fe9d

A system for processing a data signal includes a first decoder unit, such as a convolutional decoder or a QAM decoder, for receiving the data signal, decoding the second level of encoding and outputting a decoded signal and a first error indication signal indicative of errors in the decoded signal. In another embodiment the physical attributes of the object are utilized as a key for accessing information included in a digital watermark for the object. The first and second components are configured for slidable movement therebetween while preserving common rotation so that when the second component is axially moved in a distal direction, the second component deflects the preformed curvilinear section towards the main axis while orientation of the outer shaft is preserved.

1459827797-04031e9f-0e25-4685-9125-d51aa2cdd247

A method, system, and related apparatus for performing time-divided communications in a metering environment are disclosed. The pores of the surface covering are sized such that blood platelets are prevented from contacting the surface of the electrode while physiological fluid is allowed to pass through and contact the electrode surface to hereby provide a conduction path for current from the electrodes. The direction may correspond to an angle range, where the ratio of the gradients corresponds to a trigonometric function of the angle of the edge. The first communication hole is arranged at a circumferential direction position different from the second and third communication holes to ensure that the low-pressure connecting pipe and the intermediate connecting pipe two dimensionally bent in a circular arc shape do not interfere with each other.

1459827797-124e8a23-6ca3-4219-ad58-792256547111

A grommet for securing a tube includes an oval hole having a wide portion and a narrow portion, a recess located between upper and lower shoulders surrounding the hole, an inclined surface to guide the grommet into a mounting hole, and a lower surface that can be engaged by a connector on the tube. and an exhaust pipe made of this titanium material for an engine. Furthermore a pulse current generation circuit converts a synchronization pulse voltage signal into a pulse current that alternates between positive and negative current values. A second index creating unit is configured to create, in a time interval after the current time interval, a second-level index for data in the current time interval. A difference between a first inductance of the first winding and the mutual inductance is smaller than a difference between a second inductance of the second winding and the mutual inductance. 1 to 4, as polynucleotides having polymorphism sites capable of being useful indicators for prediction of validity of interferon therapy.

1459827797-7fc2648a-50e3-4093-a662-e0050f184d88

One aspect of the present invention relates to optionally substituted halogenated benzyl halides and the like. New entries to be added to the database are determined

responsive to the traffic on the network during a learning period. The request includes a parameter describing a configuration of the second device.

1459827797-a275e351-f5d5-4061-a199-ddd0f16bb50f

A method of correcting scatter includes obtaining a voxelized representation of a 3D image of an object from a plurality of projection data. The image data may be re-rendered using only the primary and secondary colors. The remote translation control entry table on the hosted partition is loaded with data from a hypervisor in response to requests made by the OS running in the hosted partition.

1459827798-733fe2a8-d1bd-4d43-a8a4-ac0b35b1e480

A method for assembling a washing machine is provided. A result set is generated by querying the database, forwarding a link associated with the result set to a user-preferred remote location, the link being sent in an electronic message. The buckle sheet is engaged to the upper cover. Furthermore, the management server provides a user terminal with server information including a parameter associated with a noise amount of image data from a user terminal. Additional air freshening and cleaning, deodorizing, odor neutralizing, scent applying, fungicidal, bactericidal, and/or germicidal chemicals or materials may be applied to either or both filter elements. The primary and secondary processors each include a chain generator for generating primary and secondary chains of function elements.

1459827798-83ec8d90-795c-4275-aa44-a88e64057058

An information storage medium capable of recording and playing back still picture information is provided with a first information unit having one still picture information, and a first group unit which is composed of a set of first information units, and has a plurality of pieces of still picture information having different contents. A communication device or network appliance compares communications entering the communication device to a list of communication types established as known security risks, for example hacker attacks, unauthorized attempted access to network resources, or similar network security threats. The tapered portions each include a main portion which is shaped such that an angle formed between the main portion and an axis of the rotary shaft gradually becomes smaller from one end of the main portion located rearward as viewed in the rotational direction of the impeller toward the other end of the main portion located forward as viewed in the rotational direction of the impeller. The calculated response is compared to the measurements of resistivity. In broadcast mode, a diagnostic instrument can send a data stream wirelessly to many listening computing devices.

1459827798-bfe2ea0f-520f-453a-8da7-2370ec2612f9

An apparatus and method for originating a call in a full-touch screen portable terminal are provided. Each cavity having at least a first and second sidewalls set at an angle offset from the planar major surface. The visual display unit further includes a visual display, and a second communication port. In certain embodiments, the suction device provides suction even on wet or underwater surfaces. The electronic device includes a receiver which outputs the received sound; a receiving portion which receives the receiver; and a hole which communicates with the receiving portion. The ring structure of the bus provides efficient communication between the logic core and the various data ports.

1459827799-38311bc5-d03e-4301-9675-3bfa90a52767

A film scanner useful in a digital printing system. Subsequent to decoding the first signal field, the controller re-encodes the first signal field to generate a second signal field. The first stack core includes first core pieces and first couplers. Each Method from subject code is examined to determine whether the Method conforms to the criteria of the stack frame template.

1459827799-73ce8d18-db35-4006-bea4-a727e33995e4

A broadband communication system in which a central office is connected to a high

speed network utilizes various LMDS architectures of the present invention to expand network capabilities. The lure may also comprise a cover assembly removably covering at least a portion of the lure body. The preferred fiber is a quartz fiber having an elongation to break of at least about 5%. The flexible straps attach to the cover and the frame of the generator. A tube connected fixedly to the wall is mounted around the bellows, so as to maintain an air gap, surrounds the bellows in a moisture-tight manner and is longer than the bellows in its longest initial position corresponding to the expanded state.

1459827800-05634c5b-356c-48a1-901e-45ee6a5ea8c5

An apparatus and method for treating a substrate to deposit, clean or etch material on a substrate using a first horizontal chuck to which a plurality of substrates is attached and electrically charged. An elongated pivoting structure is pivotally coupled to the strongback for parallel pivotal movement relative thereto. When an image based on the second print data is arranged at an end of a continuous sheet, the second print data is assigned to the beginning of print data to be printed on another continuous sheet. The frequency bins follow variations in the frequency of the magnetic signal produced by the sonde which allows the detector to detect the sonde at a separation of up to 30m.

1459827800-481e5788-008f-4776-8245-cfe2d659f4f9

A drill for making a hole within a workpiece has a body extending along a longitudinal axis, at least one flute extending along the body, and a drill point extending from the end of the body. The input scanner includes a light source for illuminating a three-dimensional object, an elongated sensor array for producing a digital representation of the image on the three-dimensional object, a lens array, a moving mirror, and a mirror positioning system, which beneficially includes a mirror motor. A die lip portion is disposed on the die block having a lateral dimension. Each data dimension is displayed radiating from a central point, and data corresponding to a data dimension is displayed at a position indicating the value of the data in relation to a reference value so as to enable the identification of an exception. As a result, a seated occupant may selectively engage mechanically adjust the chair seat relative independently of electrical adjustments available by the control mechanism.

1459827800-d1c2458a-eae8-49cb-af04-3b3f62290242

The system contains a molded plastic reticulated tray composed of a continuous rib that forms a tray rim and a plurality of intersecting ribs defining relatively large openings therebetween. A ventral access opening selectively provides access to the horse's abdomen while the bandage remains in place. An adhesion strip is secured to the first exterior side surface being adapted to absorb an adhesive placed on the foundation wall for securing the moisture impervious sheet to the foundation wall.

1459827801-729341ca-67b3-4188-94db-c83590b7dbb5

In one or more embodiments, a tag is provided and includes a property that associates a strongly typed variable with the tag. The assembly includes a panel and an aperture extending through the panel. The housing body has a cylindrical sleeve for mounting the diagonal to a telescope.

1459827801-743d5dcc-44ba-4e14-9bef-7cd9702fe1bc

A multiple directional wheel includes a frame having a central hub rotatable about a main axis, a plurality of roller supports radially spaced from the central hub, and a plurality of rollers evenly spaced around the circumference of the wheel and rotatably mounted on the roller supports. There is provided air vents 162, 163 and 164 between the fixing device 122 and the heat exhausting fans 157, 158 and between the delivery portion 125 and the heat exhausting fans 157 and 158. The pressure of gas filled in a gas charge chamber 122 defined by a lid 120 and a diaphragm 130 displaces the diaphragm 130, the displacement being transmitted to a shaft member

150 through a stopper member 140 including at the center thereof a tubed portion 142 storing an absorbent. This enables the distractor apparatus to be positioned relative to a patient such that the tensioning mechanism is offset from the long axis of the limb of the patient thereby facilitating improved access to the distal portions of the limb. The preferred device further comprises a plurality of peripheral voids and more desirably a central void space therein, which may desirably be filled with a grafting material for facilitating bony development and/or spinal fusion, such as an autologous grafting material.

1459827801-992cf9ac-fb29-4647-b310-8d3517ce7bd8

A PDP driving apparatus having a resonance driver of a PDP electrode for shortening a time required to display an image since the power-up. Ventilation grooves having an inlet and an outlet are defined in the rotor with at least some of the coils including at least one of the ventilation grooves. The condenser assembly also includes an ambient temperature sensor for sensing at least one temperature of the ambient air, to provide a sensed temperature. The spacing may be based on a relative speed between the magnetic piston and the actuating magnet. The flank section is connected on each side flank with the outer circumferential area via an adjacent planar bevel area which is inclined under a bevel angle obliquely in relation to the same in the direction towards the other side flank. Stability and construction advantages may be provided by snap-fit features of the header member and first and second side plates.

1459827801-aaad1893-1726-489a-afb1-7319ca7db7d6

A technique for implementing in a networked client-server environment, e. In one aspect of the invention, the technique comprises evaluating one or more performance metrics associated with the one or more resources given one or more configurations of the one or more resources. Once the position has been adjusted, the vehicle can be pulled forward on the platform to continue the loading process.

1459827801-bd824a01-fe0c-4b1d-abf1-2da0166837b8

The present invention prevents cross-linking between multiple resists that are used in the fabrication of a semiconductor device. When a user operates a cross key, recorded information about a trimming position of each of the first and second continuous-zoom-photographing frames is updated according to the cross-key operation, and the first and second continuous-zoom-photographing frames are produced at the updated trimming position recorded after the update. Thereby allowing the magnetic circuit to be installed in front of the supporting stand; and thus high-pitch sound and low-pitch sound simultaneously output from a single device. A first stress-blocking dummy diffusion region is adjacent to the first edge, with no dummy diffusions regions therebetween. Large multipliers are divided up and optimized as above.

1459827802-35175e8a-74c5-44a4-a3e7-0d46dcb3183e

A method and system is provided wherein an event experienced by a player is documented and the documentation of the event is stored. The removable telecommunication sensor module monitors energy usage at a telecommunication equipment circuit level for a piece of telecommunication equipment arranged in a telecommunication network infrastructure. The methods further include migrating the collection of diplets using one or more of a velocity model or an anisotropic velocity model, and synthesizing one or more of the migrated diplets to an output multi-dimensional seismic volume. An interrupt in the input register of the second port is set to notify the second component coupled to the second port that a new message is available. There are provided an electronic device and a method of operating the electronic device that may more effectively resolve handover request collisions by using a specific field value included in a handover request message.

1459827802-f91f1bbe-6bd8-4590-95a3-6a1c9dfe3cf2

An applicator for applying liquid media to a material strip that can be moved

relative to the applicator includes a housing having a drum chamber, a drum gate supported within the drum chamber and adapted to rotate therein, and a nozzle block spring-mounted to the housing. Person characteristic data extracted from a plurality of cameras are stored in a person characteristic database. The positive slack is converted to negative slack by replacing cell instances in the IC design with footprint equivalent variants of the cell instances. The outermost coating may contain an anionic pigment. The controller is also coupled to an indicator mechanism and is intended to transmit a cut-off notification signal to the indicator mechanism. The bottom doors rotate from the closed position to the open position under gravity.

1459827803-02e30c42-5875-4ace-a290-e2f466a77c09

A cutting tool insert includes a body of a hard alloy of cemented carbide, cermet, ceramics, cubic boron nitride based material or high speed steel. In various examples, an episode classification algorithm evaluates electrogram signal data to determine whether T-wave oversensing has occurred. The first wire pair provides a communication service to a customer location. The technique further involves, after performing the comparison operation, outputting a detection signal indicating that the path is flaky when the IOs-Over-Period metric falls within the predefined flaky path range and non-flaky when the IOs-Over-Period metric falls outside of the predefined flaky path range.

1459827803-ad33b1ec-10f1-473e-a676-c05023710e9d

Disclosed is an actuator device for an optical device. Accordingly, a low dielectric constant film having excellent resistance against chemicals and excellent moisture resistance is provided. The green body is reduced to smaller pieces thereby forming ceramic fragments. The base includes independently suspended idler rollers, and the drive rollers engage the idler wheels, so that at least a portion of the weight of the upper assembly is borne by the engaging drive rollers and idler rollers. A method for optimizing the use of an aqueous solution of an alkali metal hydroxide in a phenol recovery process uses pH measured to regulate the feed rate of the aqueous solution. , and a component S2 including a high-boiling point solvent having a boiling point of more than 100\xb0 C.

1459827804-476bf122-d3ce-4a16-9160-7f6c758828fd

A percussion tool is described and which includes a housing mounting a tool bit; a reciprocally moveable hammer borne by the housing and which is operable to repeatedly strike the tool bit; and a reciprocally moveable piston enclosed within the hammer and which imparts reciprocal movement to the reciprocally moveable hammer. The apparatus may include a memory, a QoS level setup unit, a transition condition setup unit, and a radio resource manager. A first horizontal slide element is slidably mounted to the upper base and is adjustably slidable in a first direction with respect to the upper base. The collectors may be used in conjunction with the aforementioned targets to obtain awards in a bonus sequence as described.

1459827804-4abc4880-97f5-427f-a4aa-c63721538b54

An image reading device in which a processing time required for prescanning and fine-scanning of a film can be shortened. The focused light beam is scanned across the surface of the photo-detector. Then the reactor vessel is carried out through an opening provided in a top portion of the reactor containment vessel. The filter assembly is also provided in fluid communication with the nozzle inlet, the suction generator and the dirt cup.

1459827804-658ce1da-3b95-4426-9af8-ee60cf54deb

The performance, thermal and power management system is configured to perform DVFS calibration, temperature compensation adjustment, aging calibration, and DC offset calibration in an IC. A method comprises: operating said voltage controlled oscillator in a first frequency band by switching a first capacitive circuit having a capacitance that varies with a tuning voltage; and operating said voltage

controlled oscillator in a second frequency band by switching a second capacitive circuit having a capacitance that does not vary with the tuning voltage. In addition, the authorization request may be transmitted from the POS server to a payment gateway. The clamping device connected to the ACT node may reduce the voltage on the ACT line during power down mode, whereas the clamping device connected to the RNL\* node may increase the voltage on the RNL\* line during power down mode to reduce sense amplifier leakage current through these nodes.

1459827804-a37a64ad-724d-4f10-8a80-696878e11be5

A system for dampening the vibrations experienced by a sensing line connected to a jet pump within a nuclear reactor pressure vessel. The system includes a memory coupled to a processor. The flexible hollow supporting structure is integrated with the flexible display panel and extends from the first end to the second end of the flexible display panel.

1459827804-da463957-59ff-4ad7-a7ac-caf5de3147cc

In a method manufacturing a silicon single crystal 8 according to an MCZ method, a flow rate of an inert gas flowing in a growth furnace 1 during growth of the silicon single crystal 8 and/or a pressure in the growth furnace 1 is altered according to a pulling amount of the silicon single crystal 8 to adjust an interstitial oxygen concentration therein. The ring member is resiliently disposed between the carrier and stop members. The storage device write cache limit comprises a maximum amount of write cache of the storage controller available to a storage device for a write operation. The covering also includes a series of parallel binder threads for attaching the first layer to the second layer. Further, the lens unit is coupled to the liquid crystal panel and is configured to guide the polarized lights with the second polarization direction to pass through for 2D display and to guide polarized lights with the first polarization direction into predetermined transmitting directions for 3D display.

1459827805-93948c97-fa7d-4fae-b7a3-a05f0a392e22

An adaptive filter suitable for fabrication on an RF integrated circuit and used for transmit leakage rejection in a wireless full-duplex communication system is described. A plurality of safety devices are attached to the window covering. Multiple embodiments are disclosed for alternate configurations of a first fuel injector, including an annular manifold and a plurality of radially extending tubes. At least a portion of the cavity is situated between adjacent blades. A plurality of phosphor layers are formed on the second substrate.

1459827805-94b01c37-f8a9-496f-bad0-084b0a55f04c

A speech synthesis apparatus appropriately transforms a voice characteristic of speech. The non-charging portion is capable of contacting the image bearing member while maintaining an electrically dischargeable gap therebetween. A spring-loaded latching mechanism is located in the female coupling and is automatically engaged when the male assembly is inserted into the female assembly, connecting the coupling. When the tip is removed from the joint, the electrical circuit is broken and the tip material may quickly cool to a temperature safe for human contact.

1459827806-41fc427e-1b85-45e6-b6d1-5c27e77f3a77

A mirror module for a vehicle component, for example a sun visor, includes a module frame, a mirror connected to the module frame and a having a mirrored surface and a mirror cover supported at the mirrored surface of the mirror. In case of a CCD with G-stripe or Bayer arrangement, the frequency divider divides the frequency of a clock by an odd number and the frequency-divided clock is inputted to the signal processing part. In the general formula, R1 is hydrogen, an alkyl group having 1 to 4 carbon atoms, or an aryl group having 6 to 25 carbon atoms. The slider's fly-height is established over the unaltered portion of the disk, then the slider impacts the deformable material. This is achieved by controlling the carrier injection into the laser diode in the vicinity of its facets in such a way that

abrupt injection current peaks are avoided. That is, the above construction can realize radio equipment which can stably radiate radio waves even under ungroundable conditions and, at the same time, can realize good characteristics even under low transmission output conditions.

1459827806-de3b93fa-290e-4e17-b5ef-92e7bdf54b57

The present invention relates to a partially-crystalline copolymer comprising tetrafluoroethylene, hexafluoropropylene in an amount corresponding to hexafluoropropylene index of from about 2. The interfacing modules automatically transmit orders from the OMS databases to the ETM and update the OMS databases in response to orders executed at the ETM. The control device increases a highest speed of rotation of the compressor if a temperature in the chamber of the refrigerator main body detected by the cooled state sensor is low.

1459827808-425fb2e0-fc75-4ed4-a98f-87663105b6c1

A graphical user interface for a portable electronic device includes an application display region that displays a current application context of an application and a navigation bar adjacent to the application display region. The filter contains an oxidizing agent that will oxidize the interferent gas but not ethylene oxide or alternatively a polymeric material that allows selective hydrogen bonds to the interferent gas but not ethylene oxide. An RF up-conversion block uses a TX local oscillator for generating analog RF signals for ordinary TX signal generation, and a different feedback LO for generating analog RF signals for RX phase alignment signal generation. The recording unit records the processed image data, in which the first additional information is embedded, to a removable recording medium, in a first image recording mode, and records the unprocessed image data, to which the first and second additional information are attached, to the removable recording medium, in a second image recording mode. An arm is provided at a pivot of an end of a link opposed to the link of the first parallelogram linkage such that the arm rotates in a restrained state of 90° relative to the link.

1459827808-8c467383-ddb8-4ff2-ba33-8e72b872af83

The invention is directed to improvement of a write element of a thin film magnetic head. The catalyst of the invention is a liquid titanium compound chelated with an imidazole ligand. A magnetic field response recorder wirelessly transmits the time-varying magnetic field to the sensor and wirelessly detects the sensor's response frequency, amplitude and bandwidth. Matrix Q is computed via the specified portion based on first inputs using the MGS process, where the first inputs include the matrix A and possibly a scaling factor  $\alpha$ . Transcoding instructions are defined using the matching pattern to locate and extract field values within web pages of the web page family.

1459827808-95aac614-bbae-412f-9416-77cbe5fbe9c7

A hermetically sealed package for electronic circuit components includes a generally hollow, titanium body, having a reduced thickness bottom wall/floor, whose interior surface is laminated with a relatively low mass, insert, upon which electronic circuit components are mounted. The air-blower mechanism includes a pumping device, a buoy, and an air conduit. The sheet-shaped base board 2 is a flexible base board capable of transmission and reception of the light and electric signals, in which a light guide 21 and conductor patterns 22 extended in an insertion direction 10, are formed. Edges representing implicit links are generated between distinct nodes representing distinct book content items in a weighted graph.

1459827808-d08ba0db-8981-4406-82b2-8c1d530033ea

A high barrier film and method of forming a high barrier film. The first refraction surface receives light discharging from the light source while refracting the same to form a first refracting light, the upper part of the first refraction surface further comprising a refracting structure for refracting the light emitted from the

light source. with agitation and then allowing the crude oil to settle for a period of time until the oil becomes stratified into the at least two layers. The first and second support member side walls define at least one generally horizontal slot when the support member is secured to the back-up wall.

1459827809-2591babd-ee52-4784-a1ac-c5b3065b9d6b

A pointing device is provided for reporting motion information about the pointing device. The synchronization unit comprises a first functional unit for performing a first signal processing function, a second functional unit for performing a second signal processing function different from the first signal processing function, and at least one signal processing circuit. It has a radiation receiving front surface and a rear surface. The database files generated by the survey software are available to the analyst for analysis and inclusion in the resulting training system analysis document. Data are loaded, processed and stored on the central storage system.

1459827809-b4c477bf-b31e-433f-b355-494c1765360c

A novel and useful mechanism and method for writing data updates to a data cache subsystem of a storage controller. The lattice structure includes two structural regions which are arranged on both sides of the waveguide ridge and are formed at a distance from the laser layer above the laser layer. The diode's polarity allows current to pass from the direction of the second input terminal. A pin locates the tool relative to the stator slide, and establishes a reaction point for forces applied by the drive block to the stator slide. Furthermore, a demand-supply scheme is planned and changed so as to maximize a profitability index that is calculated by using a cost regarding the production of a product that includes a material cost, a manpower cost, and an equipment cost, a stock management cost, a transportation cost, etc. In addition, the control unit performs control so as to cause a period from starting readout of the signal of the predetermined line to starting next readout of the signal of the predetermined line in the first mode to be the same as that from starting readout of the signal of the predetermined line to starting next readout of the signal in the second mode.

1459827810-48976f4c-1180-4510-9fc5-22932545d3c2

Base stations can remove inter-BS interference components from received uplink signals using downlink information communicated over a backhaul network. The ashing method uses a two-step plasma process involving a hydrogen-containing gas, where low or zero bias is applied to the substrate in the first cleaning step to remove significant amount of photoresist remnants and etch residues from the substrate, in addition to etching and removing detrimental fluorocarbon residues from the chamber surfaces. The fan shroud mount has a general profile defining at least one fan shroud mount slot aligned along a second axis which is perpendicular to the first axis of the fan shroud slot. An electrically powered steering unit is connected to the steering member for providing steering feel to the operator. A motor is coupled to the at least one circular track and capable of moving along the track in the tangential direction, to relocate the center of mass of the wheel on which the radar array is mounted. The electro-chemical deposition system generally comprises a mainframe having a mainframe wafer transfer robot, a loading station disposed in connection with the mainframe, one or more processing cells disposed in connection with the mainframe, and an electrolyte supply fluidly connected to the one or more electrical processing cells.

1459827810-626554ff-ca54-437c-bda2-aae1aa4bd665

A method and apparatus for automated spectral calibration of a spectroscopy device. The internal nodes and links from paths according to routing algorithms and the internal nodes provide data packets with a load-dependent marking. One idea of the present invention is providing a planar antenna in which the printed wired board of the mobile station is used. The second film is preferably a coating deposited over the ball and over the arm controlling the ball motion. The method further includes

using the processor to determine a set of summarization parameters based on the relationship between the viewer and the user and using the processor to reduce the number of images or the length of the video from the digital image collection using the determined set of summarization parameters to be viewed by the viewer. The PMR disk structure may include multiple soft magnetic layers with intervening hard magnetic layers and in between.

1459827811-114f7dc7-683d-4b44-9d5f-d567410e4e93

In one embodiment, a first wiring line is pulled out from an active area, and a short ring circuit is provided in a peripheral portion of the active area. The kernel may reside in a host that interacts with a secure processor maintaining content protection clients. The PDA comprises electronics for wireless communications and a contact information database and a means for coupling the handset to the PDA.

1459827811-1c8540bc-ffb5-455f-8525-1327db30abb3

A system and method for efficiently charging and discharging a capacitive load from a single voltage source. A processor may include a dedicated cache memory. Two or more discrete fixed beds can be disposed across a cross-section of the body. In this state, a treatment tool projected by a reduced amount from a distal end opening of the channel is captured on a light receiving surface of the image capturing element.

1459827811-366fce58-ab98-4f47-a955-9aa2e2ba280a

Transaction-level data and size of wallet data may be used to identify luxury merchants. The method comprises: forming CMOS source and drain regions, and an intervening well region; depositing a surface channel on the surface overlying the well region; forming a high-k dielectric overlying the surface channel; and, forming a gate electrode overlying the high-k dielectric. An enclosure extends around the water heater, with indoor air flowing between the enclosure and water heater to a duct for distribution. The polarization filter is configured to filter polarized light reflected from the surface of the medium.

1459827811-87ffef0c-166f-4fbf-a1df-2efc0b13fb60

An apparatus for sorting particles composed of a mixture of particles with differing physical and chemical characteristics. The method may be implemented for a query that has multiple possible forms of execution or outcomes depending on a run-time condition or element. In another aspect, the catch bumper and the bumper base can optionally be combined into a single catch bar bracket. In particular a discoloration layer including the metal sulfide is applied onto at least a portion of a base substrate.

1459827811-a7362d61-8c0e-4034-ab00-f424c8ae3daa

According to one aspect, a drilling rig carriage is adapted to move along a drilling mast, and includes a body structure, electric motors coupled to the body structure, and pinions operably coupled to the electric motors, respectively. An edge region of the sound-absorbing component be extrusion-coated with the plastic of the channel body in such a way that the sound-absorbing component is connected in a form-fitting way to the channel body along at least a section of its circumference. 50 mass % or more of a total supported amount of the catalyst component on the three-dimensional structural support is present in a region from the surfaces of the cell walls of the three-dimensional structural support to surfaces of the catalyst-coated layer. Time-series data on the fuel temperature of a predetermined average acquired by using the time-series data on the reactor output and a predetermined dynamic characteristic model is acquired. The second fixed part to which the harness is fixed and electrically connected is disposed within a battery upper surface area.

1459827812-393edc3a-0bdd-4801-a0ed-1cc8e5edde38

A cost-effective package is described that creates a visual impression of a packaged item floating within a frame. The tap assembly includes a tap faceplate, having at least one port. The asset tagging module is configured to receive information for an asset tag from the web browser, and to receive a selection of a location on the component to place the asset tag. This control can provide a translational shift in the operating characteristics of the transistor, and it has been found that this can compensate for ageing of the transistor, for non-uniformity between different devices, and for temperature variations. Multiple failures can be accommodated using multiple secondary arrays, each storing the address of a respective failed fuse, or a tertiary array which stores the address of a failed fuse in either the primary or secondary arrays. The structure comprises an active waveguide layer formed on a passive waveguide layer.

1459827812-d0034c53-07e1-4c3e-a950-1edcfca2762f

Methods for operating, such as methods for dispersing and clustering, robotic devices employ adaptive behavior relative to neighboring robots and external conditions. The laminated structure includes an array of foam spacers arranged with spaces between them, a layer of foam attached to the top of the spacers, a first insulating sheet on the layer of foam spacers; a conductive sheet on the first insulating sheet, and a second insulating sheet on the conductive sheet. Related techniques, apparatus, systems, and articles are also described.

1459827813-42d78029-51a2-4dad-814f-525dff59cd64

The present invention is directed to a series of polymeric citrate esters that have unique liquidity, and outstanding feel when applied to the skin. The system provides a local configurable resource for iteratively collecting computing performance information relating to the quality of service experienced by a computer user interfacing with a computer network. And a ultraviolet curable composite material is disposed between the substrates which is then phase separated to form polymer walls having liquid crystal directors fixed therein regardless of application of an electric field across the electrode layers, and wherein pixel regions are formed between the polymer walls. The car has movable coil stops to discourage longitudinal shifting of loaded coils. A frequency generator generates the carrier wave frequency to the signal antenna. A key to the present invention is the supplemental compressor and the associated heat exchange equipment is separate and distinct from the LNG-based liquefier.

1459827813-43a90d0f-2462-4e90-90ac-c1473c8acca0

A highly integrated radio front-end module. A first dispensing head incorporating a first nozzle and a second dispensing head incorporating a second nozzle are provided and the substrate is fed along the first axis to a position where the first and second dispensing heads are located. These each serve to accommodate one corrugating roller unit. The resin package unit and the insulator block are combined with each other while the leads for contact are fitted into the groove portion, and a portion of the leads for contact fitted into the groove portion in the insulator block forms a fit connection unit.

1459827813-53850fb8-b7cd-4b91-b699-0696ef7450dd

An information processing apparatus includes a first casing and a second casing hinge-connected to the first casing via a hinge part. Execution programs of the POS system are stored in the host unit, and each POS terminal unit is not provided with any POS system execution program, and has at least a transmission data generating function and a communication function for data exchange with the host unit. A cylindrical space is formed between the outer peripheral surface of each of the sheathed heater and the case body. A resistance heating element is used to produce a heated thermal mass. The sensor includes an electrode and a nanowire resonator.

1459827814-1136d170-1e86-462e-90a1-246f545bf54a

An integrally plastic outlet pipe and making process thereof includes the steps of:

a. The method initiates with receiving a video bit stream. Each inter-block bit line connects a middle diffusion wire for one of the memory cell units of first block of the separated blocks and the middle diffusion wire for one of the memory cell units of the adjacent second block lying on the other end side of the diffusion wires of the first block. An additional safety measure of the cap may be to completely darken or whiten the vision of the pet such that the pet is temporarily impaired from seeing anything. The technique of this disclosure is applicable to a prediction device which, for example, acquires position data and predicts a predicted route. A method in accordance with the invention can be used to sever copper traces without damaging adjacent material or creating conductive bridges to adjacent traces.

1459827814-837c7a1c-138e-446d-9219-10ece49a2b03

A semiconductor device including: a semiconductor substrate having an integrated circuit and a penetrating hole; an insulating layer formed on an inner surface of the penetrating hole; and a conductive section formed on the insulating layer to penetrate the semiconductor substrate and having a recess on an end surface. A platen roller forms a nip between it and the thermal head for pressing a stencil. , at a time when an optical head initiates a seek operation, with an adder, this latter value being stored in a readout power value storage circuit, because an optical recording medium readout apparatus makes it possible to cause the value of the readout power at the time when readout power control operations resume, i. A method for the preparation of a clay gel matrix is also revealed.

1459827814-85abf487-a523-43fb-9455-c26b0732513f

Method of printer color error correction employing the rapid alternate viewing of a scanned original color image file and an image file formed by scanning an image printed by the printer whose error is to be corrected. When in an ac mode the output is unbalanced, or the balance may be controlled. The intake gearbox is drivingly connected to that at least one feed roller. Before a substrate is subjected to exposure processing by the exposure device, the substrate is transported to a washing processing unit by the interface transport mechanism. Such coupling decreases the effective inductance and increases the effective series resistance in the improved resonant circuit, both of which increase the communication bandwidth.

1459827814-94a51e9f-6357-4b4a-8ac7-4143b1efd5f2

In one example, a method comprises rendering a dashboard assembly user interface comprising a canvas section and a resource section, the resource section comprising one or more resource content elements, and the canvas section comprising one or more dashboard content elements. The number of commutator segments is higher than the number of rotor teeth. , the non-aqueous electrolyte additive decomposes and a part of the decomposed additive polymerizes to form an insulating film on a cathode surface, and a part of the metal reacts with an insulating film formed on a cathode surface to improve thermal stability of the battery, thereby improving safety of the battery.

1459827814-c26f6879-555c-453c-a9c9-59d124bba4c3

A method of extracting neural stem cells from a living subject, comprising the steps of introducing magnetic nanoparticles into the subject, targeting the neural stem cells with the magnetic nanoparticles to form magnetic nanoparticle-targeted cells, isolating the magnetic nanoparticle-targeted cells, extracting the magnetic nanoparticles-targeted cells from the subject. The detecting an abnormal BP condition can include detecting various forms of hypertension or hypotension. for one hour under a pressure of 30 kgfcm<sup>2</sup>, an elongation percentage of the interlayer dielectric film in a planar direction is 0. The power supply regulator is coupled to regulate the reflected voltage across the primary winding, thereby regulating the output voltage across secondary winding.

1459827815-7c37658e-9361-40a1-a01a-a459e625bde3

A modeling method of neuro-fuzzy system including a rule-defining process and a network-building process is disclosed. The invention is applicable to affect the distance or speed measurement of targets by means of laser-based measuring instruments, where the measurement procedure of the respective laser-based measuring system is jammed or even prevented. The displacement accuracy of the VSDCM is better than that of the conventional electrostatic micromirror and the low driving voltage is compatible with IC components. The method can involve forming a semiconductor layer comprising semiconductor elements such as silicon particles over a conductive layer; forming first metal-semiconductor compounds at a bottom surface of the semiconductor layer; and forming second metal-semiconductor compounds at uppermost boundary portions between the semiconductor elements.

1459827815-a193c9a5-ba60-45e5-b755-4c8538badf30

According to some embodiments, a borehole deployable apparatus is described that can be used to generate strong vibrations in a subterranean rock formation. A roof is disposed on the upper end of the sidewall so as to cover second chamber, the roof having a first inlet formed thereon. Also in response to low battery voltage, a crowbar circuit loads the hearing aid battery with a loading circuit element. Based on identification of data or events in the host application, the companion application may obtain information characterizing or providing a context for data provided by the host application. If the one virtual machine needs additional resources, the one virtual machine is automatically cloned.

1459827815-b21fbe61-5626-49eb-9333-f7f1b9c377fb

A system for creating an anonymous social gathering of 3 or more persons. 25 millimeters, a Figure of Merit of greater than about 0. The semiconductor device further includes a second opening having a second width in the molding material with the second width being greater than the first width.

1459827816-27e41fd7-a688-4475-a474-8ff93a7bd9be

Swimming goggles has a left frame and a right frame, a nose support connecting the left frame and the right frame together, eyeglasses received respectively in the left frame and the right frame, and a head strap movably received in outward sides of the left frame and the right frame. The semiconductor device includes an auxiliary mark including an inner mark having stepped portions with four sides as stepped portions to be detected and an outer mark having stepped portion as stepped portions to be detected, provided approximately parallel to stepped portions along four sides of the inner mark. The method further includes, in response to selecting performing optical stress generation and detection, applying at least one second control signal to the controllable retarder, and performing optical stress generation and detection using the modified light beam.

1459827816-36f0b357-49f6-441d-b964-238aae47ac2b

A mounting buckle for a safety helmet includes at least one mating member configured for attachment to a V-shaped strap having an apex, the apex of the strap being substantially flush with the abutment surface. A vehicle controller monitors input from, for example, an inertia switch and electric motor generator conditions and can disconnect the output shaft from the drive wheels in predetermined vehicle conditions such as during a rear-end collision, or abnormal electric motor conditions such as over-torque, over-temperature, or over-current. A planarizing process of the present invention employs a fixed abrasive tool containing substances harder than the film to be planarized in a content of 10 ppm or below and having a mean pore diameter of 0. Time saved in that one person coordinates two blower tubes, verses the old way of two people trying to think together in a fluid flow of movement as to effectively moving the debris together. Such tire component may be, for example, a circumferential tread having a running surface intended to be ground-contacting or a sidewall insert. The link plates and connecting pins are arranged randomly along the length of the chain.

1459827816-616a1150-06c6-4d36-99ad-5289256316e5

A method for removable attachment of a mask to an IOL to protect a sharp peripheral edge of the IOL optic during polishing. Intra-instruction fusing can increase cache memory storage efficiency and computer instruction processing bandwidth within a microprocessor without incurring significant computer system cost. A message signature is incorporated within the signature data. Preferably the column provides the only support of the turbine and the column is not supported by guide wires. The plurality of network identifiers are visually displayed for user selection, and at least two of the network identifiers may be substantially the same.

1459827816-bb68072d-58d8-4b1c-b3a4-6e86142361dd

Protection and working routes are determined responsive to shared resources. The system includes a foot motion sense module for sensing a user's foot motion, and collecting sensor data based on the user's foot motion, and the portable equipment for receiving the sensor data based on the user's foot motion, recognizing the foot motion, and performing a portable equipment function in response to the foot motion recognition result. The layer is composed such that the amount of the lithium carbonate is 0. The surface of the sensor portion is joined to the first surface of the cap portion such that the sensor structure is sealed between the sensor portion and the cap portion. The memory stores a plurality of audible messages. The biological condition may be a naturally occurring physiological state or may be responsive to treatment of the subject with one or more agents.

1459827817-0aeca616-47c1-4661-ab24-9b0132d79bd3

An embodiment of a cutting tool positionable in a tubular for creating a cut in a tubular includes a body securable within the tubular and a cutting head having a nozzle for discharging a pressurized cutting fluid, wherein the cutting head is rotationally and axially moveable relative to the body. During a polishing process, an appropriate amount of a polishing agent is dropped onto the readout surface of the optical disk by a polishing agent supply pump to continuously supply the polishing agent to the interface between the optical disk and polishing pads, while a polishing water supply pump is operated to replenish the polishing agent with moisture evaporated by the polishing heat. An image recorded on a record medium is displayed in the state that an end portion of the power supply housing section and an end portion of the record medium secured to the cutout portion are placed on a surface where the lighting apparatus is placed. The invention finds use in a variety of drug discovery, clinical and therapeutic applications.

1459827817-3c5ba81d-98b8-4d38-a1f0-08b49780853a

A non-volatile semiconductor memory device with good writeerase characteristics is provided. R2 is a member selected from the group consisting of H substituted or unsubstituted alkenyl, substituted or unsubstituted arylalkyl and substituted or unsubstituted heteroarylalkyl. Then, the measurement results are Fourier transformed to obtain the oscillation frequency of the plurality of oscillation circuits for evaluation at the same time. The conductive elements are configured to form a substantially round cutout region surrounding the signal bond pad.

1459827818-202fbffe-cdf1-47ff-bbf1-e2d19914d248

A dual rate receiving device is provided, which is applicable to an optical transceiver module, and includes a dual rate optical receiving component, a channel switching circuit, a low-speed limiting amplifier data path, and a high-speed limiting amplifier data path. The control system has a tool recognition device configured to generate a recognition signal corresponding to each of the removably attachable work tools, and at least one fluid actuator configured to move at least one of the plurality of removably attachable work tools. A cylinder lost motion connection facilitates movement of the baskets over ground irregularities and obstacles without operation of the cylinders. The internal flag status is analyzed if the first adapter is de-registered from the shared device. Optionally a tuning

mass can also be used to tune the vibration frequency. The charge storage node has a protrusion at the first side of the trench adjacent to the sourcedrain region and also has a top surface portion laterally adjacent to the protrusion.

1459827818-91cbf631-9e76-4d77-877f-f852a8547834

The invention relates to a mounted optical component and also a method for the production of mounted optical components. The chip package includes a first coupling portion and a second coupling portion that are coupled to each other on edges of a lead frame for mounting a chip thereon, and thus a package module is easily embodied by coupling the first coupling portion and the second coupling portion to each other. The system receives the information, detects events in the information, interprets the events, and determines implications of these events. Also, by determining whether a user requesting to print the XML document has an access authority to the XML document on the basis of the policy information, it is possible to allow the printing job only to the user having the access authority. A translation vector and a scale vector are computed and applied to the set of transformed vertices to obtain a ghosted set of vertices. The refractive index of the test mixture is measured and then correlated with the refractive index of the first liquid to obtain information about the volume of first liquid dispensed.

1459827818-e3d89244-02c5-4e7a-9877-295581c43aca

An apparatus and method for testing a semiconductor device in an AC test regime. Such void-based irregularity formation is prevented by dimensioning the mold cavity so that the thickness increases in such direction at less than a threshold rate. The plate includes a plurality of first adjusting apertures, at least one pair of second adjusting apertures, and at least one pair of third adjusting apertures.

1459827819-4171cf71-ff26-4bca-aa5b-7a214533c2a8

A cooling apparatus and method of fabrication are provided for cooling one or more heat generating components. The system can not only breakthrough the limit of the self-character of the amplifier, but also decrease noise in course of adjusting the sensitivity of the camera module. Cuttings are sized and chemically prepared within the same tank and fed directly to an injection pump for discharge to cuttings transport tanks or injected down hole. The searcher may then perform searching for a scrambling code in accordance with the one or more hypotheses.

1459827819-aa477b1b-8d8d-4b12-a9c4-b6fec4569cb3

An inflatable air cell pressure transducer. In one aspect, a method includes receiving a request for an electronic map segment for a geographic region, with the request identifying a geographic entity to be highlighted in the requested electronic map segment. Rigid spaced hooks extend from a body of the inner belt and form upturned cavities that engage with similar hook portions formed on an associated inner trim panel. Generic scores associated with the search results are modulated by the user profile to measure their relevance to a user's preference and interest. The present invention also addresses the relative location of the etch stop layer in the polysilicon region and a variety of structure materials and oxidation methods. The present invention relates to peptides and peptide analogs of heat shock proteins capable of interacting directly with dendritic cells.

1459827819-ba3ac9c4-c7c1-4be7-a7de-eb61bdf6dc88

A system, method, and apparatus for networked print management without the presence of print servers. An adjusting unit is received in the casing and has a threaded rod which can be rotated to move the adjusting unit. The wedge member and the coupling portion are formed of a synthetic resin material. The fastener assembly includes a central web and fasteners that wrap around the ankle of a wearer. Accordingly, the indicator is configured to provide an electrical response as a direct indication of a failed sacrificial member and as an anticipatory indication of failed piping.

1459827819-e43fd2ba-e9f8-4ef7-b73b-debdc8040363

A portable therapeutic device and method of use generate longitudinally propagating ultrasound and shear waves generated by such longitudinally propagating ultrasound to provide effective healing of wounds. For this purpose, the synchronization channel carries a repeated detection word together with system information between repeats of the detection word. Signal is provided, with no secondary coil being provided.

1459827820-0552f1db-4c32-49db-85c5-d9741419573c

A communication system comprises evolved base nodes communicating via an over-the-air link with low mobility user equipment. The chair includes a chair frame having two spaced leg structures and a top ring mounted to and supported on the leg structures. A polyvalent metal salt is then added to stabilize the acidified activated silica. A release target of the modified limiter is a highest peak within a look-ahead delay. This configuration allows local I/O line repairability with fewer redundant elements, and shorter physical local I/O lines, which translate to improved speed and die size reduction.

1459827820-12b04b27-60d7-4ca8-9e98-48bfdf0b51c8

A light-emitting diode with which the LED chip will not be destroyed comprises an LED chip 40 mounted on plate-shaped wiring means 60 inside a light-emitting diode. The steering system includes variable gear ratio steering apparatus, a first ECU for controlling the apparatus, an electric power steering apparatus, a second ECU for controlling the apparatus, The steering system further includes a steering wheel angle sensor and a steering wheel angle ECU, which are integrated. An anchor plate is secured to the rail, and adjustment screws are interconnected with the rail for adjusting the elevation of the rail relative to the base plate. The invention is therefore intended to provide a separator having an improved ammonia trapping property. And a network control module which accesses the World Wide Web while transmitting the language request signal to determine a browser language. The user pre-wraps a fragile object in the pouch, peels the cover panel from the attachment block, and then places the assembly into a box or other container where it adheres to the bottom of the container.

1459827820-670668f0-5a8f-42b8-9976-b86a86e2726f

A method of generating and verifying a memory test is disclosed. A second plate has a second coolant face with a second set of coolant channels formed therein. A monitoring unit monitors the scattered laser beam as a two-dimensional image information. In addition, the portable x-ray viewer is provided with an automatic control for controlling the viewer. In accordance with the invention it is proposed that the means for fastening the isolating elements are embodied to be a single piece with the pole housing. The first detector system can be moved in the circumferential direction of the open space by a movement device.

1459827820-6d52812a-9216-42f9-8a19-5574dcdbbc9f

A system and method for collecting and analyzing integrated circuit test vehicle test data by identifying various blocks of circuitry through at least two different intersecting test paths. An open-circuit electrical conductor is shaped to form a two-dimensional geometric pattern that can store and transfer electrical and magnetic energy. The pixel electrodes have a plurality of protrusions and slits, and a dielectric layer with a planarized surface covering the pixel electrodes. A second lightly doped region is formed in the bulk substrate. Subsequent masks are produced by performing an address-sensitive decimation of the former mask.

1459827820-830b9dc0-f090-4fa6-8b0d-0b2805a6deb5

A method and apparatus for monitoring a process by employing principal component analysis are provided. A relatively non-wettable region of the surface modifier coating is formed around the light-emitting region. The automatic exposure mechanism projects an orientation vector into an image plane of an image sensor.

1459827821-24a7cd1b-8d6c-4913-b6e2-6d725767387a

A mobile phone includes a body and an antenna array that is coupled to the body. The object of the present invention is therefore to create an arrangement enabling simplified manufacture and assembly to be achieved. It is attached to the animal with a fastener portion secured around the ankle portion of the animal's leg.

1459827821-46ad4e85-a4a7-4d3f-b23e-48157cf6e27a

An IP usage pattern of a first computer system is monitored by a second computer system that is remotely located from the first computer system. The disk-error detection system may include a processor in communication with the storage disks. Equalization can be accomplished partially or wholly in the analog domain and digitally controlled by a digital control loop. Parallel data distribution and collection through forms of multicast and packet-gather operations are also supported. The process is fast, environmentally benign, and highly scalable.

1459827821-779c0f1b-7ca7-4fc2-a025-6223060ea5af

The invention relates to a computer-implemented method for medical diagnosis support for patient data of a patient through a data processing system, wherein the data processing system comprises a graphical user interface and a database containing rules for calculating diagnosis risks. The preconnectorized outdoor cable includes a cable and at least one plug connector. Control information transmitted from the base station to the mobile station includes Transport Format Combination Indicator, Transmit Power Control, and a pilot symbol. For this purpose, it is sufficient when the function variable value transmitters transmit constant power signals over the multiple-access channel in a channel estimation phase. A one-bit digital signal that could develop an overflow depending on its modulation degree is attenuated at a stage upstream of the input of the converter, and the multi-bit signal is amplified at a stage downstream of the converter to avert a clipped state between the stages. The data, including musical data in MP3 format, are automatically downloaded at high transmission speeds from the central storage system to the mobile remote system.

1459827821-bb160afe-b63c-402b-963b-c2414fe56f16

This invention describes the preparation of fatty acid esters of glycerol formal either by a triglyceride transesterification process or, alternatively, by an esterification process of fatty acids previously obtained from the hydrolysis of triglycerides, with glycerol formal in the presence of an acid or basic catalyst. The wedge tip releases the slide fastener's auto-locking member at the pull tab hole to permit movement of the slide fastener to close an opening of a stuffed toy animal. The base is part of a frame positioned above a wellhead. The gaming machine also includes a game controller in communication with the game display and the network interfaces.

1459827822-0bdd405b-64da-4c97-a956-696178a385f9

A component material for an electronic's casing comprises wood or woody material that has two surfaces, one of the surfaces of the wood or woody material which is carbonization-treated to provide a carbonized layer on one surface of the casing, and the other surface of the wood or woody material which is not carbonization-treated. The heater is separated from the nozzle by less than 5  $\mu\text{m}$  at their closest points and the nozzle length is less than 5  $\mu\text{m}$ . The ends are fixed to side frames on the vehicle body side to form impact absorption members.

1459827822-73970d35-b468-469e-a604-4659206077bd

A truck bed extender including an elongated support adapted for securement in a trailer hitch mounted on a truck, and a shorter upright support pivotally mounted at the opposite end of the elongated support, for pivotal rotation from a collapsed position generally alongside said elongated support, to an upright position extending upwardly away from said elongated support. A sidewall of the passivation

layer is covered by the molding compound layer. In addition, the invention relates to a polyacrylonitrile-sulfur composite material, a cathode material, an alkali-sulfur cell or an alkali-sulfur battery as well as to an energy store.

1459827822-77904dd2-20a5-49c9-bc51-0bda18f4bcc6

An instrument interface of a robotic manipulator and a surgical system including the instrument interface are provided. Although a single flux quantum circuit can fabricate a high-speed sequential circuit with ease, the initialization of the circuit is required for guaranteeing the normal operation of the circuit. The pair of intersecting cutting planes define an inspection line at the intersection thereof, wherein the inspection line is swept through a selected area of the workpiece, thereby collecting inspection data for the workpiece. The suturing arms each have a proximal end interconnected with the elongated base member and an opposite distal end.

1459827822-8064bbc2-51c7-486f-83a4-20d5a2b769b6

A branch graft stent system includes a tubular primary graft having a branch graft opening which when deployed is located in alignment with a side branch vessel emanating from the primary vessel in which a branch graft is deployed. In a follow-up examination wherein the region of interest is again placed in the imaging volume, a follow-up dataset of the region of interest is registered with the apparatus operated with the stored, first set of operating parameters and the follow-up dataset is stored. The sulfide-containing polythiols of the present invention can be especially useful in polyurethane compositions for the manufacture of ophthalmic lenses. A third Active RFID tag is associated with a second container for the first containers. The method further comprises flowing the gaseous precursor mixture over a substrate under chemical vapor deposition conditions to deposit a blanket layer of epitaxial SiGe onto the substrate, whether patterned or un-patterned.

1459827822-d0430fd6-0f13-48e0-8568-e1c6b86a3599

A solid state imaging device includes an array of active pixels and an infrared cut filter formed over the sensor. The barrier layer in the via line region is initially thicker than the barrier layer in the via hole region, prior to being etched during an etching process due to varying selectivity of etching rates between the via hole region and the via line region. When the content being searched matches any of the rules programmed in the Programmable Intelligent Search Memory action associated with the matched rule are taken. The audit opinions of the set of risks and of the set of risk controls are in turn used to evaluate the set of processes associated with the set of risks. The area of the MT pulse waveform is set to a specified value equivalent to the conventional. The increased thickness of the buried dielectric layer may reduce back channel effects in devices formed on the substrate having trench memory structures.

1459827823-226a39f8-5a53-49e9-a43f-95f8919c02ab

An apparatus for detecting a location of conductive pins with respect to a circuit board during an assembly process using a press tool to mate the circuit board and the conductive pins includes a detector housing holding a plurality of switches aligned with corresponding conductive pins, wherein the detector housing is configured to be mounted to the press tool used during the assembly process. The tool is preferably constructed of a material that is harder than the substrate so that a depression can be readily made therein. A method and apparatus for co-injection molding of plastic materials for the formation of the plastic garment hanger construction are also disclosed. An associated kit, device, and method are provided. The method comprises the stage of regulating the supply voltage as a function of actual operating conditions monitored in the vehicle using the automatic transmission.

1459827823-3218654d-10c4-4b42-8398-15a129352778

A gas filling system includes a gas tank ; a gas filling device that fills gas into the gas tank ; and a controller that calculates a temperature increase  $\Delta T$  and a pressure increase  $\Delta P$  in the gas tank during a predetermined period of time that elapses from a start of gas filling. The film trap includes an image aperture and a first and second trap rail assembly. The internal separator forms a first compartment and a second compartment within the package. Coefficients for the EC estimation filter are then generated based on the digital RX signals recorded during the two training steps. The irradiation with ultraviolet ray 3 is conducted in the presence of oxygen and hydrogen or in the presence of ozone and hydrogen. The output voltage of this voltage conversion circuit is determined according to the ratio of the pulse width to the pulse period of the pulse signal generated by the pulse generator.

1459827824-013e83ff-1c5c-4192-b47f-50a00a6ab1dd

RFID tags to provide a relatively low power and power conserving wireless communication system to dynamically and automatically transfer all preselected data developed in designated digital devices to a centralized data processing system. Each converter is a self-commutated converter with power semiconductors. A scheduler is configured to schedule, using the plurality of scheduling nodes, respective transfers of the data packets from the plurality of queues. In that case a stroke of the hydraulic adjusting element for the first elevator cage for adjusting the first elevator cage in a first adjustment direction is converted into a stroke of the hydraulic adjusting element for the second elevator cage for adjusting the second elevator cage in an opposite adjustment direction. The opening can be sealed via a cap or plug to effectively contain the used motor oil. The blood volume and wall motion modulates the electric field, which is detected by passive electrode sites on the preferred catheter.

1459827824-65e78e70-4be0-4814-84e7-3e3748862436

Methods for detecting BoNTA activity in a sample, methods for screening molecules able to compete with BoNTA receptor binding, methods for reducing BoNTA activity in a human and methods of marketing a neurotoxin capable of selectively binding to FGFR3 to a governmental or regional regulatory authority. The aqueous tire wheel cleaner composition contains an alkylene glycol, a salt of dialkyl sulfosuccinate, and as surfactants ethanol amine and an ethoxylate phosphate ester. A separately detectable internal testosterone standard can be provided in the sample. , with reference to a database, and thus the position of the vehicle, can be determined. The optoelectronic modules may include means for optical and/or wireless communication.

1459827824-ace7da01-0bfa-4d78-959a-dfd1ff3833b0

A method for manufacturing a semiconductor device. The first and second entities may use the key pairs to encrypt, decrypt, or sign and authenticate communications between the entities. The squeegee cut tread exposes the outer surface to the snow surface in the closed position when the ski bottom is in a non-flexed position. A machine control comprises a computer system according to the invention. An active power detector detects an active power of the synchronous generator. A surface flow generating device is positioned to direct a fluid stream to break up solid contents present in the region.

1459827825-012b299d-d299-472d-8394-4f489cd7b868

The present invention discloses a software development system for WIKIs including a WIKI server, a BLOG server, and a data store. Setting information by the user on access between a first management unit including at least one device of said plurality of devices and a second management unit including at least one device of said plurality of devices is accepted. Trailers containing freight are assembled into trailer assemblies using specialized dollies.

1459827825-44e45eed-41e4-4a99-afaf-00ab88641993

A computer-controlled robotic platform with a collapsible lifting arm that positions a non-destructive inspection sensor for scanning inside tunnel regions of a composite structure such as an integrally stiffened wing box. The resultant free flowing granular food product comprises a swelling powdered food material having a relatively large mean diameter and a relatively narrow span in diameter distribution so that the granular food product is dispersible by simply pouring it into a hot liquid. The linear guide is coupled to a fluidic spring and/or damping element which forms a load-bearing constituent part of the revolute joint. It can reliably prevent an operation error of operating the image forming section with the waste toner conveyance end sections left in an open state as the stay of the cover presses the first through fifth shutters when a waste toner box is not mounted. These registers define translation windows within which a transaction will be claimed and translated to the destination bus interface. The invention further provides a modified APP protein and associated nucleic acids, peptides, vectors, cells, and cell isolates, and assays that are particularly useful for identifying candidate therapeutics for treatment or prevention of Alzheimers disease.

1459827825-4a667bde-b5fe-40e9-93d6-ad57be66c8fd

In accordance with an embodiment of the present invention, control device and method are disclosed for reducing unnecessary data backup and restoring operations and increasing data read and write speed in a flash memory. Circuits such as a central processing unit and a memory, necessary to drive an electric device, are formed using single crystalline semiconductor integrated circuit chips. Data may be managed by resolving conflicts in the primary data as between the one or more application providers. The injection drug in each housing portion is sequentially delivered one by one by rotation of the rotating body.

1459827826-7f63c790-ee7a-4333-a566-ce6da34a257c

A deposition process for coating a substrate with films of varying thickness on a substrate can be achieved. The first level, second level, third level and fourth level form different portions of the termination identifier. The two blades may be of different lengths and, by suitable geometry and arrangement of the blades or of magnetic elements, the shorter of the two blades exerts a greater pressing force on the panel with its cleaning edge than does the longer. The trusted third party establishes a credit score for the buyer. The interposer may also be electrically coupled to the IC die.

1459827826-a53ce2db-575b-4fa8-ab38-3e6a3caaba5e

A system for the conversion of digital phase shift keying signals into digital amplitude shift keying signals. The multi-antenna structure includes a set of  $n$  antennas with beamforming capability. The control apparatus comprises a haptic input mechanism configured to provide haptic feedback responsive to a push input, and an integrated touch sensitive display forming a surface of the haptic input mechanism, wherein the touch sensitive display comprising a touch-sensing mechanism. As further log records are processed more information about previously unidentifiable relationships is determined.

1459827826-ae828d8c-112f-4362-b3b0-90c28d38f98e

System and methods may calibrate an AC rms voltage applied to a coronode of a charging device to achieve a predefined operating current at a target value of DC shield voltage. In accordance with the invention, the radio antenna is a planar antenna and consists of one carrier part of an electrically insulating material, of a coating applied thereon and of two spaced coating feeders having an electrical connection to the interstitial coating. The nut middle includes a threaded central bore suitable for threaded engagement on a threaded installation bolt, as well as a plurality of ratchet gears on an outer surface where each gear has a respective first slip surface and a first drive surface. The switch is turned on when the control signal is in the first state to couple the power source to the battery, and turned off when the control signal is in the second state to decouple the power

source from the battery. First and second protection diodes are connected between the base terminals of the first and second bipolar transistors constructing the input differential pair and the ground potential, respectively. Each data field in the primary database requiring anonymization is substituted with the anonymized value.

1459827826-bf4ba16c-f964-4516-8801-acfed89af107

A mechanical-puffer-type arc-extinguishing chamber includes a fixed main contact, a movable main contact that moves on an opening-and-closing axis in a connectable and disconnectable manner to and from the fixed main contact, and a mechanical puffer chamber that is provided in the movable main contact and blows compressed insulation gas to an arc. One example power converter includes an energy transfer element coupled between an input and an output of the power converter. Such early detection can prevent routing congestion problem that would be too expensive to fix later. A fluid valve is coupled to the processor, and is configured to allow an amount of fluid to exit the fluid region associated with the volume of the air region.

1459827827-83ca84f8-20ad-4f98-bd73-7bd6ba1469c3

A slide stop device of a hexagonal spanner serves for preventing a rounded edged inner hexagonal screw to slide as the hexagonal spanner drives the inner hexagonal screw. An RF power amplifier includes transistors, and a transformer as the output matching circuit. A communication section outputs the extracted analysis object information to the outside. The area of the arm which engages with the helix from the rear has an end area which is disposed on the rear side of the ear when the arm is attached.

1459827827-b23facdd-9f0d-48cd-ae43-ace1b7345fa9

Provided are a novel fullerene derivative which can adsorb quickly and efficiently an allergen which may cause a pollen allergy without releasing the allergen again, does not contain a metal or the like which may cause a harmful effect to a human body, and is easily applicable, impregnable, or chemically bondable onto surface of various materials: and a process for producing the same. An engine torque request module determines an engine torque request based on said adjusted pedal and an engine speed. The system includes a parallel data bus with sharing bus masters residing on each processing module decreeing the communication and data transfer protocol. The gasket includes a compressible strip of electromagnetic interference limiting material.

1459827827-f02bc132-745a-4bce-869a-470f25499d63

A method and system for coordinated interference suppression in a communication system. A control unit controls at least one of a first fuel flow rate of fuel and a first air flow rate of air based on the first frequency analysis result for the plurality of frequency bands. The untrained high-speed interface is in communication with the memory interface device.

1459827828-3937c702-2582-4db7-a9c3-8c84b634ef5a

A semiconductor package includes a lead frame having an interior region and leads surrounding the interior region, an integrated circuit, a region of insulating material, and a power bar. A key component of the invention is the use of optical imaging technology in combination with projective optics to make this revolutionary technology work. The processing apparatus stores the result of executing the processing in a memory if the connection to the processing request source is disconnected before the end of the requested processing.

1459827828-7a82867d-2033-40ca-8604-c1023a2f20ac

A device for satellites is associated with heaters that are turned on when the device is turned off and turned off when the device is turned on. Element end, features a contour, including element top surface segment, extending to bend, then

defining a tongue element extending downwardly along an incline, to inverted bend, which defines a tongue side having a tangent. The network access device communicates with the management device through the distributed network to control loads at a remote location. Moreover, the conductive layer also includes a dopant, and the dopant diffuses substantially to the surface of the top side of the conductive layer to form a dopant oxide layer when the conductive layer is annealed at the predetermined temperature and the dopant is exposed to oxygen. A source packet having a four byte TP\_extra\_Header attached to a 188 byte transport packet is generated, 32 source packets of 192 bytes each are collected, and aligned units generated equivalent to a three sector portion of data are recorded or reproduced on the recording medium. The methods comprise reducing the pH of a culture for a period of time and then raising the pH of the culture, wherein the culture comprises the presence of a first acid and the culture is contacted with a second acid to reduce the culture pH from a first pH value to a second pH value.

1459827828-896d0e24-cc99-4c4e-89ba-7967c1f5d08d

The invention relates to a method for preparing a sulphoxide compound of formula either as a single enantiomer or in an enantiomerically enriched form, comprising the steps of: a) contacting a pro-chiral sulphide of formula with a metal chiral complex, a base and an oxidizing agent in an organic solvent; and optionally b) isolating the obtained sulphoxide of formula. In an optional embodiment, wagers may be received prior to commencement of the game and/or at the intermediate point and resolved at the end of the game. Accordingly, an image is displayed on the standby screen even in a blank period that a TV image cannot be displayed well because of a preparation for displaying a TV image right after the transition to the standby condition, thereby promoting utilization of a TV broadcasting through the mobile terminal. As the player plays music, inputting potentially unacceptable notes, the inputted notes will be converted to musically acceptable notes with reference to the currently presented chord in the chord progression. The nanocapsules produced by the methods have been shown to have long-term stability, high cell penetration capability, low toxicity and efficient protease-modulated specific degradability without affecting cargo protein function.

1459827828-a08fd6b9-6b28-433f-96b8-326b8e75c137

The invention relates to an imaging member and a method for use therewith comprising an imaging layer and a base wherein said base comprises a closed cell foam core sheet and adhered thereto an upper and lower flange sheet, and wherein said imaging member has a stiffness of between 50 and 250 millinewtons and is conductive. In an embodiment, a service network receives a notification from an access network for a completed repair at the access network. The reference signal is sampled at the sampling rate, and a digital measured reference signal waveform is formed. Retention to the teeth is provided by adhesive on rear adhesive surfaces. One or more advertisements are requested for placement in the advertisement slot. The technique may further vary the width of the tracks.

1459827829-5ab5d062-c36b-4b33-a13b-17a15bcfe2b9

A foreign substance inspection apparatus includes a light projecting unit, a detector which detects the intensity of scattered light of light projected onto the surface of an object to be detected by the light projecting unit, in association with the two-dimensional coordinate position on the surface, and a processing unit. A headrest support secures a bun and is pivotally secured to the bracket in a forward biased direction. In addition, the server updates device information in the memory by requesting the image forming apparatus for the device information of the image forming apparatus in a case where the server shifts to the power saving mode. In an alternative embodiment, an anchor is provided on the distal tip for engagement with the far cortex of the bone.

1459827829-aaf44743-af27-4538-91c9-caaec43cb021

A method is provided for securely fitting an orthopedic brace to the body by means

of a plurality of straps, strap locks, strap attachment members, and strap connection members. The first electrode and the second electrode are made of corresponding different materials in chemical potential for hydrogen gas. The control wall has a distribution path. There is thus only required a very limited stationary sub-floor with a manure collecting device, i. , a pressure of from 1 to 50 kg/cm<sup>2</sup>, an H<sub>2</sub>O ratio of from 180 to 1800 liter/liter, and an LHSV of from 2 to 10 hr<sup>-1</sup> as an isomerization step.

1459827829-b0c324f2-7aef-4c42-8fd9-e3c7c08aa2e6

A nonvolatile semiconductor memory recovers variation in the threshold of a memory cell due to disturbance related to a word line. An automatic parcel volume capture system in accordance with an embodiment of the present invention includes stereo image input means, image processing means, feature extraction means, and volume measurement means. Based on the at least M interference signals and the N satellite signals received and capable of being processed, the navigation system computes navigation information for the first navigation system. The invention provides an increased stability of launching units for highwall mining.

1459827829-e6b39afd-c045-4b3e-b5f7-bcd3baed67fc

A catalyst material comprising an electrically conducting support material, a proton-conducting, acid-doped polymer based on a polyazole salt, and a catalytically active material. The shutter curtain engages the at least one retractable guide as the shutter curtain moves from the up position toward the closed position, biasing the at least one retractable guide to the retracted position, and in the closed position the shutter curtain engages the camber and allows the at least one retractable guide to move to the extended position. The first sign sleeve receives at least one sign and is mounted to a front surface of the sleeve support portion and the at least one second sign sleeve receives at least one sign and is mounted to a front surface of the first sign sleeve.

1459827829-ef09e5de-e7d2-414f-829c-232340d96fa4

A below main cable work platform support for hanging a work platform below a main cable of a suspension bridge and a method of installation thereof. The propellers are configured to not only propel the watercraft through the water but also to chop vegetation at or near the water surface. The metal nitride electrode may include a metal silicon nitride current-limiting portion. The plate and blanket cylinders are thus removable from the printing press and substitutable with replacement cylinders having a different outer circumference.

1459827830-05607f61-ca85-4461-bee4-7a97a4ecc120

A ratcheting handle actuator provides for a tool to actuate an intraluminal catheter system for treatment at an intraluminal site by repeated movements of the handle. The replaceable plug is plugged into that plug-in slot, while the front side of the replaceable plug is just adjacent to the closed-end wall surface of the plug-in slot, the power cord is connected to the open-end of the plug-in slot on the plug socket. In this respect the information is displayed at the same place alternating with the same type of graphics, but with different labels. The plurality of radial stiffeners is coupled with the bottom surface of the elastic reflector material and extends radially from a central portion of the elastic reflector surface toward the outer edge of the elastic reflector surface. The SC Optimizer provides Fuzzy Inference System structure selection, FIS structure optimization method selection, and teaching signal selection and generation.

1459827830-20c1dfdb-4453-4876-a64d-de2344476678

Magnetic tunnel junction magnetic device for writing and reading uses a reference layer and a storage layer separated by a semiconductor or insulating layer, which can include an antiferromagnetic layer adjacent the storage layer. Each post terminates in an upper extremity. The saturated catalyst is heated to a temperature exceeding the low range. An input end of the optical fiber is connected to a

semiconductor laser having an output power of 10 W. In the second step, it is determined that the object can continue to be stably held when a force which should be generated by a contact portion to generate resistance to the predetermined external force is included in a friction cone of a force generated by driving the contact portion and enlarged by a suction force from the suction mechanism.

1459827830-257acc2c-8ec6-4e4d-9d93-42eb58f83358

An Illuminated electrical plug adapter assembly utilizing an Illuminating module assembly comprising Light emitting diode, Controlling means and Battery, removably contained within Adapter body. The client computer uses a standard HTTP-browser. The urn distal attachment is configured and sized to be selectively attachable to the cap proximal attachment.

1459827830-4e32e263-5e98-428b-9c3a-bda9f5f3deee

A universal power distribution system is provided for routing electrical circuits within a building structure to comprehensively provide electrical power to the building in ceiling configurations, wall-mounted configurations, raised floor configurations and in office furniture configurations. The particle detector is capable of detecting a particle with high signal-to-noise ratio and resolution, scanning a sample without mechanical motion of the conductive nanolayer and analyzing DNA base sequences. As a result, the TFTs and wires in the display area are prevented from being destroyed by the static electricity.

1459827830-b7388791-b753-4df3-abcd-f9912e4f4b84

An inkjet nozzle assembly includes a nozzle chamber having a planar roof spaced apart from a floor. In said system, the optical guide means has Kerr nonlinearity and low polarization mode dispersion. The bucket still further comprises at least two wheels mounted to the bucket at the back face about an axis at a bottom area thereof. The number of subchannels and a product of a modulation order and coding rate are extracted according to input variables for the selected MS.

1459827831-122e613d-4c24-4add-8f8c-4b33e6da0e59

In a method for diagnosing an injection valve, in an overrun fuel cut-off phase the fuel supply to the fuel rail is closed, and after the fuel supply has been closed off a first fuel pressure in the fuel rail is measured, and after the first measurement of the fuel pressure an injection valve is actuated for a test injection. The multiplexer includes a plurality of first conductors coupled to the first ends of piezo ceramic elements in corresponding rows and a plurality of first switches each of which is coupled to a respective one of the first conductors and a plurality of second conductors coupled to the second ends of piezo ceramic elements in corresponding columns. By employing an iterative process including this search for optimal coefficient indices, joint improvement of run-length coding, Huffman coding and quantization table selection may be achieved.

1459827831-73afb1c1-0632-408d-be62-f0f7103ba270

An assembly machine for assembling disposable syringe-driven filter is provided, which includes a rack and an automatic controller arranged on the rack. A plurality of pairs of overlapping recesses in the cylindrical surface of the drum. The proximal portion of the rotatable member may be disposed on a distal side of the plane when in the stowed configuration and disposed on a proximal side of the plane associated with the opening when in the deployed configuration. The cylindrical roll of sheet material is desirably mounted on a portion of the roll support. The new variety is a *Dicentra spectabilis*, suitable for outdoor landscape and container use.

1459827831-97f60e8d-baea-4beb-8da0-b6b97869d4f3

An accumulator apparatus for accumulating one or more sheets or articles is provided and includes a sheet accumulator portion for accumulating one or more sheets or articles, a ramp disposed upstream of the sheet accumulator portion

relative to a flow direction of the sheet or article, an actuator and a pusher plate connected to the actuator. A training mode for calling up warnings may be started via an input unit, in which the warnings are output following a call-up without a situation, for which a warning should be output, actually having to exist. Devices with CuBO<sub>2</sub> thin films include p-type transparent thin film transistors comprising thin film CuBO<sub>2</sub> as a channel layer and thin film solar cells with CuBO<sub>2</sub> p-layers.

1459827832-10ad4821-141c-4648-b27e-7e6c64408f93

An Internet-based analysis tool follows, in real-time, the flow of traffic through a website. Each processor is connected to at least two other processors, each of which is a mirror image of the first processor. Collected materials can be processed on the common disc-like recording medium from image pickup to editing. The cam follower arrangement advantageously includes an advance piston spring which is housed within a spring cage received within a lower portion of a return spring for the pumping plunger. To this end, the address of management information is identified with reference to a management table recorded in a fixed area on the optical disk, and a recording format is selected for the management information to be recorded in combination with an extension file.

1459827832-2512c7da-ac06-4f0a-ac69-b17742d31e7e

A systems design is disclosed which converts Geopressured-Geothermal brine into saturated brine in concert with the production of electricity from GPGT brine energy. A local area computer network receives and responds to messages to or from the control network via the wireless ground stations. Location processes are provided for finding a vehicle left in a parking area, and for locating items that are additionally described in messages displayed on the electronic device. Models include element lists comprising element chunks. The plurality of inflatable and deflatable sections may further include a head rest section and a head tilt adjustment section. They display very good catalytic activities, good operating lives, and require little cocatalyst.

1459827832-61cab722-ca8b-450f-986f-10df66700fc8

A fluid flow indicator including a disk and spring assembly positioned within a fluid conduit whereby the pulsing force a fluid input biases the disk and spring against an electrical contact thereby completing an electrical circuit and illuminating a visual indicator. Optical unit such as a reflection mirror and an optical waveguide medium is provided at a position in a laser resonator near a laser optical axis and not blocking the optical axis. The transfer assembly provides drive torque to a front differential assembly driving the front wheels and a PTU gearset driving the rear wheels.

1459827832-81abb4f1-faa8-4149-981c-37de41b06ed0

Embodiments of the present invention disclose a method, computer program product, and system for optimizing execution of a query that includes a JOIN against a system utilizing data relationship concepts. Data to be delivered to multiple destinations is stored in memory. The first language-training example is translated to a second language output. The lead frame has a pair of fixing bar and inner leads.

1459827832-e6def949-d8d8-4cf0-8fe3-34a0c1dc55cc

A dust collection conversion device for facilitating removal of dust from the area of work piece when a user is working on the work piece. A display model is generated on the screen. The phase rotator adds, based on the phase rotation amount, a phase rotation to reference signals and a data signal of each subcarrier of the plurality of subcarrier groups.

1459827833-5feafd65-056a-4917-aa04-c76cc1847c23

A manufacturing apparatus is provided for manufacturing a tubular resin film of

high quality and little thickness variations, which is stretched and given an orientation, and suitable as retardation film or the like. At the bottom of the housing are a pair of outlets and a condensate trap spanning across that facilitates condensate transfer from the cool side to the warm side for evaporation out of the warm side outlet. At least either of the oxidizing gas and the reducing gas is jetted into an upstream region S1, a middle region S2 and a downstream region S3, with respect to the flowing direction of the gas, of a processing space S containing the workpieces W. The high frequency stimulation may begin with a relatively low amplitude, and the amplitude may be gradually increased. Here, the auxiliary capacitor increases the data voltage according to a level change of the scan signal. After the set of requested digital images are determined, request data, that identifies the set of requested digital images, may be sent to the requestor.

1459827833-ead24f3f-8d24-421c-9d52-73d9196d5600

Exemplary embodiments of an improved scanning tool with a module reprogramming capability are disclosed. The launcher is fixed on the cable and comprises a substantially cylindrical inner body with a rigid outer body adapted to rotate about the inner body. The power management interface coupled to the processing unit is operable for switching the satellite navigation receiver among the operation states according to the time durations. In the glass, a coefficient of thermal expansion in a temperature range between 30 and 380°C. The radial configuration represents a time period and includes a first radial section and a second radial section disposed about an axis point at different radial distances from the axis point. The apparatus also includes a mode setting unit which sets predetermined operation modes based on information of the external input which is input to the switching unit, and a control unit which controls the operation of each unit of the apparatus according to the operation mode set by the mode setting unit.

1459827833-fb600e7f-4bc6-40c9-a3f3-526abbcca435

A radiation detector is provided that has no fluctuations in detection sensitivity and is capable of suppressing the influence of the noise emitted from a light source. In the data linkage system with a means for data transfer via a storage device, a program generation tool is prepared in the open system. A device for making a filter material. However, when a transmission attempt of the voice signal is unsuccessful or when transmission of the voice signal terminates, the signal selector and method restore default communication of subsectional signals of the first transmit signal. When displaying an image, a selection is made between displaying the image represented by the group 1 and displaying the image represented by the group 1 plus the groups 2 and 3. A recessed depression portion having an opening portion on both an inner periphery of the valve seat and a seating surface of the leaf is formed in the valve seat, thereby creating a site where the pressure of the working fluid on the inner side of the valve seat can act more easily on a seating surface between the valve seat and the leaf valve.

1459827834-4b15dd66-bb8d-45f9-8651-94f66efb7c89

A disposable diaper using elastic sheet materials so that a contact surface pressure may be locally enhanced and thereby the diaper may be prevented from being noticeably displaced on the wearer's body during used thereof is provided. The communication device allows users to communicate with others using their own preferred language and the communication device provides a translation for each user in their preferred language. A second partition element separates the transition flow region into a first transition flow chamber and a second transition flow chamber. The word line booster circuit further includes a third boosting capacitor operatively connected to the first and second boosting capacitors via a charge-sharing transistor, the third boosting capacitor being connected to one end of a load resistor to generate an output signal at the other end of the load resistor when the charge sharing transistor is enabled. However, a response to a member's inquiry is determined by a reciprocity due to the inquiring member.

1459827834-55b5806d-c549-4ff2-8899-099c11ea337b

The large-scale process and environmental variations for today's nano-scale ICs are requiring statistical approaches for timing analysis and optimization. The bias charge roll member is supplied with an electrical bias having a variable voltage waveform onto which a DC bias is superimposed. The method includes the steps of forming a core of substantially transparent plastic and applying a plurality of coats of material to at least one surface of the core, which material is substantially transparent to humanly visible light and which is opaque to light in the infrared portion of the light spectrum.

1459827836-4aafb7d9-a605-46c1-8da8-1d49485a7a13

A \u201cmesostructure renderer\u201d uses pre-computed multi-dimensional \u201cgeneralized displacement maps\u201d to provide real-time rendering of general non-height-field mesostructures on both open and closed surfaces of arbitrary geometry. The control circuit also includes a PWM splitter circuit that receives the master PWM signal and provides a first PWM signal for a first switch and a second PWM signal for a second switch. The main controller determines whether or not a calibration procedure is being executed. The closing and flow restriction member has at least a first area and a second area, which generate forces in opposite directions, when the component pressure is applied, wherein the areas are sized in such a way that the opposing forces substantially offset one another. The sums of the elements of the matrices are taken as focus evaluation values of the original image in the X- and Y-directions, respectively.

1459827836-cfdffdd8-f814-4a8b-a730-33bd64a51f11

The present invention provides a laser irradiation apparatus which can accurately control positions of beam spots of laser beams emitted from laser oscillators and the distance between the adjacent beam spots. Phase change material having a phase change temperature within a preferred operating temperature range is employed in order to maintain the battery temperature within the preferred operating temperature range during extreme ambient temperature conditions. A response to the request is communicated.

1459827836-e0b83bab-6917-4e2a-83ef-b21069aed6e7

A plasma etching method and apparatus in which a processing gas is supplied from a shower plate arranged on an electrode opposed to an electrode for generating a plasma or a sample toward the sample center, and the gas is transformed into a plasma thereby to etch the sample. In one embodiment, a method is provided for determining synchronization information in an Orthogonal Frequency Division Multiplexing broadcast. A method of making a container assembly comprises the step of molding a container body over a portion of a reinforcement.

1459827837-37a4b042-8e26-4206-b4a7-eba48980340c

Disclosed herein is an edge-type lighting device which is configured such that when a light guide plate thermally expands, a light source is prevented from being pressed. Multiple display screens, each coupled to a computing device, can be arranged in a circular formation surrounding a user. The electrode wire further includes retaining bodies formed on the first end and the second end of the wire portion. The external supply voltage VDD is disconnected from the integrated circuit chip during idle periods. The deckle part has been arranged to be supported so as to be movable in the longitudinal direction of the machine and that the deckle part additionally comprises a mounting point at which the deckle part is secured so that, in the service position, it is substantially immovable at least in the longitudinal direction of the machine.

1459827837-60c70713-4314-4bc5-9b26-09abe0e04c31

Disclosed is an expandable transluminal sheath, for introduction into the body while in a first, low cross-sectional area configuration, and subsequent expansion

of at least a part of the distal end of the sheath to a second, enlarged cross-sectional configuration. According to the disclosed method, a transmitting processor holds a request-to-send signal in an active state for a prescribed period of time so that a transmitting DMA logic of a receiving processor can be initiated after the operation of a receiving DMA logic of the receiving processor is terminated. Copper hillocks are also suppressed by doping a copper layer with a dopant that will constrain the grain size of the copper during subsequent processing. Then one or more of the set of cross-allocated blocks are deallocated based on results of the user-defined repair process. Treatment is accomplished through the use of topical compositions containing one or more copper or zinc salts and/or copper-zinc compounds or complexes, particularly copper-zinc malonate active ingredient. A first monitoring zone is monitorable with regard to a faulty position of the cleaning cloth, and is disposed downstream of the contact zone in a travel direction of the printing material.

1459827837-73398316-e246-4d21-a8f7-f0e02caa32d7

A fuel dispenser with a booted nozzle for vapor recovery is modified to include check valves in a vapor return path. The clock gate functions indicate an activation state of the clock gates and a combination of output values from sequential circuit elements in the target circuit are substituted into each of the clock gate functions to obtain clock gate function values. A speaker and adjustable leg are mounted adjacent each of two opposing sides of the backrest portion. The linked AT commands and operating code may be executed. Forming the active region of the device and then encapsulating it such that one or more of the registration markers are still visible to allow correct positioning of surface electrodes.

1459827838-3f4d6bdb-bd44-4491-a3c0-5b9a3dd69ae6

The present invention is an orally administered liquid pharmaceutical composition that demonstrates excellent physical stability while delivering concentrated levels of the pharmaceutical active. The integrally weighted cabinet is able to satisfy load bearing and tip over standards without requiring the addition of separate weights. Longitudinal grooves are defined in the arc-shaped top and extend along a longitudinal direction of the base that is orthogonal to the arc-shaped top. The gates of the third and fourth pull down transistors are coupled to a control signal and the inverted delayed control signal, respectively. In combination these traits set \u2018ROMAN BEAUTY\u2019 apart from all other existing varieties of Rosmarinus known to the inventor.

1459827838-868a1317-ec99-4bc8-8aa6-39395e98d516

A rifle scope indicia system preferably includes a mounting base, a marker turret and a plurality of marker pins. Specifically, an anvil stack in an anvil assembly has a foil interface with a composite layer containing, e. One electronic apparatus connected to the digital bus inquires of an electronic apparatus connected to the digital bus whether it is a monitor apparatus that receives the data mainly through a channel formed in the broadcast connection mode or not, and channels connected in the broadcast connection mode are allocated to monitor apparatus respectively.

1459827838-ab26fe42-9e59-4d3d-97bf-4f2923283737

An advanced primary nurse care system and process is disclosed which is client-driven for processing a number of clients in a timely manner with enhanced healthcare outcomes. Each article includes a band formed of one or more lengths of twisted inter-spiraled wires formed of said material. A coating material that is capable of preventing oxidation of the elemental material and an oxidizing agent may be present and be capable of reacting with the elemental material so that a self-propagating high temperature synthesis reaction from a stabilized solid material is yielded for the purpose of rendering terminal effects or thermal impact to a target at impact.

1459827838-ed00493f-dc61-49f4-8ab3-85aa565598a9

One system of the present application includes an electric power generation device structured to provide an AC electric power output at a target frequency. The abrasive articles are fabricated using a metal matrix. The energized power line conductors conduct both the data signals and the power. The storage capacitors may be charged via a charge path independent of the auxiliary converter output path so that the storage capacitor charging rate may be set independently.

1459827839-608281bf-595e-4075-b1fb-20a1b63079ca

A location-related entity ranking technique is described that allows a user see the ranking of location-related entities near a desired location in response to a query. The fastener body has an end functioning as a connecting head, and center of the fastener body forms an axial threaded bore. These polymers can also display an unusually high stability with respect to solvent and heat exposures. The activity may be a video game, electronic board game, sports bet, card game, or any other activity, and may be performed against the seller, a pre-programmed software opponent, a computer opponent, another buyer competing for the same or a different product, a player participating as a player only and not as a buyer, or anyone or anything else.

1459827839-63b0c20e-a302-4c5f-b285-8399be4e8679

Colloidal metal particles having a coating comprising non cross-linked, SH-activated dextran or aminodextran. Coefficients relate the two signals according to a model defined in accordance with the present invention. The external bus master is connected to the data processing device via a second bus so as to process data. The knob and the lever are coupled to a single control member which extends through the coil to a joiner where it is joined to a pair of pull wires coupled to the jaws. Selected sequences of N elements that represent possible sequences of phase differentials are evaluated using multiple-symbol differential detection.

1459827839-b9240904-445c-4222-af78-9980a038deac

Data may be modeled as an undirected graph. Oscillation characteristics of the actuator are calibrated to control a sink current that drives the actuator during an autofocus. Privacy boundaries on the user device control transmission of natural identity information to other entities such that, without user consent, computers outside of the user device have insufficient data singly or combined to determine a natural identity of the user. The integrated circuit can be part of an FPGA or FPGA fabric. The charge trapping layer is disposed between the first conductive layer and the second conductive layer, wherein the first conductive layer has a sensing region therein when charges stored in the charge trapping layer, and the sensing region is adjacent to the charge trapping layer. The mirror box and the main body are made of a first material having a first thermal expansion coefficient and a second material having a second thermal expansion coefficient, respectively, the second thermal expansion coefficient being smaller than the first thermal expansion coefficient.

1459827839-cebaf988-8e3e-49c9-b66c-a36d662d9eef

Copper seed layers for use in damascene structures are commonly deposited by CVD because of their superior step coverage. Induced noise has independent effects upon the current function and voltage function of an inductance measurement circuit. The data management device includes an application authentication module, a mapping module, and a local storage display module.

1459827840-5baff04c-9824-44b1-b66c-c1ba7b8bb254

A language model for a language processing system such as a speech recognition system is constructed from training corpus formed from associated characters, word phrases and context cues. The control unit further executes calculation of target airflow rate, calculation of target intake pressure, and calculation of target boost pressure based on the target torque. As a user reclines, the plurality of

rollers operatively engage the plurality of ramps to lift the seat of the apparatus.

1459827840-713a8445-b4fe-40cd-92da-77cb463e8374

An ostomy irrigation system and an ostomy port useful therewith permit independent, hands-free irrigation by a user having an ostomy or surgically created reservoir. The systematic employment of this information offers substantial improvements in productivity, cost savings, cycle time reductions, product integrity, and lifetime supportability of the system. At least one resonator chamber element is attached to the air filter housing and is connected with the filter chamber by at least one air-conducting channel or slot. As a result, small microlenses can be provided with longer focal lengths.

1459827840-8faef141-41af-49cf-80cf-fafbb9b89957

An apparatus and method for improving control over the milling force applied to a milling bit that is turned through a rotary drive to form a hole in a wellbore casing. Therefore, this invention dissipates as little as 20% of power of the present drive circuits known in the art. The belt contacts the roll surface in a contact region and has a second temperature that is different from the first temperature of the roll such that the belt affects a temperature change in at least a portion of the surface of the roll in the contact region as the roll is rotated. Instead of having publication occur first, the Presence Source makes a subscription for the Watcher information first or simply waits until the Presence Server contacts the Presence Source.

1459827840-96dbdad9-b4a7-4d51-80f3-6c2c082a1cab

Apparatus is provided for improving athletic performance of a user, including a flexible insole, adapted for insertion into a shoe, the insole shaped so as to define one or more chambers. A user equipment can detect a home nodeB and communicate such identification to a macro network that includes at least one node base station. An aspect of the present disclosure also describes the application of evaporative cooling to a pet shelter. The emergency light module includes multiple LED modules and a bracket set.

1459827840-d4d3c9d8-e32b-4784-a478-7d5c0b91457f

A coating suitable for use as a bondcoat for a thermal barrier coating system includes about 5 to about 10 weight percent of aluminum, about 10 to about 18 weight percent of cobalt, about 4 to about 8 weight percent of chromium, about 0 to about 1 weight percent of hafnium, about 0 to about 1 weight percent of silicon, about 0 to about 1 percent of yttrium, about 1. The matrix and the nano-particles comprising the coating may be of or include the same metal or a different metal. For this purpose, the installation state is detected by the sensors themselves, i.

1459827841-3e59a694-ff82-4b79-b24f-592b392283cc

An integrated circuit includes a first, diode-connected MOSFET and a second, linearly operated MOSFET serving as resistor. The first cache control logic may be configured to generate a first prefetch request to prefetch first data, where this request is to be aborted if the first data is not present in a second cache memory coupled to the first cache memory. The volume of the float chamber prevents inadvertent shutoff of fluid due to normal perturbations in flow to the load. The other portion of the L extends up the back of the automobile seat, and is provided with a reflective surface such that a child in a rear facing car seat will look directly into it.

1459827841-77b78c78-e58d-4759-996a-099ef990f9b9

The present invention relates to a method and apparatus for measuring interference in a wireless communication system. The colored flame candle according to the present invention comprises a candle body and a candle combustion wick, wherein the candle body comprises a primary combustion agent, a higher fatty acid amide and a

higher fatty acid triglyceride as the strength- and flexibility-modifier, a color-forming agent and conventional adjuvant such as perfumes and pigments. Such implementations may also involve parsing the source code to create the component definition and transmitting an intermediate representation of the requested component to the client device. This information is integrated with information on the treatment beam characteristics to better match treatment beam coverage with minimal overlap with healthy areas of the fundus. The equation processor computes a result of the first equation using the acquired first data. A first measurement signal from the first sector is substantially in response to returning energy which results from the interaction of the applied energy with the mud mixture.

1459827841-ea7095c0-a0be-4e04-9925-75269b335777

A rotatable base apparatus for use with a hose reel enclosure. A preferred methodology focuses on flexible and careful consideration of human factors throughout the change process, with frequent status re-assessment and plan re-alignment. The device can be used to move material such as dirt or sand in a manner which allows easy leveling of the material. One lock is created for each object management system component associated with a particular service within the system. The mandrel cupping assembly comprises a cupping arm turret having a cupping arm turret central axis, a mandrel cup cooperatively associated with each mandrel of the plurality of mandrels, at least three motion limiting devices disposed upon the cupping arms distal from the fulcrum, and a first actuator. In a specific embodiment, monochromatic blue or UV light output from a light-emitting diode is down-converted to white light by packaging the diode with fluorescent organic and/or inorganic fluorophores and phosphors in a polymeric matrix.

1459827842-11b84d9f-c980-46ff-bb40-386033cafe1b

A computer-implemented system for managing purchasing orders for a plurality of items to be purchased is shown. A hydrodynamic bearing mechanism 40 of the hydrodynamic bearing type rotary device is formed of a sleeve 1, a shaft 2, a flange 3, a thrust plate 4, a seal cap 5, and oil 6. The result rich exhaust air then passes through an oxidation catalyst, where NO<sub>x</sub> is reduced with CO and HC. The optical surfaces have a high value of elastic modulus, reducing coma and other aberrations associated with gravity and acceleration.

1459827842-34c037ab-0fc3-45cb-9b5a-3991812129cc

The present invention relates generally to systems, methods, and computer program products for optimally allocating a fixed number of bits among a plurality of multi-media data channels. Feed enters the gas-phase thermal zone, where it passes to a liquid-phase thermal zone. Heat is absorbed into the fluid from the heat generating portion, and the fluid changes from a first phase to a second phase different from the first phase when the heat is absorbed. Finally, the material including the surface layer is exposed for the gas and the penetration of the gas into the material through the surface layer is measured.

1459827842-573c854f-f293-4aec-8148-c46e7ebd0ccb

A liner top packer is configured to be secured in a liner string, such as in a liner drilling operation. The prediction unit predicts target data and judges whether prediction is right or wrong. The invention further relates to a method for operating a fuel system.

1459827843-413ce9e3-5fc6-4e19-aff1-84c5a72d74d7

Objects of the invention are to provide compounds having excellent activity against interleukin-1 production and also medicines comprising them as effective ingredients. Symbol decorrelating means detecting correlations between spread codes allocated to spread spectrum signals to be removed and a receiving signal. The dual-resist method not only reduces the final gate length, but also mitigates the gate recess undercuts, as compared with those fabricated by the conventional single-resist processes. A spatial filter is designed so as to be effective at

separating up and down propagating acoustic energy over substantially the entire range of non-horizontal incidence angles in the fluid medium.

1459827843-71753bdb-3423-41ef-92ab-5326178f952e

A Continuous-Time Delta-Sigma Analog-to-Digital Converter for a radio frequency receiver employing a 200 kHz IF realizes an optimal signal-to-noise ratio using a programmable resonator that is set to resonate at 200 kHz. A spout engagement channel is positioned on the bottom surface of the body. The thrust force applied to the main shaft 13 is supported by electromagnets 17. Thereafter, the adjusted working signal is provided to the processing unit. In a second preliminary phase, a second specific software item, functions as an interface with said lower layers, of the second protocol stack and with specified layers of said first protocol stack, and is installed in the terminal. Conductive structures are arranged in regions on the electrically insulating layer.

1459827843-820c97fe-3ce4-4273-89f2-f57b63733e21

A sense circuit is provided connected to a control loop of a circuit having an output. The system comprises a brake controller coupled to the front regenerative braking system and the rear regenerative braking system, and the brake controller is configured to receive a braking request, a first amount of braking that is available from the front regenerative braking system, and a second amount of braking that is available from the rear regenerative braking system. The path segments of the movement run at the two different levels are each located on the same side of the exposer. Such acidity measurement is conventionally made using a glass electrode. The first attachment section is attached to the first foam strip; the second attachment section is attached to the second foam strip; and the middle section extends from the top surface of the first foam strip to the bottom surface of the second foam strip when the middle section is stretched out straight.

1459827843-fc3cecc0-6e87-4cc5-9799-c8870bc0ea42

The present invention relates generally to amino acid derivatives and to methods of making the same. The wedgebond pad has a surface which includes a curved or v-shaped feature for receiving a wedge bond. Front end portions of the plural wave-shaped portions of the hood inner panel are positioned further toward a vehicle front side than a rear end portion of the lock reinforcement. A second photomask process is conducted to pattern the protection layer, the second metal layer and the gate dielectric layer for forming a gate, a scan line and a second pad, and a part of the drain is exposed. A bedding sheet is disposed above the left and right frames, and has two opposite ends respectively connected to the mounting ends of the left and right frames such that the bedding sheet will be stretched when the left and right frames are disposed at the unfolded position and that the bedding sheet will be folded when the left and right frames are disposed at the folded position. The compounds are used for the prevention and treatment of pathologies deriving from said activation.

1459827844-014a7fd1-ccb7-494f-8eaa-7ffa7d2cfbbd

A ceramic material with a negative temperature coefficient of specific resistance has the general formula  $\{1\text{u}2212\text{xx}\}\text{z})\text{O}_3$ . In addition, an interlocking device moves the support between the exposure position and the retracted position in association with movement of the tray toward the outside and inside positions. Different foam molds can be used to form differently shaped front surfaces on the foam component. The hub includes a first tab extending outwardly at a position which is exposed from the outer shield, and the outer shield includes a second tab.

1459827844-2e0f3643-bc2d-413b-93ca-4530baad4a1b

A piezoelectric thin-film resonator includes a lower electrode provided on a substrate, a piezoelectric thin film provided on the lower electrode, and an upper electrode provided on the piezoelectric thin film. A preferred aim of this is solved by providing two or more magnetoresistive effect elements which are

electrically connected in series to each other and by selecting one of the series-connected elements depending on a direction of a current carried in the series-connected elements, a magnitude thereof, and an order of the current thereof for performing the writing operation. A related method also is disclosed.

1459827844-a5375803-4d4b-4e94-8799-e4e2ee56d86d

A burn-in socket assembly for receiving an IC package has a base defining a cavity for receiving the IC package and a loading member retained in the cavity. Next, the network checks the authenticity of the user using a ciphering key, corresponding to the temporary user mobile identifier and a random number. The current pushes the fabric scoops downstream and then fold closed as the fabric scoops are rotated out of the water and travel back upstream. The housing is rotatably connected to the cover and operable to be covered by the cover. First and second address pits are disposed in the address area on an extension of a boundary between the groove and the land and the first and second address pits are disposed to satisfy predetermined requirements. The microcomputer estimates time required for a crank shaft of the engine to rotate from a present crank angle to a designated crank angle.

1459827844-b98cf67e-cf77-4a71-ab34-0d58c536dea2

A cup lid dispenser is characterized by a cylindrical housing for containing a stack of relatively flexible cup lids in vertical orientation with a lip of the bottommost lid supported at points around its circumference on a plurality of shelves within and around a base of the dispenser at a lower end of the housing. The auxiliary conductive patterns can be substituted by conductor sections which are provided in the insulating sheets at the positions facing the through-holes provided in adjacent insulating sheets. Compressed code is entered for the programs to be blocked. The azimuth sensor unit senses sunlight to generate an azimuth signal. The identification code does not disclose the identification string, but is able to confirm the accuracy of the identification string and selectively correct a given number of bits within a corrupted identification string.

1459827845-348972fe-d89e-417d-8533-6b877f78743a

This disclosure is generally directed to communication systems, devices used in communication systems and associated methods which may implement parallel hypothesis search techniques. A metal layer selected from a group consisting of titanium, cobalt, platinum, palladium and an alloy thereof is formed over a silicon layer. A match region whose boundaries are defined by the selected features of the devices on the golden boards is established during the training phase. Information may be shared through direct communication between base stations, or may be managed by a controller.

1459827845-b4f927d5-58ac-46bf-9b54-dce093a5b145

An apparatus for reproducing information units recorded on a recording medium in a hierarchical structure having a plurality of levels. The method comprises mixing a polyisocyanate crosslinker with a base TPU cover material, wherein the polyisocyanate crosslinker is aliphatic, miscible with the base TPU cover material and has functionalities greater than or equal to 2. Mean squared error values are computed from a plurality of samples, while a start sample position of one block is shifted on a basis of a start sample position of the other block. The flex joint improves bending fatigue life of the top chain. When several prizes or prize options are displayed, the user may select a desired non-monetary prize, e.

1459827846-184d9fd1-d301-4780-8f98-5df708f247e2

A multimedia safety analysis system used for system safety training and as an information repository is disclosed. When greater-than-specified electric power is being input from both the first input section and the second input section, the control section controls the state of connection so as to prioritize connection of the second power source to the inkjet head driving system over the first power

source. According to another preferred aspect of the invention, the fluid flowing through the heat exchanger is oxidizer tapped from the storage tank. The capacity restriction is related to the requested upgrade adjustment, and the capacity restriction controls rates of data transfer with respect to the filesystem. The front region faces the interlayer dielectric material.

1459827846-4d3b2c79-5f82-4a3a-b7ca-8a4e2fe4dc40

The weight sensing device may include a base, a cover, a first load cell attached to the base and the cover, a second load cell attached to the base and in contact with the cover but not attached, and an analyzing circuit which is connected by electrical wires to the load cells. During operation, the network device can receive an Interest packet that includes a name or a name prefix associated with one or more target entities for the Interest. A photodetector receives the measurement light reflected at or transmitted through the scale. In turn, images, corresponding to the thumbnail size medical images encompassed by the navigation rectangle, are displayed on a monitor that corresponds to the navigation rectangle. The supporting element is disposed between the first and second substrates, and supports the second substrate.

1459827846-a274dd39-d7d5-454a-adbf-fd62b52cd2c4

The present disclosure provides, in some embodiments, a method for managing applications and resources. The MEMS structure includes a backplate electrode and a 3D diaphragm electrode. Two rows of contacts are held in an upper contact area.

1459827847-1c59a9df-a510-4c9a-85a0-be52219e7bb7

A device for measuring and isolating noise-creating imbalances in a paired telecommunications line has an internal circuit which comprises a balanced center tapped termination consisting of precisely equal resistor pairs. In one embodiment, the ladder assembly includes a base which is coupled to the tailgate. The bottom edges of the jaws are brought into alignment to form a cutting edge when the jaws are forced together, and separate to perform a splitting action within a cut when the jaws are moved apart. An arbitration takes into account availability or congestion of the ports before allowing data transport from device to device.

1459827847-34253828-3238-46da-a5a2-dcf7382f8d20

A memory circuit having features specifically adapted to permit the memory circuit to serve as a video frame memory is disclosed. For the manufacture of such an assembly, a device is used for filling with casting compound and which includes a mounting for securing the assembly in a position which permits air to escape from the casting gaps, which have an external connection during filling. with a T10 point greater than 205\xb0 C. An upper part of one of the flanges accommodates a shaft which supports an end fitting. , adjusting the tension in the web material.

1459827847-3bdfdf346-24f8-4373-9526-0d3db61997a3

A hard surface cleaning solution having improved cleaning and descaling properties. Also, a method for making the reflecting device for flat panel displays is disclosed. The detecting unit is configured to detect selection information entered by a user.

1459827847-4465bd20-a454-47a7-9e4b-9e2211026c6a

A method for specifically quantifying HDL cholesterol in which cholesterol in lipoproteins other than HDL is erased in the first step, and HDL cholesterol is specifically quantified in the second step, by which accurate values can be obtained even in measurements of abnormal samples such as disorder of lipid metabolism and lipoprotein abnormality, is disclosed. The operation of writing is performed by forming a filament in a region between the second and third semiconductor layers, which is a conductive path electrically linking these semiconductor layers, through application of a voltage equal to or higher than a predetermined threshold between the first electrode and the second electrode. In at

least some embodiments, the write-tracking circuit is configured to write the different values to the one or more dummy memory cells during a single write operation. A control slider which is actuated by the control motor is coupled gearwise to the slide rods so that when the control slider is displaced, the slide rods carry out a movement in opposite directions.

1459827847-8ec24067-8d14-415e-bc54-1bcd36c121a5

A spectrum allocation method, device and system are provided, which are capable of improving the flexibility and applicability of the frequency spectrum allocation system. The first protrusion of the joining component is fitted into the groove part of the first speaker unit. The data is organized from the viewpoint of an analysis process of an analysis item of each sample. A preferred set of prices for the plurality of products based on the sales model and cost model is then generated. Each data block of the data to be written is associated with a respective one of the storage blocks, for transmitting the association to the plurality of storage devices.

1459827848-55a00841-58bf-4cae-8dcb-6c025bb0f79a

Several embodiments of simplified structures for internal combustion engine timing drives that limit undesirable degrees of movement of a flexible transmitter pivotal arm by providing one or more projections on a removable component of the engine such as the cylinder head gasket that provide contacting edges that cooperate with the tensioner arm. This combined tool is comprised of a dart-like body having a longitudinal axial bore. Lateral current flow from sourcebody regions on trench walls increases the active channel perimeter to a value well above the amount that would be present if the device was fabricated on just the surface of the wafer.

1459827848-822bc082-f1bf-4615-bd9b-22159676667a

A method for manufacturing socks with a circular knitting machine having at least two feeds or drops, consisting in producing the sock starting from its opposite end with respect to the toe. The rotation detecting sensor is fixed to a sensor fixing member to be fitted to a wheel support bearing assembly. An actuator actuates the reflecting mirror to enable the image sensor to sense a plurality of scan lines on the calibration sheet through the lens and the reflecting mirror in order to obtain a calibration standard for the image signal of the document. Application of the voltage pulse to the electrodes stimulates contraction of the heart. This housing part includes a main frame and at least one locking frame.

1459827848-8a93de8b-fbea-43da-9194-c606684944b6

A presentation controlling device includes a presentation controller, wireless transceiver and a timer program. The compressed signal is filtered to generate a filtered signal comprising substantially the known signal, and the filtered signal is expanded. Two studs serve to fix the casing so that the casing is rotatable to protrude out of the frame body and can be drawn back into the frame body to be placed on the lower supporting rods. Using samples from a footprint larger than a single pixel, a gradient is calculated matching the direction of an edge.

1459827848-91808e92-6508-468f-80fb-e1802bc2fa8b

A sampling probe for delivering a reactant to a substance deposited on a substrate to form a reaction product and for transporting the reaction product to a product analyzer for analysis. This environmentally hazardous method and the problem of recycling the foam back as well as the latex layer can be avoided if a nonwoven is applied instead to the tufted back of the carpet by water needling. The call is connected to the UMA-subscriber when the location area code or combination of location area code and cell identifier is associated with one of a group of GANCs, or connected to an alternative destination, such as a voicemail service, if the location area code or combination of location area code and cell identifier is not associated with said one of a group of GANCs. The carbon monoxide remover lowers carbon monoxide contained in the reformed gas. The bending rolls are positioned in

their progressively inclined inclinations by cooperation of an elongated connector and clamps for providing securement to curved support ribs of an associated frame at the adjacent lateral side of the roll bending station housing. Other embodiments may be described and claimed.

1459827849-736b58f4-394a-4747-8945-4c05b60393a3

The present invention provides a respirator hood assembly that has a bag, half mask and a respirator assembly. This is aimed at optimizing heat transfer and microwave efficiencies in a high-speed cooking oven, thereby enabling the oven to deliver an optimal cooking efficiency in comparison to the conventional high-speed cooking oven. The apparatus communicates with the wireless node through at least one of the first or second preferred beam pattern.

1459827849-776f363f-efd9-4d58-92db-81f829394786

Adaptive vision-based vehicle detection methods, taking into account the lighting context of the images are disclosed. A chassis upon which the power tool is attached has a trolley like connection with a guide rail releasably secured to a work piece. One or more suspended exercise objects is connected to the main beam assembly. The information processing device associates, based on the received identification data, the user who operates the first information processing terminal and the user who operates the second information processing terminal.

1459827849-e81d7d4f-f966-458a-acda-8aa8119a1a06

A method and system for improving route finding are described. A gas cluster ion beam tool is used to apply an ion beam to exposed fins, which converts the fins from a semiconductor material such as silicon, to a dielectric such as silicon nitride or silicon oxide. Also provided is a method for assembling the fuel cell system.

1459827850-5841bcf3-9116-4396-8156-85fe5afd936c

A method of producing shredded cheese according to the present invention comprises producing cheese in a mixer; forming the cheese into cubes, the cubes being sized for shredding in a shredder; salting the cubes in a brine solution; and shredding the cubes in the shredder. The first drive mechanism first causes the lever arm to pivot on the supporting point to greatly move the press plate, and the first drive mechanism is then stopped to operate the second drive mechanism, so that the lever arm pivots on the force point to press the press plate against the press plate. A control system detects the amplification of light photons by the image intensifiers. A ratio defined as is greater than 1. In the third mode, the pressure is temporarily released, allowing the sleeve to again be movable along the lead.

1459827850-5ad35569-7ea2-46ae-9575-a184d99fe75e

Methods and systems are provided for the noninvasive measurement of the subepithelial impedance of the breast and for assessing the risk that a substantially asymptomatic female patient will develop or be at substantially increased risk of developing proliferative or pre-cancerous changes in the breast, or may be at subsequent risk for the development of pre-cancerous or cancerous changes. An elongated opening extends through the package body to the internal space for accessing and permitting dispensing of the removable wet wipes. The ramp portion may further be translatable to a second bypass position defining a trajectory passing on the opposite side of the second vehicle's trajectory relative to the trajectory defined when the ramp portion is in the first bypass position. A relationship is established to link the data with the identification of the patient. The tunneling dielectric layers are disposed between the substrate and the floating gates. By detecting a servo wedge instead of a spin-up wedge to determine an initial head position on disk spin up, such a servo circuit allows one to increase the disk's storage capacity by reducing the number of, or altogether eliminating, spin-up servo wedges from the disk.

1459827850-63544aba-2499-4f22-b41d-19361f5d822a

The present invention relates to morpholine and thiomorpholine derivatives of the general formula I or pharmaceutically acceptable salts thereof and their use. The device comprises a shoulder portion, which may be part of a bulbous portion, having a diameter profile that conforms to the shoulder region, and, in some embodiments, a plurality of affixation members in an area of the device that typically extends from a distal end of the device through the shoulder portion. Next, the printer cuts off the tip portion of the printing paper in a long rectangular shape in order to clean a cutting edge of a cutter. The implantable system may also include a sensor for detecting cardiac electrical signals. The directional vector of the linear motion is used to estimate the longitudinal axis of the vehicle, and the rotational vector of the rotational motion is used for estimating the normal to the vehicle plane. The various electronic components of the invention, can be formed in as a flexible modular unit which can be attached to existing footwear, or formed to new footwear during the manufacturing process, or thereafter.

1459827850-640daee9-1ebe-4d12-b7fa-7a2821457796

In a method for reading a programmable anti-fuse block of a high-voltage integrated circuit a first voltage is applied to a first pin of the HVIC, the first voltage being lowered to a second voltage at a first node. In one aspect, a first cavity for a comestible paste resides in an area between a hollow piston and a top section having a dispenser. The module uses the validity of the server's response to determine whether a transmitted message is authentic. After receiving the request, the address generation server creates the disposable electronic message address, which may be limited in use. The data of one page after rewritten is written into the page in the memory cell array that corresponds to the page address of a copy destination. The wire can be constructed as a monofilament wire or a multi-filament wire.

1459827851-10457c5b-9528-4f85-9098-22a2e387c6b8

A liquid composition includes a therapeutic component dispersed in a liquid carrier system. An exemplary embodiment of a SOI device comprises a substrate. A network path is selected from among the candidate network paths based on the estimated performance metrics. In another aspect of the invention, two modular refrigeration units are independently operable to cool the evaporator block, and each refrigeration unit is controllable in various modes of operation including an enabled mode in which it is ready to cool the evaporator and an on mode in which it is actively cooling the evaporator. The shielding winding layer is coupled to a static terminal coupled with the primary winding or the secondary winding. The implantation of the construct initiates and achieves incorporation of neo-cartilage into a native surrounding cartilage including a formation of a new superficial cartilage layer overgrowing and sealing the lesion in the joint cartilage.

1459827851-1b5b47c4-2a1f-4d73-84b3-6aa854b69153

Methods and apparatus are provided for alternative routing of a connection between a source node and a destination node in a PNNI hierarchical network. The purge valve is opened when the voltage across the purge cell portion falls below a defined percentage of a threshold voltage. The connection unit receives data, to be used to emulate a logic, from a host computer, and transmits result data, output from the logic, to the host computer. To perform this calculation, a multi-membership Bayesian function is used.

1459827851-b1dcf520-3e2e-44a0-9e5b-3d8ad5983cf1

A cargo rack for transferring loads between a marine vessel and an offshore marine platform provides a frame having a front, a rear, and upper and lower end portions. A diffraction optical part is provided in front of the reflective surface of the optical element. The grounding member includes a metal insertion leg mountable on a leaf spring mount, a bow section connected with the metal insertion leg and a first end and a second end respectively outward extending from the bow section and

latched on a grounding rail. At least one substantially resilient preload mechanism is positioned adjacent to bearing surface with at least a portion thereof being projected thereabove.

1459827852-1b58ea15-16f9-4756-bd38-d63849a1aa27

Methods of forming and tuning a multilayer select device are provided, along with apparatus and systems which include them. An embodiment of the fuel cell includes first cells which have the terminals at an anode and a cathode respectively, and second cells which have terminals in neither an anode plate nor a cathode, stacked alternately. In this manner, a wide range of dilution rates can be accomplished with only a single revolution of the needle valve. The card may further include means for wirelessly updating information and providing a display to the user, which includes, but is not limited to, a housing, a memory module, a processor, one or more displays, and a power source. The duplexer is connected with the first branch contact of the first switch.

1459827852-a6d39246-1dda-4000-b8c6-1dffb8c888669

A high frequency sinusoidal wave is generated and applied directly to a gas discharge lamp in a power efficient electronic ballast. The sensor may further include an input probe connected to the sensor providing power and a ground probe connected to the sensor providing a grounded connection to the sensor. The lid molding includes at least one formation for each latch whereby an abutment will occur that will reduce the likelihood of prizing of a latch from the lid molding as a result of the latch moving upwardly about its pivot axis. As such, the device reduces vehicle damage due to inadequate ground clearance, while increasing vehicle stability and fuel economy. When the engine speed approaches the target engine speed, the gain is set to a smaller usual gain, and, in a change to the same advancing or retarding side, a change to an ignition timing in the same side is suppressed using a smaller advancing or retarding gain.

1459827852-a8f0baef-d9b2-422d-93f4-b0a880d7b774

Pressure-actuated electrical switches are provided that comprise a housing having a slidable piston therein. At least one software application selection from the list of applications is received by the system. The non-diffused monolayer deposited on the surface has a second surface work function value  $\phi_2$  that is less negative than the first surface work function value. In a narrower aspect, the control is powered, such as by an electrical or electromechanical device from a remote location. The first transistor accumulates, in the channel thereof, charges transferred from the second and third transistors.

1459827853-9f29719c-a7fa-4e87-97a0-3c7c573895da

A method of operating a lithographic apparatus is disclosed. The ureter stent includes a first holding portion, a second holding portion and a junction portion. The compounds are effective in the inhibition of histone deacetylase. The analyzing device receives the light beams reflected or transmitted from the object and is adapted to analyze the optical characteristics of the light beams at varying angles and/or wavelengths to verify the authenticity of the object. The float includes a magnet therein for activating the sensor device when the float moves the magnet through the vertical activation length.

1459827853-bab2b75b-48b1-4561-ad1b-ec0c11eca170

A heat sink is used for dissipating thermal energy generated by an electronic component of an electronic device. Images acquired by the sensor are stored. 01 to 25 oxidizer, 0 to 15 inhibitor for a nonferrous metal, 0 to 15 abrasive, 0 to 20 complexing agent for the nonferrous metal, 0.

1459827853-f4494bb3-0e83-40a3-9f06-903f6463cb51

Systems, methods, and devices enable spectrum management by identifying, classifying, and cataloging signals of interest based on radio frequency

measurements. Users may extract and collect conditional statements from research reports. A first method uses an RZ quadrature AM dither or an RZ \u201chillclimber\u201d bias dither, to apply a relatively low frequency dither signal to a variable RF delay for the RZ clock signal applied to the RZ modulator or NRZ data signal applied to the NRZ modulator. The first and second clamping members have recesses for receiving said first and second ridges of the table, respectively.

1459827854-09eafa9e-a589-4c88-9827-0a379298e4d3

Data of an examination object comprises a volume-data record and a plurality of two-dimensional projection images. A pass-through box is added in one of the storage and handling units, the pass-through box having a portion shaped like a cartridge so that it is gripped by a gripper of a cartridge shuttle. The first plurality of monitors is disposed at a second plurality of points in the network. A search index of the system may include allportion of the usage analytics such that the obtained results from the system may already be integrated with the usage analytics.

1459827854-3ee3bf7c-49eb-4211-90aa-74ef1b32d42e

Disclosed are a semiconductor light emitting device comprising a single crystalline buffer layer and a manufacturing method thereof. Preferred gel formers are superabsorbing polymers. The method obtains a baseline test result by executing a set of customized test scripts on a baseline build with a first code base.

1459827854-427375a8-abc9-4ef3-9f7b-c00ea41aa2ce

An apparatus and method for determining forces on a downhole drilling tool is provided. A multi-particulate oral dosage form comprises a plurality of pellets, the pellets comprising a core having disposed thereon a core composition layer. The inventive rotor body comprises a rotation-symmetric base body that forms the hub and one or more blades that all have the same thickness in the direction of the rotor rational axis. A first RS-spread-spectrum transmitter transmits an access-burst signal, which has a plurality of segments.

1459827854-9becfaf9-6656-4a9e-86a3-65c3f11f1839

An efficient Reverse Path Forwarding check mechanism is disclosed. The illumination source includes a metal base substrate including a line pattern and an insulating layer including a composite material with an inorganic filler and a resin composition. Therefore, the present invention can prevent generation of an unnecessary address transition detection signal pulse upon generation of a glitch and can thus stably drives semiconductor chips even at a high power supply voltage. The blocks provide thermal resistance, and enable a reduction in number of fasteners required for assembly. When the transparent film, holographic image, and film label are removed, certain marks are left on the card which clearly demonstrate that the hidden number has been accessed. In another exemplary media implementation, one or more electronically-accessible media include at least part of an operating system that is configured to request from a runtime environment exception handling and/or unwinding information for functions that are managed by the runtime environment.

1459827855-0288657d-4416-450e-9d2a-10a22b1aabd5

A three-dimensional, curved building module comprises a saddle-shaped membrane having four connecting edges for joining with like building modules and four truncating edges. Each plate has an opening in which a flanged bearing is fitted. A communication link between the probe and the test set has a predetermined propagation delay, from which the system can calculate a propagation delay of the conductor between the test set and the probe, and a propagation delay between the probe and the anomaly. A suitable removal strategy can provide similar amortization advantages. A logic controller also receives power from the power supply, receives the sensor signal and removes the control supply from the power controller when the

sensor signal does not satisfy an established criteria.

1459827855-3870eb58-fa4f-40e1-9008-84bf6984725f

Metronidazole is solubilized in an aqueous phase, by mixing same with niacinamide and at least two glycolic cosolvents; the resulting solutions and pharmaceutical compositions comprised thereof are useful for the treatment of dermatological conditions/afflictions, notably rosacea. An upper permanent magnet group is configured to be inserted into the rotor core to form a magnetic pole. For a printer having an alignment surface, and a width adjuster to push the first-sized media against the alignment surface, the greeting card feeder includes a biasing member which pushes the card stock against the alignment surface.

1459827855-802e852a-b51b-4099-84d4-50b011db5547

The present invention is directed to a sorbent comprising a disordered polyvalent metal oxide on the surface of an inert substrate. A system for providing a remedy for failure of a product composed of a plurality of parts comprises a unit for entering information about failure including a free word, an extracting unit for extracting keywords from the free word, a remedy database storing remedies for failures, and a unit for searching the remedy database using the extracted keywords. In another aspect, a method of synthesizing multi-walled carbon nanotubes using the catalyst is disclosed. A transition between the first and second duty cycle control modes is responsive to a magnitude of a current flowing in the switch reaching a current threshold value. Destination decodes first data packet during slots d2 and d3, and second data packet over slots d3 and d4. The network computing system includes a radio communications controller, one or more transceiver device, user equipment, and data communications network facilitating data communications amongst the wireless communications devices of the networked computing system.

1459827855-c08b17f2-7201-4c29-939e-e0ad1b5147a0

A new variety of carnation plant named \u2018CFPC Unforgettable\u2019 having flowers with a light to medium purple color diffused over a cream base color. The invention also includes methods of using compounds of Formula I as type I receptor tyrosine kinase inhibitors and for the treatment of hyperproliferative diseases such as cancer. The stapling mechanism is controlled by a trigger handle or a switch assembly. The information retrieval systems and methods store the user-generated lists for future presentation to other users.

1459827856-0f486c78-820d-4498-9b00-89c55ef50dc2

The present invention provides, in one embodiment, a semiconductor wafer dicing process. The planarizing step is performed by filling irregularities of the microlens planes with a resin having a second refractive index and planarizing the front surface, opposed to the microlens planes, of the resin, to form the planarized second optical resin layer, and the joining step is performed by joining the support layer to the planarized second optical resin layer. The top and side walls of the chamber meet in an inverted V such that when the blower operates, a vortex is created in the inverted V in the chamber. In addition, the server selects a computer with the highest performance rating as a local administration proxy for the network.

1459827856-1afddaf3-3c38-4367-8d52-fd1ed8c67ea9

Methods and Systems to browse data items. If the received request for the transmitting method of the video frames is the request for the transmitting method of the video frames for recording, each of the video frames formed in an image sensing unit is temporarily stored in a memory and each of the stored video frames is transmitted. The cone cutter includes a cone body, a plurality of teeth arranged in a first inner row, and a plurality of inserts. The locally rich region within the combustion chamber has sufficient fuel density to autoignite, and its self-ignition serves to activate ignition for the lean mixture existing within the remainder of the combustion chamber.

1459827856-e2531533-75b2-49d4-af44-3c6715619889

A method of testing a process that has undergone modification. A mailing machine facilitates the association of a confirmation tracking number with a mail piece and a check. The first panel section defines an access opening through the first film layer when it is separated along the first tear line during an initial separation of the first and second film layers. Products can be used directly as transportation fuels and/or blending components to provide fuels which are more friendly to the environment. In response to a resource activation request for the reservation, the resource manager activates a resource at a launch location selected from the multiple locations.

1459827857-2c79f3ca-06cc-4040-923f-fa277852574c

Embodiments of the invention can include systems and methods for associating an accessory with a firearm. During the air removal phase, a substantial majority of the liquid moisture is removed from the bagged articles by introducing brief periods of dry, warm air to the autoclave chamber. A second portion of the array contains SRAM cells with a higher ratio that are more stable than the cells in the first portion, but are somewhat slower. Place a substrate having a plating surface to be electroplated into the electroplating bath connecting surfaces to be plated to a first cathode.

1459827857-3b425901-ca71-4dae-8f82-b6434a86d498

Disclosed herein is an ink comprising first and second organic compounds which are incompatible with each other; at least one of a compound exhibiting fluorescence properties and a coloring material exhibiting fluorescence properties; and a liquid medium dissolving or dispersing the components and therein. A DNA probe 66 is fixed to an electrode plate 22, and the electrode plate 22 is displaced by applying a DC voltage between electrode plates 22 and 23. The method further includes forming a MEMS beam above the wiring layer. The images in the library may be repurposed for print, sales display, transmission to a user, on-line customer support, and the like. The magnitude of the biasing force of the spring is adjustable. The method and device are adapted to provide to a space, which it is desired to fragrance, a continuous supply of a first fragrance composition and a periodic supply of a second fragrance composition.

1459827857-f6466b0c-d8be-4f25-9e6b-4b30bb260ea0

A clamping device includes a body having a first guiding feature and a slider component positioned within the body that is moveable between a first position and a second position. It also relates to polymorphs of the phosphate salt of the amide. The semiconductor light-emitting element can be mounted on a package obtained by insert-molding lead frames with a resin. Each cast tooth supported by the working quadrant has a pin depending from it and is fully seatable against the upper flat surface. A mask disposed in front of the display panel contains cutouts providing the text and/or graphics of the sign.

1459827858-1f7a8aa3-9a2d-4b83-bce4-2c7fef85ed9d

A wood or other bio mass fueled appliance is disclosed for maximum efficiency and low cost construction for home, garage, workshop, and barn. In one embodiment, the apparatus can include a support housing having an engaging surface to engage the skin surface. The resin composition is the reaction product of a first compound having a plurality of hydroxyl groups with a carbamate compound reactive with the hydroxyl groups of the first compound and added in an amount sufficient to form a carbamated intermediary. The cooling tube of the first cooling circuit is configured to transport a first coolant having a first temperature.

1459827858-3d4e9500-6d77-4e95-9ce5-89f1b9bd23a6

To provide an organic electroluminescence device having high emission luminance, high heat resistance, excellent high-temperature storage stability, and a long

lifetime, and an aromatic amine derivative for realizing the device. The present invention relates to such retroviral protease inhibitors and, more particularly, relates to selected novel compounds, composition and method for inhibiting retroviral proteases, such as human immunodeficiency virus protease, prophylactically preventing retroviral infection or the spread of a retrovirus, and treatment of a retroviral infection. The baseband unit processes the wireless signal group to generate a position signal. A current may be run through the second conductive lines to increase the temperature of the second material to a temperature greater than the second material Curie temperature, causing the second material to lose its ferromagnetic properties, providing increased write selectivity to the memory array.

1459827858-94a6edbf-6fc8-4563-8d98-1441a2ade5f5

A trim tab of resilient material affixed in a cantilever fashion at the stem of a boat and of a regressive flexural stiffness such that when deflected, the undersurface of the trim tab assumes the shape of a progressive curve in the direction of water flow. The novel wire harness is generally a plurality of bundled, preferably un-stripped, insulated wires. The fluorescent polymer comprises a hydrophobic segment.

1459827859-1e3b9d07-8af4-48ae-ad5e-cc08114822ed

A method begins by a processing module determining a mapping of encoded data slices to wireless channels for wireless communication of data, wherein a data segment of the data is encoded in accordance with a dispersed storage error encoding protocol to produce a set of encoded data slices. The floorplan or a placement layout generated resembles the final floorplan obtained through a floorplanner or the final placement layout through a placement tool without requiring that complete conductivity information be provided to the floorplanner or placement tool. The processor also includes a functional unit coupled with the decoder and the register file. A second quantity of cured encapsulant material having a second index of refraction, different from the first index of refraction, is provided on the first quantity of cured encapsulant material. The ROI is tracked using a mean shift algorithm to guarantee that always the correct image details are extracted in high resolution. If not, the secondary storage computing device can avoid storing the block of data on the storage devices.

1459827859-4aef8a9f-5b5f-4cec-8736-aee7b8a835b0

A method of fabricating a semiconductor device utilizes a substrate including a high voltage circuit area, a medium voltage circuit area and a low voltage circuit area. An initiator initially receives the wage assignment information. The apparatus includes an arm rotatably attached to the shaft. The apparatus includes a handle for cranking the shaft. The grounding plate comprises throughholes through which the grounding contact elements extend.

1459827859-65caaaa4-0c32-4c69-872d-6bca15692615

A toilet tank valve having valve workings supported on a riser. The universal adapter defines multiple openings disposed in spaced, generally parallel relation relative to each other. The signals are affected by both geometrical parameters such as lift-off and by material properties, but these influences may be separated by mapping the in-phase and quadrature components directly into material property and lift-off components, and hence a material property and/or the lift-off may be determined. The tool may then be used to develop a mathematical model for the performance of the IT service. The mobile broadband modem may include a chassis for securing the PC card modem transceiver within the chassis. If the first node and the second node receive a disconnect request of the call from the DKT, each of the nodes transmits an accounting information item and the call identification item to an accounting apparatus.

1459827859-666f1819-89f8-48d9-b785-62a8582292af

Column-stabilized floating structures having a deck and a plurality of vertical buoyant caissons bridged together in distantly spaced relation by a plurality of open frame horizontal truss pontoon members and vertical truss columns at a lower end. A reference image forming unit forms reference images on a transfer member. The invention also relates to methods of production of highly unsaturated fatty acids by marine organisms at low pH levels, and includes methods for generation of low pH tolerant strains.

1459827859-b15f55fb-324e-47a5-840f-f6a7700f2fd7

A dust collector brush assembly capable of being selectively attached to a CNC machine that allows dust and debris to be easily removed from the work site. The ice chest has a rim located on the interior thereof adjacent its upper perimeter edge. A second locale is suggested to narrow the number of language independent keys displayed in connection with the value entered in the first locale. The pigment flakes and foils exhibit a discrete color shift so as to have a first color at a first angle of incident light or viewing and a second color different from the first color at a second angle of incident light or viewing.

1459827860-60a68cff-2f1d-4b05-a784-60b22b9ce2b5

Embodiments of the disclosure relate to a biosample cartridge that includes storage slots for holding biosample plates. In some embodiments, the tools may include a moveable inner sleeve member configured to selectively allow hydraulic fluid pressure within the fluid passageway to act directly on the at least one blade. Alternatively, the source power and the bias power are applied such that the effective value of the source power reaches a second predetermined value after the effective value of the bias power reaches a first predetermined value.

1459827860-d24d84cd-4293-4e7e-a21a-343196e4b41e

A fluid loss control method uses a fluid loss control pill in a well in advance of a completion operation. The client devices record tracking data that indicates that a particular promoted listing has been displayed to and/or selected by a user. If the file contents are suitable for the specific process and the file object is not committed, the file can be committed by the specific process. The reverse thrust member effectively increases the pitch of the propeller when operated to propel a watercraft in a reverse direction, thereby improving the performance and efficiency of the propeller. When not in use, the front sheet and the pair of side sheets may be detached from the base sheet and the sheets may be folded, secured to one another and transported by the user.

1459827860-e330c690-025c-49f1-b0d0-147bb05dbf60

The invention describes stable anthocyanin compositions, methods to prepare such compositions and also methods of use of such compositions to treat various afflictions. A system for generating a dynamic information system comprises a persistent dynamic repository of data and an integration metasystem. ; average particle diameter of at least 3  $\mu\text{m}$ ; and a substantially uniform structure; wherein the rare earth permanent magnet has a structure that gives a pinning-type initial magnetization curve; and wherein the magnetic intermetallic compound has a  $\text{Th}_2\text{Zn}_{17}$ -type structure, and the like.

1459827861-3a1cc292-f606-4bf0-bfb3-afe0b992e3dd

Flow diverting structures for preferentially impeding, redirecting or both impeding and redirecting the flow of flowable encapsulant material, such as molding compound, proximate a selected surface or surfaces of a semiconductor die or dice during encapsulation are disclosed. The apparatus uses a plurality of adsorption units holding adsorbent, where the adsorption units are serially connected and are moved to shift the relative position of the feeds and drawoffs to the apparatus. potato starch having an amylopectin content of at least 95%, preferably at least 98%. The apparatus uses the existing axle receiver of a manual wheelchair as a universal connection point and to maintain the center of gravity for a user. The

addition of the treating agent to green wood chips, without the need to dry them to low moisture content, is believed to be novel.

1459827862-1072ec1c-4970-464b-8246-1d27bcdcf3a

Files are encrypted and stored on a WORM media device along with their encryption keys, the binary values of which are stored as a combination of written and unwritten sectors in a key storage portion of the media. The regulating means is characterized by a flat plate-shaped rotary member provided at a predetermined distance from the belt and capable of being driven to rotate by contacting with the end surface of the belt with the bias of the belt. The inner surface of the cover has at least one protrusion thereon, with the protrusion adapted to contact an inserted electrical device thereby causing the cover to cease contacting at least one portion of the frame when the electrical device is installed in the socket. Operation of the fan assembly draws air into the housing chamber through the at least one inlet opening and forces air out of the housing chamber through at least one of the primary outlet opening and the secondary outlet opening.

1459827862-f9fa1533-e496-4e63-b0e5-feb07f6d52ab

A hydraulically damping elastomer bearing has at least one housing, a connection element, an elastomer body, which couples the housing and the connection element with one another in a vibration-damping manner. The first communication apparatus includes first communication means for communicating with the second communication apparatus using the system information, and first setting means for setting the system information in the first communication means. When bidirectional communication is performed using only the CEC line, the switching control unit controls the switch so that the CEC signal output from the HDMI\xae source or the receiver is selected. The fatty acid monoester is removed from the reaction zone through a product port of the simulated moving bed apparatus.

1459827863-96037484-3b23-4c5f-9be2-4455b3beeb2b

A sliding electrical switch for use in a garment has two spaced elongate flexible surfaces, at least one electrical contact on each surface, and a slider slidable along the surfaces to cause electrical connection between the contacts. A image signal is received and a first light emitting element is illuminated based upon a substantial maximum of a non-uniform image signal in a first region. Voltage is sent from the circuitry to the liquid crystal display and the light emitting diode in order to reveal the image held underneath the lens. The illumination system may be for generating dynamic light sequences, or for generating a spatial color distribution. A convex lens is disposed in the cavity and positioned in a middle part of the reflector. At least one element out of said first substrate is formed to be mechanically and/or electrically connectable to said at least one support structure.

1459827864-95dda962-aab1-43f6-9985-66174efcc072

Data elements stored in a computing system and associated with a physical object are reassociated with the same or another physical object. The inflator induces expansion of a gas by application of an electric voltage to the gas or to a plurality of filaments disposed within the gas. The wireless telephony network monitors and obtains billing information associated with integrated service delivery and coordinates the billing information with a satellite radio service provider. Detection of dissolved carbon dioxide in the tissue may serve as a useful clinical marker for physicians. Each of the liners has an outer circumferential portion that is not fixed on the inner surface of the casing. The cam and the motor drive mechanism are synchronized so as to move axially and rotate the collar so as to produce the unscrewing of the cap from the punch.

1459827864-a26548b0-7670-4298-86d4-13eca70bacb3

The present invention relates to a towed wireless network communications subsystem for use in flight by a towing aircraft. The protective winter turf cover is

efficiently held down with a dual apertured washer and x-position of nails therethrough. The second circuit may be configured to further regulate the output voltage in response to the input signal. Thereafter, the resin layer is cured to form a core layer and then an over clad layer is formed on the under clad layer in such a manner as to cover the core layer, to thereby produce an optical waveguide. The control device comprises a linear actuator acting on at least a first lever and a solid elastically deformable element. Systems implementing aspects of the invention can, for instance, provide developers with a mechanism for creating Web Services without having to write low-level SOAP, XML, or WSDL code.

1459827865-0a9f3ddd-da1a-449d-bea5-31b86e205ee0

A method and system of providing switched broadcasting of content to a number of consumers. In this manner, the examination of S PLLs can be performed in a single test, and thereby it can reduce the time needed to examine PLLs in the semiconductor integrated circuit having a plurality of PLLs. Data representing an initial state of the object prior to the changes and data representing a subsequent state of the object after the changes is persisted. The dial by specialty service can then search an augmented directory to find the telephone number of a provider who best satisfies the search criteria. A rotatable gear located at a fixed lineal position within the housing receives the drive rod in threadably inter-engaged fashion.

1459827865-36b34d11-9846-4aed-93c9-deaa64d7afc6

The present invention provides feedback control information for the multiple base stations multiple input multiple output. A through-loading opening is provided in the element. A laser may also be used for in situ cleaning of components of a lithographic projection apparatus. Presentation time stamps are provided with the audio transport packets to indicate when decoded audio data is to be output. The converged reflected light is imaged on the light receiving plane by the imaging lens.

1459827865-e104dff2-7c71-4ad3-b6f4-fc1ff1a1fd7a

Herein is disclosed a biomedical dispersive electrode which can redistribute the current in the subject body, increase subject safety, reduce the chance for burns and other tissue damage as well as discomfort experienced by subject during or after usage. The test circuit is coupled to a pair of bit lines. Rods, connected to the rails, support an adjustable platform. At least an account identification associated with the presentation instrument, a monetary value to be loaded onto the presentation instrument, and a payment instrument from the customer is received. The resulting thin micro-battery with high surface capacity can then be integrated in an integrated circuit, in particular by bonding by means of indium connecting balls. The phases of the first and second induced magnetic poles of the outer rotor are displaced from each other by only half of a predetermined pitch, and the phases of the first and second permanent magnets of the inner rotor are displaced from each other by only the predetermined pitch.

1459827865-fe4beb16-c803-4ae0-8c92-79a59b9dfa45

Electrokinetic devices and methods are described with the purpose of collecting assayable agents from a dielectric fluid medium. The computer program product and method includes the steps of identifying a solution for preparation and its associated volume. The gain circuit is connected to receive the output from the transconductance circuit, wherein the gain circuit includes a transistor that is matched to the second transistor of the H-bridge. A charge blocking layer is formed over the tunnel insulator. Tracking circuitry is connected to the device and remains in communication with the first bus transmission medium. Between successive elution runs, at least one performance parameter of the elution system is adjusted based on the accumulated error data.

1459827866-b64aafa4-a328-43b4-bcd2-036ff7ae56e9

A medical robotic system includes an entry guide with articulatable instruments extending out of its distal end, an entry guide manipulator providing controllable four degrees-of-freedom movement of the entry guide relative to a remote center, and a controller configured to manage operation of the entry guide manipulator in response to operator manipulation of one or more input devices. The vehicle seat carrier unit has at least one base unit and at least one cover unit which is embodied separately from the base unit and which is provided to be connected to the base unit in the assembled state. A communication device can reference the service policy table to locate a service that is to be used for the data session and can identify an identifier linked to the service and associated with a mobility gateway. A churn type of event may be encoded in the statistical model as an absorbing state of a stochastic process, with a time of transition to the absorbing state modeled as being infinite. It is particularly useful for improving the adhesion of a polarizing plate adhesive for a liquid crystal display to a glass substrate, with little change over time even under hot and humid conditions.

1459827866-e40032bd-1e34-4207-a048-8a5f95b6d15e

Provided is a method for system recovery. The LDMOS polycrystalline silicon gate structure is patterned using a two-mask etching process. The system further includes a first flow body fixedly coupled to the airfoil to form at least one gap between the leading edge of the airfoil and the first flow body. In this case, an output inversion flag, indicating that the output data group is to be inverted, is generated. The label is inserted in the compartment to allow the contents of the pouch to be easily determined. Moreover, the basin is cost-effective to manufacture and use.

1459827867-2812dcb7-e4d9-4a83-ba8a-f011861b2a93

Devices and improved methods are provided for operation of ultrasonic transducers and horns. Using this physical vapor deposition amorphous silicon precursor film, the amorphous silicon film is transformed to polysilicon by metal induced crystallization wherein the crystalline growth occurs fastest at regions that have been augmented with a metal catalyst and proceeds extremely slowly, practically zero, at regions which bear no metal catalyst. Each raised portion being molded in the body to separate the outlet from the base of each reservoir to ensure a sufficient flow rate of fluid from the reservoir. The data streams are uninterrupted transmissions of data from the medical device.

1459827867-4ce38195-12dc-44c0-a641-e18015e1a0d3

A multiple access wireless communications architecture provides selective, simultaneous communications with wireless devices located in different sections of a spatial area around a communications apparatus referred to as \u201csectors\u201d. A cryotherapeutic system configured in accordance with a particular embodiment can include an elongated shaft having a distal portion and a pressure-relief portion proximal to the distal portion. Uncompressed data may be compressed using a plurality of compression engines in parallel, with each engine compressing the data using a different lossless data compression algorithm. At least one actuator is associated with each respective nozzle chamber. In one embodiment, third parties are permitted to access and search the submissions on an open exchange.

1459827868-11502b30-0201-447d-988a-765bfafbd2a2

An automated banking machine can cause financial transfers responsive to data read from data bearing records. Each HA is configured to display content having a time of focus and a local lime control user interface when in an LTC mode. According to the invention, said reaction chamber comprises a base part mounted stationary in respect to the interior of said vacuum vessel and a movable part adapted to be sealably closable against said base part of said reaction chamber. The processor modifies the output of a selected program signal upon user selection of a new signal channel if a default blocking mode is selected by the user, then continues

to modify the program signal associated with the newly selected signal channel at least until the program related information is determined. By determining the density of the mass of material at different locations, the density profile of the mass of material can be assessed. A pair of siding panels include a substantially planar member with apertures formed therein and a flange extending rearwardly therefrom.

1459827868-a5e8d893-c2df-4136-8713-240f2b13b7b3

The present invention features a non-peripherals-based processing control unit having an encasement module that is very small and durable compared to conventional computer encasement structures. The admission control procedure manages a first spectrum resource. The number of bits per cell may be decreased when fidelity is more important. The first switch includes a first terminal coupled to each of the first terminals of the first and third light emitting elements and a second terminal coupled to the first terminal of the second light emitting element.

1459827868-e6c593da-e7e6-4e1d-afbc-810bf7d0c626

A locking system for a vacuum cleaner having a top portion and a bottom portion where the bottom portion has an opening. The continuous medium printing apparatus comprises: a conveyance system; a printing section; a feed-force adjustment section disposed on a downstream side of the conveying path from the printing section; and a feed-force control section. The binary code data contains information data, checksum and error correction. The development system further includes a non-magnetic, cylindrical shell for transporting the developer between the supply and the development zone, wherein the shell can be rotatable or stationary.

1459827868-e9e7a84f-c2ce-4e29-956f-df97525c572a

An image forming apparatus includes a plurality of process cartridges and a pair of frames. This invention is also related to a process to prepare the said composition. The maximum height  $R_z$  of a roughness of an adhesive-layer-facing surface of the substrate is 2 nm or less. The fibers are in the direction of the longitudinal axis of the main body.

1459827869-0541c734-e85b-4beb-80d9-b8e81cd5ee63

An electrical conductor has a metal substrate. The container includes a bottom wall that supports the container in a first substantially horizontal position and a front wall that adjoins the bottom wall and slopes upward at an obtuse angle from this bottom wall. These reduced data allow to deal with asphaltenes flocculation in an industrial simulator working according to a simplified model.

1459827869-3a23e438-fd94-4d8f-94e1-bdd835b8e344

In one aspect, a computer-implemented method for geo-locating images may generally include receiving, by one or more computing devices, a request to geo-locate an image on a map and, in response to the request, providing for display a user icon on the map. Blobs are extracted from the two original images and their negatives, using an enhanced blob extraction algorithm based on connectivity analysis along gray-levels. The unit can transfer an impact force to the pin in the direction of extraction. PdIm4Cl<sub>2</sub>, where Im is imidazole and HCl dissolved in water or an alcohol. The depositing of the oxide structure includes the steps of depositing a buffer layer overlying the free layer, wherein the buffer layer is a buffer-layer metal when deposited, depositing an overlayer overlying and contacting the buffer layer, the overlayer being an overlayer metallic oxide of an overlayer metal, and oxidizing the buffer layer to form a buffer layer metallic oxide. The layers are individually formed and laminated together, the laminated combination subsequently cut into a plurality of discs.

1459827869-da0d7fa9-dcc5-4b2f-a387-0d2a94cbb4de

A memory system includes a master device, such as a graphics controller or processor, and an integrated circuit memory device operable in dynamic memory bank

count and page size mode. A plurality of sorting holes are formed in the transfer track for successively sorting and dropping the tokens in the order of increasing diameters as the tokens are transferred upstream toward downstream in the transfer direction. The success rate of the PCI allocation for the target cell is improved by the present invention. The control display also enables a plurality of respective batch operations to be performed on the items. A solar energy receiver for use with the systems and methods may include a container for holding a solar absorption material, such as a phase change material, and a cooled cover disposed above the container for condensing and collecting vaporized phase change material collected along an underside of the cover. The second output line outputs a second voltage lower than the first voltage.

1459827870-16e0c3e9-835f-4745-b2a9-5b41389d8c0d

Improved fabrication processes for manufacturing GeOI type wafers are disclosed. The ATM includes a fascia which extends on the outside of a wall and includes a user interface. It is evident that a number of these methods can be concurrently employed thereby to serve all of the vehicles in the most efficient manner that can be determined. Additionally, iterative morphing using a Bezier Curve technique is described. In a third aspect, master control manager manages the operation of each physical subsystem through a respective subsystem manager, directs state transitions of the subsystem managers, and routes interaction between the subsystem managers from the master control manager.

1459827870-4845ec82-2e1d-443f-97b9-fa77a1994bc5

A test vector decode circuit includes a lockout circuit to prevent inadvertent latching of output vectors. The garlic juice is produced by cutting, crushing, or otherwise damaging garlic cloves, and collecting the juice. The front ends of the transformer units are respectively connected to the driver units which are parallel connected to a power source. and their inhibitory activities on common fungi and bacteria and the identification of mean inhibitory concentrations.

1459827870-521dc7f6-ab48-4bd1-9871-f25cfec8a509

A tube electrode stabilizer for an EDM drilling includes a stabilizer block and a mover. The support frame defines a horizontal plane having a longitudinal axis. The systems of the present invention are capable of recycling a variety of currency from multiple countries and multiple denominations.

1459827870-8b20879b-7486-4698-87b9-c7f8a995ccf8

A system and method for capturing a sample gas for analysis is disclosed. The core is formed primarily of a rubber material, the envelope layer and the intermediate layer are each formed primarily of the same or different resin materials, and the cover is formed primarily of a thermoplastic resin or a thermoplastic elastomer. Each current source 18 provides alternating current to the corresponding winding.

1459827870-8e6adc02-0db8-4183-a15c-d198a49aa49f

A method for providing add-on services responsive to an email transferred via a distributed computer network. A part of the metal connect is between an active semiconductor region of the device and an underlying buried insulator layer. An electromechanical actuation system is provided that is configured to be coupled to the mechanical steering system.

1459827871-308453c6-c475-4883-bcd7-af419ed38d5a

A system and methods for carrying out point-to-point intracluster communications between hosts is provided. A notification is provided to the online user that the requester would like to join the online conversation. A suppression instruction counting unit counts the number of suppression instructions, issued from the cache controller, to suppress a read request and sends a suppression control unit a notification of the number of suppression instructions.

1459827871-7377aece-f81a-4129-86f3-45889da8ac2f

Disclosed herein are novel genes and methods for the screening of therapeutics useful for treating impaired glucose tolerance conditions, as well as diagnostics and therapeutic compositions for identifying or treating such conditions. An interior angle formed by the contact area of the auxiliary lens terminal and the contact area of the eleventh lens connector terminal at the mount center point is smaller than an interior angle formed by the contact area of the first lens connector terminal and the contact area of the eleventh lens connector terminal at the mount center point. The first wall-charge of the first polarity stored near the respective scan electrodes generates an associate electric-field in the cells. Then, at the mixer, a noise control signal outputted from an active noise controller is added to an audio signal outputted from the buffer amplifier. Particularly, the present invention provides a process and a system for wastewater treatment which effectively process wastewater having both high nitrates and low organic carbonaceous sources, and effectively reduce sulfates by-products. If the carrier is an unwanted carrier, and thus no message is received, the sensitivity of the transponder for receiving electromagnetic signals is reduced, in particular by reducing the gain of an input amplifier.

1459827872-69d28e84-1afe-4729-9853-4ea224665ee5

Variable resistive punchthrough access methods are described. The fan may include bottom inlet and may draw air through an opening in the bottom skin of the computer system and may generate a positive pressure within the computer system. A pull top is releasably secured to the canister and extends over the open top to form a sealed container containing the fragrant material and the grid. Another embodiment includes first and second digital levels that cooperate to emit a skew signal that is indicative of the skew orientation of the antenna when the device is affixed to the antenna. In another form, a fuel vapor barrier layer is bonded to a layer comprised of a blend of structural and adhesive materials. The estimated noise level may then be utilized in encoding the video signal by being inserted into the video signal or used to change parameters used in video encoding.

1459827872-a0ead47e-9c78-450f-b20b-426c21cb550b

A transportable basketball system having components which are arrangeable in a play configuration during which a basketball-related game can be played, and also in a transport configuration during which said transportable basketball system can be easily transported between a sand covered outdoor environment and a remote location. The sniffer operates to extract certain data from each address. The arm assembly selectively positions the visual display for viewing by a target subject. Wireless stations are load balanced across APs so that user bandwidth is optimized.

1459827872-f56feb38-f33a-4291-87e9-94b26f6ff5f9

A gas meter is mounted between vertical and horizontal branch tubes of a gas canister valve and has an indication pointer driven by a magnetic block that is movable inside the valve to indicate a residual quantity of gas inside the canister. The network behavior of users of a computer-implemented social network are observed and used for user profiling. The annular body has multiple sections that include a first section and an opposite second section. The optoelectronic device is disabled and a count of compared bit groups is kept until the comparison indicates that the optoelectronic device is completely off.

1459827873-7b2c7c9a-7e23-4791-81e7-2fd29b8234ff

An exemplary golf club head having additional discretionary mass may be realized by utilizing light-weight materials, an favorable average crown height, and/or articulation points. According to various embodiments of the invention, the photonic integrated circuit includes a plurality of optical devices having associated characteristics which may have lead to optical signal degradation. Spring elements are arranged along slots that are formed in the peripheral wall portion. The device also incorporates a lateral anti-blooming drain structure that

is formed by a self-aligned diffusion process and does not need a polysilicon gate for its proper function.

1459827873-7e219081-6c83-4309-ab4b-1de8914a1340

A method of adapting an event processing component. In one embodiment, the system is designed to assist in lifting lift a body wall in order to perform surgical procedures within the body cavity without establishing insufflation. Current is injected into the gain region by way of a p-side electrode and a n-side common electrode by a constant current source, forming the population inversion required for laser oscillation. Numerical analyses were performed to find the optimum flow guide occupation ratio of the conventional technology and the corresponding total pressure loss coefficient.

1459827873-f46b5cb1-4c64-4ffe-be68-9c46e29639ce

There is provided an apparatus and a method of printing a diffraction grating. The reverse osmosis element includes a plurality of permeate tubes arranged to form a core frame. A receiver optical assembly includes a photo-diode an optical converter, such as a transimpedance amplifier, and a processing control that can administer, for example diagnostic data associated with the receiver optical assembly. The stake pockets receiving a stake used to secure the cover to a surface, typically the ground. Information pulses encode further information for receipt by a missile, such as an angle of roll of a missile launch platform from which the LIF is emitted. The transport apparatus continuously transports feedstock of an arbitrarily long length at a desired feed rate, and the grinding apparatus grinds the feedstock transported by the transport apparatus.

1459827874-22e3585f-d5ed-42a7-9b3e-03357cfe1c12

A broadcast station transmits radio frequency signals containing on-demand, main program, and index materials to a plurality of receivers. Nanopores may be fabricated by providing on a substrate spaced apart electrode regions, a spacer region therebetween, and a cover layer on the spaced apart electrode regions and on the spacer region. The basic data is data that is decodable in a completed state without using extension data, and the extension data is data for improving the quality of data generated from the basic data. Then, a surface treatment is applied to the material layer until the average run-out of the surface of the material layer is below 10 $\mu$ m during the running of the spindle motor, and the distance between the surfaces of the material layer and one end of a shaft of the spindle motor achieves an expected value. A method for controlling the electronic censer with control system is also provided. The rear of the body of the giddy baby relaxer is equipped for safety straps to allow for optional transporting in an automobile.

1459827874-367dc9f1-e42f-4d25-b5e7-25bf58018e9f

A mobile station is associated with a first wireless coverage area that has a first pilot signal. The radio control apparatus comprises a controller for including cell identification information in the MBMS MODIFIED SERVICES INFORMATION message, and a transmitter for sending the MBMS MODIFIED SERVICES INFORMATION message with the cell identification information included therein to the mobile terminal on the DCCH. A plurality of tines extend downwardly from the lower surface of the forward portion of the frame. The agent enforces simple filter rules for received network packets. The product encompasses composite service states.

1459827874-6404b049-8a2e-43c2-be7c-188d9939e5cd

A multi-output DCDC converter, comprising inductive electrical energy storage means, switching means and control means. In one embodiment of the disclosure, the circuit interconnect includes a dielectric layer. The desired local effective channel height varies in accordance with a predetermined formula from the first radial position to the outer radial position. The corrective data is used to correct the anomaly on the target computer and the target computer may acknowledge

receipt of the corrective data. The mixed molten liquid is a liquid obtained by mixing a radical compound having a nitroxyl radical site and serving as an active material and a metal salt having a fluoroalkylsulfonyl site and serving as a supporting electrolyte. Alternatively, the composite panels may be formed as separate pieces that are connected to the metallic storage box frame.

1459827875-5451d93a-c7a8-495c-a97c-d3f0e2d414ce

A device and method for enabling an individual located on a bed to sustain a side-sleeping orientation on either a left or right side. The present invention also relates to improved bacterial host cells that are deficient in one or more of the active transport systems for an inducer of an inducible promoter, such as arabinose for an araB promoter, and contain an expression vector encoding a recombinant polypeptide under the transcriptional control of the inducible promoter, such as an araB promoter. When the path-state determining unit 54 determines that there is no path which is neither in process of data transmission nor in the prohibition period, the path selecting unit 55 selects a path which completes data transmission but does not pass through the prohibition period as a path for data transmission. According to another aspect, different applications or configurations can be run on different groups or sub groups of CPUs allowing complete flexibility. The rotary module has at least one protruding point positioned at the second end for contacting the first rib.

1459827875-9054e72c-864a-49f1-a90d-019ab108aae3

Methods and apparatus for transmitting data are provided. The sensor performs control processes appropriate for the sensor and regardless of the type of actuator being used. variabilis is a widely distributed tick associated with different diseases.

1459827875-974b7834-9801-41e6-9899-dfcf18e0032c

The invention relates to a method and apparatus for detecting the presence of an ophthalmic lens, particularly a contact lens, in a package. The computer includes a program that provides a grid of display windows, each of which displays an image received from the camera associated with that window. The method further includes controlling the first and second process control systems together. When a user is typing an address, the profiles and the relevancy scores are used to identify and sort suggestions for the completion of the address input. The first and second conductors are connected to the conducting connection via the first and second contact holes, respectively, which are both outside the image display region.

1459827876-4118880b-934e-4846-bde8-9c99501de142

An apparatus for and method of implementing a cluster lock processing system having a relatively large number of commodity cluster instruction processors which are managed by a highly scalable, off the shelf communication processor. The first lens group from the object side has negative refractive power and both the second lens group, which includes a stop, and the third lens group from the object side have positive refractive powers. The invention further includes an electrocautery system, including an electrocautery device, a control circuit electrically connected to the electrocautery device, and an electromagnetic component electrically connected to the control circuit. Additionally, the divider means comprise a Sigma-Delta modulator. If the verification file is successfully retrieved and displayed and recognized as the correct verification file, the resource is authenticated.

1459827876-c80acf1e-adea-4935-86e0-19483d798a6f

A composite material including an arrangement of approximately aligned nanofilaments overlying at least another arrangement of approximately aligned nanofilaments, the longitudinal axis of the nanotubes of the first arrangement being approximately perpendicular to the longitudinal axis of the nanotubes of the other arrangement, and the arrangements forming at least one array. The lighted cup

holder includes a cup holder body and a light-producing light source, with the cup holder body being attached to the seating arrangement and having a cup receptacle therein, the light-producing source being disposed within the cup receptacle for illuminating the receptacle. Each fiber cluster is a matrix of interconnected fibers. The first conductors are respectively in electrical contact with the conductive pads of the chip. The transistor of the first switch for clamping the voltage may be remarkably reduced in size in comparison with an output transistor of the output buffer.

1459827877-b0a6b994-0295-4960-b003-fba522990db5

The present invention is directed to a system and method for managing state information related to an interactive application to accommodate one or more users participating in an interactive application session, wherein the state information comprises local state information specific to each of the one or more user's unique view of the interactive application and global state information. The semiconductor device includes a wiring substrate having a plurality of bonding fingers formed on a chip-mounting surface, a semiconductor chip mounted on the wiring substrate, a plurality of wires having a ball part and a stitch part respectively. In addition to being able to generate a message guiding a user through corrective action, the system can estimate the rate impact of the detected fault. Client programs manipulate the methods and properties included in the OLE objects to perform transactions involving the transaction services. As fluid flows through a device, a scrubbing liquid is positioned in a pattern to contact the fluid and constituents in the fluid are transferred to in the liquid. In an example, a computing device may be configured to receive lane information relating to locations of lane boundaries and may be configured to estimate a lane boundary on a road on which the vehicle is traveling, based on the lane information.

1459827878-10cb506c-8043-4a75-82b0-1ab69c81d491

An apparatus for simulating flames using fabric flame sheets or elements. In a specific application for generating electric power, the two-dimensional solar concentrator means consist of a parabolic trough collector, while the three-dimensional solar concentrator means consist of a heliostat field and central tower for generating overheated steam that expands in a turbine coupled to an electric generator. The antenna module disposed in the axle is fixed to the main body. The fins are stowed canted relative to planes that include the axis of the tail section. Two of the support posts interact with a cylindrical hole and a U-groove in the sample to establish location of one point on the sample and a line through the sample. The IC package can include a die in which the electronic circuitry is formed, a ball grid array substrate, and a plurality of conductive balls coupled to the BGA substrate.

1459827878-8c9e0aff-2d11-4b5f-8c29-f7eca839c5fe

Disclosed is an apparatus for coupling a display window and buttons for a clothing handler. The vibrations are applied to the skin surface at substantially a same frequency rate, a first harmonic of the same frequency rate, and/or a second harmonic of the same frequency rate, as a burst rate of electrical pulses being applied to the skin surface. A first conductive line is embedded in a first level of the insulating layer. The message is then routed to one of a plurality of message centers according to the routing method chosen. The signal processor also includes a filter enable module for generating the filter enable signal, the filter enable module including a motion detection module for detecting motion in the at least one of the plurality of pixels and for deasserting the filter enable signal when motion is detected in the at least one of the plurality of pixels.

1459827879-0b247a3f-9502-4e91-baf6-fe7d997c53ee

A method and system for flexible payments to enable buyers to pay for goods and services using only their fingerprints at the time and location of purchase. After that, device isolation grooves are formed and buried with a device isolation

insulating film. The invention also relates to transgenic animals altered to contain the CD-RAP promoter transgene. A hydraulic motor rotates the ball screw to drive a ball screw nut and attached first section relative the second section.

1459827879-8ce425c9-ce7e-4176-aaaa-a1dcb43a482c

An exemplary sensing circuit for sensing the current drawn by a target memory cell comprises a first transistor connected across a first node and a second node, a load connected across the second node and a third node, and a voltage boosting circuit coupled to a supply voltage, wherein the voltage boosting circuit supplies a voltage at the third node which is greater than the supply voltage. A composition can include cementitious fly ash, water and cellular foam. The first direction is opposite of the second direction.

1459827879-92bb594b-eaea-4cd8-a8e2-99160d5ec810

The invention is a Gray code counter that uses a carry chain to determine the state of each bit of the counter. A support member is pivotally coupled with the frame. The apex of the curved cavity is closer to the cylindrical outer wall of the vial than the ends of the inner cavity. Shortcuts to the identified printers and shares are created on at least one computer on the network. The first and second compartments may be ruptured to allow the first and second components to mix within the enclosure.

1459827879-ad74a364-7be6-4455-9c94-89b6f7adb9bc

Method of inerting mineral residues comprising automobile grinding residues, in which method water is added to the mineral residues so as to form a paste, the paste is mixed with phosphoric acid, and the resulting mixture is calcined. The powder container is configured to contain powder. The disclosed embodiment includes an economizer circuit, an unloader function, and an optional suction modulation valve. Low-cost is also achieved by forging the rotor in a single piece with integral shafts.

1459827879-f3bd720b-7be6-483d-8159-fff8e0ba7177

Sensors and methods for detecting attachment to a surface are disclosed. All of these components can be packaged for integration into a single IC including components such as filters and inductors. A delay control section controls a delay amount of the delay units. The illumination source includes LED printed wire board segments that may be configured to form a light line of any length. In another aspect, the product is used in the treatment of various types of cancer such as leukemia, colorectal cancer, lung cancer, breast cancer, liver cancer, nasopharyngeal carcinoma and esophageal cancer.

1459827880-0d2df851-250b-4869-9526-5acb8fa36d30

The invention concerns an imaging assembly comprising a synthetic aperture instrument including a plurality of pupils separated by sampling detection means. The bipolar plate assembly includes a cathode plate disposed adjacent an anode plate, the cathode and anode plates formed having a first thickness of a low contact resistance, high corrosion resistance material by a deposition process. The bottom wall defines a plurality of semi-cylindrical protrusions. Thus, the dispenser can be used in all lighting conditions.

1459827880-32b981bd-8a86-4f35-b28f-8337805ec364

A method of forming a semiconductor device comprises forming a gate over a substrate. Here, the location information for a mobile terminal in the service control point is fixed in accordance with a request from a subscriber of the mobile terminal, and a subscriber accommodating center having the mobile terminal under it stops the registration of the location information of the mobile terminal for the service control point. The invention further relates to methods for producing a lettuce plant containing in its genetic material one or more transgenes and to the transgenic lettuce plants and plant parts produced by those methods. The data

manager may also be responsive to receive, store and display other services such as programming guide services to provide enhanced program viewing and storage management as directed by the user. Further, the plunger assembly is disposed in a socket within the tool head and biased toward an extended position by a spring. A plurality of presentation objects are also provided as abstract representations used to organize and customize the display of the information.

1459827880-6906a106-66cc-4035-aa8e-9cf34cee2298

A magnetic head capable of increasing the data transfer rate during recording and/or reproduction, while improving the accuracy of tracking control is provided. One of the sets of the arbitration members may include first arbitration members to respectively connect to the storage members, each first arbitration member having an associated transfer rate corresponding to a sum of the output rates associated with the storage members of the set to which the first arbitration member connects. A partial logical-to-physical L2P mapping table in a RAM has entries for only 1 of N sets of L2P mapping tables. A blur is applied to the low contrast areas, which stops abruptly at the edges.

1459827881-75960744-796c-4eb6-9322-a2d4ba567c5d

An integrated MEMS device comprises a wafer where the wafer contains two or more cavities of different depths. The actuation of the said optics is based on deformations arranged to take place in the optical image stabilizer unit. When a client seeks to access a logical database, the client may send a logical server and logical database name in a data structure. The retention plate has a pair of latching arms in correspondence to the latching blocks and the pivots.

1459827881-7cd60e06-dbb0-459c-8e74-ba169d199b75

The present invention relates to a color cathode ray tube and more specifically to a color cathode ray tube in which mechanical stress due to internal pressure made by evacuation is decreased. In a further aspect of the invention the observer output signal,  $E_I$  angle, can be used to determine the transition to closed loop control, when the observer output signal reaches a value indicating conditions close to pull out conditions. The present invention also provides Si-based MIS transistors having a gate conductor having grain sizes of about 0. The cassette is pressed into the rails which initiates the rotation of the rails, which close onto the cassette. It is also possible to measure the axial static moment of the blades, with the classification in pairs then being performed while taking account also of the axial static moment as measured in this way. The equipment can be provided in a kit form for easy installation by a homeowner, authorized dealer or contractor.

1459827882-923f99e9-927b-4bf2-9e22-c540359db00c

In an expression style processing method, a plurality of objects are stored. A user places a PC in a hibernation state by inputting a particular key operation under a typical OS environment. Icons are displayed for the selected function via the display device. The drive-train assembly bi-directionally rotates about a pivot in response to torque applied to or acceleration forces on the vehicle. Firearm actuation is permitted when the latching track allows for the sliding of the ring past the predetermined location on the track.

1459827882-9dabfaa7-9d8e-4985-be84-2eaaec662308

A wireless endpoint employs frequency hopping for communicating signals in a wireless communications system. In particular, the present invention provides methods for treating and/or preventing ovarian cancer in a subject by administering to the subject an effective amount of Mullerian Inhibiting substance and/or an effective amount of an agent that inhibits BCRP1. In some embodiments of the present invention, for example, mate information between rigid parts in geometric models may be translated into corresponding elements in other modeling environments. A portion of the coin guiding channel is oriented vertically and guides the received coins to a position above the coin hopper. Additionally, a

plurality of paths or maps, for example, one being a normal coolant temperature strategy and another being a high coolant temperature strategy is used. In this way, as many as possible flexible printed wiring boards can be obtained from a laminated sheet for flexible printed wiring of prescribed size.

1459827882-f34b1b62-6205-453f-95f1-ed618ebc6994

According to one embodiment, a first engaging surface can be configured to engage a first region of an antler set, and a second engaging surface can be configured to engage a second region of the antler set. An open channel extends parallel to the axis which is adapted to receive a medical line, such as intravenous tubing. A link quality measure is then determined for this first modulation. Each clamp carries a cauterizing pad for cauterizing the severed ends of the vessel.

1459827883-4c96992e-a681-4fd3-bfe2-ff69d5e25272

There is provided a liquid jetting apparatus configured to jet liquid, including: a channel structure in which liquid channels including a plurality of nozzles are formed, and in one surface of which a plurality of supply ports are formed to communicate with the liquid channels; and a plurality of filters attached on the one surface of the channel structure to cover the plurality of supply ports. The fluid that is used to expel the chips from the sluice feeder principally includes pressurized fluid withdrawn from the treatment vessel. of grainy fertilizer on a lawn surface, or scattering material on slick roads or paths. The coating detection further includes determining whether the measured parameters are within ranges corresponding to the determined fluid type. Low density knit fabrics are also useful according to broad features of the invention.

1459827883-54c950e0-f3b4-46ea-9df3-12fd95fa1924

A self-hold motor protector has an open metallic housing in which a thermostatic disc carrying a movable electrical contact is cantilever mounted. A random number generator processor is arranged to select a plurality of RNG system components and configure them in an RNG pipeline, to provide random numbers to a gaming system. Consequently, after completion of metering process and before injection process, the screw is moved forward after the screw has been rotated in reverse a predetermined amount to prevent resin backflow.

1459827883-b92dca9a-a9dc-4374-9a63-3c6f34d551de

One embodiment of the invention is directed to a method of extending the input range of an analog-to-digital converter having a nominal input voltage range. The piston assembly is resiliently disposed within the housing. The entity might be a medium, human, animal, or a passenger vehicle. A gate is configured to provide an opening in a bottom portion of the protection case when the gate is in an open state, and to close the opening when the gate is in a closed state. These designs improve collection efficiency of the vane electrostatic precipitators. A request is received to write one or more tracks.

1459827884-4207210a-d63e-4e49-a177-ca9fcc4c140c

An LCOS display, including specially manufactured spacers, and a process for making the display, are disclosed. Large vibrations of the frame from an impact of a strike on the rim are transmitted to the second plate, and the rim sensor provides an output corresponding to the striking force. In one embodiment, two or more MEMS inertial sensor sets are installed in the IMU. When resident in the flash memory chips, a single ALU or multiple ALUs may be used.

1459827884-8d6c15be-0ea1-42eb-8e7b-754dfdb00c0f

This specification describes a system and method that can offer, among other advantages, a technique for resource assignment that involves obtaining a group of resources, repeatedly selecting a resource from the group of resources until a resource that is available is selected, and associating a client or process with that resource. The apparatus converts data from a data processing apparatus into

bit image data to be reproduced as a visible image by means of using the data converting unit and the reproducing unit, so as to accomplish an efficient system as a whole. The treating apparatus includes one or more safety features, and it includes beneficial control concepts that enhance the effects of the benefit composition being dispensed through the nozzle. The router also includes a thermal transfer assembly disposed within the sealed housing that conducts heat away from the router's circuit board components. The reversed gate conductor assignments increase the threshold voltages of the transistors in the memory elements to improve reliability in scenarios in which the memory elements are overdriving pass transistors in the programmable logic circuitry. The interface provides flexibility by utilizing at least two clock cycles in order to accommodate a myriad of memory devices.

1459827884-ee8ee55a-a981-4968-aae7-84d0d386dcc9

Disclosed is a mixing apparatus where a fluid is progressing from an Inlet tubing to an Outlet tubing. Ribs on the upper surface slant downwardly and laterally and channels between the ribs slant similarly so as to drain water from the upper surface. The securing portion partially defines a channel for receiving a part of the bed unit to secure the compression control unit to the bed unit. The precursor materials used for forming the flash layer and the capping layer are selected such they include at least one metal-oxygen bond.

1459827885-a0c7366b-4d39-468f-9449-0f58f5f41bdc

A device for carrying out a two-stage, linear movement as well as an associated method for displacing a displaceable structural unit relative to a stationary structural unit. 1 to 10 weight %, with respect to the weight of said fiber, of a complex oxide comprising oxides of at least two metals selected from the divalent or trivalent metals, and coated with  $\text{O}_2$ . When it is determined that there is no transmitted or received packet traffic during the certain time, the UE requests a network to release the RRC connection by utilizing a Signaling Connection Release Indication message. A torque interrupt actuator assembly is connected to the torque apply piston assembly and is operable to selectively move the torque apply piston assembly from its engaged position to the disengaged position to thereby interrupt torque translation between the drive and driven members through the clutch pack. In another aspect, there is a location range received from a wireless handheld device associated with a driver and data received from the driver indicative of a more accurate location within the location range. The drag rings can be mounted in grooves in the alignment bushings or, alternatively, in grooves on the drive pins.

1459827885-f3e7a686-1779-4b79-81ea-8c204260fc41

It is an object of the present invention to provide a light-emitting device in which, even when a material with high reflectivity such as aluminum is used for an electrode, a layer containing oxygen can be formed over the electrode without increasing contact resistance and a manufacturing method thereof. An E-beam firing bar engages the channel and selectively engages the anvil during distal firing movements, wherein the tissue is severed and stapled driven upward from the staple cartridge to form against the anvil. The feed table includes an attachment mechanism to detachably couple the feed table to the bagging machine, a mobility support mechanism to at least partially support the feed table when the feed table is not attached to the bagging machine, and a tow mechanism to detachably couple the feed table to a towing vehicle. In conjunction with a class module, the client call command is translated from the second processing environment that the application is executing within and the first processing environment providing the document management system. The control unit controls so as to fasten a first clutch based on the converted rotating speed of the engine output shaft, thereby enabling a start of a vehicle. The gear shift control apparatus for a hybrid vehicle includes an engine, a transmission for changing the speed of rotation of the engine, and a motor for assisting the driving force of the engine.

1459827886-202c9db2-9235-4410-90ad-68e688918181

A releasing pressure and a pressure releasing position, when enclosing films are expanded by gas produced at an abnormal time, are easily and positively configured. In the present invention, an element wire is removably fastened to the optical connector by tightening a main wire connection member using a tightening member from a state in which a plug, a main wire aligning member, a spring, a fastening member, the main wire connection member and the tightening member are previously assembled together. The high unit density arrays of this invention are formed on chips which may be combined to form multichip arrays according to the methods described herein. Sorting and issuing the IO requests in the manner described herein can, for example, reduce drive head movement resulting in faster storage subsystem initialization. Each of the plug and socket has a second plurality of pins or sockets.

1459827886-77ca772b-8fb1-4565-9be1-10737c18c237

A predistorter configured for use with an RF power amplifier having an input loop configured to be coupled to the input of the RF power amplifier and peak control circuit. The clock generator circuit further comprises a pre-phase clock generator subcircuit associated with the clock generator subcircuit which is operable to generate two pre-phase clock signals, wherein each are associated with a respective one of the two clock signals generated by the clock generator subcircuit. In addition, the apparatus affords a more compact design, an improved angular field of view and an improved overall ruggedness of optical design at a lower manufacturing and maintenance cost compared to previous devices.

1459827887-5da4f095-3c50-4cff-9db2-672385fc1167

An automated banking machine has a housing which is suitable for mounting in various manners and configurations. The variable reference current generator comprises an offset current generator permanently coupled to the current comparator, and m2 distinct current generators, independently activatable by the successive approximation register, each one generating a current equal to a respective one of the plurality of cell current values. A damping valve and a bypass passage parallel to this damping valve are disposed in this partitioning member. Embodiments also include the compute node selecting from a plurality of ghost nodes, the calculated number of ghost nodes for participation in the execution of the algorithm and executing the algorithm with both the selected ghost nodes and the contributing nodes. The multicast processing module is also for identifying a data initiator according to the subscribe response, and for receiving the data from the multicast service module in a multicast mode. Optical assemblies formed using microbump micropositioners are also disclosed.

1459827887-5ecfc778-c279-4101-850d-7392a1373838

A method of monitoring an immersion lithography system in which a wafer can be immersed in a liquid immersion medium. The host computer comprises a printer driver that determines whether each print job unit can be more efficiently rendered on the host computer or on the printer and processes the print job accordingly. Furthermore, on the basis of the plurality of binarized luminance evaluated values, a width of a high luminance area included in the object scene is calculated while a width of an adjacent area adjacent to the high luminance area out of a low luminance area included in the object scene is calculated. A second protective diode is arranged, with the diode thereof, in the supply terminal of the module such that it leads to the supply potential, said supply terminal being supplied by the lower-lying supply potential.

1459827887-deb89944-2b35-43a1-9fb3-4934f872ff8b

The present invention is directed to a versatile holder or holster for portable telephones and other personal items, wherein the holder is secured to either side of the body of the user in any physical orientation. The thin film consists of a material having an extraordinary Hall coefficient, the thin film also has a

resistivity and a film thickness no greater than a threshold thickness at which the resistivity is substantially equal to 150% of a bulk resistivity of the material. A resonant frequency is generated between an inductance and a ground electrostatic capacitance which are measured between the following: a) one of the three phase terminals of the permanent magnet synchronous motor, and b) a ground. The first IO port is adapted for interfacing with a medium, and the second IO port for passing an acoustic signal to an acoustic transducer. , the mixed gas is introduced into the NOx removal catalyst, thereby decomposing VOSO<sub>4</sub> adhering to and accumulating on the NOx removal catalyst into V<sub>2</sub>O<sub>5</sub>. The highlighting information may identify one or more of the elements that have been highlighted by a group of users.

1459827888-38104360-a3ea-4643-b7c3-13b847ef76c8

The present invention provides a process for the preparation of functionalized indolizidines comprising the steps and products disclosed within this application. Systems and methods according to various embodiments of the invention include an oscillating platform for therapeutically treating damaged tissues, bone fractures, osteopenia, osteoporosis, or other tissue conditions in a body. A load shedding factor may also be determined. At either the predetermined positive or negative pressure level, the valve opens when sufficient liquid has exited either the external or internal passage to permit the flow of a restrained gas past the liquid column.

1459827888-433954fb-01b6-485c-a6bd-dfb9ff3fca8e

A method is provided for removing a coating from a coated magnesium alloy product. According to one embodiment, for each data range of parameters to be encoded, a number of bits required to represent a maximum parameter among the parameters in each data range is determined, including a first number of bits and a second number of bits corresponding to the first and second data ranges. A power clamp unit discharges the electrostatic current, which is discharged to the first power supply line or the second power supply line by the first discharge unit, to the opposite power supply line. In another example, a method for priming a printhead assembly includes pushing liquid from a container into the printhead assembly through a liquid port and then pulling froth from the printhead assembly into the container through the liquid port. The initializing unit initializes the storage unit after a predetermined time from an activation of the driving signal. The present invention deploys two independent transmitting paths.

1459827888-c616040b-ddd7-4201-9b74-80abbf886bf6

A printing system includes a processing device, a printing device and a display device. The splitter is indexed from the side of an actual kerf rather than from a side of the saw blade. The slip case is removed so that the first nickel-base superalloy powder and the second nickel-base superalloy powder contact in the transition region and form a non-compacted powder mass. The regions of varying flow volume enable variable cooling across the fuel cell stack, thereby enabling a constant temperature to be achieved across the fuel cell stack. Additional detectors can be assigned to receive light in a similar manner.

1459827888-d64f1620-2d73-4822-8269-b9fd69722f40

A multipurpose site guard for use at all peripheral and central venipuncture infusion sites, sensitive areas, and for pediatric and adult patients. The housing includes a cementing port and a packer on its outer surface below the cementing port. The reliability checks allow to check whether resources meeting the requirements to transmission of a group of data packets of a priority class are available in the network.

1459827888-e323a062-6f4d-4cf7-b4ad-2d79857afedf

A method, system, and/or computer program product presents product recommendations based on input derived from a user's social network. The shell includes at least one continuous sheet element having at least one differently deformable portion

located at particularly stressed regions of the user's body. On the other hand, the first and second panel heaters are heated by supplying a current and the sealants are heated from the outside.

1459827889-60340835-3dcc-4d33-ad8d-3849588756f0

Method and system for optimizing selection of a network. Further, second annular conductors are helically defined from the lower layer to the upper layer, and second annular conductors are helically defined from the upper layer to the lower layer. According to the method and apparatus, by unifying diverse input devices, manufacturing costs and developing time can be reduced, and user convenience can be provided. When in the desired position, the spring-loaded pin is released and the pin reengages the inner leg member. In one or more various embodiments, related systems include but are not limited to circuitry and/or programming for effecting the foregoing-described method embodiments; the circuitry and/or programming can be virtually any combination of hardware, software, and/or firmware configured to effect the foregoing-described method embodiments depending upon the design choices of the system designer.

1459827889-6f18b2ce-c568-4730-81dc-88d7133699aa

Variations in memory array and cell configuration are shown, which eliminate punch-through disturb, reverse-tunnel. A solid state imager, such as a CCD image sensor, is continually clocked during the standby phase prior to irradiation from an X-ray source, so providing on same time an output signal proportional to the accumulated dark current and the continuous removal of the same. Cooperative engagement between the main flap unit and the shutter unit seals the main flap unit and the shutter unit together and prevents fuel from leaking therebetween. Phase values are arbitrarily assigned and a phase values to the subcells. Each of the plurality of holes in the first side is aligned with one of the plurality of grooves in the second side. The invention detects the most common typing errors that involve both permutations and incorrect striking of adjacent characters during data entry via a keyboard of an electronic apparatus.

1459827889-8b2d563e-784f-4423-92d1-1d0b0e7c3e12

A method and apparatus provides a modified color stripe video copy protection signal. The premixer may include a fuel plenum with a number of fuel tubes and a burner tube with a number of air tubes. The LCD screen preferably is flexible, and may be bent to a cylindrical shape around the light-generating element. An example of financial advice is given. a probe measurement head which is movable relative to the rack for picking a module from the rack. In addition, at least one of the bearings can include dual components.

1459827889-9f4fceed-bd30-430a-aad1-45866b3af7ee

Example embodiments of the present invention relate to an electrode structure, a method of manufacturing the electrode structure, a phase-change memory device having the electrode structure and a method of manufacturing the phase-change memory device. If a packet has not been successfully transmitted, it is determined whether an HARQ early termination condition is met. The lamp is resistively ballasted by a current limiting filament connected in series with the lamp. An oval ring-shaped member interconnects the bars in the ends opposite to the base member. Sweep drive mechanisms operate the sweeps. More specifically, the invention is directed to a process for converting a feedstock comprising an oxygenate in the presence of a molecular sieve catalyst composition, wherein the feedstock is free of or substantially free of metal salts.

1459827890-2ddc74f0-45f0-4901-887c-c2fff8b29fa3

Systems and methods for integrated application platforms in accordance with embodiments of the invention are disclosed. The recording medium includes a substrate, a first ferromagnetic layer formed on the substrate, a nonmagnetic layer formed on the first ferromagnetic layer, and a second ferromagnetic layer formed on

the nonmagnetic layer. One interface set on one end of one busbar can be inserted in the other interface set of the other bus bar. A method of ablating a target area is also provided. The images obtained are displayed with an overall magnification of: fSfCSFESD180,. At least one bypass branch from at least one supply channel is provided at the entrance and in the upper portion of the tank, so as to divide the supply delivery to form the filling delivery and a bypass delivery, these two deliveries being supplied to the intake of a double-acting pump serving as a filling pump and a supply pump.

1459827890-b2a23759-863a-4e5e-b383-982e4b047c0a

In accordance with the present invention, an electroplating solution is provided for electroplating satin bright tin-copper alloy solder coatings at high speed. The piece of oilfield equipment has an exterior surface. The reflective element is disposed on the second surface.

1459827890-fa934cfd-6bbb-4b10-b49c-b3399580cce9

Methods and apparatus are provided for removing emboli generated during a surgical procedure comprising a catheter having proximal and distal ends, a lumen extending therethrough, an occlusive member affixed to the distal end, and at least one blood intake port disposed in a lateral surface of the catheter. A swivel attachment is attached to the distal end of the bat and a flexible yoke is attached to the swivel attachment, and an elastic cord is attached to the yoke at one end and to a fixed point at the other. The correlation properties correspond to a desired spatial force function where spatial forces between field emission structures correspond to relative alignment, separation distance, and the spatial force function. The generic Internet based supply chain data viewing engine may be employed in a virtual private supply chain. To reduce or completely eliminate such elevated emissions, an oxidation zone is provided in an waste gas duct downstream of the heat exchange line in the gas flow path, having an afterburner, the waste gas being caused positively to pass through open flames of the afterburner to assure the economical oxidation of the waste gas. In the case where a difference in the feature amounts between the frames is within a predetermined error range, a similar shot detecting unit detects that the shots from which the frames have respectively been extracted are similar shots to each of which mutually the same shot attribute value is assigned.

1459827891-23a7ce0b-58d5-467f-8096-3a108b190c25

In a method for forming a layer of coating material, a conveyor having a conveying part which is pervious to the coating material is used. A heat treatment process has been found to significantly increase the oxygen-scavenging performance of the polymer. The kit also includes mosquito netting to cover the doorway and windows of the shelter. The automatic machine is adapted to rotate the medicine container transversely of its longitudinal axis.

1459827891-824d9cd2-ed9a-46f2-8938-d8a1b9a25de2

A transmission of the present invention has an input member, an output member, four planetary gear sets, a plurality of coupling members and a plurality of torque transmitting devices. The light assembly includes a lens, a plurality of light-emitting diodes and a housing that receives the plurality of LEDs and the lens. If during high-speed reproduction that particular unit of picture data is to not to be displayed, then the whole unit of data may be skipped according to the user data which specifies how long the data unit is. This unambiguous printed ballot makes it easy for voters to verify the accuracy of their intended vote and can subsequently be used to cast the voter's official vote or saved to provide an audit trail for subsequent confirmation of the electronic tally. The controller compares the amount of time the ingredient feed mechanism is active with a reference value and switches to a timed mode if the amount of time deviates from the reference value.

1459827891-cacdcbbb-9f34-4666-b37e-863a26c76f00

A printing plate is prepared for the insertion of images by applying an ink accepting layer and an ink repelling layer to it. Each structural shelving component has a face surface and elongated edge surfaces. A first bushing is provided having an aperture with a first dimension that mates with a corresponding first dimension of a positive cast-on-strap post. Preferably, the ratios of components in the solutions used to make the hydrogel are such that in the hydrogel the silica/alumina molar ratio will be in the range of about 2. The invention is also directed to pharmaceutical compositions comprising the compounds, and to the use of the compounds and compositions in the treatment of diseases mediated by the M1 receptor. The oxygen reacts with the silicon to form oxide, which provides electrical isolation for the fins.

1459827892-78aaf089-0c63-469c-bfdf-200c2a95c126

A method and apparatus for characterizing the spectral response function of hyperspectral electro-optical instruments or imaging spectrometers are provided. The direct digital speaker includes many pressure producing elements being adapted to generate a sound at a sound pressure level and at a given frequency in response to an input signal, without using digital to analog converter. One of the traction base or slider is at a fixed longitudinal position with respect to the head support and the other of the traction base or slider is at a fixed longitudinal position with respect to the cervical collar. An oxygen-containing gas is passed through the positive electrode chamber 33, a negative electrode solution L is supplied to the negative electrode chamber, and preferably the negative electrode solution is circulated. After the cooling device has been replaced and is operating normally, the CPU can be powered back up, interrupts can be enabled, and the CPU can once again execute user and operating system processes.

1459827892-916cb172-a6c4-4abb-a997-79909aa97f0e

An object locating system includes a primary portable controller including controls and LEDs, a transceiver, a digital signal processor, and a memory. Each information work includes information, and cross-references can be between information in the respective information work. The collected data is aggregated and analyzed to generate data regarding the search queries used to locate and access particular destinations. The ink tank has a partition wall that defines, inside the partition wall, a passage of the ink entered through the inlet to an inner bottom surface of the ink tank.

1459827893-68f84aed-995a-452b-9066-b8d9b9643d0c

A method increases the spatial resolution of a source image based on an auxiliary, co-registered image of a higher spatial resolution. The circuit includes an adjustable sine wave burst generator which generates a low voltage longitudinal ac signal that is transmitted across the balanced pathways. Accordingly, thickness and power consumption of the backlight assembly may be reduced and display quality may be also improved by preventing leakage of the light at ends of the sub LCD panel. The first locking member defines an outer periphery extending along the inner periphery of the first opening of the housing. Because of such a structure, a mass increase of a section which should be driven together with the electrode is restricted, and high response in X-axis, Y-axis and Z-axis directions are achieved, whereby an electric discharge machining apparatus capable of improving a machining speed and a machining accuracy is achieved.

1459827893-b6c0301b-6f6a-4240-a5f6-de224b5db8c4

A method for reducing the fogging effect in an electron beam lithography system wherein the exposure is controlled in order to obtain resulting pattern after processing which conforms to design data. The invention allows materials known to be well-tolerated within the human body such as alumina-oxide ceramic and platinum to be used as raw materials in the fabrication of body-compatible, single or multi-channel leak-tight feedthroughs. The closure member is displaceable with respect to the body between a first configuration and a second configuration. When an AC

magnetic field is applied to an on-chip antenna from outside, eddy current is produced in principle because the semiconductor substrate is conductive.

1459827895-591bb5c3-1721-41b2-be6d-e3b40b72d6be

An exposing apparatus for projecting a pattern on an original plate stage onto a substrate of a substrate stage via a projection lens. In one aspect, the method comprises providing a memory array comprising a memory cell in one of a plurality of states. The warming resistors are formed above the recording element substrate through the ejection resistors and an insulating layer with respect to a lamination direction of the recording element substrate and are disposed between the ejection resistors and the ink flow paths. The striking plate is punched or welded on the golf club head to thereby form a gap between a sole plate of the golf club head and the weight combined with the rear surface of the striking plate. A ratio of absorbing attenuation and a thickness of a blood layer is not affected by a thickness of living tissue.

1459827895-71811693-5f9a-42e4-b020-e2aea05f686a

Porcine reproductive and respiratory syndrome virus causes serious economic losses in swine. The presence of small amounts of F are effective to lower the refractive index, and hence the NA, of the core region even in the presence of significant amounts of A1. The gaming device provides any awards associated with the activated wheels to a player. The first drive member is independently rotatably associated with the camshaft. The regular expression also allows the creation of a superset matcher, permitting multiple stages of matching of increased accuracy to produce additional throughput gains.

1459827896-67098b7c-fa69-46db-a60d-b6be824ffdf9

A molding machine for machining workpieces of wood or plastic material has a transport path for transporting workpieces in a transport direction and adjustable spindles arranged sequentially in the transport direction on the transport path. A device is needed to make a representative measure of the boat's acoustic power using measured boat sound level with integrated corrections for sensed distance to the boat and measured ambient sound level. The key performance indicator may be evaluated by retrieving the indicator value from cell of the spreadsheet, comparing the indicator value to the goal value, and providing a visual indication based on the result of the comparison. When the selected print setting is the print setting to be applied, the printer driver applies the print setting to original data to thereby generate print data.

1459827896-a49db945-88eb-4756-bb43-6a81e6dc906a

A spiral configured structure formed of metal or polymer is naturally biased into an erected and spiral arranged position, to form either a cone, a cylindrical structure, or other shaped structure, and which includes a series of lights, or a highly illuminated or phosphorescence dyed cloth, to act as a warning structure to the surrounding environment. Process water or effluent discharge from the drying process is reduced or eliminated. The image data can be captured at multiple disparate points along another continuum. The system may include a central processor that activates the device.

1459827896-af9b135b-ff71-474b-ad6a-17888e387b8a

Embodiments are directed to the providing a cloud keying and signing service and to securing software package distribution on the cloud. In one embodiment, a method for providing control moment gyroscope attitude control singularity escape includes calculating a Jacobian A of a set of control equations, calculating a measure of closeness to a singularity, and comparing the calculated closeness to a threshold value, when the calculated closeness is less than or equal to the threshold value, recalculating the Jacobian A. The image to be printed is analyzed in respect of the image attribute and the information regarding the measure of the nozzle firing quality is used to determine an optimum printing speed for printing the image. The

elongated anchor planks connect to the widthwise frame and the mattress support frame, and four anchor struts are fastened on the outer frame respectively near the lower ends of the elongated anchor planks for the anchor planks to rest without swaying. The method allows the inner tube to be detached in a controlled manner with a high degree of uniformity from the outer container and to be placed against said outer container again without a significant inclusion of air. By altering the airfoil profile throughout its span, the natural frequency of the airfoil is altered so as to not coincide with a critical engine order of the compressor.

1459827897-098d125a-e73a-4a01-a962-89a74c55dfde

A method and device for using laser light to trap non-atomic particles optically within a hollow region of a hollow core optical fiber. A compound light directing member includes a light pipe bundle wherein at least some of the light pipes are to individually direct light energy from one or more sources onto one or more of the photodetector elements. The VCO outputs an oscillation signal in response to a difference between first and second control voltages.

1459827897-427c9605-d323-4ff0-a198-d8edd573a939

A method is provided for centering a steering rack in an automotive vehicle, particularly a vehicle that includes an electric power steering system. The clamp actuator includes a first actuator configured to be interactable with a rod; and a second actuator configured to be interactable with the first actuator. Such dial tone testers can include a visual device or an audible device indicative of line status. The cover includes: a door, which covers the folded air bag. An access terminal can include logic configured to determine an optimal paging cycle and logic configured to set the paging cycle based on the optimal paging cycle, where the paging cycle varies based on at least one optimizing metric.

1459827897-8726c697-2d57-4a2d-bf20-3a97c587672a

A method for controlling access to information is provided. Furthermore, in a channel estimation process, if a Synch Word to be demodulated is included in any of groups into which a plurality of symbols are divided, the Sync Word is demodulated by using a channel estimation value obtained with the channel estimation process using not this group but another group. the total extract, obtained by treating with supercritical carbon dioxide a suitable extraction matrix, made by 50% biological tomato berries and 50% biological dry fruits and/or other components, following a co-extractive technology. An NBC and/or a CBRN filter can be mounted to the apparatus to allow for release of pressure from within the enclosure. The pocket panels are reversible in orientation. The body portion is integral and in one piece or is an assembly of inner and outer tubes.

1459827898-05b4682e-2fe1-4bf3-8f24-0d1eaa27d59b

An apparatus for separating liquid from a slurry comprised of a solid and a liquid is described. The product gases from the synthesis stages, with the exception of the last stage, are separated into at least two partial flows. Forming the soldering bumpers includes a step of forming the soldering bumpers in the same pattern and size by means of a photolithography process.

1459827898-3265465c-8621-4c4a-8adf-5ff0dab4836f

A reset of a synchronization counter is synchronized to an external deterministic signal. The closed-loop radiating element is formed on a first surface of the dielectric substrate. While the body of the pin lies flat within the channel, the pin end hooked into the hole in the base plate resists push or pull forces on the pin, thus limiting damage and eliminating misalignment of the pins. The transport module interprets the units for packetizing and/or multiplexing purposes. In the latter instance, the effectiveness of ultrasonic treatment of the single workpiece is enhanced by favoring formation of progressive waves and minimizing formation of stationary waves.

1459827898-6693ddea-a651-42c6-8f0a-ecce8cd0882a

A method for constructing a scotopic after-glow lamp for use in an electric lamp with the scotopic lamp having a lamp wall is provided. A fulcrum coupled to the operating cylinder includes channels within which levers can be selectively activated to open specific doors of the car, thus allowing the contents of the railcar to be sequentially emptied. The first reference data is obtained by learning the first characteristic amounts of a plurality of images, which are known either to be of faces or to not be of faces.

1459827898-b7fb6048-f7cb-46c4-b63e-6d3907b97582

A method of dynamically linking abstracted hardware devices, which are used in association with gaming machines, to gaming software is disclosed. The drive tool includes a top portion which is engageable with a drive source and a lower portion which is engageable with a fastener. The antenna includes a plate and a case that are electrically continuous with a matching-use base plate.

1459827899-1bd18b26-0cac-4737-b3f2-36fe6bb84bcd

The present invention is directed to pyridyl, pyridazinyl, pyrimidinyl and pyrazinyl piperidine compounds that inhibit the glycine transporter GlyT1 and which are useful in the treatment of neurological and psychiatric disorders associated with glycinergic or glutamatergic neurotransmission dysfunction and diseases in which the glycine transporter GlyT1 is involved. The sequence comprises a given number N of symbols which are part of an alphabet of symbols, N being an integer. The provided process involves initializing the first NFC device to perform a device detection polling loop for detecting a second NFC device. The access modules include at least first and second active access modules and a spare access module. Due to the foregoing, buckling caused by an inserting load in the process of automatic wire connection can be positively detected, and the reliability can be enhanced and further the repetition of connecting the wire again can be reduced. An interlayer of the laminated glass is tensioned so that the windshield has a force acting to cause the entire laminated glass to flex toward a passenger compartment.

1459827899-2b82fb43-c380-4998-888a-a884801ad891

In the disclosed wireless information consumer electronics apparatus, limitation of mounting position of antenna is small, and further limitation of place of installation of the apparatus is small. The locking device mounted on the door. For a plurality of focal point detection regions the focal point detection regions are changed according to the trimming range of the imaged picture. by selectively activating or deactivating service logic modules in the gateway devices.

1459827899-38aab7e0-ea6b-4fce-85f7-9e6df9abb1a1

A method of making and recycling a golf ball is disclosed. An opening in one plate communicates with the measuring vacuum chamber and has a sealed connection for joining to medium to be measured. A mechanical link is rotatably connected to the leg so that movement of the mechanical link applies rotational force to the leg to cause the leg to rotate about the axis. In one embodiment, the outer woven sleeve is configured into a predetermined shape through manipulation of the catheter and used to maintain the inflated balloon within that predetermined configuration.

1459827899-44758526-007d-4827-b45e-5e1e1a388fad

Method and device for reduction of a gas component in an exhaust gas flow of a combustion engine that is adapted for operation by a lean airfuel mixture. This prevents a finder or a third party from obtaining information stored in the smart chip or accessing the mobile financial service as the owner of the terminal. The invention further relates to screening methods for identifying agonists and antagonists of the polynucleotides and polypeptides of the present invention, and compounds identified thereby.

1459827900-657d0885-13b9-40ff-b9df-30a4385670f2

The invention relates to an analog to digital converter computing all the bits in parallel or sequentially, without using decoding logic having an analog input and a digital output, wherein given the analog signal  $x$ , each bit can be computed by applying a formula containing a non linear periodic function which may be sine shaped or pulse shaped. For example, the encoder adaptively changes frame sizes to reduce blocking artifacts at low bitrates. The body further has a middle region defining a middle through-hole portion with a dimension that is smaller than the first through-hole dimension. A lookup process includes a simple and finite set of instructions that can be efficiently implemented as pipelined hardware and support very high packet arrival rates. Springs located in hinges on the fins accomplish the complete deployment of the fins after proper orientation by the actuators. At least one automated operating parameter is generated automatically in response to the single click by the user at the discrete region of the selected image to determine whether a contour of interest is in the automated ROI graphic image.

1459827901-53ef8ee1-7085-44e8-ad76-f4df73c77b00

A method and an apparatus for upgrading an existing service outlet in a house by adding functionality thereto. Correlating or translating involves relational to object translation, object to object translation, relational to relational, or a combination of the above. The computer system accesses object identifying data corresponding to the object. The interface includes a video player upon which video content is displayed as a video and a tag display presenting tags associated with the video. Then, in another phase, a generator traverses the object model hierarchy in a top-down manner, producing source code files corresponding to objects in the object model. The internal chamber includes one or more guide tubes configured to route the cable through the interior portion of the top tube or the down tube.

1459827901-6dfbd2a3-32d6-4363-a9ba-7d171b809ecc

A system and method of controlling the movement of a virtual agent while the agent is speaking to a human user during a conversation is disclosed. The steps include fabrication of modular cooling ribs, each including microchannels along the cooling edge and a peripheral flange. The present invention also includes functions for comparing one image model to another. Only one cam member may be rotated, or alternatively, both cam members may be rotated sequentially, depending upon the amount of expansion which is needed. Dust generated by cutting the sheet member is prevented from scattering by cutting a cutting site with the cutting member after printing a predetermined pattern along the cutting site of the sheet member with the printing head. The disclosure addresses example configurations for such input devices that may be used to provide inputs to the wagering game system.

1459827902-62ede07a-ad6d-468d-b621-6d9363a637d7

In the invention, each piezoelectric element for a vibrator for an ultrasonic motor has electrode regions for exciting stretching vibration and flexural vibration separately. Also provided herein are vectors and host cells comprising those nucleic acid sequences, chimeric polypeptide molecules comprising the polypeptides of the present invention fused to heterologous polypeptide sequences, antibodies which bind to the polypeptides of the present invention and to methods for producing the polypeptides of the present invention. A machine system for implementing the method encompasses a cutting device for the relief cutting of workpiece lugs as well as a thread cutting device. At least one of the members also has a plurality of elongated, substantially parallel cavities with one end at a wall of the member that is spaced apart from the edge wall of the member, so as to define a recess or step adjacent to the edge wall, and an opening. The profile is characterized by a camber ratio, and the camber ratio of the profile is greater than or equal to approximately 4%.

1459827902-66920e8f-ea97-4236-b6a9-3f91ead93c0e

An NH<sub>3</sub> applicator implement is equipped with a hitch arrangement for automatically effecting a connection with a tongue of an NH<sub>3</sub> nurse tank wagon. The carbon filter

removes free residual chlorine, the particle filter removes particles including carbon particles from the carbon filter, and the ultraviolet filter kills bacteria. Nearly all of the reverse bias voltage is across the MOS transistor until the MOS transistor breaks down. When processed by the server, the stop data indicates to the server that at least some of the encrypted data received by the client device from the server was not decrypted using the second key.

1459827902-81169e71-f278-448f-83a6-48e6071a2af4

Provided herein are compounds, pharmaceutical compositions comprising such compounds, and methods of using such compounds to treat or prevent diseases or disorders associated with HDAC activity, particularly diseases or disorders that involve activity of HDAC1, HDAC2, and/or HDAC6. The ultrasound transducer transmits ultrasonic radiation into the spot weld joint, receives corresponding echoes, and transforms the echoes into electrical signals. Steel body formation may be done by traditional press compacting or, alternatively, by injection molding steel powder in molds. The ETT has a transmission interval and program description information according to the EIT. The console interface implements a plurality of browser methods which each define a browser function which can be invoked by each snap-in component. The track base lines of the outer ball tracks, at the attaching part end, form a radius whose center is positioned beyond a first longitudinal axis and is offset by a first offset from the central plane of the outer joint part towards the attaching part.

1459827903-75ee63a3-9d4e-425f-b9b7-96c03a9eba85

A new and distinct cultivar of Hydrangea plant named 'Dancing Angel', characterized by its upright and mounded plant habit; strong roots and stems; strong and dark green-colored leaves that are dark yellow and purple-variegated in the autumn; and large mophead-type inflorescences with pink and red purple bi-colored flowers. The antenna elements use a hole arrangement in addition to grooves in a steel tool body, which is typically a drill collar. After connecting the pins of the blocks with no timing constraints, each wire is assigned to a metal layer, based on length. A method for forming a multilayer green body tape using simultaneous wet on wet ceramic slurry deposition is also provided. The set of configurable input-select circuits in each interior tile has a set of inputs that are supplied by a set of asymmetric locations in the configurable IC.

1459827903-a898f820-46f5-42c1-9e36-8ccd52cf557c

A maskless exposure system that has multiple maskless optical engines arranged in an matrix that form and project a pattern onto a substrate. The first robotic attacher is positioned to service each of the first plurality of milking box stalls. The valve assembly comprises a valve and a valve control mechanism.

1459827903-fe0ecde6-4956-4bc1-b10f-56f6f570bdea

The invention provides an organic EL display device usable for both negative and positive polarity video signals. The mixers and waveguides are accommodated on a substrate surface and multiple substrates can be layered up to support a two-dimensional array of waveguide openings in a face of a waveguide mixer block. Further embodiments relocate the resources from a sub-cache to a different sub-cache based on their persistence score, and remove the resource from the memory based on the persistence score.

1459827904-7101c7ba-22cf-4c44-9fdf-ade6351d8fe9

An automatic handset lifter is used with a wireless communication system. The monorail bogie comprises a load-bearing wheel having an axis of rotation that is parallel to the running surface. The fuel pump increases the pressure of the gas to allow efficient injection into the chamber. A hydraulic circuit is operator activated to allow fluid flow through a flow divider to ensure each cylinder operates in concert. The integrated circuit of the present invention exhibits minimal sensitivity to enhanced low dose rate sensitivity effects of radiation, and

pre-irradiation elevated temperature stress effects of radiation. Further, a method of transepithelial delivery of a drug to a human by topical application to the skin of a human of a composition including laureth-4, propylene glycol, dimethylsorbide, a pharmaceutically acceptable diluent of water and ethanol and an effective amount of a pharmaceutically acceptable drug has beneficial delivery effects.

1459827904-935484eb-a33a-4da8-99b3-2b8a8a5ce23b

A method, system, and apparatus of a touch-based authentication of a mobile device through user generated pattern creation are disclosed. A part of at least one of the plurality of intermediate members is exposed to the opening. The first sheet-shaped member has a higher stiffness than the seat pad. The completions permit temporary or permanent monitoring of changes in reservoir saturation with the use of mobile sourcessensors. A method to control power to a light-emitting device to switch current to a parallel connection of an inductance device and a light-emitting device repeatedly between a charge state during which said inductive element is charged and a discharge state during which said inductive element is discharged through said light-emitting device. As a flame retardant component, the shear thickening composition provides an enhanced char formation mechanism for superior flame retardance.

1459827904-ae1cc6ae-a934-4a54-871e-1517835274dc

The present invention relates to a two-stage lock cylinder structure, which includes a lock casing, a lock barrel and an actuating unit, wherein a first joining member is located at one end of the lock barrel, and the actuating unit is fitted with a corresponding second joining member. A challenge-response key exchange is implemented between a bootstrapping server function and mobile terminal. An interior load bearing shaft is within the exterior shell and is proportionally smaller than the exterior shell. The sintering agent is brought into a recess of the substrate that accommodates at least some areas of the component. The second layer is provided between the first layer and the p-type semiconductor layer and includes Al<sub>x</sub>2Ga<sub>1-x</sub>2N having second Al composition ratio x<sub>2</sub> higher than the first Al composition ratio x<sub>1</sub>. The method can also include accessing a particular node utilizing a selective one or more search methodologies including keyword search, hierarchical search, and dichotomous key search.

1459827904-dc1a9f6f-0a1d-4a2d-9f20-63d63583e8ab

The disclosed apparatus includes a stator and a rotor disposed for rotation within the stator. The system includes a detector, a converter, a generator, a process control unit, as well as an ejector mechanism which is disposed to be activated for ejecting the sterilized object on receipt of a negative comparison signal from the process control unit. The expression \u201cadditional functionality\u201d includes UV resistance, yellowing resistance, photooxidative stability, flame retardancy, and sealability. The logical types of information managed by datasets in the preferred embodiment include graphical objects, blocks of text, spreadsheet cells, and database records.

1459827905-2472efe2-a9ce-4556-b71a-44eba42316da

Elements, which are used in a medical activity, are stored in a storage space including a plurality of partitions which are each dedicated to receiving a certain type of element assigned to a predetermined medical activity. The bipolar transistor has a raised extrinsic base such that the link base resistance is reduced by providing an extrinsic base which is thicker than the intrinsic base. The present invention can effectively improve the successful handover probability. The client having restricted access to what changes can be made to the data on the Enterprise server, yet sufficient permissions to require a single point of access to maintain user access to both the message server and the Enterprise servers. The multiplexers receive audio information or information already assembled in asynchronous transfer mode cells from the channels selected by the call monitors, and disassemble and multiplex the received information for assembly into the

payload of a new ATM cell.

1459827905-2dad8515-2e8e-4d84-b84a-6bc79c05cbbf

A system for molding dispensing valves includes first and second mold sections, at least one of which is movable with respect to the other between a closed position in which the mold sections form a plurality of dispensing valve mold cavities, and an open position in which the mold sections are spaced from each other and the mold cavities are open along a mold parting line. In place of expensive chemical mechanical polishing, in the method of the invention, mechanical polishing and chemical etching are continuously applied to thus sequentially remove and planarize the unnecessary metal layer. MPTS channels are rebalanced via re-grouping and transrating as necessary to optimize bandwidth utilization.

1459827905-52401b0b-9614-4142-adf3-334c613801f2

A clamp including first and second clamp members, at least one of which can be pivoted between an open orientation and a closed orientation. The total number of cycles of the central processing unit clock signal that are applied to the processor core and the period of the central processing unit clock signal are used to determine the time quantum. A transformed signal and spreading code are multiplied to provide a product whose phase is shifted by the propagation delay of the signal in shift means.

1459827905-bb8ec7c0-9b6d-440e-9a1f-f56793c03d04

According to one exemplary embodiment, a structure comprises a substrate. The support member has a groove formed all around its inner circumference, and the O-ring makes contact with sidewalls of the groove. A switch at the service site directs data messages to service lines coupled to the site which have destination addresses corresponding to one of the service lines. An apparatus for lapping a wafer is further provided that includes a hardened lapping carrier and at least one lapping plate proximate the lapping carrier for lapping wafer disposed within the at least one opening defined by the lapping carrier. The latching switch utilizes an electrorheologic fluid and the electronic latch function thereof is actuated by a pressure signal and deactivated by the removal of both the pressure signal and a holding voltage.

1459827906-50f94ad0-3ed4-4537-8230-d3e06ec22989

Certain embodiment of the invention discloses a new gate driver structure suitable for TFT display apparatuses, comprising a gate driver having at least one channel for outputting voltage signals; a switch circuit for controlling the outputted voltage signals from the gate driver; and a TFT substrate wherein the gate driver and the switch circuit are positioned on the substrate. The first reflector layer is a layered body and the second reflector layer is a layered body. The end sections of the axial thrust washers are bent over so that they are supported on the prominent unbalance masses, and form a funnel-like entry region for the rolling elements or for a cage of the rolling bearing which houses the rolling elements. A driver portion drives the optical system and scans light ray information about the object. The deployable bed is configured to rest upon and/or connect to the conventional sofa, chair, and the like with the conventional sofa, chair, and the like providing support and acting as a head board. Bit maps define the attributes of each character position of variables and ranges; character maps define which character positions are constrained to a fixed character for each of the ranges.

1459827906-669e2b2f-bd00-4745-883a-0891f865943a

Wireless mobile communication devices located in near proximity of each other may be enabled to form a mesh network. The appropriate programming code is identified from among a variety of code objects being broadcast from the headend facility of the cable television system. An obturator used with the cannula may also have a longitudinal slot extending along its length. The viewing device is reciprocated up and down or from left to right depending upon the embodiment to change the colors

perceived by the user's eyes.

1459827906-a5fb54d8-0da9-48b4-89d2-225022bb989c

A device, a method and a computer program for position determination are provided. For the non-machining forming of the brake caliper two mould parts each partially receiving the brake caliper are used, in which support surfaces and action surfaces are formed on the brake caliper in such a way that the brake caliper for the subsequent machining is supportable by its support surfaces in a defined manner and clampable by means of clamping forces acting upon its action surfaces. A sample of the material is treated to diffuse target decay isotopes within the sample such that the measured alpha particle emission directly corresponds to the concentration or number of target decay isotope atoms within the entirety of the sample, enabling the concentration of target decay isotopes in the sample to be determined. From the perspective of the server, a motion-based affiliation initiation request message is received, and based on the message, at least one device is determined to receive a motion-based affiliation request message. A density of the weight member is greater than a density of the shell portion.

1459827906-d4fc8cd9-1dd6-45f6-b967-0e14ffc4847f

A novel small format touch screen user interface for displaying, adding and editing program setpoints is described. The injection assembly includes an effusion plate that has a plurality of plate openings and a plate sleeve having a sidewall portion that includes a forward edge. The distributed gateway routing elements communicate with each other over a virtual bus that guarantees quality of service for SS7 message packets. A pressing force per unit area applied to the glass substrate by the mechanical chuck is at most 25 kgf/mm<sup>2</sup>. The control element can be based on multilayer dielectric stacks.

1459827906-eea20894-50e2-41f7-8965-b0b4f001819e

A data transfer apparatus improving data transfer rate regardless of the original transfer mode in a USB interface is disclosed. Such alerts may be communicated to the authorities through any suitable communication method such as, for example, phone calls, email and/or SMS text messages. When the color information is color-separated into the colors, it is determined if the two regions share the color, and trapping for an adjacent portion of the two regions is controlled. If the elastic strand is made at a location different from the location where the strand is used as a raw material, the strand may be heated at either location, or both locations. Auxiliary side appliances can be located left and right of the main cooking area. A mechanism caches hash buckets in SRAM and stores other hash buckets in DRAM.

1459827907-78b3cc31-c7d5-4f94-9785-f986d7db8ac6

An audio system includes a general-purpose computer in the audio signal path to provide, or to enhance, pre-amplification functions. Regions of the scene in the image data which may correspond to one or both eyebrows of a person and which may correspond to one or both eyes of the person are extracted from the data. Some of these WCDs may be eligible for channel-assignment-into-soft-handoff, wherein a WCD is assigned multiple traffic channels from multiple wireless coverage areas during call initiation procedures. A number of methods of producing unitary polymer structures with a plurality of projecting microfibers are also provided.

1459827907-86f619c0-64a5-483e-a9d8-1e332411f2ef

The present application describes a method and an apparatus for characterizing a conductive plane using multipoint measurement. The database is updated by a special interface application using a log file and the AV driver cache. Each product selection panel includes a plurality of keys, each of which is associated with a type of product stored in the vending machine. The earth ground for the building has a direct connection to one of the enclosures.

1459827907-bd7538fc-68f2-412c-bb9c-46ed20564c5d

The stamp for use in a lithographic process, such as patterning a surface layer, of the invention has a stamp body with a first and a second side, at which first side a printing face is present and at which second side a stack of a carrier body and a reservoir for liquid are present. In one aspect, the device has a stack of layers. Efficiencies of construction of the sectional covers, disk and a sensor probe are disclosed. A series of related events forms an event path that progresses chronologically. Thus, the output signals are held after the power input, and after the input signal rises, the signal transfer function is started, so that the output of incorrect control signals can be prevented, and thereby erroneous operation of a printer can be prevented.

1459827907-d081a8c2-2310-4794-b4f3-36c4ad464a52

An indexing mechanism is disclosed that can put a tool in a variety of positions while downhole in the face of high static and dynamic loads. The present subject matter relates to an arrangement and methodology that provides an interrogator paired together with a separate receiver, which may comprise a second interrogator, functioning together to perform a self-testing operation. A second, generally L-shaped sleeve is fitted up against the back of the first sleeve so as to place the lip end of the inboard seal in a similarly raised or retracted position. A photo-sensor is provided at the toss hoop to record a valid toss when a ball is tossed upwardly through the hoop within a predetermined height range and descends through the hoop prior to the serve.

1459827907-d3ebdee2-0220-47c3-8123-439a404b9436

An interleaved voltage-controlled oscillator is disclosed. Each retroreflecting element is configured to selectively retroreflect two optical rays. Preferably, the inductor and the cable follow an S-shaped path to facilitate good electromagnetic coupling therebetween. Accordingly, such constraining members may aid in preserving the microcomponent with its substrate during the release of such microcomponent from its substrate during fabrication. Extenders connect the modules to the drive shaft and can change the distance between the modules and the drive shaft while the drive shaft is rotating.

1459827908-19054989-53ff-4c80-adff-e9a20f3b8e37

A semiconductor device has a resistor area and wiring area selectively disposed on a semiconductor substrate. The oxide hard mask is preserved in the present invention by utilizing a method which includes a chemical oxide removal processing step instead of an aqueous HF etchant. The feeding axle has a first engaging portion.

1459827908-2f01332f-7bde-4f42-9b01-425ddf4f05d2

Disclosed are liquid nutritional compositions comprising: carbohydrate; lipid having from about 0. Shunts extend between the rails at intervals along the railroad track. The partial feasible routing solutions are then merged to identify one or more feasible routing solutions for the set of wires to be routed. The identification information can be used to partition and/or route the combined packets to their respective destinations. The welding wires are composite materials comprising a metal alloy and high temperature nanoparticles dispersed in the metal alloy.

1459827908-5d0d7058-4370-4c5c-b8d4-56b08b42cdb7

A portable instrument with strings hammered by strikers operated by keys of a chromatic keyboard is described. Subsequent to filling the microwells, the microchannels are sealed to protect the integrity of the solution in the test microwells. The specular control device permits a spectroscopic analyzer to receive the diffusely reflected light that is reflected from, for example, a first layer or depth within the tissue, while preventing the remaining diffusely reflected light from reaching the spectroscopic analyzer. An exhaust fan is mounted on the housing above the second inlet region while an air supply fan is mounted in the housing on

the downstream side of the mixing chamber.

1459827908-6692914c-009c-46da-8ff9-6aa8dd96c506

The present invention provides a novel telecommunication architecture. The back 18 of the staple has a rearward extension 22. A fluid passageway extends from the container housing through a piston stem. In another, a multipurpose guide collar locks and drives the trap door in and for movement between the raised and lowered positions, and assists in animal release and in resetting of the trap.

1459827909-2932e7c2-3074-443c-904c-a3d5eb87ec5a

A system and method is disclosed whereby a patient at a senior care facility can send and receive messages via the inter-net. A detection unit moves in an X-Y plane at a position apart from the surface of the magnet. The described transformation techniques may be used to convert any object whose schema changes occur at the page-level. As a result, the standard practice of numerically iterating between the image and projection domains is avoided. Top and bottom extension faces extend from a wrenching face of the slide and are located on inner faces of the wings. Thus, Joule heat is generated at the contact portion between the bottom of the outer case 16 of the unit cell 10a and the positive polarity terminal 18 of the unit cell 10b so that the contact portion melts.

1459827909-867dd4ff-d45f-4de8-81af-409315042d20

An eyewear structure combinable with an accessory glasses unit comprises a main glasses unit and an accessory glasses unit each having assembly bores drilled at a bridge thereon wherein attracting elements with insert grooves and attracted elements with insert rod are respectively combined with magnetic elements and embedded to the assembly bores of the main and accessory glasses units. The chassis includes a chassis bottom wall, a chassis front wall and a chassis rear wall. By enabling the flow sources to regulate their data traffic based on the QCN messages from a congestion control component, the queue length at the bottleneck link may converge to an equilibrium queue length rapidly and TCP throughput performance may be enhanced substantially in a TCP incast circumstance.

1459827909-a06a7186-052e-4aac-abc-f87bde6f2461

A vehicle body structure for fitting a pillar garnish and a fender panel is provided which surely prevents a space formed in the surface of a vehicle body from being viewed as black. The vector constructs that are described include a number of modifications that enhance the safety of the vector. The integrated circuit applies the divided local oscillator signal to the mixer circuit instead of the local oscillator signal during testing.

1459827909-a9d3f15e-9e96-4cd8-b0d1-5f8e58d98ef1

A process for polymerizing ethylene is disclosed. More particularly, a superabrasive insert may comprise a superabrasive layer bonded to a substrate at an interface. For a shorter interval during back-EMF detection, the voltage drop across the motor is reduced from the full power supply voltage. The columnar body comprises a hollow tube, a plurality of pins inserted inside the tube, and an insulating sealant filled inside the tube. In one embodiment, the game is continuous in that the icons are replenished after being selected. The system can utilize the matched and scored account pairs to determine duplicate accounts, and terminate at least one of the accounts in a duplicate account pair.

1459827910-28dfa9a3-e61a-4878-aa15-76792176046e

To provide a liquid crystal composition satisfying at least one characteristic such as high maximum temperature of a nematic phase, low minimum temperature thereof, small viscosity, suitable optical anisotropy, large negative dielectric anisotropy, large specific resistance, high stability to ultraviolet light and heat, or has a suitable balance regarding at least two characteristics. The box includes doors to either side and neither the box nor the doors extend above the top of the sidewalls

of the truck bed. The decoder may select a row or column of the memory cell. When a notification about changed network configuration parameters for a radio cell is received, known positioning servers simply erase all positioning data records related to that radio cell. A plurality of paths are defined through the lower end of the sleeve so that by shifting the core to let either of two flexible disks to seal the paths in one direction, the direction of fluid flow can be controlled.

1459827910-29779e70-6183-42b9-8f05-71d3117de91b

An apparatus, and related method, for determining one or more association variables is described. The transfer case receives torque from a power transmission mechanism and distributes driving torque to a primary traction wheel and axle assembly and to a secondary traction wheel and axle assembly wherein an electric motor power boost for each traction wheel and axle assembly is available as well as a regenerative braking power recover from either or both. A lower insulating pattern, which is covered with the charge storage layer and thicker than the tunnel insulating pattern, is disposed on the semiconductor substrate beside the tunnel insulating layer. The preferred embodiment provides a duplicate instance of SCTP on a separate node in the cluster which provides a hot back-up to the primary instance. The controller is for controlling the driver to spin the body based upon the measured voltage to orient the control panel to the user.

1459827910-3707c211-aac5-4abd-b20b-6494461f6745

The present invention extends to methods, systems, and computer program products for automatically optimizing memory accesses by kernel functions executing on parallel accelerator processors. An active gear wheel and a passive gear wheel are disposed respectively on two rigid frames. A subset of this pool of virtual real memory is a block of memory allocated for use by an application. Hereby the time needed to reduce vibrations between steps is eliminated. Sizing and construction of the struts forming the peaks and valleys can create bimodal deployment wherein the struts bend under increasing stresses to enable the stent to expand to larger diameters. The module includes a power shell and a plurality of lead frames each lead frame including a conductive pad on which one or more MOSFETs may be electrically mounted.

1459827910-a8de8553-5864-4529-b6d0-8a73cd04d82f

A retransmission control scheme and a wireless communication apparatus wherein the efficiency of retransmission control is enhanced to further improve the system throughput. The valve unit includes a phase transition material, which melts and expands upon an application of the electromagnetic waves to the valve filler, and the valve filler is directed into the channel through the connection passage and closes the channel. The resin is a thermoplastic polyurethane resin that is semi-crystalline at room temperature. In addition, the control unit includes a stapler actuator coupled to the stapling mechanism in the stapling head, actuation of the stapler actuator causing the stapling mechanism to drive staples through the folded lumenal tissue against the anvil.

1459827911-0e89cc03-1bd9-463f-8000-676a6d5c29b7

Various example embodiments are disclosed herein. The portable storage device is pre-configured to contain multiple root directories uniquely corresponding to multiple print job management programs. In the ionic liquid, the amount of a salt including the second alicyclic quaternary ammonium cation is less than or equal to 1 wt % per unit weight of the ionic liquid, or is less than or equal to 0. The intermediate portion can be configured to produce a compensated signal based on the processed input signals. The function is provided that, when this illumination device is arranged at the front of the illuminated body, rays are projected on to the illuminated body and rays reflected by the illuminated body are transmitted with scarcely any dispersion. Related methods are also described of performing equal comparisons while providing binary hysteresis.

1459827911-39d698d6-ae7c-4716-bb22-88d69e6bcb66

A mandrel for composite fabrication includes an open cell foam carrier and at least one vacuum bag enclosing the open cell foam carrier. The correlation destruction information is calculated based on whether pieces of performance information newly acquired from the elements satisfy a relationship represented by the correlation functions. The dual-mode PMOS transistor has a size and gate-oxide thickness each having a magnitude that cannot accommodate a permanent tie to the high voltage.

1459827911-caa4211a-87e2-4fd1-87dd-912c0cf47eb5

The invention features a method of selecting for a grape somatic embryo or grape plant having resistance to a plant pathogen using a liquid culture medium. A latching mechanism is provided according to invention hold the balance piston immobile as described above. In embodiments, the interconnection comprises compressed elastomeric members positioned between the thrust lug of the side frame and the bearing adapter in the longitudinal direction and a low friction interface between the roof of the pedestal jaw and the top of the bearing adapter.

1459827911-f05b17d0-0686-4dda-b387-0827456e1397

An invention is disclosed for performing failure recovery in a Java platform. The apparatus includes a pair of planetary gears, sunring gears and at least one crank. Total capacitance of the system is less than 10 pF. Each of the N BSs uses at least N pilot values to transmit the signals. A magnetic cross yoke is formed having ends that are disposed at opposite sides of the pole tip region of the write pole.

1459827912-07f14271-0af1-4a27-891b-9b6fa8f683e8

The present invention provides for bevel gears having a localized and stable bearing contact. The first frame has a stop for engaging the periphery of a reel and the second frame or trolley is pivotally and slidably coupled to the first frame via a toggle mechanism. Contextual information relating information of the HMD and information associated with the interaction to describe an interaction state may be stored. Also, a trader may configure one or more alarms to be displayed or played in combination with the annotations. The P2P connection system includes a user terminal configured to register connection information for connecting to the user terminal through each of a plurality of connectable networks in a location server; and the location server configured to store the connection information received from the user terminal.

1459827912-0cf33443-1681-46c8-968a-3c4810c329bd

The present invention provides a method and apparatus for marking a semiconductor wafer or device. When a connection for a conference is set up between a plurality of telephones accommodated in the IP network, each telephone packetizes a voice signal and sends the resulting packet to the network to address it to a conference trunk. The encoder outputs a degree of difficulty in encoding the video signal based on an amount of the video signals. Propellant is supplied from the manifold, goes through the channel and into the container. These windows are then processed in the order of the windows queue are arranged. Thereafter, on a second of the plurality of outbound channels a second of the plurality of first inbound channel grant signals is wirelessly transmitted.

1459827912-323949e7-b929-458b-84fe-56eef511fcc6

Methods relating to the power management of positive airway pressure apparatus using a battery are disclosed herein. A pair of pressure conveying members such as bellow reservoirs can be used for conveying the external force to the conductive flow. 8 wt % B2O3, 70 to 77 wt % PbO, 0.

1459827912-d037e2ec-46a6-4c45-8c08-b264460e7f5c

A method and system for enabling personalization of services for a user. The system provides the user with a simulated environment that presents a business opportunity to understand and solve optimally. The interchangeable module includes a tube

supporting structure and a rotatable hub connected to one or more strikers positioned to impact the tubes, resulting in agitation of tube contents. The automated platform can receive the edited template, and can generate a response.

1459827913-06e2630b-d166-459d-9bc2-11c4e6c68e48

Methods, systems, and apparatus, including computer programs encoded on a computer storage medium, for identifying and scoring restricted-locality synonyms. The platform resource table is configured using information from both the platform management system and the platform resource provider system. If the condition is satisfied, image files are backed up, and storage priority levels defined for these image files are reduced in accordance with a rule predefined by a user. The contact members, which are brought into or out of contact with each other by a forward or backward movement of the backward moving body, are moved together with the backward moving body.

1459827913-4c201e5a-8900-4b35-9009-4784cf5eb2c0

A ballast circuit is disclosed for inductively providing power to a load. The time for the motor to rotate an electrical angle  $60^\circ$  is obtained by alternatively counting the occurrences of zero crossings with two counters and comparing the counted values, and the motor is delayed an electrical angle of  $30^\circ$ , by which a precise commutating time is obtained. If the branch instruction is not accompanied by an address mode change, the transferred address mode information is adopted as the address mode of the branch destination. The stopping member is connected to the keycap and moves simultaneously with the keycap.

1459827913-b1a9016b-8b9d-4818-8604-ef6ee9928067

A composition and associated method for chemical mechanical planarization are described. After being inverted, the conductive foil 60 is polished on the insulating resin 50 as the support substrate for separation into the conductive paths. The error data are provided to the host computer for analysis. The assessing of the stereophonic recording in the electronic device may be based on a type of each of the first microphone and the second microphone, and/or based on a spacing therebetween. The carbon-doped semiconductor region prevents an outdiffusion from the zone of the collector region into the remaining region of the collector region.

1459827913-d0392ad3-ef42-42b0-bb7a-1d01ab849788

A user interface for a building appliance controller that may include a control panel and one or more option cards. The statistical parameters, estimated to be at least 192, serve as biometric indicia, to authenticate, or to decline to authenticate, an asserted identity of a candidate person. A first list is used to identify frequency spectrum segments that exhibit a power or energy profile over a range of frequencies associated with a downlink channel bandwidth, and a second list is used to identify frequency spectrum segments that have a total or average energy greater than a threshold energy relative to a noise floor. The printer has one or more printer input devices which communicate with a processor to capture data regarding one or more customer requirements such as a customer selected pattern, or roll length or width.

1459827914-13bdd084-fa7e-467c-9dbb-a40bd8181ccb

Compounds of formula :wherein R1, R5, R6, R7, Ar, L, A, and Q are as defined in the description, and to salts thereof, to compositions containing them, to the process for preparing them, and to their use as medicinal products, in particular as anticancer agents. At the intersection of each arm with the rim the latter comprises a recess opening on one of its surfaces, the bottom of this recess comprising a passage opening on the other surface of the rim. For fluorination-treatment of the perfluoropolymer, an apparatus 10 is used, which comprises a melt extruder 11 for melting and extruding the perfluoropolymer, a die 12 for forming the melt extruded polymer into continuous strands 1 and a fluorination tank 13 for contacting the continuous strands 1 with a fluorine gas.

1459827914-14a5fe30-b55e-44a2-8c5a-c4f7924cf35a

A pyrotechnic charge for producing IR radiation is proposed, in which a deuterated compound is contained as fuel and/or as oxidizing agent or as fuel, as oxidizing agent and/or as binder. The input terminal portion includes a first layer made of the same material as that of the gate electrode and a second layer made of the same material as that of the pixel electrode. The exhaust gas purification apparatus further includes a communicating pipe that connects between far end portions of both the housings, and a nozzle that is disposed in the communicating pipe and injects liquid reducing agent in exhaust gas. Next, the second task determines whether the credential is valid.

1459827914-2aaf7641-c27b-44a9-b6ea-a8a58d6b3120

A method and apparatus for reducing power consumption within a wireless receiver is provided herein. The representation is a view-dependent displacement mapping that represents displacements along a viewing direction. Metal interconnects for semiconductor devices may be produced by the method, which has the advantage of forming the metal seed layer by a simple electrochemical plating process that may be combined with the plating of the interconnect itself as a single-bath operation.

1459827914-8a60439e-7417-4bc3-ba88-904b10eb3bd2

A method, apparatus and medium are provided for detecting anomalous payloads transmitted through a network. The method comprises the act of roughening at least a portion of the implant surface to produce a microscale roughened surface. The interrupt request output by the interrupt controller is accepted by one of the processors.

1459827914-acb9bae3-0a95-440d-a0b6-9aaaabb9d368

A head mounted virtual image display unit is provided which is compact in size and weight, and incorporates a high performance optical system offering a clear see-through capability. Then, the terminal control unit periodically executes a nearby base station measuring process, controls the 1x reception signal process unit, and searches for a nearby base station which supports the 1x method. The Document Type Definition or schema associated with a document is modified, such that the DTD or schema specifies a reference to stored security policy to be applied to document elements. The movable contacts are pivotally coupled to the terminal members and selectively contact the contact members to effectively close the switch. The signal traverses towards the reflective fluid, and reflects back towards the input port after coming into contact with the fluid's surface.

1459827914-c8dde7b4-f028-4f44-8238-45cba3b98ef3

The present invention realizes electronic commerce by providing a reception section that receives product information and service information and a barcode formation section that forms a barcode based on the received information, displaying the barcode formed by the barcode formation section on a display section and allowing a barcode reader provided at a shop terminal, etc. The heat pipes are oriented within a rotating member such that the axis of the heat pipe is non-coaxial with that of a central axis of the rotating member. Close nesting is accomplished by provided adjacent tanks with complimentary curved ends.

1459827915-028aa3dc-63e5-4a8d-8421-7f3e98c03e32

A system for monitoring and treating transformer oil within an on-line electric transformer may include an oil filtration system using a first filter medium that removes acids dissolved in the transformer oil and a second filter medium that removes moisture from the transformer oil. The current controller includes an input, an output, a comparator and a latch. A method for electrophotographic image formation using the bio-toner that contains a bio-resin is also provided. Equivalents using the peptide and methods of vaccinating a vertebrate against R.

1459827915-0fee09fd-fda2-49e8-a9ce-238ca8f64c07

An on-board gaseous fuel tank module includes: a support frame member; and a gaseous fuel tank fixed to the support frame member horizontally. A read head is in the housing, reads data stored on the magnetic stripe and produces a signal indicative of data stored on the magnetic stripe. Such combinations have effects, with minimal side effects. A unique structure forming frame member is disclosed which includes an outer sheath and inner rod that gives the bag body structure, durability, flexibility, resiliency, and differing degrees of restorative force along one continuous member. An inductor body is formed around the inductor coil and includes a resin and a magnetic material compressed while it is dry and surrounding the inside and the outside of the coil. The mirror assembly has a hollow carrier that can be at least partially filled with a material having a density different than that of the carrier.

1459827916-526c02be-c587-4ba8-8a8f-1c956df1437e

A structure that can be made in many different shapes composed of primarily soft limestone slabs and formed in a manner to a frame whereby ample surface area is provided for securement thereon of crustaceans, coral and other aquatic life. The method can perform feedback loop processing including subtracting a feedback data signal obtained by multiplying a feedback processing data signal by a gain from an input data signal to generate the feedback processing data signal. These nodes and edges are subdivided into subsets. The respective input time interval for a particular pixel can include a per-pixel loop period and a per-pixel start time of a loop at the particular pixel within the time range from the input video. A linear actuator is connected to the upper body section for simultaneously actuating the upper body section, seat section and lower leg section in articulated movement. The control system includes a dynamic parameter estimation sub-system that provides an estimated front-wheel cornering compliance and rear-wheel cornering compliance based on a front-wheel steering angle signal, a rear-wheel steering angle signal, a vehicle lateral acceleration signal, a vehicle yaw rate signal and a vehicle speed signal.

1459827916-acf387cb-7001-4a48-949c-76fd2aa1f35e

A method, computer-readable medium, and system for monitoring usage of computing resources provisioned across multiple cloud providers and/or data centers are disclosed. A connection element is arranged so as to connect one ends of the first and second support element to each other therethrough, so that the first support element, second support element and connection element cooperate together to form a substantially U-shape in section. The central controller is in control of all of the units which are involved in the changing of the printing press. The loyalty dollars are then applied to the purchase transaction as a discount or rebate. The gates of the second TFTs are electrically connected with each other to control the second TFTs to be turned on simultaneously so as to tilt the liquid crystal molecules. In addition, a method of forming a corona-producing gas ionizer is provided by providing a corona electrode formed from CVD silicon carbide, electrically coupling the corona electrode to a high voltage power supply, and providing an AC or DC voltage from the high voltage power supply to the corona electrode.

1459827916-c320e673-3bc7-49d8-b075-5acbe58cb142

A device for comminuting feed material has a rotary blade ring rotating about an axis of rotation. For each group, the process defines a base volume, such as the volume containing the most commonality with the other volumes. The method also includes determining the timing slack of each path of the design. The actuator member is arcuate in shape when in a quiescent state and straightens in shape when actuated. The structure facilitates good recording reproduction on the two types of recording media irrespective of the reproduction wavelengths or substrate thicknesses of the recording media.

1459827917-6f797d95-2e7a-4c64-a2b8-fb26608eece3

A bicycle component operating device is basically provided with a base member, an operating pawl, a positioning ratchet member, a positioning pawl, a release member and a control member. The dynamic feedback control circuit is capable of changing a clock frequency of a clock signal supplied the charge pump from a first non-zero value to a second non-zero value depending on the difference between the word line voltage and a target threshold voltage. The second connector is configured to be engaged, by fitting, with the first connector.

1459827917-8f9e1391-072c-45ca-a011-dc8f1aebb4be

Level shifter modules, used in integrated circuits, are automatically inserted and their correctness verified. The change of the distance correlates with an elastic or plastic deformation of at least one component of the fitting including a radial crimping process. The oscillating means comprises at least one oscillator amplifier being protected from interfering signals by means of a load and a tail-current source for providing high noise-interference ratio. The initiator is configured to transmit at least one data request on the bus to one memory address in a predefined address window of the device controller.

1459827917-9ba75cd3-d52b-4c77-b277-a2b6b104d2b2

A method and apparatus for providing platform initialization enhancements is discussed herein. for preparing a phenoxyacetic acid derivative represented by general formula or a pharmaceutically acceptable salt thereof, which has  $\alpha$ -adrenoceptor stimulating activity and are useful for treating or preventing obesity, hyperglycemia, diseases caused by intestinal hypermotility, pollakiuria, urinary incontinence, depression or biliary calculus. The web feed is output with the presence data concurrently. The circuit further includes a controller that enables the word lines to substantially simultaneously write a value from the bit lines to the memory cell.

1459827917-c144300d-07e3-4b67-b818-67d30b60d6f1

A hand operable switch includes an operating knob that is movable longitudinally or rotationally about a longitudinal axis of the hand operable switch. In one embodiment, a slit valve door seal includes a ring-shaped base having a center axis and at least one finger extending from the base. In the interconnect structure of the invention, at least one electrically conductive via connects a first interconnect element on one interconnect level or on the substrate level to a second interconnect element on a different interconnect level. The software distribution file can include an extractor for automatically extracting items in the distribution file. Films prepared with these propylene polymers have a significantly broader processability range and can be evenly stretched at lower temperature compared to films prepared from traditional polypropylene polymers.

1459827918-1676f801-0c44-4472-8c16-6afe6e53e261

The FIGURE is a face view of a type font showing my new design. This loop enters stable state for a start signal having the low level and oscillates for the start signal having the high level. A practical drawback in cationic peptide therapy, however, is the cost of producing the agents.

1459827918-73a97b7c-a81e-4bd2-b4b6-be65199c7268

A side entry storage net useful for securing items in a storage area comprises an upper and lower front panel, a back panel, and two sides formed from a piece of netting folded at upper and lower folds. The test structure comprises a plurality of patterned electrically conductive metal layers within a scribe line. The predetermined time delay signals the buffer to transmit an older image and a newer image, sequentially separated in time by the predetermined time of the predetermined time delay. In one form, the organometallic vapor includes copper, silver, or gold. The lens includes a lens body having functional graphics molded therein to compliment the functionality of the gage and adapted to be visible when

the lights behind the applique are not on.

1459827918-a00acb3c-6624-4f35-ae5d-75e4b36bf37b

A visual simulation technique is provided to facilitate visual activities, such as reading and movement of a subject through surroundings, for sight-impaired persons. The compounds of the disclosure are useful for the treatment of the above psychiatric disorders alone or in combination with other therapeutical agents effective in the treatment of schizophrenia and/or anxiety disorders. Methods for growing and handling plants, including identifying plants that demonstrate specific traits of interest are also provided.

1459827918-c739e36e-4942-4487-9fdf-608d29264d20

The nonvolatile memory according to the present invention can precisely read information included in a memory transistor subject to a shift phenomenon because electrical read is performed on the memory transistor by using a reference voltage generated from a refresh memory transistor. A first attachment face, in the mounted condition of the assembly adaptor, is held in abutment to a frame of a cabinet body. The base station and the source device are connected through a first system, and the base station and one recommended candidate cooperation device selected from the list of candidate cooperation devices are connected through a second system. unevenness, in a helical layer positioned as the innermost layer. The facility analyzes the sparse matrix to obtain an analysis result for the received stream of user behavior. System actors might include those which notify monitors or operators, and those which modify the system to detect and correct operation gone awry.

1459827919-0eafb656-15f7-4d3f-a1a4-00a611d6e0cc

An apparatus and a method for filtering sectioning wastes of a microtome that are present in an air stream are described. The invention relates to the various parts of inbred NPIJ7516, including culturable cells. Additionally, the engagement element is secured to the retractor, wherein the retractor comprises a coil retractably wound around a reel, such that the engagement element can be repeatedly extended from and retracted to the casing.

1459827919-8ee771ac-3363-4de7-bb6c-64c106c9dc46

A processing gas introducing mechanism for introducing a processing gas into a processing space is provided between a plasma generation unit and a chamber of a plasma processing apparatus. The fixing unit and the cartridge are mountable into the main assembly and are disposed side by side. The at least one tie member extends between and connects the first and second horizontal shelf members, with the at least one panel clamped therebetween. Wireless stations are load balanced across APs so that user bandwidth is optimized. The press portion has a front end face formed with an end face and an oblique end face and has a side protruded with two spaced opposite oblong ears and a clamping recess formed between the two spaced opposite oblong ears.

1459827919-9e9b50f2-911e-4279-b66c-e5ccd1866055

A broadcast program information processing apparatus is provided which is capable of smoothly downloading broadcast program information to a plurality of broadcast program information receiving apparatuses from a data server in which the broadcast program information is stored. This invention thus relates to the seeds of soybean variety RJS31004, to the plants of soybean RJS31004 to plant parts of soybean variety RJS31004 and to methods for producing a soybean plant produced by crossing plants of the soybean variety RJS31004 with another soybean plant, using RJS31004 as either the male or the female parent. An active groove filling region 25 of the second conductivity type in contact with the base diffusion region 32a is provided in the sub groove part 27. The private company is subsequently converted to a master limited partnership to generate an equity gain. At least two clamps are attached to each chain link of the link chain, wherein the clamps in the link chain

are spaced apart from one another by equal spacings.

1459827919-b315a385-0a53-460b-84f3-fe3a6fe4f896

Methods and apparatus for fabricating structures, extrusion units, and structures fabricated using such methods and apparatus are disclosed. The structure can be employed for protecting a wide range of substrates such as wood, metal, concrete, cement, among other substrates. If the target cell is identical to a preceding cell, the system uses the previously calculated solution as a solution for the target cell. The stripe including a nitride of the bioerodible metal, a fluoride of the bioerodible metal, or a combination thereof. The rotating knob rotor may be adjusted for length by means of an exchangeable adapter.

1459827919-ed9e11c1-eb21-4e70-be87-e0b2d8f68859

Methods and kits for determining prostate cancer prognosis in a subject are described. The processor unit is configured to run the weather band selection process. The soldering partners are connected at the envisaged joining location by using a solder that is melted by energy emitted by the inductor. The first plurality of fuel ports is upstream from the downstream surface of the inner shroud. The predetermined voltage is appropriately set so that a required voltage difference at the sense node between high and low levels can be obtained near a changing point between charge transferdistributing modes.

1459827920-32100591-4a24-45d2-a172-ae5bc989d467

A light assembly for use in a work area that is mountable, portable, can be powered by moveable work equipment, and is capable of providing light necessary to adequately illuminate a work area so that work tasks can be completed. Two sources of length variation in a DRHVL are leakdown and residual mechanical lash. An exhaust gas recirculation control system for the engine includes an ECU. Thus, the first support handle is effective in aiding the individual rising from or returning to the seated position.

1459827920-8104dae1-9413-46d0-9f96-73cd278879cd

A molded pad for a brassiere cup contains shaved polyurethane foam inserts interleaved between thin upper and lower polyurethane foam layers. The generated oversampling clock is automatically synchronous with the input clock and the input serial data in a serial data link, and is adaptive to predetermined parameters, such as bit depth and oversampling rate. A user operates the processed data generating device to arrange the processing pattern on the setting plane.

1459827920-871171c1-e505-4179-9a0e-25593ec00a48

An engine arrangement of the type including an internal combustion engine having an EGR line, wherein at least one turbine is located on an exhaust line, is provided. The input module receives a request for footprint data. The control current includes a consumption current of the regulator circuit and a feedback current. During that time while the necessary signals are being collected and processed, the cursor 171 is held steady on the display screen 322 until a predetermined criterion is met for discriminating whether the user has indicated x-direction cursor movement, y-direction cursor movement or diagonal cursor movement.

1459827921-0007e6c0-f727-481a-9e39-ffad32d621c7

The invention relates to novel guanidine derivatives of the formula . In turn, the service node includes a switch coupled to the xDSL lines, a gateway coupled to the Internet, a router which couples the switch to the gateway and a bandwidth measurement server coupled to the gateway. The offset threshold is then compared to a detected signal from the photodetection element when the light emission element emits light, thereby determining the presence of a through hole between the light emission element and the photodetection element through which hole light passes without being influenced by external light.

1459827921-ec3df5e3-2a17-426a-817d-b0b7c9f215ad

A no-frost refrigeration device includes at least one storage chamber for items to be cooled; and an evaporator chamber which is formed by a two-part first housing having first and second housing parts. A textual form and non-textual aspects of the file are rendered in a plurality of sections of a display. 0, and the pH value of the hair treatment composition is from 2. One candidate data object is pushed in an output queue contingent upon the measures thereof, enabling the pushed candidate data object to be transmitted before the other candidate data objects to a client apparatus via the output queue.

1459827922-6ce25744-a4d6-4c8b-98d6-6fc806fd8112

In order to control the sonde of an underground object, such as an underground boring tool, a predetermined sequence of rotation steps is applied to the object and that sequence is detected. The perpendicular magnetic recording head has a main pole, a coil, which applies a magnetic field to the main pole, and a return pole constituting a magnetic circuit together with the main pole. A player selection of a second predetermined number of keno board spots is received. In one embodiment, multiple locations, such as pagers, email addresses, and alternate phone numbers are contacted in order to inform the user of the urgent message.

1459827923-5921bb1b-355f-4270-8467-d3f9636f3945

A suspension system is provided for use with a crop harvesting header including a frame carrying a structure movable about an endless path to deliver a crop to the header. The first antenna element and the second antenna element can be arranged along two sides of a case of a communication terminal apparatus, for example. The first layer, the second layer, and the top dielectric layer are configured to form a hole wire in the first layer. In this way, a multipath TCP connection can be more reliable and efficient as flow control and data flow are enhanced.

1459827923-84623002-148c-4428-bdc3-bf3fe0190df1

The invention encompasses compositions for enhancing the ability of a companion animal to resist and/or overcome viral infections. A device includes an electrochemical cell having a cavity for containing a liquid electrolyte, a first working electrode having at least one electrolytic surface at least partially within the cavity, and a second counter electrode having at least one electrolytic surface at least partially within the cavity. The first capture unit is simultaneously enabled with the second capture unit. The preview may also be docked or pinned to a location on the main user interface so that it is displayed within the main user interface. The image of the mold and/or part is acquired at a substantially parallel angle relative to the image-capturing source thereby allowing the imaging of the mold while the mold is opening thus increasing the resolution, speed and accuracy of part-forming machine imaging systems.

1459827924-2be832fc-6f42-4aba-b2c9-0e273fcb9626

Cellulosic fibers intrafiber crosslinked with a polymeric polycarboxylic acid crosslinking agent are disclosed. A magnetic fluid is loaded within the magnetic gap. In some embodiments, the output-load subsystem may draw output current from the power converter having an output current ripple at a nominal frequency, which may range, for example, between about 35 and 100 Hz. A risk associated with payment of the first bill is determined and a debit type is selected based upon the determined risk. Each of the outer compressor airfoil assemblies includes more than one axially-spaced stage of outer compressor airfoils.

1459827924-5574d62c-87ed-4a41-93d0-e2364184a4b9

Disclosed is a method whereby 3,4-tetrahydrofuran-2-ol is hydrogenated in the presence of Rh, Re, Pd, Ru and Ni catalysts, optionally supported, to form tetrahydrofuran and its precursors. The atomizer can be intermittently operated by a user and the user command readout is visible to the user. The HAL provides a relatively uniform abstract for aggregates of underlying hardware such that the

underlying robotic hardware is transparent to perception and control software, i.

1459827924-e2220faf-e35c-49ed-8d42-3c308f62cfa6

A method of valuation of large groups of assets by partial full underwriting, partial sample underwriting and inferred values of the remainder using an iterative and adaptive supervised and unsupervised statistical evaluation of all assets and statistical inferences drawn from the evaluation and applied to generate the inferred asset values. The pump shaft is driven by the cam shaft via the polygonal hole and the polygonal shaft portion. The isolation gate is configured to provide electrical isolation between the first and second memory cells.

1459827925-30ed8447-628e-4096-9fc4-eb91b5dd8553

A system for selecting a transmission mode under the multi-input multi-output architecture based on a scheduling number and a method thereof are provided. The method includes providing a substrate, forming a photosensitive layer over the substrate, exposing the photosensitive layer to a first exposure energy through a first mask, exposing the photosensitive layer to a second exposure energy through a second mask, baking the photosensitive layer, and developing the exposed photosensitive layer. The solution can be applied during a CMP process or during a post CMP cleaning process. NFAs are compact, but their matching performance is unpredictable and with no worst case guarantee. A storage section configured to store information on a state of absence of a foreign object in the liquid. Thereafter, the in-vehicle device acquires an image and sound acquired by an application being executed on the portable terminal from the portable terminal, with which wireless communication has been established.

1459827925-511de392-6757-49e5-9d48-68d45fc5465a

An interface arrangement is disclosed that provides an interface between a signal line for connecting external peripheral devices and a microcontroller bus. The foundation base includes a body for inserting into the ground and has an axial passage for carrying the underground electrical wires to the electrical device. A first and a second offset lead frame, each having a plurality of lead fingers, are then attached to the base lead frame on opposing sides thereof so that their lead fingers respectively extend over the first and second dice in a cantilevered manner. Exemplary embodiments are also directed to a method of product identification, comprising providing a durable material that includes indicia thereon corresponding to useful information.

1459827925-7d265c6b-a18c-4d0b-ba1c-089d2459941e

An electric field driving device, in which a plurality of pixels, each of which is formed of two or more sub-pixels that respectively correspond to different colors from one another, are arranged in a matrix in a pixel region on a substrate, includes pixel electrodes, a common electrode, an insulating layer, and a material. The system and method also includes truncating the entry to create a truncated entry. The techniques also include managing a vocabulary database. The shell has flexible parts for flexibly contacting a connector receptacle shell mated with the first fitting part.

1459827925-8aa19e2d-0660-4996-bd61-8ed2986e3603

A control solution packet for calibrating a bodily fluid sampling device includes a container, a control solution pressurized within the container, and a membrane for covering and sealing the container. The artificial blood solution comprises an aqueous carrier, and a dendritic polymer that is capable of carrying oxygen dissolved in the aqueous carrier. In another example, the seismic isolation system further includes a damping system comprising internal dampers within a concrete slab resting on the top plate to provide displacement control. An outer box portion includes an outward extending flange and provides a protective enclosure surrounding the inner box portion and the electrical device within the inner box portion. The method further includes detecting a failure in operation of the first

processing system using the second processing system and at least partly managing and performing the operator interaction using the second processing system in response to detecting the failure.

1459827926-0d73b848-6b0c-4de5-b5ed-4ee29991e715

A beverage dispensing system is characterized by a beverage dispenser and a beverage dispensing tower located remote from the beverage dispenser. The temple is connected to the rim via the coupler by sliding the coupling member into the receiving cavity of the coupler to tightly fit therein. A non-engagement zone and separation zones may be created on the first web. The electric motor is substantially prohibited from being fed with electric current, when the turning operation of the vehicle is being decreased.

1459827926-9246c023-9db8-4cb6-9af0-264b42d19d8f

A convertible motor vehicle roof, especially for hatchbacks or pickups, with at least one roof part which is supported to move lengthwise on the side roof members and when the roof is being opened, can be moved into the storage position. , including a machine frame, a horizontally situated floating axle arranged parallel to a direction of travel of the machine, and a rear axle constructed as a steerable, rigid axle and supported on the machine frame so that it can be swivelled about the floating axle. 1oct-3-yl)benzamide or a solvate thereof.

1459827926-ae19edca-84ee-4f88-b1ee-6456da7b3ae8

A terminal adapter, along with a value added network, is disclosed that interworks a plurality of terminals with a processing host to accomplish transaction processing. The jar includes two housing portions movable with respect to each other. The semiconductor device reduces the current dissipation and can operate at a higher speed.

1459827926-c66e3f8d-9f7c-4ac9-9b08-a59f9cb165fa

In an image pickup apparatus, an image signal generator generates an imaging signal DVb representing a variable frame rate image, and also, a synchronizing signal generator generates a synchronizing signal for generating the imaging signal DVb. A suction motor is positioned in the air flow path. Such uses include the preparation of antisense oligonucleotides and their use for the prevention or depletion of function of a target nucleic acid of interest, such as an RNA, in a system.

1459827926-d9f53f7e-ba46-4b73-b93b-852a651b2123

Modifications to the spanning tree algorithm allow bad news to propagate quickly by providing that protocol entities on bridges process inferior information sent by the designated bridge for each LAN. According to an aspect, a relay can receive a data packet sent in accordance with a reliable transport protocol. The displacement and angle of rotation of the upper part of the yoke portion are measured by using these link-mechanism base and link member, thereby measuring a change in the pointing direction of a reflector.

1459827926-ea39510e-bd05-46a6-a692-63d8be7e9938

Plural blood vessels different in blood flow velocity are depicted with high image quality in blood vessel imaging using PC-MRA method. In one embodiment, a billiard table is provided comprising a frame comprising a first connector, a playing surface supported by the frame, and a billiard ball storage compartment comprising a second connector, wherein the second connector is configured to mate with the first connector when the billiard ball storage compartment is moved into a first position with respect to the frame. The contact between the nanomaterials and the surrounding matrix changes with applied stress, affecting the volume electrical response of the finished nanocomposite material.

1459827927-1d11801b-3c58-4aa5-ae75-d0282395a292

A rod integrator, which has a light incident face and a light exit face, inclines

its axis at a predetermined angle with respect to a light emitting direction of a light source. Inside a cab of the work machine, there are provided travel pedals, with which the traveling devices can be operated, and operating levers, with which the traveling devices and the implement device can be operated. The distal end of the wire frame extends away from the barrel portion in a direction transverse to the plane of the loop portion. The third conductive portion has a film thickness smaller than that of the first conductive portion, and is made of the same composition material as that of the first conductive portion.

1459827927-45318efd-43b2-4ca3-b5e1-caea1e89ba01

A communication system allocates a discrete line between a base station and each terminal device that allows discrete communication in a time span equivalent to several frames. The gap is at least partially left as a cavity 7. The exterior wall includes mapping electrode openings and irrigation ports.

1459827927-4671afb0-6731-47cf-8865-a270e52f89e0

One embodiment of the invention includes a switching power supply system. The stent has a scaffolding including a polymer formulation comprising PLLA and polymandelide. Advantageously, a wedge pocket adhesion surface lying closer to a loose run of the support belt is provided with a roughness greater than the roughness of the another surface, or a wedge pocket slide surface lying closer to a supporting run of the support belt is provided with a roughness less than the roughness of the another surface.

1459827927-b6f9cf38-dd5c-4f4d-8998-065adb0aaec6

Devices and methods are disclosed which relate to the gathering and recording of network availability and attributes in a location in order to define location based services. The apparatus comprises a shaft, an end effector disposed at the distal end of the shaft, and a suture fastener removably secured to the end effector. From the received parameter values, a number of parasitic values for a subcircuit model of the inductor are determined. The coating is harder and more abrasive than the mating surfaces of the planet gear teeth.

1459827928-0dde4c80-e4ce-4a1c-b511-c7392bc5cdf7

A flowmeter for sensing fluid flow. The refrigerant flow is automatically by-passed and the filterdryer core is isolated for removal. A reference to data in the distributed database is added to the file in response to a user input from a user using the computer to browse the distributed database. The formation to be treated may be chosen so that the mixture produced from the formation will have a desired amount of condensable hydrocarbons and non-condensable hydrocarbons. The components of this system may be used to construct a structural component comprising a plurality of I-shaped bearing members positioned parallel to one another. The catheter shaft may include a sleeve disposed, for example, near its proximal end.

1459827929-0006d152-23d4-4efb-96e1-6fb518b5b0d9

A portable waste disposal apparatus includes a stand for receiving a portable bowl and a waste container. The apparatus includes an interconnect structure that includes multiple leads each including an electrically conductive portion having a first end and a second end. Desired pixel pitch across the enlarged pixel array is preserved by forming die stacks with each pixel array circuitry die stacked on a separate die that contains the corresponding signal processing circuitry. A plurality of devices can be used to form a wall or the device can be used with a separator bar and a crossover bar to create a separate area on the grill so that uncooked products do not touch cooked products. According to this approach, a thickness uniformity of the display panel may be achieved.

1459827929-18bd2133-761a-4b19-b870-fa8c1f4bf7c7

A hydraulic drive system designed so that while maintaining intact a structure of a relief valve having a shockless function, the drive unit hydraulic drive system

facilitates changing a driving pressure or braking pressure of a hydraulic swing motor and hence, changing a maximum driving torque or braking torque of the hydraulic swing motor. According to one aspect, a broker mechanism is established within a first container. The lines adjacent to the node-separated line include a protrusion portion protruding toward the cut-off portion of the separated line. Based on analysis of TCP path information and/or send/receive packet counts, loss of certain network connectivity can be inferred, which greatly improves the accuracy and responsiveness of detecting network connectivity losses. The first face includes a first axially arranged conical opening and a first positive locking cone forming an inlet valve. An antenna bus in each container, that is connected to a container ID tag reader, allows bus connector insertable antennas to be strategically placed for accommodating various asset packing densities.

1459827929-9a3f52d5-088f-4815-885a-eee798faa263

An HF radio ALE communication system may include a first HF radio communications device including a first HF radio transceiver and a first controller coupled thereto, and a second HF radio communications device including a second HF radio transceiver and a second controller coupled thereto. The PD presents a valid PD signature indicating that the PD is attached and capable of receiving normal operating power from the PSE. Responsive to the request and the determination, the subscriber, in the session, is provided a signal with a standard definition version of the requested high-definition content. As the female connector 20 moves, the degree of engagement between some of the resilient contacts 50 is reduced. The classifications can be outputted for storage and/or further processing. Said catalysts can be used as hydrotreating catalysts.

1459827930-076ea4d4-77f8-498c-8523-ccd7aa8937ed

An oxygen generator includes a stationary unit and a portable unit. Unit cells of the DRAM may be within active region pedestals, and in some embodiments the unit cells may comprise capacitors having storage nodes in direct contact with sidewalls of the active region pedestals. The proportions of the pH indicator and the pH modifying agent in the concentrate are selected so that when the concentrate is diluted with an appropriate amount of water, the pH indicator indicates visually by coloration of the composition, whether or not the pH of the water is suitable for acceptable agricultural activity of the chemical. An electrical sound producing device may be mounted on the rotor for emitting the sound of a bird predator. The control scheme comprises code to determine an input shaft angle based upon rotational positions of the electric machines.

1459827930-3f964ec9-eb9b-4bd8-b841-3cbcbcb187d9b

Data throughput is increased in a communication system that is designed for a bidirectional information exchange between a single master terminal unit and a number of slave terminal units. A feedback state signal is generated having a first feedback state and a second feedback state. The tangential and sagittal radii of curvature of the second mirror may be  $R_{2t}$  and  $R_{2s}$ , respectively. Citations within the documents can be identified and compared to a trusted records list. Spectral phase decoding is performed at the receiving side by performing coherent detection and folding all the spectral replicas of the transmitted signal to the baseband by means of sampling.

1459827930-84104130-dd44-440a-bdee-1060ea3dca58

The present invention provides a method, apparatus and computer program product which enables the mode of use of a multi-sensory device to be used to prioritise the type of data which is sent to the device. The method further includes exchanging reference radar signals between the at least two radar systems to determine measurement-relevant parameters. The biaxially oriented polyarylene sulfide film contains 70 to 99 parts by weight of the polyarylene sulfide and 1 to 30 parts by weight of thermoplastic resin A; the thermoplastic resin A constitutes a dispersed phase having an average dispersion diameter of 50 nm to 500 nm. The

detector is connected to the load for detecting a forward voltage across the load to generate a detecting voltage; wherein the detector compares the detecting voltage with a first reference voltage.

1459827930-e7f1fcb2-f5ca-4057-841d-458f3feebfe9

A transistor device includes a compound semiconductor body, a drain disposed in the compound semiconductor body and a source disposed in the compound semiconductor body and spaced apart from the drain by a channel region. The hydraulic power unit comprises a pump unit which via respective conduits are directly connected to the two sides of the hydraulic cylinder in order to form a generally closed hydraulic system therewith. The soldering portion of the second type is wider than that of the first type and distances between every adjacent soldering portions of the first and second type are the same. The size of the ball is determined and compared to a threshold. Finally, the subnet manager can authenticate the fabric component if the second encrypted message contains correct information.

1459827931-114a8c29-825f-4974-aa8c-7f0f8b4d9074

The disclosure is directed to: phosphacycle ligands; methods of using such phosphacycle ligands in bond forming reactions; and methods of preparing phosphacycle ligands. When receiving a message from the client device, the load balancing apparatus determines whether the message contains the path control identifier. The tightening strap and the fastening hook are coupled using a retainer piece molded to the tightening strap that is held in positive contact in the recess of a grip end connected with the fastening hook.

1459827931-a91219bf-2806-4cbe-b844-2e08f4e356d8

Various embodiments include two-stroke stratified engines and dual passage carburetors for use with gaseous fuel, such as hydrogen, methane, liquid petroleum gas, pure propane, and butane. The housing is implanted across a bifurcation such that the nozzle extends from a first branch communicating with a healthy region of a lung towards a main passage, and terminates proximate a lateral opening in the housing that is disposed within a second branch communicating with a damaged region of the lung. The system also includes a non-motorized sensing tool having a printed circuit board and a sensing element electrically coupled to the printed circuit board. When a force is applied to pull on the leashes, the spools rotate thereby unwinding the return springs. The turntable is received in the receiving room. The body includes two or more resilient clasps projecting from a common base to resiliently hold a retail display sign therebetween.

1459827931-facf8fc5-d193-43c3-8bcd-9cee9fe6f449

A vapor-lift pump heat transport apparatus having a small heat resistance and a large heat transport capacity. The feeder has a frame, housing and a roll for individually feeding sheets of material within the image transfer system. The electrode forming part includes a plurality of first electrode serials arranged parallel to one another in a first direction and a plurality of second electrode serials arranged to cross the first electrode serials. Thus, time required for iteration between the die designer and the package designer to establish a proper placement and assignment of die connection bumps is substantially reduced. The at least one second sub-runner communicates with the block through hole and extends toward and terminating at the lateral surface.

1459827932-604ab317-1160-4a8a-bd9b-142e85057c50

A receiver includes a constellation processing module and a plurality of equalization stages. The outer link is connected to the first roof part by a first link mechanism and is disposed on an outer side of the first roof part in the closed position of the top. A ball joint is mounted to the head adjacent to the first section. The gown has a connection device that is configured to allow opposing portions of the back panel to be connected together in a location in front of the person wearing the device. Accordingly, a printing system and a printing

method, which are capable of preventing user inconvenience and waste of resources due to re-printing are provided. The device is contemplated to be assembled in-situ for the purpose of treating vascular defects or conditions.

1459827932-7c6f3690-94b3-47a7-92d2-c1fc67eec46e

Techniques disclosed herein prevent wire flaking. In an aspect, a product database associated with a merchant is downloaded from a computer system into a mobile device. A corrected lane calibration is derived for the respective engraving lane from deviations between the rated printing densities and the actual printing densities.

1459827932-835b3e6e-a561-4702-b922-dca0241c14cd

A bedside storage caddy includes a flexible panel attached to a rigid backplate, as well as a first flexible strap and a second flexible strap from which the flexible panel is suspended. Such task control processors may detect the completion of a first task on an associated execution processor and, responsively, generate commands to lead to the initiation of a second task on the same, or another, execution processor. A binding material can be used in conjunction with the hoop-stress layer to facilitate positioning of the hoop-stress layer around the center for easier manufacturing. If the packet is successfully decrypted using the second encryption key, the packet is encrypted using the first encryption and transmitted over the power line. In an exemplary embodiment, the page transmission for data-service pages is preferably greater than that for voice-service pages. A first electrical connector provided on the outer mounting surface is connected electrically and detachably to a second electrical connector provided on the first mounting surface to permit signal transmission between the personal digital assistant and the mobile communications device.

1459827932-847bde61-6609-478f-ba84-c6bfb554bc78

A method, a system, and a processor for processing a network address translation service are provided. These modulators contain amino acid structures that are arranged as a hydrophilic analog of an alpha-fetoprotein. The local oscillator signal is selected to frequency translate the signal of interest to within a near-baseband passband whose lower edge is spaced from DC by at least about the maximum bandwidth of the signal of interest.

1459827932-cb547ec7-c926-4a30-ad82-179de5101c69

Techniques for using small parallax angles in remote sensing to determine cloud feature height include exploiting two identical medium-resolution SWIR bands with parallax to estimate cloud edge feature heights well enough to enable assessments of the impacts of shadows and proximate cloud scattering on ground illumination, and hence, on reflectance calculations. The inspection apparatus has a variety of optical functions to cover a variety of kinds of defects to be inspected. The test pad array is electrically connected to a group of terminal pads disposed on the surface of the panel, which are electrically connected to an electronic device with anisotropic conductive film bonds.

1459827933-2b85b1fc-278e-4375-947a-4bae1d26817f

Systems, methods and computer program products for multiple reminder and sub-events for calendar items. The circuit arrangement further comprises a frequency processing circuit for providing a reference frequency as a function of the AC component, and a demodulator with a first input for feeding the reference frequency, with a second input that is coupled to the input of the circuit arrangement, and with an output that is coupled to the output of the circuit arrangement. The invention may be implemented in any component of the entertainment system including a set-top-box, satellite receiver or a remote control. A first level of multiplexers multiplex at least one master payload based at least in part upon the arbitration of the first level of arbitration blocks.

1459827933-2da9ff7a-8483-472f-978d-2d6826bf14c2

A method of fabricating a thin film transistor for liquid crystal display is provided. One method includes forming first and second FET trenches in an interlayer dielectric material on a semiconductor substrate. Each of the plurality of devices have a number of channels. The stabilizing core is isolated from the rocker cover such that the sealing material of the gasket element is arranged between the stabilizing core and the rocker cover.

1459827933-bb441d39-739e-4653-987c-8494363f4d88

Disclosed is an improved method and system for implementing parallel processing of computing operations by effectively handling dependencies between different sequences of computing operations. The method involves measuring the electromagnetic response at two different under water source-receiver separations and using measurements at the larger separation to estimate the airwave response at that separation. The resulting AFUs can be locked so that users cannot view proprietary and trade secret information as to how they accomplish their tasks. Determining that two touched positions are detected on the single display object, the touch state-detecting section determines whether the detected touched positions are moved while keeping their touched states. In this manner, the print center uses the output data file to generate tickets that closely resemble the on-screen ticket proof approved by the client.

1459827933-c9f97471-39c6-49d3-96f6-37079938aa40

A first arm member and a second arm member are provided. The wall can also be a gel or skin balloon filled with water or oil. The second detection circuit detects the trailing edge of the pulse waveform of the input signal.

1459827934-21652ac2-b383-4828-9a2a-b2512e39cad1

A product management display system for merchandising product on a shelf includes using a trackless pusher mechanism that travels along a surface on which product is placed and one or more dividers for separating product into rows. A prior test of the validity of the destination telephone number of the request is executed automatically and locally to the requesting machine relative to a database local to said requesting machine in order to forward the request from the requesting machine to the domain name server only if its telephone number passes said test. The front body has a locking element mounted on the front body, and the rear body of the sole plate has at least one key formed on the rear body.

1459827934-382b938f-30ed-41dc-a70f-553021d38b8c

An apparatus comprises a housing, a clamping unit associated with the housing, a biasing system, and a length indicator. Even-numbered data and odd-numbered data are simultaneously output over a single clock cycle, and are then converted into DDR data and are then serially output. In addition, as synchronous drive transmission mechanism of the pair of carriage guide shafts, a gear wheel train was used.

1459827934-b9486f98-3797-47f1-9fe4-ed48a145bf84

The present invention provides a system for processing panoramic photographic images. The device quickly cuts a clean slit opening in the Shrink Wrap and security tape along the inserted edge of the packaged product. BTRANS are fully symmetric merged double-base bidirectional bipolar opposite-faced devices which operate under conditions of high non-equilibrium carrier concentration, and which can have surprising synergies when used as bidirectional switches for power-packet-switching power converters.

1459827934-f805e21d-ec43-4637-934e-8f9a08bbbedf

A method for producing apertures in hot section components of gas turbine engines made from ceramic matrix composites that have at least one oxidizable component. The luggage rack is mounted to the existing mounting plate at brackets which may be

selectively adjusted to provide the desired friction fit. When a operator-caused error has been introduced to the database by changes made by an already-committed transaction, the techniques described herein may be used to recover from the error by returning the database to a point in time prior to the commit time of the transaction that introduced the error. An Interworking Function is configured to maintain a call between a wireless communications device and a communications device as the wireless communications device is handed off between a cellular network and an IP network.

1459827935-375402a3-4450-47aa-919e-27e7c95f6892

A crankshaft damper and a method of crankshaft damper assembly using interlocking beads. In this case, the invention provides for a flow deflection device, which is not the same as the blowing device and which deflects the quenching gas flow radially outward through more than 90°, to be provided in the outlet-flow area of the quenching gas. The disclosed technology provides a method for copying the unduplicated information without transmitting or storing the duplicated portions. A controller controls the transfer of propellant from within the exchangeable propellant cartridge system to the spacecraft. The second semiconductor die defines a second active surface, the second active surface includes at least one conductive bond pad.

1459827935-44821287-bfd5-4c33-b7aa-b0147ae401e1

Processes and systems for the production for pressure management of a polymerization product flowing from a loop polymerization reactor to a separation vessel in a slurry polymerization system are disclosed herein. The device includes a semiconductor die and an electrically conductive attachment region having a first attachment surface and a second attachment surface. The adaptor band is compressed and inserted within the pre-existing housing that does not have torsion spring receivers already therein.

1459827935-c0cca1fd-6bf9-4be8-9d08-8a7fe97e25a4

A sheet 1 for shielding soft X-rays comprises a first outer sheet, an interlayer sheet, and a second outer sheet. One conducting terminal of the second transistor is connected with the first power source line via the first transistor. The snug fit of the holder to the irregularities in the bulb resist the twisting of the bulb. Furthermore, when the mobile robot is positioned at a boundary of neighboring regions of the cleaning region, the boundary where a closed curved line is formed, the mobile robot compensates for its position based on a matching result between feature points included in the map, and feature points extracted from images captured during a cleaning process. 0.3% or less, Ni: 9 to 15%, Cr: 15 to 20%, N: 0. The interlayer insulating film includes a first SiOCH film and a surface modification layer including an SiOCH film formed by modifying a surface layer of the first SiOCH film, the SiOCH film having a lower carbon concentration and a higher oxygen concentration than the first SiOCH film has.

1459827935-d5ab4d54-726c-4b78-99c2-6eb815077723

An apparatus and a method for generating hoistway information from images of the surface patterns of a hoistway component such as a guide rail sensed by a CCD line camera. The conversion element includes a first electrode disposed on a first surface of an insulating substrate, a second electrode disposed on the first electrode, and a semiconductor layer disposed between the first electrode and the second electrode. A frequency allocator 24 selects any one of the frequency bands from the frequency band storage unit 22 on the basis of the communication quality acquired by the communication quality acquisition unit 37, and notifies the mobile station device of channel information indicating the selected frequency band. Alternatively, the fishing line attaches directly to the hook, and the lure manipulator resides on the hook. An error is identified in the coupling state if the characteristic voltage pulse does not occur within a predefinable time period.

1459827936-1a2ceadf-5970-4971-a77c-2d6a3cc61178

A strap tensioning apparatus consisting of a strap tensioner attached to a firearm, a spring loaded spool contained within the strap tensioner, the strap having one end releasable attached to the spool, the strap exiting the spool, the other end of the strap attached to the firearm. The predetermined relationship may be a linear relationship which reduces the trap width monotonically for object widths less than the trap threshold width. The application is deployed for execution by a client device and a server. The shell enclosing the housing includes two retention devices on each of two opposite sides thereof. If not, the control unit sets the image forming apparatus in a printing state.

1459827936-1b6755d2-6e95-415a-91a9-77b01a5f4b34

A method of making read sensor with self-aligned low resistance leads is provided. In the method, at least one selective writing sub-field is used to turn on discharge cells selected in an address interval. The SAS expander hub relays the IO requests to SAS expanders connected to data storage devices capable of servicing such IO requests. The mover at least has a permanent magnet. The breathable film can be protected from an intentional load applied thereto. The stowage compartment includes a cover plate element and at least one sidewall element.

1459827936-f4211554-d328-4ad9-b10c-dd603b5bffb1

A wafer comprising a semiconductor layer formed on a substrate is diced on the back surface of the substrate to a depth of about thickness of the substrate. The contactor assembly is applicable as both a switching device and an isolation or load protection device. While these processed detection signals are output to the alarm output units, the control unit sends other processed signals to LED display units, so that the LED display units turn on alarm lights. The low power scan architecture is advantageous to ICdie manufacturers since it allows a larger number of circuits embedded in an ICdie to be tested in parallel without consuming too much power within the ICdie. The easel is further configured to extend upward from a back bottom of the frame.

1459827937-1e9eb083-a894-4255-ac0f-fc21fe542c26

A negative active material containing super-conductive nanoparticles coated with a high capacity negative material and a lithium battery including the same are provided, wherein the super-conductive nanoparticles have a structure in which polycyclic nano-sheets are stacked upon one another along a direction perpendicular to a first plane. A driving transistor has a first terminal coupled to a first reference voltage, a second terminal coupled to an output line and a control terminal connected to the first node. The releasing member has three leg portions on the vertexes of a triangular plate portion insertable into through holes in the reel. A restoration mechanism restores the shift lever to the neutral position. An alternative embodiment features spirally wound tubes with staggered exit locations for better distribution of the gravel.

1459827937-41968e6e-5c20-4576-b447-dd14f8060351

An information handling system having a processor and a computer readable medium accessible by the processor and having stored thereon a data structure operable as a directory service. An optical gain medium such as a solid state disk, rod or slab is located between the front and back mirrors within the chamber to produce a laser light along the optical propagation path. The memory cell area includes at least a one-time programmable read only memory cell, while the peripheral circuit area includes at least a logic device. The crumple regions and support regions cooperatively allow the lid members to withstand planar and nonplanar compressive forces. The method also includes determining a corresponding rectangular grid that includes the pixel, wherein the corresponding rectangular grid comprises at least one indices in a group of indices. Because the verifier performs less stringent type checking in response to such an instruction, the JVM can execute assembly language programs that were generated based on source code that was written in a

dynamically typed language.

1459827937-73de7d2c-f4bf-4fd9-9114-8d5bae9bd9d3

A display device includes a first set of data buses coupled between a timing controller and a first line driver. A cable tester tests the cable to determine a cable status, which includes an open status, a short status, and a normal status. While a particle is passing across a gap between dee electrodes, the acceleration voltage applying section applies RF acceleration voltage to the particle, and further applies RF acceleration voltage having a phase different from the phase of previously applied RF acceleration voltage.

1459827937-7e3fd250-379e-4968-b7c9-e82d82edfb6f

The present invention describes systems and methods of providing a pressure switch with temperature enable function. The spacer member receives a driving force from the main assembly of the apparatus, by which the spacer member is disengaged to contact the charging roller to the photosensitive member. Processes and systems for recovering light olefins during regeneration of an adsorber in an oxygenate removal unit can include recycling residual effluent stream to an upstream operation unit upstream of the oxygenate removal unit.

1459827938-047c8323-ab31-49c7-843f-66f84c374dee

An approach is provided for compensating for non-linearity in an overlaid radio communication system, such as a satellite network, wherein a terminal and a hub station communicates bi-directionally using a composite signal that is transmitted from a relay station and includes an inbound signal overlaid with an outbound signal. The apparatus includes a carriage driving motor, a transfer motor, a scanner which reciprocates a carriage having the recording heads in a scanning direction, and a transfer machine. A pair of shutter pieces are located on the central portion of a slot in a front bezel to be used to insert the disc therethrough and are spaced at a certain interval. The film may be applied selectively to parts of the CSP such that it overhangs the top of the component and upon reflow flows over the edge of the CSP to form a connection with the substrate. Other aspects of the invention pertain to methods of forming such stents and methods of using such stents. Many of the devices may be introduced into a patient via minimally invasive introducer devices and the like.

1459827938-0cf99c71-d703-4359-9f13-9292cd6c2924

A method is provided for collecting at least partially retted plants and winding them into bales. Power supply system supplies electric signals to the piezoceramic ring that are transformed into mechanical waves and cause vibrations in the liquid. Thus, the sender is enabled to specify users not to receive a copy, forward or print of the document.

1459827938-1d6fd74d-350d-4969-b71e-8201ecac3106

An optical semiconductor lighting apparatus includes a heat sink including a heat dissipation base and a plurality of heat dissipation fins formed on a lower surface of the heat dissipation base; an optical semiconductor device placed on the heat dissipation base; and an optical cover coupled to an upper side of the heat sink to cover the optical semiconductor device. After having received at least one information item relating to the detection of at least one event, the latter is characterized according to at least one rule of a plurality of predetermined rules, that can be updated, to allow the establishment of a security report according to the said characterization of the said at least one detected event. Between the objective and the imager there is provided an additional optical unit that has in particular optical microelements, e. A sharp pull on a tether line connected to the float causes the float body to roll 180 degrees such that second keel is submerged and the first keel is in the air and the float tacks in the second keel direction. The peacekeeper structure is separated from at least one of the first conductive structure and the second conductive structure by a fixed spacing distance for

conductive lines for a self-aligned double patterning process from the integrated circuit was formed.

1459827938-627cb82e-6278-4c75-af1f-7d7c5198b680

Process controllers, methods, and systems provide for frequency control to account for the effects of periodic disturbances in the feedback signal of closed loop control systems. A clamping mechanism provided on one of the members clamps the first guide and the second guide to the vertebral bone portions. The liquid crystal panel is driven by moving image data read from the display data RAM at the frame frequency. The control element is linked to a first crank.

1459827938-c41dedf4-1750-48fd-9b38-f1c82be140ef

Techniques to recursively discover services in a distributed environment may include receiving a request, including a unique client identifier, from a client device to access a home resource at a services site. The soundboard is made of a three ply torsion box design utilizing a honeycomb substrate as the central core. The slave machine measure the degree of radiation exposure in real time, and notifies this measured result automatically to the master machine by wireless communication. Also provided is a method of using the olefin oxide so produced for making a 1,2-diol, a 1,2-diol ether or an alkanolamine.

1459827939-251d6c8f-2bb3-4784-b08e-88bfc3a91c6

Polarization independent optical isolator/circulator devices based on Mach-Zehnder interferometers. The catheter is advanceable intra-luminally to place the implants. A switch-transistor well is disposed within the semiconductor body and is electrically isolated from the memory transistor well. The roller press assembly comprises a housing assembly that rotatably supports a second print wheel.

1459827939-753077ed-6dbe-4918-91d6-44cad86245b3

An ATM communications device connected to an ATM network via an optical fiber improving the efficiency of the traffic in the ATM by separating the real-time data communication system and non real-time data communication system. Wireless service area identifiers are received at the wireless device, where selected ones can be stored as points of interest on the wireless device. The operator includes both optical and edge sensor obstruction detectors and is responsive to wireless communication for receiving user initiated command signals. This step scales up a numerator for a ratio. The bolt member is threadably engaged with the bore of the floating nut front portion for driving the lip of the pressure bar front segment into the meter box overlap joint to electrically connect the ground clamp to the meter box. The triangular configuration of the container enables it to be tightly nested with other identical containers and also presents more planar and discrete outer surface areas for disposing advertising material thereon.

1459827939-975e4d95-561d-48e4-af28-5e52024f2bb8

A scrolling scan optical band scanner is provided having a scrolling scan optic with a scan function that inherently deviates from an ideal imaging function over wide apertures. The travel kiosk includes a first section containing a touch screen, and a second section adjacent the first section including an aperture and a document delivery tray within the aperture. A tablet reserving member 200 is disposed below the feeder vessel 36. A coefficient table storage unit sends tap coefficients corresponding to the classes resulting from the classification to a sum of products circuit, which sum of products circuit then effects linear predictive calculations, using the tap coefficients and the class taps, to generate decoded picture data. The translation information may be based, at least in part, on historical information associated with at least one other request associated with the location and previously obtained from at least one other mobile station. The predictions are generated using social signals that are based on social information surrounding the content item, such as the density of connections between the posting user and the viewing users, the profile information of the

users, and the geographical separation between the users.

1459827939-f10b6132-297c-4a3d-92a5-31e14c2c485b

The phosphor composition for low-pressure gas discharge lamps with a high light efficiency for generating radiation with a color temperature of greater than 5000 K and a very good general color rendering index Ra of greater than 90 includes at least one halophosphate phosphor, a phosphor which emits in the red wavelength region and a phosphor which emits in the blue-green wavelength region. Behind said jet-discharge disk a flat water-filled chamber is occluded on the side facing away from the jet-disk by a transparent to translucent bottom. Detection of the actuator deflection is indicated by comparison of the feedback signal as detected via at least one of the plurality of contacts that are interposed by at least one of the first and second piezoresistive portions. The image printing apparatus prints the image of received image data by directly using uncompressed data and expanding compressed data. Each of the slot transmission line substrates provide one or more slot transmission lines that each bridge or \u201cpatch\u201d together two, separate slot transmission lines together. Periodic off loading of the data to the dealer and service providers is also provided.

1459827940-2b8ecdd4-a6b9-4caa-9dd2-6444ac2f96d0

The present invention is a steering guide for surface cutting machines. CRFR2 antagonists may block agonism by one or more CRFR2 agonist, for example Ucn 2 or Ucn 3. Additionally, the turbine can be put into storm protection mode by bringing the vanes right next to the central shaft where the profile of the wind turbine is reduced to minimum. The purchase request may include product identification data and buyer location information. A second PTM transmission is then initiated into the content transmission area for content distribution.

1459827940-871648ef-343f-4ce2-b400-c3317f33701d

A light source controlling circuit controls a light source outputting continuous light. The first information includes second identification information of the second radio frequency identification tag, and the second information includes first identification information of the first radio frequency identification tag. All three layers contain combustion apertures but only the outer layers include fluid apertures. Control circuitry for the grid can be disposed in electrically insulative potting. The device includes: acquisition means for acquiring the frame images being the imaging results; estimation means for computing a first matrix of coordinates of a joint of the 3D body and a second matrix of coordinates of each of the parts of the 3D body, and generating a first motion vector; computing means for computing a second motion vector; and determination means for determining the 3D body. The arrangement according to the invention comprises a detector unit, a communications device, a server and a database connected therewith, and a data presentation means.

1459827941-0b6c19e9-2fbc-49ff-9aeb-6a9db04e3da7

The invention relates to a multi-layer heat-sealable packaging material especially for food packages. The integrated plunger assembly is constructed and arranged to be integrated into an interior of an end of an extension pole, for example a standard telescoping extension pole. Then, the stopper portions are formed on the surface of the substrate by sputteringvapor deposition of Cr, and then the resist is removed. At least one tubular member is selectively movable relative to the other. A resolution, transmission bit rate, coding structure, security protocol and/or security level for transmitting the received content to the wireless handset are adjusted based on the acquired user profile. In one embodiment, the target detection platform determines tentative location and velocity of the signal emitter, and the signal collection platforms are configured to perform TDOA and/or FDOA analysis of the collected signal data corresponding to a signal of the signal emitter.

1459827941-7eb1bb49-c3ef-4baf-9ea8-c155e0e053d6

The present invention relates to extracts of Salicornia species. The assemblies include components used in conventional mass-produced vehicles, with a chassis, a body with optional cargo area, undercarriage, such as axles with steered and/or unsteered wheels, tires, wheel suspension, spring support, steering and brakes, and an engine-transmission unit with drive components. The recipient is specified by the e-mail message.

1459827942-203d73f8-c762-496b-941e-4b4fa6d6cf0e

A compact sulfur recovery system is disclosed which includes an upflow orientation for the gases through a primary structure including a catalytic partial oxidation reaction zone, a first temperature-control zone, a first Claus catalytic reaction zone, a second temperature-control zone, a first liquid sulfur outlet, and a first effluent gas outlet. The apparatus may include a driver, a plunger operating and cartridge assembly mechanism, a cartridge assembly having a fluid reservoir and a bone penetrating needle. The invention further relates to a fluid inlet device, to a use of the fluid inlet device, and to a method for treating a fluid. Additionally, the probe structure of the present invention solves several problems caused in an actual testing step of the semiconductor devices, for instance, long testing time of the semiconductor device, difficulty in providing the sufficient contact force between the probe structure and the semiconductor device, and having to specially design the test pads of the semiconductor device. The first and second memory materials have different properties such that the first and second sets of memory cells have different operational memory characteristics, such as switching speeds, retention and endurance.

1459827942-4d29391e-156d-4822-aef2-4b69ce820917

A camouflage net, in particular for covering persons and articles in the desert against detection in a thermal image, has a knitted fabric with a hole structure. The amino acid mimetic monomers are selected to mimic the side chain of the amino acids asparagine or glutamine. The environment template is built using a blueprint. Each bone screw has a screw head and a threaded portion extending therefrom. Also disclosed herein are novel boronic ester and acid compounds, their synthesis and uses. The holder also has an access slot to allow the user to manually push all of the cartridges out of the holder simultaneously.

1459827942-796a1340-0cb8-41d1-a390-a9d70f2fce0e

A document processing device having an evaluation region disposed along a transport path between an input and output receptacle capable of processing both currency bills and barcoded media having at least two barcodes. The activity level detected by the body motion detection section is outputted to a fatigue detection section for estimating a user's fatigue level on the basis of the activity level. The column decoder is adapted to receive an address of a memory cell to which data is to be written or from which data is to be read. The heating element is placed within the elongated slot and then connected to a suitable source of electricity so as to melt snow and ice which accumulates on or near the gutter cover. Alternatively, the downstream interleaver memory requirement may also be determined based on the upstream channel conditions by estimating the downstream capacity of the communication channel based on the upstream channel conditions and determining an interleaver buffer size that satisfies one or more predetermined downstream configuration parameters and the downstream capacity estimate. The new transistor consists of a laser or LED diode as drain or source, and a photo sensor diode as source or drain.

1459827942-ab05fd2c-dcdf-437e-8079-35cdfa6f3f15

A new and distinct cultivar of Bracteantha named 'Flobrafla', characterized by its compact and bushy growth habit; upright and rounded plant form; freely-flowering habit; bronzed orange and golden yellow bi-colored involucral bracts and golden yellow-colored disc florets; and short and strong

peduncles that hold inflorescences above the foliage. One embodiment of a disclosed apparatus includes a plurality of strobe inputs to receive a plurality of strobe signals. The touch sensing period is included in a vertical blank period of the frame.

1459827943-1a6cacf6-c7f3-47eb-b820-71f2f2cd7878

A method and an apparatus for projecting an end of service and/or an elective replacement indication of a component in an implantable device is provided. The impeller assembly also includes a sieve ring having axially opposed first and second ends, an inner cylindrical surface and an outer cylindrical surface, where the sieve ring encircles the base of the rotating blade at the first end so that a portion of the ears are radially spaced inside the inner cylindrical surface so that the ears rotate within the sieve ring. Responsive to receiving the package update notification, a delta set of source files that correspond to the difference are identified. The housing has supporting parts that support the back surface of the main locking arms in the vicinity of the main locking projections when the retainer is in the main locking position. The gaming machine tracks all of the preference selections made by the player.

1459827943-75ca6ef1-1e21-4986-9acd-ee4431357ec5

The present invention relates to a mixture comprising  $\Theta$ . Each tube has an associated deflection correction device which comprises a convergence circuit. The readout portion reads out at least first, second, and third color signals in each of the first and second fields.

1459827943-9207b7ee-5e08-40ed-8c8d-94da9de865a9

A copolymer of an acrylate monomer containing fluorine at -position with a norbornene derivative is highly transparent to VUV radiation and resistant to dry etching. The first frequency source includes an input coupled to receive a reference input signal and an output for providing a first frequency source signal. The prescription entry system transmits and receives information from the communications network and provides an input system for the prescriber to electronically enter individual prescriptions for each patient.

1459827943-c359073c-a574-4bc2-96ff-9db2c9a4c648

A portable terminal is constituted using a geomagnetic sensor for detecting an azimuth, and a GPS receiver for detecting a present position thereof. The blister pack is arranged in an outer pack between a base part and a cover part. A passivation layer is formed on the IMD layer, and a bond pad is formed overlying the passivation layer to electrically connect the upper line portion. Instead of shielding or separating the susceptible analog circuits from noisy digital circuits, additional circuitry is added where one of the added circuits, denoted as the noise separator circuit, produce only the noise component of the output signal, the first output, of the analog circuit adversely affected by the noise. The location data is provided from a locator incorporated in the unit. The ramp structure is configured to support at least one object such that a first end portion of the object is disposed within the liquid medium while a second end portion of the object is supported by the ramp structure outside of the liquid medium.

1459827944-00627c57-85bf-497b-8dbb-68b16f3a4020

A treatment method and apparatus for performing a diagnostic or therapeutic treatment. The system utilizes VRU technology in conjunction with the national telecommunications network connected via Computer Telephone Integration to a virtual telephone number database containing a nationwide master list of telephone numbers with attribute data items associated by Spatial Key linkage to each telephone number. Each oscillating signal has a frequency or amplitude or both that are variable dependent on a variable drive signal. This is done so that the first portion of the contact pad is aligned with and spaced apart from a first portion of

the contact, and the second portion of the contact pad is aligned with and disposed inwardly of a second portion of the contact. The dielectric cap is interposed between the shield and the antenna, the shield being a ground plane for the antenna.

1459827944-97709fe6-1d0a-4dc1-8c9e-191da9a53bdc

Provided is a data management device for managing data recorded onto a readable and writable recording medium by an application that is verified based on a digital certificate. The present invention also concerns a surgical assembly comprising said medical device and controlling means as well as a process for the specific destruction a target volume inside an organ by means of said medical device or surgical assembly. The GPHE generally originates from macro- and micromagnetic phenomena involving single domain reversals. The controller is configured to generate a diagnosis based on data from the electrocardiograph or the ultrasound device. This is achieved by a robust regulating mechanism that compensates leakage currents. For example, the thiazoline acid derivatives are useful in diagnosing and treating pathological conditions associated with an excess of trivalent metals in humans and animals.

1459827944-add5e811-bf0b-48e5-a3f7-8ba5851ac50e

A fastener to secure and train branches of a vine or plant to a horizontal support wire or other structures comprises a longitudinal body including first and second hook portions and a longitudinal flexible member having first and second ends connected to the respective first and second hook portions. A method may involve receiving audio data corresponding to sound detected by a wearable computing system. In another aspect, the determined weight vector maximizes an accuracy measure and a variance measure.

1459827945-28766177-0d65-4a70-8bf4-87cd29f7c213

The present invention relates to a method and a device for transmitting force, in particular an impetus, by magnetic interaction. Said sub-assembly comprises a body with a liquid flow inlet duct, opening out in an aspiration chamber and at least one aspiration duct for the liquid contained in the packaging. Still further, the PSBN provides expanded capacity throughout the network without requiring the implementation of new infrastructure. The terminal portions are constituted by transition portions that link solder ball pads to the base portions, while offsetting the solder ball pads in the same direction as the contact arms.

1459827945-2920e922-0447-4307-8520-917a5e3836db

The invention provides polypeptides, polysaccharide-polypeptide conjugates, and expression vectors for treating or preventing pneumococcal infection. A number of independent streams that are to be transmitted for each link is determined based on an overall system performance measure. The struts each have a strut height defined as a distance between a first wall and a second wall. The device further includes one or more conductors that electrically couple together all of the segmented electrodes of the first set of segmented electrodes. A buffer memory operates for receiving the first and second information signals from the head at the predetermined constant transfer rate  $R_p$ , for temporarily storing the first and second information signals, and for outputting the first and second information signals at first and second transfer rates  $R_a$  and  $R_b$  respectively. The second polymer contains a co-polymer having at least 50%  $\alpha$ -olefin units and is characterized by a number-average molecular weight of about 7,000 g/mol to 50,000 g/mol, a viscosity of between about 2,500 and 150,000 cP measured at 170°C.

1459827945-456ea82a-6548-4276-91d5-0616f6a611e5

Methods and systems are provided for modeling temperature characteristics of components in a system such as a power module for a hybrid or electric vehicle. A heat sink for dissipating heat generated from the LSI chip is installed within the core layer. The packaging signal lacks gag gene sequences, and has approximately

one order of magnitude greater infectivity than retrovirus-derived packaging signals without gag gene sequences. Each of the respective particles may be divided into a respective plurality of sub-particles.

1459827946-2b5b8cf5-e432-4fba-b8b3-a3b4fc6d6966

A method of operating a variable geometry turbine during transient operations for maximum response by determining the VTG area at the balance condition of the pressure ratio and efficiency curves for the variable geometry turbine to achieve maximum power. The RTSMS has a reservation system. Sandwich plate bridge panels without peripheral metal frames are held together only by the adhesion of the plastic to the metal plates. An exemplary registration algorithm as disclosed provides an approach to automatically make fine adjustments to the 3D data registration.

1459827946-90f1f73c-9865-47ce-bba0-bfc84920462c

Exemplary apparatus and process can be provided for imaging information associated with at least one portion of a sample. Braces are fastened on the extremities of the shafts, which are eccentric with respect to the shafts. Both an inhibit voltage and a selection voltage may be driven through these single transistor devices, which may be achieved with the introduction of odd and even designations for the address lines. At least one stretch resistant member is disposed within a lumen formed by the embolic coil. A heavily doped region of first conductivity type is located on the first surface side around the element region.

1459827947-12e18cd5-059c-4554-b5f3-19d31b068d67

The present invention relates to positioning components of an assembly using fiducial features. The elements comprise a substrate and a layer of an imageable composition over the substrate. An exterior surface of the input mechanism is operative to come in contact with the user of the device. A blade is supported on the support line with the blade cutting edge perpendicular to the support line.

1459827947-1e5627d4-6957-46f1-8d2f-d54bba04b14b

A computer, connected to a communications bus, includes a display that selectively displays a user interface. The first lens element with positive refractive power has an object-side surface being convex in a paraxial region thereof. Traditional systems have not been constructed to enable such inbound translations, providing instead only communications outbound from the incompatibly addressed domain towards the global Internet. Device modules perform operations on encapsulated messages formed from data and commands, such as device operation commands and data from storage device readwrite operations. An actuator drives the projectile through the tube, and a first sensor detects when the protruding portion of the projectile extends from the tube to make contact with, for example, the core of the wound roll to start a timing sequence.

1459827948-44ba9c4d-0814-4d50-9f16-74e825cabe61

A light analysis system for analyzing light transmitted through an ampoule includes a housing having at least one receptacle for the ampoule, a cover for substantially preventing ambient light from affecting the receptacle and having an interior reflective surface, and a master control system. An echo produced through an echo path is mixed, as an echo noise, with a sending signal So and this sending signal is attenuated by a level attenuator. The on-channel received samples are processed in a back-end portion to decode on-channel information. A residual piece is removed from the cut building stone, leaving a corner stone. Therefore pre-silicidation preparation treatments described in this invention feature removal of both native oxide and arsenic based defects from conductive surfaces prior to metal silicide formation.

1459827948-8d19e66f-5090-4999-9103-9d47bb891bd5

The principles of the present invention provide the ability to flexibly change the

delivery point and time for a mail item, while the item is en route. In one embodiment, a semiconductor device includes a plurality of first features disposed in a first material layer. The equipment according to the invention thus comprises a settler, which is essentially trapezoid in shape so that its cross-section is wider at the feed end of the settler and gets smaller towards the rear end of the settler, from whence the separated solutions are discharged from the settler, and the settler is equipped with at least one device to dam up the dispersion. The wide-range of input allowed by the up-converting device enables the continuance of power drain from the UltraCapacitors, i. A fifth wheel trailer hitch member has a base portion.

1459827948-bbb3aba9-4935-493d-8e8a-3348355f9ca0

An assembly for felling a segment of a tree trunk in a safe and controlled manner and method of using the same. Prior to the proof, a generation history of a generated profile of an output device is preferably managed. The surface of the magnetic material compact body is roughened, and then the external electrodes are formed via plating.

1459827948-d57713b0-4531-48ed-8e4a-9cd909498591

A seat track cover for transferring at least one of electrical power and data between two seats. The generator includes two output terminals connected to the ventricular electrodes, to deliver joint stimulation impulses with an adjustable inter-ventricular delay. The at least three lightly doped regions have a lower concentration of doping atoms than other portions of the silicon layer forming the transistor. The average crystal size of this FePt alloy is 0. The vanadiumphosphorus oxide catalyst may be used in the production of maleic anhydride by the catalytic oxidation of hydrocarbon feed streams. An inversion of the second data signal synchronized to an inversion of the second clock signal is latched.

1459827949-948a950a-fff4-41a0-b9cf-1c0fc2e306f6

The present invention relates to a rhamno-polysaccharide antigen from Enterococcus faecium clonal complex which is useful as a vaccine component for therapy and/or prophylaxis of bacterial infection. A U-shaped resilient fastener spring wire has leg portions that are resiliently biased apart, at least one of the legs containing a laterally extending bulge portion that extends into a corresponding locking slot contained in a side wall of the knife cassette. The ROPS may include a C-post positioned behind the seat, and a B-post positioned in front of the seat.

1459827949-a70cde31-c5c0-4cfd-a431-f80d30cff73c

A method of continuously forming a multilayer panel includes making a gypsum slurry, then dividing the gypsum slurry into at least a primary gypsum slurry and a secondary gypsum slurry. The system may have a plurality of laser signals and a plurality of identifiable modulation signals. Conveying means for conveying flows of purified air are associated to the panel to define, together therewith, a fluid-dynamic barrier, which avoids relative contamination between one environment and the other environment. The AGV moves on the guidance path and is guided by the guidance path. The organic electroluminescent element has a micro optical resonator structures, an organic electroluminescent member emitting light within the color region of bluish purple and a color conversion member emitting visible fluorescent by absorbing the light emitted from the organic light emitting member.

1459827949-dd8020ba-5455-49e9-b2ee-7b8018858476

A process for reducing the amount of magnesium in a lithium-containing brine by adding an aqueous solution of KCl to the brine to precipitate at least some of the magnesium as carnallite salt is disclosed. Each cycle has a detection phase and a classification phase. The authentication control company BS is, for example, a telecommunications company, and performs authentication control for a plurality of product supplier companies SP1 to SP3 according to the product purchase status on the television TV. The invention aims at enabling the wheel disc to be accurately

positioned relative to the rim base and at providing a wheel with an attractive design.

1459827949-f59265fa-1b09-4a7f-a026-4dbbd437def8

Valve repair apparatus and methods for ensuring proper coaptation and operation of the leaflets of a heart valve. In one arrangement, the radiating member is used to remove a blockage from the central venous catheter. In addition, one side in a width direction inside the elastic leg is more protruded toward the pillar than the other side, and the pillar includes a dented portion for receiving the protruded portion. The housing member 5 also has a ventilation port 8 formed to communicate with the first region A and equipped with an anti-dust filter. The cover is made of fabric, paper, plastic or a like material.

1459827950-2c09f3fa-0f26-4734-800e-68cb18c1a451

A content usage right issuing terminal issues a content usage right to a portable terminal of a user who visits a store. Through-holes for the semiconductor components are made in the base, in such a way that the holes extend between the first and second surface of the base. Power means is arranged to pivot the beam about this axis relative to the chassis. A ramp is disposed in the flow channel as well as a porous surface forming a wall of the flow channel opposite the ramp. The select devices may have vertical channels directly against the semiconductor material pillars and directly against upper regions of the first and second conductivity type regions.

1459827951-82dc0c0e-5e86-4095-b866-b2e389d25690

A fluid-jet precision-dispensing device includes a layer, one or more first holes within the layer, and one or more second holes within the layer. In addition, an optical coupling set includes the optical fiber connector cord and the receptacle. The coupler is preferably a Y-junction coupler, but can also be a multi-branch waveguide coupler or a waveguide directional coupler. The targets are either distributed across the field by placing the targets within the active area or by distributing the targets along the streets which are between the dies of a field.

1459827952-2e59de9d-2f65-42f1-a8a1-5f7886d937ee

A stack type mobile terminal for enabling the user to easily add only a necessary option cabinet from among different types of option cabinets eliminating the need for electric connection of the user is provided. The optical disk is set on a turntable of an optical disk unit while the label surface of the optical disk is directed downward. The first optical element has at least two side walls at two opposing sides among four sides of the first optical element and the second optical element has at least two side walls at two opposing sides among four sides of the second optical element.

1459827952-9c368258-8e7a-47a8-a58e-bbaf97279bea

An integrated circuit memory device is designed for high speed data access and for compatibility with existing memory systems. The method also includes maintaining, while continuing to reduce the overall fuel flow, a first portion, of the overall fuel flow delivered to the first burner at a maintenance level so that the predetermined dynamic operating condition of the first burner is maintained. Then, the amorphous silicon film is processed by a photolithography method and dry etching to form gate electrode forming films.

1459827952-afdec9c0-5215-4e43-9959-5c550b4e5b33

The CSF shunt valve includes an elongate, hollow housing and a valve unit disposed within the housing. The presence, location and morphological characteristics of a meiotic spindle in the oocyte can then be determined based on the spindle structure in the retardance image, and the developmental potential of the oocyte can be evaluated. The SOI wafer including an insulator layer and an upper silicon layer. The result customization application performs transformations on the response data

to generate a result set conforming to the result set definition.

1459827953-71473bfb-0c5a-406c-819f-5bb095ecec38

The specification discloses systems and methods that provide improved capability to detect and decode encoded telemetry data. Weld portions formed by laser light are provided at a contact area extending in a joining direction between the holding frame of the filter element and at least one joining end of the joining ends of the case members. The apertures are sized and shaped to receive a removal tool having prongs with a complementary shape to the bores. In this embodiment, the middle oxide layer is formed with the rest of the hard mask, and then reduced in a lateral dimension, preferably using a DHF dip.

1459827953-b885f572-fcb1-4d07-9928-581145b09a32

High-functionality highly branched or hyperbranched polyesters based on di-, tri- or polycarboxylic acids and di-, tri- or polyols, processes for preparing them, and their use. At least one data field to be filled with transmission data is clearly assigned to each further station. Each of these conductive patterns includes a first end and an opposite second end. In one aspect thereof, one may use a torque reduction rulebase configured to avoid high torque reduction, and inaccuracies in the motion-indication parameter due to high levels of creep, if any, in a wheel of the respective axle.

1459827953-e3334957-0f8b-4a86-9c5f-5972537cd349

A method and system is provided for generating digital content using text-to-speech conversion. Since the nozzle is formed by radiating the laser beam to the nozzle plate through the ink feeding passage of the substrate after attaching the nozzle plate to the substrate, the accuracy of the nozzle in form and position improves, and the nozzle of desirable structure of the improved ink discharge efficiency can be obtained by radiating the laser beam only once. The network traffic is analyzed based on each connection made from a server to a client and the measurement time interval. The at least one chain guide may be configured to rotate about the track while applying tension to the bicycle chain so as to reduce friction and/or dampen noise.

1459827953-e379fe9e-ba50-4e3a-ba0b-10651feb5dd8

There is provided a field device management apparatus for acquiring and managing device information about a field device. In one embodiment, the first and the second keying modules are pivotably mounted on a base assembly having fixed opposing tenting angles. A leaky function module calculates a leaky function for each tap coefficient in the asynchronous time domain. The first interfacial attachment area and the second interfacial attachment area separated by at least one relatively thin isolation strip such that the first and second interfacial attachment areas generally approach covering the entire attaching area of the chip capacitor.

1459827954-990801bb-7289-4841-b620-2b8a59b312ea

A breast saw apparatus is used for cutting a poultry breast having a keel bone. The communication unit performs data communication with an external apparatus. A conductive terminal includes a pin portion insertable through the hole in the flat circuit and into the hole in the support member. The ECU outputs a control signal to the driving circuit.

1459827954-b0e6d543-bf23-4c75-8211-cde143670bfe

An automatic feeding machine for transferring semi-manufactured products between a progressive die and a single station die, includes a frame, a feeding device, and a manipulator. The binding permits easy adjustment of the binding's position on the board, while also allowing for removal of the binding from the board for improved utility of storage or transport. A database at the verification station retrieves information related to the unique identification code, and a camera captures a

digital image of the moveable object, while displaying the image and querying a user to input verification data to an input device. Then, a keyboard status and a command byte of the keyboard controller are stored into the RAM. The RF coil is in thermal contact with the heat sink assembly that is coupled to the cryogenic system through a heat pipe to achieve and maintain a desired low temperature at the superconductor RF coil. The exposure of the vent can be adjusted by a sleeve that slides back and forth on the conveyor tube at the location of the vent.

1459827954-be85c05c-1819-45d1-994a-1b8e57d1d07b

The present invention provides a bifunctional phenylene ether oligomer compound having a thermosetting functional group at each terminal, an epoxy resin containing the above oligomer compound and a use thereof. Immediately after the bypass valve is opened when the electric motor is running, the air flow inhaled into the internal combustion engine may be calculated by acquiring the bypass air flow through the bypass passage and using the acquired bypass air flow to correct the intake air flow measured from the signal of the intake air flow sensor. A control unit may determine currents based on at least the number of coils or coil sets, an angle of rotation of the rotor and a parameter depending on an axial position of the rotor, and supply the determined currents to the coils or coil sets. In particular, the invention relates to indolocarbazole analogues of the following general formulas that inhibit topoisomerase I activity .

1459827954-d8a1049e-f697-4c69-aec3-19bec36ffb04

A method is disclosed that monitors and controls the condition of an expandable mixture before injecting it in a mold and that maintains the conditions for filling so as to make a casting mold having a uniform strength. The clutch pressure is further reduced at a constant change rate and the amount of time is measured until the turbine rotation speed increases to the predetermined rotation speed. Word lines are coupled to the first and second nonvolatile memory cells. The first stand off leg is attached to the substantially sequential ribbon arrangement of the optical fibers at a first end, and the second stand off leg is attached to the substantially sequential ribbon arrangement of the optical fibers at a an opposite second end. The third and center mattress support portion has two sections that are pivotally connected. The retaining rails are insertable into the guide rails and securable at the guide rails by resilient elements and resilient stops.

1459827954-df8b2eb5-f2e4-4867-aecf-cfc912ad0259

A method for estimating the likely waviness of a wafer after polishing based upon an accurate measurement of the waviness of the wafer in an as-cut condition, before polishing. The network emulator can replicate attributes of a wired communications network. The top leg extends from the one end of the base member at a top thereof, such that a bone slot is created between the bottom leg and the top leg. A JSP visitor configuration file, which defines user configured classes and sequence of execution, is used by the JSP translator to invoke methods of user-defined classes in the order specified by the user to process or visit elements of the DOM object.

1459827955-4bbff1ed-6545-470c-ac96-761472a2c928

In a toroidal type continuously variable transmission, a power roller bearing that serves as a thrust bearing includes an inner race composed of a part of a power roller, an outer race opposed to the inner race, and balls arranged for rolling motion between the outer and inner races. A master set of service codes for the multi-mode environment is provided. The amount of charge and voltage change, required on bit lines for resolving a bit of data stored in a memory cell during the pulse width of the self timed memory clock, is reduced by using a sensitive sense amplifier so that power can be conserved. A DNS Server load balances network requests among customer Web servers and directs client requests for hosted customer content to the appropriate caching server which is selected by choosing the caching server that is closest to the user, is available, and is the least loaded. A common driver applies alternating current common voltage signals to the common lines.

1459827955-6e09d6bf-ebba-4a9c-83cb-f138d98e5f15

Air cleaner assemblies and components therefor are described. The thickness of the gate oxide layer on one step surface can be different from that on another step surface of the multi-step structure. The supramolecule disrupts the interactions between the hydrophobically modified biopolymer and the vesicle or cell membrane, without affecting the structure of the membrane or the hydrophobically modified polymer to which the hydrophobic substituents are attached.

1459827955-c41aae86-669a-4e01-9e24-51baf1c9c29e

Bezoar-forming units for forming at least one temporary bezoar in a gastrointestinal organ of an animal, including a mammal, to fill a space in the said organ, are provided for weight control. A sensing device for use with such a region, the sensing device for sensing and reacting to data indicative of a functional attribute of a part of the region. The distal end of the leg may include a forked portion that defines two or more tissue piercing prongs. At least one of the spaced apart electrode regions is energized, to selectively wet etch the cover layer adjacent the spacer region and define a nanopore in the cover layer adjacent the spacer region. The fixture can include a housing, a modular, removable LED module attached within the housing, and at least one modular, removable power supply attached to the housing for powering the LED module. The dual porting apparatus includes two idle regenerators coupled to two serial master devices, a synchronization logic capable of synchronizing the communications between one of the idle regenerators and a third idle regenerator coupled to the SATA disk drive.

1459827956-247bc3a3-855c-4bea-b273-14923e1f4373

A novel maize variety designated X13B662 and seed, plants and plant parts thereof, produced by crossing Pioneer Hi-Bred International, Inc. The data processor may be also configured to receive information identifying a user requesting authorization to command the vehicle controls from the one or more devices associated with the vehicle computer. The well layer contains indium and nitrogen, while the barrier layer contains aluminum and nitrogen. Such an arrangement allows analysis of the transactional information and the loading information showing actual usage of objects at both the dispensing site and the reloading site.

1459827956-6d070b8d-425a-46b8-81ed-da86069371c5

In a computing system with non-shareable resources, use-arbitrating processes are executed on behalf of each task seeking or having access to non-shareable resource. An estimate of the time-varying stress and strain fields within the subsurface region during production of the reservoir are determined, wherein the estimate is based on the integration of the seismic model with the geomechanical model. An axial tension acting on the rod which runs axially in the tube and is fixed in rotation therein, causes the lugs to deploy through openings in the tube, such as to cause the extension thereof in the direction of tension at an angle to the length of the tube. The described methods and apparatus can be used alone or in combination with various novel signaling schemes which can make it easier to compensate for the non-ideal behavior of switching amplifiers in such a way as to enable practical application in wireless transmission and/or other applications. In the process, the address next to be input can be decoded. The programmable structure comprises placing heating elements in close proximity to the programmable structure to heat the programmable structure during programming.

1459827956-823f6836-eac5-4437-9668-1eefec42a1af

A method for converting video information from an incoming format to an outgoing format using a process free from one or more intermediary files. A fin structure may be formed such that the surface of a sidewall portion of the fin structure is normal to a first crystallographic direction. A capability set of at least one capability is associated with each resource group. In particular, the invention relates to indolocarbazole analogues of the following general formulas that inhibit

topoisomerase I activity.

1459827956-ea60697a-c2e7-4d40-94ed-9023a65ec8e9

Disclosed is an optimized process and apparatus for more efficiently and economically carrying out the liquid-phase oxidation of an oxidizable compound. The liner is made of a polyurethane produced using a catalyst that contains metal-organic compounds. When authentication information is received from the network thereafter, a print controller selects, from among the print jobs stored in the memory, the job that is associated with authentication information that matches the received authentication information, and causes it to be printed. Electric wiring passes through the connectors between the housings. The controller may also be programmed to turn said heater on, turn said pump on when the water temperatures reaches said brewing temperature, and turn said heater and pump off when said temperature sensor senses another temperature higher than said brewing temperature. At least one instruction is selected based, at least in part, on a type of the selected object and, then, an associated template string is selected based on each selected instruction.

1459827957-5c6abf92-7076-4ee0-beaf-9adacf277379

The present invention relates generally to time-of-flight mass spectrometers and discloses an improved method and apparatus for analyzing ions using a time-of-flight mass spectrometer. The CPE determines the best provider based on criteria specified by the subscriber and the network provider and then sends the call to a specific IP address, that has been previously been downloaded and configured in the CPE, to reach a selected network provider. The cables may then push both panels forward toward a third position to open a rear opening in the roof.

1459827957-780755bb-9ca7-4b71-bb9a-8115a376f51b

A multimedia player has a fast seek function for navigating between track selections contained within a large playlist. The zoom lens system comprises a positive first lens group, a negative second lens group, a positive third lens group, a negative fourth lens group, and a positive fifth lens group. Markers may be affixed to the patient's body such that a body-fixed coordinate system can be determined in real time by an imaging device.

1459827958-704e3eb0-8604-4fd3-ac0c-015edd54910d

Methods and systems for operating automotive computing devices are described. Since a subscriber unit access request typically precedes a subscriber unit data transmission by a relatively short period of time, the data transmission power level will then be based on a recent power measurement. Centrally mounted to the convex inner surface is a bracket having a curved portion to hold a rattle. In still another aspect of the present invention a self-piercing fastener is a clinch nut or a clinch stud. The particles can also comprise a ceramic material, such as a metal oxide. The memory may include a library of commands for commanding functional operations of the appliance.

1459827958-9dab59e7-107e-4151-a8b5-8d568eb9b5cc

A transistor includes a channel region with a first portion and a second portion. The most image-side lens surface is an aspherical surface concave to the image side, and this aspherical surface has a point of inflection. In certain embodiments, a compound disclosed herein activates the AMPK pathway, and can be used to treat metabolism-related disorders and conditions. The optical input amplifier may be optional if the channel signal demultiplexer provides for minimal insertion loss which is optimum with a properly designed arrayed waveguide grating demultiplexer.

1459827959-371f4c4c-5e59-4d02-8643-ed71319d81f1

Providing multi-path echo cancellation comprises providing a main echo signal corresponding to a main echo section of an echo response and providing a plurality

of tail echo signals, each of the plurality of tail echo signals corresponding to respective tail echo sections of the echo response. The methods of the invention include attaching the skull cap to the bleeding victim and inflating the bladders with air using the pump. Methods for treating endothelin-mediated disorders by administering effective amounts of one or more of these sulfonamides or prodrugs thereof that inhibit or increase the activity of endothelin are also provided. Each backshell is designed to be uncoupled from the connector body while retaining the plurality of interconnects in the stacked arrangement, thereby making it possible to repair single an interconnect without disrupting the others. In one embodiment, a multi-ply structure having at least three plies is desirable. A pre-crash detection device identifies an imminent application of force on the outer side of the supporting structure.

1459827959-bd6dbe0c-af5c-4883-b1c2-ee2c6b7e7061

Extracts of Hoodia plant containing steroidal glycosides which have improved flavor, by virtue of reduced levels of discovered negative flavor compounds. In an example, a method of dicing a semiconductor wafer having a plurality of integrated circuits involves forming a mask above the semiconductor wafer, the mask including a layer covering and protecting the integrated circuits. The client sends a PDU with version to a server.

1459827959-d156a10b-c4fa-4299-bf8e-0222d0ff1bdb

A disk drive includes a base, a disk rotatably coupled to the base, and a rotary actuator coupled to the base adjacent the disk. The system comprises a unique dual-scale, asymmetrical cellular architecture for a wireless network, wherein the communication uplink is based on a macro-cellular system, and the communication downlink is based on a micro-cellular system. A parallel efficiency  $E_{para}$  is calculated in accordance with an expression  $1/R_{para} \times d \times 7 \times u \times 22 \times 12 \times R \times u \times 03 \times c3$ ).

1459827959-f35abdf4-6da7-42e5-b6f3-5f0e74bc6fb9

A vehicle has a display device which widens the field of view reflected by a side mirror or a back mirror mounted on the vehicle. In the disclosed system, assets as well as their locations are scanned using a hand held bar code scanner. Additional reinforcing elements may be embedded in the bone cement inside or outside the spinous process. If the best cell is an intra-node B cell, the UE signals the node B of the best cell, the node B switches to the best cell directly and UE receives the data from the target cell directly, and then Node B reports the switch to a radio network controller that completes the final switching to the best cell by the RNC. If a replaceable colorant-placing module is in use selected from many such modules and the particular module has a characteristic property which affects the color of printed images, then preferably information about that property of the particular module is also automatically used to modify printer operation, to compensate for effects of the distinctive property on color. Substantial reductions in analytical system complexity and improvements in reliability are achieved compared with other commonly used methods for analyzing such complex mixtures.

1459827959-ff32d2c6-f0cf-4b1a-a8e5-4865f804f2f9

In one embodiment, the method includes receiving an audio signal including a prediction residual of a block of digital audio data and coded coefficient values. The localization framework is configured to automatically identify and prioritize certain text contained within an application code base to be translated. The storage device stores statistic data. The body portion further includes a blunt nose and a gull dihedral wing configuration that further reduces sonic boom disturbance and eases constraints on arealift distribution tailoring. Any one of these three functions can be activated when the touch sensitive area detects a movement of an object with its starting point within the representation of the function on the menu area and with a direction from the menu area to the display area. The invention thus relates to the plants, seeds and tissue cultures of the variety CH103769, and to methods for producing a corn plant produced by crossing a

corn plant of variety CH103769 with itself or with another corn plant, such as a plant of another variety.

1459827960-03ad05e7-0bd6-44d3-ba6c-2320260fc741

A helmet, such as used by firefighters, includes a compass mounted on the inside of the helmet in a location that will be easily visible to the wearer when necessary but will be positioned so it will not distract the wearer at other times. The housing is located on the side of the first sealing stage facing away from the process, wherein energy is transferable through the first sealing stage 4 in the direction of the process medium. A sheet transport mechanism is arranged in the casing and is engageable with a drive mechanism of the printer to feed the sheets out of a print media exit opening defined by the casing. A further modification enables generation of a second voltage reference whose value is related to the base emitter voltage  $V_{be}$  of a bipolar transistor. The cover shields the flexible electrical connecting means exposed due to the movement of the second body against the first body when the first body and the second body are in a spread state. By selectively deleting data packets received from a suspect source address or inhibiting the transmission of data packets to a suspect destination address, network management and control can be readily accomplished.

1459827960-103fd926-a935-40bb-8c8c-0feeb71b1c13

A system and method are disclosed for securely establishing a cryptographic key between a first cryptographic device, for example a host cryptographic security module, and a second cryptographic device, for example a bank Automated Teller Machine. The resulting SiC wafer has a mirror-like surface that is fit for epitaxial deposition of SiC. An image acquisition scheduler determines the timing and intervals at which the multiple executable application programs repeat receiving image data from the image pickup device, without overlapping in terms of time.

1459827960-16f0397e-b4df-44cf-9c3f-897885f9675a

A primer pool for amplifying a target sequence of a human HNF-1 gene, including at least one set of primers or variant primers thereof, each set of primers being identified by two consecutive SEQ ID NOS, the SEQ ID NOS being given as from SEQ ID NO. Clamping bodies held in a cage are disposed between an outer ring and an inner ring. At least a first logical processor and a second logical processor associated with the at least one physical processor are partitioned.

1459827960-4417a92e-2540-40ce-860d-4f68300c73e1

A method and apparatus for processing information, method and apparatus for manufacturing an information recording medium, an information recording medium, and a computer program are provided. The vehicle system includes the portable device and a plurality of base stations positioned about a vehicle. A first belt system comprising one or more belts extends from a loading position through a portion of the enclosure.

1459827961-fbee19a5-926c-4a79-b224-4b74b2df1042

Provided is a manually operable nut cracking device having a frame, a fixed jaw and a movable jaw mounted to the frame in opposed relationship to define between them a nut holding station. The full converter comprises a generator side converter, a DC link connected across an output of the generator side converter, a line side converter connected across an output of the DC link, and a converter controller configured to control the full converter to mitigate effects of subsynchronous oscillations present on the series compensated transmission line. The active noise control system also has microphones for generating reference signals which are positioned respectively near the base of the front seat, near the center of a roof, and within a trunk compartment, i. The PAL can function as a stand-alone device or synchronized with a user's personal computer via a RF or IR link. The attenuator circuit receives the filtered signal and attenuates the input voltage of the power

amplifier to reduce the output voltage of the power amplifier to a level below the predefined threshold.

1459827962-395a6bdc-d575-4a77-a891-e31c9b38ac1e

A method for compressing digital image data to improve the efficiency of serial data transmission is disclosed. The outer crushing shell is supported on an upper frame member in vertically adjustable engagement with a lower frame member. Each of the sub-buses is connected to one of the circuit chips. A plurality of column select lines are located in each of the plurality of regions with each column select line coupled to a group of column select switches associated with a section of memory to activate the respective column select switches.

1459827962-3ffea1d7-d7de-4199-bd18-d6fce53410cf

When a user interface of a parent software application is modified such that user interface components of an add-in application are not compatible with the parent application user interface, user interface components associated with functionalities of the add-in application are added to the modified parent application user interface. The system searches the stream of display pixels for a current and previous pixel that are the same color. Accordingly, cosmetic and cleaning compositions incorporating the hydrocarbons produced by way of the process are also disclosed.

1459827962-b3a6ca74-cb94-4e32-bca3-e9a2b39eff90

A nib assembly for a writing instrument comprises a ferrule having a first end and a second end. A power distribution network includes a pre-final amplifier stage power distribution network and a final amplifier stage power distribution network. The boot is worn on a foot of a user. Source areas are formed in the substrate adjacent to the outer edges of the floating gates and a drain area is formed between and adjacent to the floating gates. A confirmation of the availability of funds is automatically sent to the merchant, and a credit for the payment is automatically sent to the merchant's account.

1459827962-f89c0cd8-1be0-4996-b38b-0fa21e8879bc

A body fluid sampling system is provided for use on a tissue site. In the preferred embodiment, the first material is fused silica, and the second material is BK7 glass. The containment member is formed as a brush, nest, sponge, swab, flexible sack, or other shape into and around which the liquid embolic composition is injected. Improved means for evaporative cooling include a rayon-based flocking on the wet side of molded plastic indirect evaporative cooling plates. A channel region is formed in the semiconductor substrate between the first and second base patterns. Each rotatable valve has a finger tab to adjust the amount of condiment released.

1459827962-fc23575f-0346-4612-95d4-a512f7bbd1c1

An illuminated assembly that can be configured as a pinwheel, pinwheel bow or decorative bow. In some embodiments the formal specification is a process-based specification. The voltage reference variable is limited by upper and lower torque limit values which must not be overshoot or undershot in the event of changes to the voltage reference variable. Dosage elements produced in the inventive method are pleasant to handle, while being surprisingly resistant to damage in handling or transit. In addition, the catalyst can maintain its catalytic activity for a long period of time without deactivation.

1459827963-3032e0d4-ded0-4dc0-aad2-2204f49ffba5

A differential signal generator circuit includes: a first amplifier for comparing an input signal with a threshold voltage and outputting differential signals; and a second amplifier for adjusting the threshold voltage in response to the differential signals. In a preferred embodiment, a server receives a request from a client for a page from the database wherein the page has a plurality of links to

linked pages in the database. A control means is provided to control a driving motor so as to produce assisting power commensurate with the detected displacement.

1459827964-62ca8db1-dd04-452a-92a3-712004dcaaaa

A process of providing a gradient field includes providing a pair of opposing magnets and associated magnet poles, which are divided into zones. A part of the coupler is connected to the paintball marker while another part is connected to the paintball hopper. This decreases the intraocular pressure. The runtime module may be configured to call the JavaScript proxy from the Java module, pass control of execution to the JavaScript module, execute the JavaScript module to generate an output method or object, and pass control of execution to the Java module to continue execution of the Java module. A read-out is connected to the mixing and detecting device for removing the output electrical signals from the mixing and detecting, and a signal processor is connected to the read-out for processing the output electrical signals from the read-out to detect and produce an image of the object.

1459827964-d8247e1b-5f3e-4ea2-8d5f-d53639cf2d4a

The invention features 4-thio)-phenoxyacetic acids and analogs, compositions containing them, and methods of using them as PPAR delta modulators to treat or inhibit the progression of, for example, dyslipidemia. Based on the traditional 2D adjustable optical mount, its inner space is utilized for installing the third dimension angular adjustment. The third terminal of a first of the PCM switching devices is coupled to a set/reset switch, and the third terminal of the remaining PCM switching devices is coupled to the second terminal of an adjacent PCM switching device in a cascade configuration. The bore 12a is adapted to guide the axial movement of the probe 14a. A first circuit includes the primary coil and a first switch. The photoresist layer is then heated to a temperature at which the thermoacid generator releases an acid and the acid-catalyzed elimination reaction takes place.

1459827964-ed8aaa59-00c5-4897-a4f5-d83c2411bcd8

An automobile display canopy with an anchor system for securing the canopy to the ground using the automobile itself. In one embodiment, the method uses existing control data that is transmitted as part of a connection establishment process in a wireless communication system. The second arm also has a first end pivotally attached to the vehicle, and a second end pivotally attached to the stepping member. This improves the acoustic compliance of the acoustic enclosure. The chamber is surrounded by a body with an outer surface which is preferably fitted with threads to facilitate secure but removable attachment of the port within a hole in the bone where the port is to be implanted.

1459827965-3e36097d-3cc2-4738-bf5e-9e49820c07a5

A needle safety device is provided having a housing, a needle assembly movably mounted within the housing and a spring for biasing the needle assembly within the housing. Both portions are then recombined in an outlet manifold. In response to detecting an occurrence of a given event, the irrelevant signaling messages are removed from the queue based on the class specifying irrelevant signaling messages corresponding to the given event.

1459827965-78c5fd7d-96b2-4133-a8e6-e90b2d9af90d

A method of treating a disc plate. In one aspect a method for automated decision support for medical imaging includes obtaining image data, extracting feature data from the image data, and automatically performing anatomy identification, view identification and/or determining a diagnostic quality of the image data, using the extracted feature data. A thin film transistor in the pixel area has a semiconductor pattern which forms a channel. The spans containing the data to be restored from the volume are identified as desired spans, and a current disk is searched for the desired spans. A second adhesive strip is located on the outside

of the flap over the opening such that the envelope is sealed when the flap is pressed against the resealable surface layer of the first adhesive. Conveying fluid enters the inlet drawing bulk particulates via the eductor series through the outlet.

1459827965-a58abb74-0bfd-49d8-bea5-55e547f9038c

A transmission mechanism used in a spring winding machine is constructed to include a rotary table, the rotary table having an eccentric main shaft protruded over first and second sides thereof. A controller includes a low-speed communication IF and a high-speed communication IF. The first fluid volume may apply a force to the first side of the piston mechanism that is greater than a second force to the second side resulting in displacement of the piston mechanism. A method of lowering resistance and enhancing permeability at the delivery site, as well as increasing drug concentrations and delivery rates.

1459827965-dd4de1e5-6886-42cc-888f-be5f8972507a

A field programmable gate array device including a non-programming-based default power-on electronic configuration. A film is also presented comprising a first conjugated polymer having a conductivity of greater than  $10^{22}$  Scm and a second conjugated polymer having a conductivity greater than  $10^{22}$  Scm formed by depositing the recited aqueous blend onto an article and removing the water-containing solution to form the film on the article. In the present invention, when the channel quality is relatively poor, various cell participating in the coordinated multiple point transmission and reception transmit the same one data stream to ensure the data transmission and reception quality.

1459827966-4d8633f3-55d8-4460-bb94-7a557f0bf81e

A method and device for detecting condensation on surfaces of structural components. The power converter uses a source oscillator and a NOR gate. Data in each partition is analyzed to determine if at least a portion of the data in the partition is reducible. If the criteria are not met, a message is provided to the user via the monitor. In some embodiments, a via can also be formed by a diamond contact and a rectangular contact.

1459827966-7d7262bb-5858-48e2-9da3-bdca4da64c64

The present invention relates to a riser pipe element comprising a main tube, connection means at both ends, at least one auxiliary pipe length arranged substantially parallel to the tube. A first epitaxial layer having a first doping level is homo-epitaxially grown on a substrate. These compounds also have very significant calcemic activity and therefore may be used to treat immune disorders in humans as well as metabolic bone diseases such as osteoporosis. The metal can then be planarized to form a layer of an integrated circuit. The third and fourth transistors receive an inverted signal of the first logical signal and the second logical signal.

1459827966-7ee4d701-68bf-4b58-95dd-9a707c19e7af

Hydraulic oil supplied from pumps, to an attachment actuator is controlled by attachment control valves. Catalyst gains are determined by modeling the catalyst as an integrator with an unknown gain and estimating the catalyst gain based on the exhaust gas sensors with the gain used to monitor catalyst performance and/or modify the engine fuel/air ratio. For this purpose, a replica switch is provided, with the voltage change on the common node of the replica switch being used to provide a corresponding charge to the common node of the main switch in an amount equal to the charge needed to change the voltage on the common node of the main switch by the same amount as the voltage change on the common node of the replica switch. Relative motion between the two belts causes the drive belt to rotate the rollers it contacts.

1459827966-c1289cd9-09a5-4d3a-b50b-76512c595a69

A packet switching apparatus for simplifying and reducing the size of a packet switching circuit which is to perform at high speed. A programming bitstream is shifted into the data register in discrete portions, with each portion being loaded into the bitline latch before the next portion is shifted into the data register. Two additional actuators can be added, as modules, during the walking stage of rehabilitation. A securing mechanism secures the first member with the second member. A gate contact applies a gate voltage bias to control charge carrier accumulation and depletion in the underlying channel portion.

1459827966-db937b25-75aa-480f-9b27-12dd0bf3783f

The casing cutter disclosed herein is useful for severing downhole tubulars and comprises a body, a cutting head, cutting blades, and actuators for operating the cutting head and cutting blades. The polymer element may be coated with piezoresistive material to form a first resistor and may have associated electrodes. In particular, the present invention is directed to a novel composition and method for the treatment of skin erythema using  $\alpha$ -adrenergic receptor agonists incorporated into cosmetic, pharmacological or dermatological compositions for topical application to the skin. A mounting member has a fastener through hole that receives the shank therethrough, a generally semi-spherical surface extending about a first end of the fastener through hole, and a recess extending about a second end of the fastener through hole that receives the inner sealing ring. Both A-law compression and A-law expansion can be used in the voice recognizer to improve the accuracy of the voice recognizer.

1459827967-1cf1b270-c728-4f2c-a91a-81238fb84974

A system includes a volatile storage, a persistent storage, a capacitor-based power supply, and a controller coupled to the capacitor-based power supply. An outlet portion of a microcatheter is delivered to the defect, then at least a body portion of a thin film occlusion device is radially expanded from a collapsed orientation to a deployed orientation for engaging the microcatheter and covering at least a portion of the defect. Each processing chamber 100 has a chamber lid 200 that can be suspended and supported by a crane unit 500. The second plate has a plurality of rhombic unit pieces of the same size arranged in a row, and an inner face abutting on the second face of the fabric. All color information for every picture element of the image of the document is provided concurrently and for every picture element PEL the image signal of all provided colors are analyzed and for every picture element that image signal of that color is selected which has the minimum contrast relative to the background of the image document. The present disclosure provides novel processes and systems for securely networking a wireless analyzer with a Wi-Fi network without the need for an operator or user to engage in manual initiation steps on, or through, the wireless analyzer.

1459827967-8eb6896b-fa08-400d-aadd-a21a9a98dde8

An exercise and/or rehabilitation machine includes a support having a rounded upper surface for supporting a person's anterior pelvic area. Said label printer cassette comprises at least one supply of printing medium and a housing. To take advantage of benefits of ingress filtering as it is gradually deployed by ISPs around the Internet, differentiated classes of service are used to transport packets whose source address can be trusted and packets whose source address cannot be trusted. A translucent insulator layer, wire grid polarizer, a second translucent insulator layer and light sensing diode region are, in turn, attached to the second translucent metal layer. The memory device comprises means for determining the at least one parameter, a calibration memory connected with means for determining the correction factor, and control circuits for adjusting pulse parameters as applied to read and write operations in the memory device.

1459827967-d74d214b-2ac5-4ba9-9199-948a1d56e333

The lighted tip fishing pole apparatus provides a lighted tip pole with intensity adjustment of the lighted tip as well as on/off control. The sealing member has an

annular base, a projection, and preferably first and second annular flanges. A reference pattern is transmitted incorporating the passive channels and a majority vote statistical analysis is applied to the states of the passive channels to decide on the state of each bit constituting the pattern repeated by each passive channel.

1459827968-4db9dff9-39e6-4bd7-8f57-a2933ed73321

A turbo decoder for decoding a data signal transmitted via a disturbed channel has a symbol estimator and a digital signal processor. Through the use of the usage rights and the delegation rights, a hierarchy of rights associated with a document is created that provides a tree-type structure of rights extending from the content owner down through one or more users. Each individual light emitting diode module includes a base and a light emitting diode, wherein the base is configured and arranged for fitted electrical engagement within the electrical socket.

1459827968-51323d20-409b-472d-87a1-b636f82d47fd

A delay line calibration mechanism includes a delay line, a phase detector, and a controller. Reactive species are generated and flowed toward a substrate for processing. The method further comprises exposing the opening and the underlying copper layer to a plasma-free reducing atmosphere 200 in the presence of a thermal anneal.

1459827968-a0d3582b-b7b6-4cc8-a868-1c17a39b6f6a

A pixel structure includes an active switching device, a patterned common electrode layer, an insulation layer, a patterned oxide electrode layer and a patterned passivation layer. These zeolites are represented by the empirical formula. The LEDs are supported in a fixed position and have a conical reflector to assist in focusing the light output. The apertures reduce the magnitude of the fluctuations in the fuel to air ratio of the fuel and air mixture supplied into the at least one combustion zone. The rotor diameter can be increased in order to provide high power output in low wind conditions and it can be decreased in order to minimize loads in high wind conditions. The treatment composition and any activator greatly increases the chemical binding of the soluble phosphorus and/or nitrates present in the animal waste or nearby environment such as soil or water.

1459827968-b49b0735-7e57-4c63-8e29-461fce04f218

A designer-adaptive visual code includes a user-selected set glyphs, a user-selected set of allowable glyph orientations relative to a user-selected reference angle, and a user-selected spatial arrangement of the glyphs. The thin film resistor comprises a resistive layer located on a first dielectric layer, first and second contact pads located on the resistive layer, and a second dielectric layer located over the resistive layer and the first and second contact pads. A second function, which deviates from the first function is assigned to the input mechanism by the control device depending on an operating state change. The bracket base advantageously comprises a plastic or ceramic material for ease of formation and for reducing expense.

1459827968-f7ab27bf-eb0f-415f-80ec-a33ec9f41b18

On receipt of a tagged file, as a tagged document, at step S1, a document processing apparatus at step S2 derives the attribute information for read-out from tags of the tagged file and embeds the attribute information to generate a speech read-out file. A BIOS confirms presence of a security function of an optical disc drive. The third section has a third side surface and a fourth side surface, a second angle of 35 degrees is defined between the third side surface and the fourth side surface. The fixing member holds the antenna in a movable manner.

1459827969-323794cf-c7a4-4b41-a614-93ad110702e8

A packaging system in which an object can be maintained for shipping. A tread plate rotatably secured to a distal portion of a rear support rod can arrest the wheels

of the stroller from any movement. One of the equilateral flaps is provided with an aperture therein which effects registration with the an aperture of the fourth sidewall of the top cover of the enclosure in which widths of the equilateral sidewalls of the platform define about one-half of the height of the sidewalls of the enclosure. The polar group of the monomer unit is preferably at least one group selected from \u2014, \u2014C\u2014, \u2014C\u2014\u2014, \u2014\u2014C\u2014\u2014NH\u2014, \u2014\u2014S\u2014\u2014, \u2014\u2014S\u2014\u2014\u2014, \u2014\u2014Ra, \u2014\u2014Ra, and \u2014CN, where Ra represents, independently in each occurrence, optionally substituted alkyl.

1459827969-3af5c0ae-d66d-4274-9a43-68662c0c1901

A sensor device and a method of making a sensor device. A method for evaluating a sound comprises the steps of: using the sound recorder to capture and record the acoustic signal; calculating the ACF from the acoustic signal using a CPU; calculating ACF factors extracted from the calculated ACF using the CPU; and identifying the kinds of the noise based on the ACF factors. The graphical interface may indicate the status of the process, the status of the various computing units of the process, or the status of groups of computing units. In use, the laser assembly in conjunction with the mirror assemblies directs upper and lower laser beams through 360 degree scans to impinge on the targets ; laser radiation reflected from the targets is detected by the detector assemblies, allowing trigonometric calculation of target positions using information derived from the scans of the upper and lower beams.

1459827969-8b311e04-d83f-4e56-aa25-387e46d682a5

The techniques introduced here provide a single, passive radio link control entity with a unified interface. An electric refrigeration unit is operably disposed in the base for cooling the contents of the interior cavity. A ribbon of the body has a recess therein for placement of a rear weighting member. Efficiency of the LED light source may be increased when using an optical extractor as the optical element. The formatting module also applies feature extraction information to the representation, and formats the representation according to a representation specification. The thread has a leading surface and a trailing surface that both slope rearwardly from an interior edge to an exterior edge thereof.

1459827970-01c34a4a-dfd8-48b4-bc3f-f4a9eb9d840e

A viewport assembly may allow viewing of a retort chamber while protecting the viewer from heat of the retort chamber through a high-temperature-resistant window in an end wall of the viewport assembly. The hinge assembly also includes a first friction disk rotationally coupled to the shaft, and a second friction disk rotationally coupled to the rotatable component. If the comparison reveals that the received SQL statement includes a malformed expression that would be inefficiently processed by a database engine, the malformed expression is modified to an efficient SQL expression form and the efficient SQL expression form is executed by the database engine.

1459827970-36be52cf-d5ac-4b0a-81c6-2204124ca226

According to one example structure of the invention, a carriage moving device includes; a guide member comprising a pair of inclined planes; a carriage slidably supported by the guide member in a longitudinal direction of the guide member at a plurality of portions where the pair of inclined planes slidably support the carriage. The air injector injects sufficient air to burn out all active matter of the fuel, whereby emissions from the engine are free of active matter of the fuel. In one embodiment, if the player obtains an activator symbol on the reels, the activator symbol activates the symbols that are adjacent to the activator symbol.

1459827970-5ca99d5b-b5cf-4b03-9061-5d318e517349

The present invention relates to an asymmetric chromatography media suitable for

separations applications, particularly as packed bed, fluidized bed or magnetized bed chromatography media. The memory includes a plurality of rows and columns, each of which include a memory cell having a pull-down device. The remote computer responds by returning batch-specific information that may affect processing parameters for the imaging apparatus. The system is configured to facilitate the execution of an automated pre-screening interview, and upon completion send the corresponding candidate portfolio to a candidate queue.

1459827970-7a622e04-a3cb-42c2-b0f0-16cd9beee143

A solution for controlling activities to be carried out in a network element in a flexible and safe manner. When the quality rating exceeds a predetermined threshold, the potential customer is associated to an assigned sales agent who determines an interest rating reflecting the importance of the financial coaching services to the potential customer. Input and drain connections are also preferably made through the top cover member. This status is left when the observed device leaves the reception area of the Guardian as the positive feedback signal misses. The sourcedrain stressor structure includes a capping layer which is formed along the and crystal orientations.

1459827970-d0252a2e-7ac3-414f-8fed-462986a326c1

A method of producing a synthetic composition having properties of marble includes blending a polymer resin with a stone gravel bit to form a mixture. The gumball machine further includes an elongated housing having an upper end coupled to the neck portion, the housing holding coins that have been inserted through the coin slot. Upon being so notified, the printer suspends processing and discards the data that has been received. for a time sufficient for the pH of the slurry to drop at least about 0. Neutralizers are also provided to prevent ion repulsion and improve ion beam focus. The proposed system would create a series of real number to virtual number mappings, allowing the sending and receiving of messages across national borders without incurring international charges.

1459827971-22e9a515-925f-4074-a642-58a52e4a5164

A method for determining a concentration of an analyte is disclosed. An elongated portion of the stent includes a length sufficient to extend substantially within the ureter from the kidney to the bladder, and the elongated portion defines a lumen extending therethrough. The agitator wheel preferably includes agitating members for transversing a significant portion of the volume of the reservoir to contact and dislodge pulverulent material therein. Based on the at least one object having a detection confidence below a threshold, the processor may communicate at least a subset of the data indicating the environment for further processing. The communication session includes a communication session identifier. A first fluid may be disposed within the first chamber interior, and a second different fluid may be disposed within the second chamber interior.

1459827971-5327d7bf-36d4-4853-8b41-5b1753ebe3ac

An electrical connector system includes a first electrical connector having a mounting interface and a mating interface, wherein the mounting interface is configured to electrically connect to an electrical component, and the mating interface is configured to electrically connect to a complementary electrical connector along a forward insertion direction. A selector selects at least two the databases for a simultaneous search, and selects at least one of the databases for a sequential search. The method and system in accordance with the present invention dynamically determines the appropriate information and/or interface for presentation to differing users.

1459827971-dc33dbc0-b230-47eb-9d43-a5ab5bccf027

An intumescent polymer composition includes a matrix polymer, an acid catalyst source, a nitrogen source and an ionic phyllosilicate synergist having substantial cationic exchange capacity. It is comprised of a pre-tank which captures trash and

allows anaerobic microorganisms to begin breaking down the sewage, an aerobic tank where aerobic microorganisms digest the sewage, and a post-tank which acts as a gravity separating clarifier in which solid particulate contaminants settle downward, leaving a clean effluent for discharge to the environment. The method includes with an application thread writing to the update buffer and, when filled, attempting to write the pointer for the update buffer to the global array. The estimated timing represents that the valve opening parameter is estimated to be switched from a first value to a second value in response to the input timing of the switching request. The method can be used to identify a projected path for the drill bit, import data, compute wellbore profiles and stratigraphic cross sections, plot actual drilling paths, overlay the actual drilling path onto the projected path, and present control buttons to the user. The end surface grinding wheel grinds the end surface of the work while the outer diameter surface grinding wheel grinds the outer diameter surface of the work in a state that the work is disposed between the outer diameter surface grinding wheel and the regulating wheel.

1459827971-e947c4bd-b066-4592-afe5-aefa861dc8e4

An accelerometer or accelerator switch and its method of manufacture are disclosed. Identification of a selected a group of end user persons to invite to join the collaborative computing community is received. The electronics board receives and processes video and audio outputs of the camera and microphone array respectively, and generates compressed video and audio outputs for transmission over the communications channel.

1459827971-fab4577f-a735-40d0-8b97-6df59554da15

The present disclosure is related to a modular insert and associated jack assembly used in telecommunication connector systems that reduces the adjacent lines electro magnetic interference from an adjacent transmitter for different plug assemblies. The invention relates to the seeds of soybean cultivar 95330721, to the plants of soybean 95330721, to plant parts of soybean cultivar 95330721, and to methods for producing a soybean plant produced by crossing soybean cultivar 95330721 with itself or with another soybean variety. The substrate is positioned in the mold and the insulated electrical contact is inserted into each of the openings. The APG is common to all the memory macros, and testing proper to each CAM can be carried out by changing over the operation of the inserted data generators by means of the control signal. The transmitter is constructed to use only a small amount of power which, preferably, is supplied by one or two low voltage replaceable and/or rechargeable batteries.

1459827972-78fe5d2f-1153-4ad0-bd02-02e40927a44b

An exemplary container data center includes a container, servers received in the container; and a ventilating system for cooling the servers. The method produces a plurality of specialized electrical contacts, capable of use in an interposer, or other device, including non-permanent or permanent electrical connections providing contact wipe, soft spring rates, durability, and significant amounts of travel. The cervical plate system has a flat elongated shaft adapted to span the intervertebral space and has at least two screw receivers spaced along the length of the plate. Washed RBCs can be provided to the patient in a timely manner, without the need for fresh blood.

1459827972-a91ae2d8-58f9-45e8-b621-9e1c617927b4

There is provided a method for referencing and correcting the beating spectrum generated by the interference of the components of a frequency comb source. The inner bag is removable to facilitate disposal. The first gate and the second gate are co-linear, with facing endwalls that terminate over the isolation region.

1459827972-e57348d5-5948-4d35-bdd7-360f91e530a1

A method and apparatus for processing symbols of a block code is presented. The feedback circuit includes an impedance element in parallel with a feedback

resistive network. sea water, to provide operational hydraulic fluid for operating a subsea device, with a piston rod having an end in a separate chamber acted on by a fluid to compensate for a pressure differential between the pressure of the water on one piston side and the pressure of the operational hydraulic fluid on the other piston side. The measured input parameters for the refined number of transceivers are used to calibrate a Radio Frequency coverage prediction tool for the calibration area. When one or more items are requested by a query, the query is analyzed and broken down into components or subqueries.

1459827973-b348d510-1a5f-4676-be7c-8df90677687b

A valve gate assembly for regulating a flow of molten material into a mold. The apparatus of the present invention includes a standard joggle die system that is currently in use in the art. Utilizing an array of seismic units permits transmission routes back to a control station to be varied as needed. When the plate is pivoted out of the functional position, the motor drive of the cutting movement is locked, or a brake precludes any movement of the knife slide or specimen slide. The semiconductor die is mounted over the substrate so that the conductive bump material is disposed between the die bump pads and integrated bump pads. This linkage permits a user to access an electronic site with the use of the respective site name.

1459827973-d048015a-51f4-4e74-988a-8b266d862773

A computer implemented method, system and computer program product for estimating an offset of at least one sensor is disclosed. The catalyst compositions comprise zeolite Y and mordenite zeolite having a controlled macropore structure. In this embodiment the metal foil is encapsulated by the adhesive layers. The transparent moisture absorption layer has a transmittance of about 85% or higher with respect to visible light. The hydrogen separator separates hydrogen from the resultant gases. Plastics which are used widely in domestic electric products, automobile parts, industrial parts and the like and have various tones are modified with an acrylic resin film so colored to an extent as to provide color shielding of the ground collected resin, to collect the plastics and produce an article without being influenced by the color of the original materials.

1459827974-51bb48de-3dbe-416d-b494-499ab88457b4

A bicycle advertising rack which is selectively attached to an existing parking meter, and which may be suitably used for locking up a bicycle in areas such as business areas having few or no bicycle racks or other objects to which the bicycle may be effectively secured. Secured to the end face of the core is an impedance matching section in the form of a laminate board. Upper and lower coupler slide channels formed from a plastic material are releasably connected to the coupler housing and contact the actuator housing. Closely spaced grooves within opposite sides of the foam panel provide for bending the evacuated panel, and a thin layer of foam is applied to the outer surface of the vacuum insulated panel to provide a protective outer surface. The system of the present invention also includes an output redirection handler connected between the display management module and a data communication link to the remote display terminal. function as a deceleration mechanism.

1459827974-52162553-4d4a-479f-99b8-b1fb58d2b884

An apparatus for measuring the resistance of a squib, including an input for receiving a power supply and a circuit connected to the input for limiting the power supplied to the squib. The first connection interface is operable to exchange security information with another electronic device for use in encrypting data transmissions with the other electronic device. The support structure defines a passageway and includes a proximal opening and a distal opening. The current source is coupled between the first current electrodes of the first and second input transistors and a second power supply voltage, wherein the second output load has an impedance value substantially one half of an impedance value of the first output

load.

1459827975-74af17f9-5ab2-4a59-a081-0564dbd3c9f6

There is disclosed an absorbent article including: a liquid permeable surface sheet; a backing sheet; and an absorbent layer located between the surface sheet and the backing sheet. A pair of electrically conductive gloves and that include silver conductive material is worn on both hands that have been clad in insulated gloves. A second die is landed on the through silicon via of the first die. The API function includes a parameter value that references the object.

1459827975-8e6ea1f8-7a76-4132-9c27-9105e2932bd0

This invention relates to crystalline boehmitic aluminas the crystallites of which exhibit unusual dimensional differences in the space directions 020 and 120. The structured object is analyzed to determine predicted locations to which a user may subsequently wish to navigate the position of interest, and positioning pads are displayed at, or associated with, the predicted locations. Each of the two heat sinks comprises a plurality of fins stacked together. This means that the collapsible storage container can be put in a usable \u201cbox\u201d position by straightening the foldable end panels and folding down the bottom panels, and also can be put in a flat storage position by folding up the bottom panels and folding the foldable end panels until the outside surfaces of panel pieces touch each other. The clip of the present invention can therefore be used with a wide variety of handguns.

1459827975-9d449837-5ab4-4bba-a601-0fb3b16eebd4

An improved process for recovery of liquefied petroleum gas from a raw natural gas feed stream, capable of achieving ultra high propane recovery yields, thereby separating substantially all of the propane and heavier hydrocarbon components from a predominantly methane and ethane feed gas stream. In a vertical compression embodiment, a lid has an integral press element that compresses the tea bag against a tea bag support means in the bottom of the container upon applying pressure to the lid. When the manual key of the TRANSFER INTENSITY is set to the right side, the printer CPU increases stepwise the transfer biases in accordance with the setting. Methods of foam control, backwashing and chemical cleaning are described.

1459827975-eb864e0f-23b2-43a5-8c2b-d80a7dfb773d

A data differencing technique enables a response from a server to the request of a client to be composed of data differences from previous versions of the requested resource. Such chelates can be used to formulate useful products. The method further forms a depleted sidewall layer on sidewalls of the MHK gate stack so as to overlie the middle layer and the top layer, and not the bottom layer. A further aspect relates to a system comprising first and second LNTs and one or more SCRs downstream of the LNTs. If there is interference, femtocell gives priority for use of the resources to the macrocell by releasing UL resources.

1459827975-ee92e7b1-b67e-42da-99c4-c6a626cad1b9

A silica glass crucible 1 having of 0. The first mixer includes a first inductor that is coupled between a positive in-phase input and a negative in-phase input. To overcome this deficiency, the structural elements are equipped with strain energy control elements that sense strain in the structural elements from on-board and external disturbances, and provide actuation of the structural elements to counteract the sensed strain. A seal is disposed in the annulus region of the clamping plate, wherein the seal is configured to generally prevent a leakage of the cushion of gas from the central region to an environment external to the annulus region. Control language specifications setting data predetermined for the control language specifications are generated. A list with the at least one preferred object class may be accessed in a configuration file.

1459827976-510c0d6e-71ab-43f1-94d7-733b821f9879

A method and a device of providing timing information within a wireless communication system is described. These mechanisms and methods for providing a team object in association with an object can allow for centralized management of a team in association with an object. The cabinet includes a plurality of vertically spaced apart shelves mounted within the cabinet interior. Using this product may eliminate the need for using pumps, or for welding or cutting tees into pipes, in order to effectively drain large containers.

1459827976-93dbbd3b-7f41-4665-9945-2cb378bd55f4

A method and a CT system are disclosed for determining movement and rest phases of a partial object that moves at times in an examination object during a CT examination. In some implementations, a user or network administrator may be notified of potential impairments due to unbalanced current. Another example of a current state in which a mapping can be reused is adjacent program instructions having mutually exclusive condition codes and sharing a destination register such that only one of those adjacent instructions will ever be executed. A motion vector that minimizes such a metric may be a good candidate for use in motion estimation. The at least one layer beneath the AlN layer is insoluble in the solvent and therefore acts as an etch stop, preventing any damage to the at least one layer beneath the AlN layer. The liquid crystal molecules of the liquid crystal layer are controlled for adjusting the transmittance of the backlight provided by the first and second backlight sources.

1459827976-9b735ce4-00ac-4dd9-9436-05e25330c5eb

A transconductance circuit having a feedback element for maintaining constant potential differences at a differential amplifier, which in turn allows an intermediate current signal to flow through a resistive load directly proportional to an input voltage signal. The base element comprises a concrete body and at least one metal carrier element supported thereon, on which the least one support surface for a housing or housing module of a self-service machine is formed, and the metal carrier element can be leveled relative to the concrete body of the base element by means of at least one adjusting device. In one example, a track is coupled to the frame and the auxiliary section is movable about the track.

1459827977-27920313-f069-49a2-b8ba-aec89da47eff

An article identification system includes a transceiver that generates a request signal and transmits the request signal, where the request signal requests information corresponding to an article. Electronic components are connected by welding seams produced by laser welding to the electric leads. As the package is advanced a robotic arm picks and places articles of commerce and associated product information card in the package cavity. In addition, the receiving communication unit, and/or the transmitting communication unit include echo canceller to further minimize the echo within the digital communication system.

1459827977-3df8d8f9-ea6b-4c96-a193-86c30bea9092

The present invention provides for a system and method of characterizing the integrity of a barrier structure. The insulative housing has a plurality of electrical contacts received therein. The pressure difference is advantageously adjusted to a zero value between two successive enabling pulses. The spacing between the first clamping member and second clamping member is then reduced such that the push pin clamps onto the head positioner assembly. As the substrate passes through the aperture, coating material is applied in a uniform and consistent layer ranging from 0.

1459827977-781f42c0-8cf3-47cd-9447-254660725f6b

Automated electronic document design systems and method for designing and modifying product templates. One end of the bit line is connected to a gate electrode of a read transistor. The supporting frame is configured both as a transport frame for transporting the compounder to the job site and as a mounting frame for the

placement of the operational compounder on a substructure at the job site. The apparatus further includes a second blowby gas returning passage connecting the intake passage downstream of the throttle valve to a head cover.

1459827977-9de10bbb-5d56-4a20-bfc5-c67b64fc1de6

A system and method for analyzing and classifying digital images as color, black-and-white, black-and-white with spot color, monochromatic, or monochromatic with spot color is provided. The device allows an individual to practice hitting a ball with a racket or bat, providing an immediate indication whether the ball has been properly struck. An event group is then produced by grouping the collected event records. In accordance with a determination that the transaction request is valid, the payment module causes the offline-payment operated machine to perform the requested transaction by issuing a signal, via the first interface module, to the control unit to perform the transaction.

1459827977-b0b7e1d0-8668-4145-9a2f-730aa318e298

A transmitter for use in a communication system includes clock input for receiving a clock signal and input ports coupled to external signal sources for receiving input signals that are synchronously modulated at modulation frequencies rationally and fractionally related to the clock frequency and to each other. The lower core is on the base plate. Other embodiments are described and claimed. The roller-pair shift unit moves the roller pair in accordance with a first position of the recording medium in the conveyance direction to shift the recording medium in a width direction perpendicular to the conveyance direction. The fuel delivery system may conserve energy by selectively activating the one or more pump assemblies and the one or more controllers.

1459827977-c9d242a2-e2c0-4530-bd7d-422556ce2118

The present invention provides a toughened thermosetting resin composition useful as an underfilling sealant composition which fills the underfill space in a semiconductor device, and includes a semiconductor chip mounted on a carrier substrate, enabling the semiconductor device to be securely connected to a circuit board by short-time heat curing. Present in the cabinet is an automatic storage unit with container means for containing the products. It is determined whether the primary channel is idle based on the primary channel signal level, and it is determined whether the secondary channel is idle based on the secondary channel signal level.

1459827978-11949779-985c-4166-b0b1-7bc39c1a8430

A more efficient method for maintaining the hydraulic actuation of a selectively engageable torque transmitting device in a vehicle. The oscillator has a basic modular architecture comprising a digitally controlled digital ring oscillator having a plurality of delay stages, a counter divider and a selection multiplexer. Mandrels are generated according to the active area widths and adjusted such that a beta ratio of a beta number for each FinFET active area to a beta number for each corresponding planar active area is within a predetermined beta ratio range. The stationary blades are disposed in the circumferential direction of the rotary shaft 8 at equidistant intervals. The automatic accompaniment apparatus can generate derivative accompaniment style data from original accompaniment data with ease. The second transistor has a source region and a drain region which are formed in the second-conductivity-type semiconductor region and which have the first conductivity type.

1459827978-81153c4e-e647-47e6-a6f1-5287c0c82152

A contract management mechanism is disclosed for managing contracts in the software licensing arena. The auxiliary oil filtration system consists of an auxiliary filtration device, an integral oil transfer pump controlled by an electric motor and that is in electrical communication with an electrical control unit, an electronic pressure sensor, fluid conductors, and means for connecting hardware.

The body may be made of a first material and the cutting edge insert may be made of a second material where the second material is different than the first material.

1459827978-9ca151da-a2e0-482b-a777-4024d24b242b

A collapsible infant bouncer comprising support assembly configured with a pair of intersecting support rods pivotally articulated to one another, each support rod configured with at least a top link and a bottom link foldable about a folding joint, and a flexible seating member mounted on the support assembly. The buffer capacitance portion establishes capacitive coupling. The lens is adapted to provide an image of a light source on the spatial image sensor.

1459827978-a45af558-623f-41b7-968d-531bef8dea05

An apparatus and method for improving input position and pressure detection in a pressure detection touch screen. Method and apparatus of the invention uses an elongated preformed muntin bar member that has a treated portion of an exposed surface of the muntin bar member. The RFID reader and the read structure communicate in a near field or proximity region communication, without any use of a direct ohmic electrical connection. The single mode fiber is successively connected with a graded index fiber and a coreless fiber.

1459827979-0bbb7916-aa42-4c71-becc-230313630ee5

Selective deposition of metal over dielectric layers in a manner that minimizes or eliminates keyhole formation is provided. The box includes a control board connected to the circuit board. The conversion of electrical signals to optical signals may be achieved at various locations in the cable adapter. The transfer system is provided with a plurality of rails, a support and at least one slider.

1459827979-56a3bbf2-7a78-42a2-a2f0-06588b610c18

An air seed meter having a rotating disc with seed openings arranged in a circumferential pattern includes a holder adapted to be mounted to the meter housing and carries two balls spring-biased to reciprocate and enter the seed openings as they pass and clear debris from the openings. The differential amplifier is adapted to receive differential signals having been differentially converted to single-ended convert the received differential signals into a single-ended signal. Also, a plurality of p-side electrodes electrically separated from each other for applying an electrical signal to the active layer optical waveguides are arranged on optical axes of active layer optical waveguides. Bi-directional demultiplexing can be accomplished by providing optical fiber tapers with etched diffraction gratings at both ends of the optical transmission fiber.

1459827979-5fe752e7-701e-44b7-a810-c5e7b771def3

Disclosed is a method of promoting healing of a chronic dermal skin ulcer, such as a diabetic ulcer, on a subject. The pacemaker further comprises an activity sensor hermetically contained within the housing and adapted to sense activity and a processor hermetically contained within the housing and communicatively coupled to the pulse delivery system, the activity sensor, and the electrode plurality, the processor configured to control electrical pulse delivery at least partly based on the sensed activity. The reflective portion reflects the reflection beam toward the object, the reflection beam re-contacting the object and generating a second scattering beam and a sub-reflection beam, wherein a part of the second scattering beam and the sub-reflection beam enter the resonance chamber.

1459827979-abe31b86-afd3-481b-8699-27c38506f058

A switching system for the electronic presentment and payment of bills between a Consumer and a Biller. An implantable vestibular stimulator provides vestibular stimulation signals to stimulate target neural tissue for vestibular sensation by a patient. As a result, it is possible to effectively reduce electromagnetic interference. The electric power source member includes a restriction accepting part. A fine structure using the resin composition, a production process of the

fine structure and a liquid ejection head. Natural gas or methane is passed through the reaction zone where it is subjected to the cold arc discharge or discharges and the resulting products flow out of the reactor and solid carbon particles are separated from the remaining gases that are then analysed.

1459827979-bb921acf-c722-45ec-8e7d-f2b906c5876b

A system and method for automatically segmenting bone regions from Computed Tomography Angiography volume data is disclosed. Each edge node is time-locked to each optical switch plane to which it connects to enable loss-free time-sharing of the network core despite the absence of buffers in the core. A second Class AB amplifier circuit is in communication with the bias circuit. A detection circuit is coupled to the replaceable component and generates an output signal indicative of the presence or absence of an electrical coupling that is established when the replaceable component is installed.

1459827980-0ee60376-65ba-4a05-8e16-c45de784cc70

A bedding assembly including at least one fitted sheet having a head end and a foot end for covering a mattress at least one flat sheet having a head end and a foot end for covering said fitted sheet, and stitches connecting the fitted sheet to the flat sheet along at least one edge of the foot end of the fitted sheet. The circular grill grate has a lip along a periphery of said grill grate so as to prevent items from rolling off of the circular grill grate either from rotating of said circular grill or otherwise. A microphone pattern processor derives a reference signal, a null signal and a core signal from the sampled signals. When a prediction has a minimum level of confidence, a corresponding action can be performed automatically by the device when the relevant factors are met.

1459827980-993fdc36-ec1f-4d45-aa1a-711aed385898

A hard mask composition includes a solvent and an aromatic ring-containing compound represented by the following Chemical Formula 1:. The method includes the step of determining the total return, risk-free return and common factor return associated with the asset over the performance period. A casing surrounds and encases the chassis so that the ink supply arrangement is unable to be accessed without destruction of the casing. The inhalation device also includes an improved implement for puncturing the receptacle, requiring less force and experiencing fewer failures. While the development member is rotating, the processor receives the measured currents and computes toner concentration using the respective received currents and the pixel data. The second cover has a second curved portion with an exterior surface that is curved around the longitudinal axis.

1459827980-b64383a8-cadc-44a6-8552-9e031461e381

A method of treating and recycling solid waste polystyrene packing material by dissolving the solid waste polystyrene packing material in a dimethylbenzene based solvent to obtain a homogenous and viscous fluid which may be used as an adhesive material or a coating material. The personal user control device provides a user-friendly interface system for interacting with the information system. According to the method and system disclosed herein, the media player and accessory may utilize a plurality of commands in a variety of environments such as within a connector interface system environment to facilitate the transfer of status information.

1459827980-fc675b8a-3e15-4e32-b6e6-fef1c9ce321f

An AD converter capable of achieving both an improved processing speed and a reduced circuit area in good balance. The artificial grass surface includes a pile fabric having a plurality of pile elements extending from a backing mat and resembling grass. A fringe portion of the superficial skin member is overlapped to a back face of the flange portion to be joined to the flange portion. The optical assembly may project images onto the electronic display, portions of the cover, or other surfaces. Full insertion of the spline to engage the exit port locks the spline in position and the interior half's proximal end prohibits the unscrewing of

the pipe joint. The micro-optic structure is located at a predefined position on the web, and the eye-mark is located at a fixed position with reference to the position of the micro-optic structure.

1459827981-ff97a344-fc67-47f6-bc45-18318cc5f034

This invention allows the encryption side to set whether an image playback apparatus should play back image data in a scrambled state or a non-scrambled state. One of the heads includes a cam surface that is translatable relative to the head. The beam is passed through a quarter waveplate retarder and a polarizer. Moreover, the movement of the video image to be displayed with respect to the preceding video image is estimated so as to generate a movement vector for each pixel of the video image. In another preferred embodiment, the total number of crown facets is 64, making a total of 122 facets. The first and second resistive bridge circuits share at least a portion of a common reference leg that sets a resistance of a first and second variable resistors.

1459827982-e35bd26c-b038-4a28-8e8c-a983bc666d77

A media exchange monitor is disclosed that selectively introduces a mixer into a two-party call when the two-party call becomes a conference call, and removes the mixer when one or more conference call participants drop out, leaving only two participants behind. When the moving speed of the user is considered, power efficiency is increased by optimizing a GPS reception period in terms of hardware and system load is decreased by reducing an unnecessary system operation in terms of software. Still other embodiments may be described and claimed. The computer maps seats within the captured image to determine a specified seat. In one embodiment of the invention, a system includes at least one water lifting unit that fluidly communicates with a groundwater source, and a gas generator that is fluidly coupled to the at least one water lifting unit to generate a gas that buoyantly moves water from the groundwater source to a water consumer. At least one of the properties of the operating element changes when coming in contact with a liquid so that the opening can be exposed by the closure element after cooperation of the operating element with the closure element.

1459827983-7e94823d-6c6c-4a93-91ac-9256ff8f7543

A game cart bicycle attachment device is provided that is configured to secure the handle end of a wheeled game cart to the seat post of a bicycle. Compensation parameters are derived from measured results per a weight of a work and stored. This specimen can be retrieved from the memory of the computer system for training purposes. This structure can then be combined with a gate electrode and an anode to create a field emission display device.

1459827984-b1b3a016-c6fd-4451-9824-f312d27daf38

In a reception apparatus 1, a multiphase sampling clock signal is generated by a sampling clock signal generation circuit 40, based on a clock signal which has been phase-adjusted by a phase adjustment circuit 50. In situations where the transmission channel is bandwidth-limited, the use of the tri-stating technique allows for the complete transition to the supply rails during the given bit period. The output of the apparatus includes a resonating circuit with inductor L, transformer 14 and a small high voltage capacitor C2. The terminal is crimped to the electric wire so that the end surface of the inclined sheath section faces a base plate section of the terminal. Further, the volume of a font table is diminished by means of combined use, as pointer tables, of a first pointer table from which unused character code areas are removed and a second pointer table which specifies an address positional relationship between the respective character code areas achieved before removal and the respective character codes achieved after removal. According to the invention, the fuel metering device includes a control valve having a valve piston which is actuated by an actuating device.

1459827984-bf9c1e8b-3d4d-4559-a2e7-bdb70c565baa

A battery monitoring system and method in accordance with the principles of the present invention, a capacity of interest is determined. The system also provides consistency checking between the measurements. The body is rotatable about the axis of rotation.

1459827985-22083ea6-083f-4d25-81d1-28a001117baa

The present invention provides compounds useful for the detection of the enzyme tripeptidyl protease I. The surface pad system also includes a pad core received in the interior region of the cover to support the patient. Additionally, the memory device includes a second power input to receive a second voltage. The flexible bag is made from a mesh, through which contents of the flexible bag are visible. The first sourcedrain region includes a Schottky diode junction with the body region and the second sourcedrain region includes an n-p diode junction with the body region. To accelerate call setup, checking functions are carried out during voice mode connection of the call.

1459827985-81d18d5e-907d-42ab-8381-30f9886d388e

A martial arts training device comprising a stand having a base and at least one substantially vertically extending arm extending up from the base. First group nozzles inject combustion gas in opposite directions along a first axis. Further, a control is provided to operate the compressor at a different speed than the turbine, at least under an operating condition, and to adjust an amount of opening overlap between engine valves in response to a rotational speed of the compressor. The primary and secondary replicas may append the record to the data, possibly at the same offset. If the querying endpoint wants to subscribe to a feature that is located at an endpoint in the private domain, the querying endpoint interacts with the relevant endpoint without requiring the further assistance of a server. Searches of the database will be performed by on-screen manipulations of the aspect cluster-positioned music items.

1459827985-8d3062f6-1204-4dd8-ad83-8c8bfb2c11c9

Systems, methods, and computer-readable media for navigating search results are provided. Parity bits are selected by a procedure using data derived by optimization using simulation of a single-channel system. For example, the method can comprise preventing the agglomeration of particulate material comprising coal and the adhesion thereof to surfaces in subfreezing weather.

1459827985-ba131126-d855-4e75-9d95-e88db250fff0

Embodiments of a communication circuit are described. One of the two plate pieces is exposed to the mounting surface of the solid electrolytic capacitor, while the other is perpendicularly erected to an anode lead. The grasper device translates proximally relative to the outer lumen such that the needle is translated into the outer lumen, wherein the outer lumen tends to straighten the needle from the curved resting state. The recess forms a seat for housing a projecting matching body on the base holder.

1459827986-935b8446-d8f6-40a2-b3b6-29a5eedf095d

An object of this invention is to correct the non uniformity between a plurality of image sensing regions in real time and cope with even dynamic variations such as temperature variations or variations over time. During operation, the system receives a request to switch a signal source which drives the display from the first graphics processor to the second graphics processor. The key touch member 11 comprises a base 11b made of an ABS resin, and a hydrophilic polymer 11a added in the base 11b in a dispersed manner. Then communicating the allocation of data bursts to a transmitter that includes the allocation of data bursts in the macro-diversity region of a data frame transmitted by the transmitter. The control lever can position the plunger to fully extended into the arcuate notch portion for fixing the movement of the tubular handle; and can position the plunger to partially extend into the arcuate notch portion for freeing the handle to pump the

hydraulic cylinder; and can retract the plunger from the arcuate notch portion for folding the handle over the hydraulic jack.

1459827986-f3a74266-d3a1-4058-a316-4f46619d171a

The present invention relates to a method, device and system for solving channel collision, which are applied to a Long Term Evaluation Advanced system. The docking system comprises a first circuit located in a robot. Lateral motion is controlled by directing the leg angle at touchdown, which determines the angle of takeoff.

1459827987-5b717bfd-0f86-425d-a285-64db6ac08e7d

The related applications include Unitary Dental Implant, U. The sliding surfaces each have base surfaces and microscopic dimples or grooves which are so constructed as to prevent reduction of flow resistance to the lubricating oil passing through a clearance between the sliding surfaces and assure a lubricating oil film thickness required for reducing friction loss between the sliding elements. When a backend server is detected to have been overloaded with requests, a different peer server is selected on the network to take over processing of the requests from the overloaded server. The module provides for a module cover without fastener openings or holes. Sets of file descriptors identified as ready for communication by the parallel system calls are combined and returned to a calling process.

1459827987-77635e7a-8768-4018-b9d6-27d646be0061

Electro-optic modulator and related device structures which can be used in conjunction with high EO materials to lower switching voltage and improve related performance parameters. It also relates to a monitor module, a monitoring unit and a monitoring system, comprising such a spectrometer module for use in monitoring an optical network. If the content-request is background-generated, for instance, the server may select a smaller quantity of content, since the device user might not be actively involved with the download. There is also disclosed the base sequence for the expression of a therapeutic gene, said sequence being shown in any one of from to and capable of directing the expression of the therapeutic gene specifically to squamous epithelium:. The printer has a front door which provides access to the inside of the housing. The process also includes causing the representation to interact with the control based on the recognized gesture, and controlling a telecommunication session based on the interaction.

1459827988-20bc6649-6bf9-4747-b1f6-383ce7500afd

An electrical connector to be mounted on an exterior PCB is disclosed. The side members are assembled into a rectangular structure with the members positioned to stand vertically upright on their edges. If the condition is satisfied, image data which is stored in a memory by the previous read operation is read out and printed. The protected copy of the decryption key is accessed. The enlarged top has a roughened outer surface to permit an escape of air from the space between the containers. The external source is designed to calculate the particular motion vector field based on a motion vector field which was provided by the motion estimator of the image processor.

1459827988-30a2d835-9773-4f6b-88c8-a6e475557f9e

The present invention allows enhancement of a microprocessor's performance. The invention also relates to the compositions containing such a compound for the dyeing of keratinous fibres and the method for using said compositions. A mounting hole defined at an end of the mounting portion. The method includes the steps of launching playing pieces towards a goal region; re-launching each playing piece that is not in the goal region if all goals contain at least one playing piece; scoring a point for each playing piece not in the goal region; and adding a penalty to the point score if there is any goal which does not contain a playing piece.

1459827988-89524c2e-710f-4f08-b44d-afa8b75ecd53

A noise or vibration control system improves the quality of adaptation estimates by

filtering the input signals to the adaptation, selectively implementing a dead-zone during which adaptation does not occur and by selectively adding a dither signal to the control commands. In a preferred embodiment, improved thermoplastic polymer blends are provided comprising from about 35% to about 85% isotactic polypropylene and from about 30% to about 70% of an ethylene and propylene copolymer, wherein said copolymer comprises isotactically crystallizable propylene sequences and is predominately propylene. A multiple roots navigation system permits the user to bypass irrelevant pages while reducing the amount of information presented in the navigation pane. In another embodiment, the wire trace coupling a user control interface button to the printed circuit board may be configured to serve the dual purposes of coupling the user control interface button to the printed circuit board; and functioning as an antenna capable of transmitting and/or receiving wireless radio signals.

1459827989-105a658e-c6ea-4ba5-8aa0-b1063d0c21ec

Provided is a dehydrator that requires no excessively large apparatus structure and achieves cost-saving while maintaining suction efficiency at a desired level by use of suction means. 5 gcm<sup>3</sup> or larger, and the nonaqueous electrolyte contains a compound having two or more nitrile groups in the molecule. The holder hooks are in contact with a rare earth magnet block resting on the platform. Automatically, instructions in a test language are generated. The through holes are filled with a conductive material such that the conductive material within each through hole is electrically connected to corresponding one of the pads and a portion of the conductive material is exposed and protrudes from the back surface of the wafer.

1459827989-10fbd3ea-6ab4-4c18-a78d-42af3ad4163a

Char-handling processes for controlling overall heat balance, ash accumulation, and afterburn in a reheater are provided. Encoded data from flash memory may be used to generate a number of data streams. In the formula,  $\text{R}_1$  and  $\text{R}_2$  separately represent a substituted or unsubstituted arylene group having 6 to 13 carbon atoms; n and k separately represent 0 or 1; Q1 and Q2 separately represent sulfur or oxygen; and R1 to R22 separately represent hydrogen, an alkyl group having 1 to 12 carbon atoms, or a substituted or unsubstituted aryl group having 6 to 14 carbon atoms. , in particular in the temperature range from 600°C. An example residential gateway comprises a radio frequency detector to detect a presence of a cellular communication device, a service controller to enable a VoIP communication device when the cellular communication device is present, wherein the VoIP communication device and the cellular communication device are different devices.

1459827989-f94249e6-810a-490a-82ff-6671e32ce9b0

A method for providing information with digital images includes receiving a digital image of a subject, the digital image including as metadata a geographic position of the subject and other information associated with generating a path to the subject. The wavelength conversion plate includes a dielectric layer with nano pattern, a metal layer formed inside the nano pattern, and a wavelength conversion layer formed on the metal layer and having quantum dot or phosphor which wavelength-converts an excitation light to generate a wavelength-converted light. A local interconnect extends through the upper isolation layer and connects the field shield to a selected doped semiconductor region of the device. The profile may contain multiple curved segments that effectively lengthen the signal conductor without significantly impacting its impedance. A slider may also be included in laminate lanyard for adjusting the size of the loop.

1459827990-183cac68-0583-48c7-81fa-1bc57dfbbb5f

A system is provided for the collection of measurements for use by a surface profiling processing scheme. The battery station may permit battery life to be reloaded onto a UAV, which may include recharging a battery of the UAV or exchanging the UAV battery for a new battery. The diffusion barrier layer may prevent chemical interaction between the aluminum foil substrate and the electrode

layer. The light controller is coupled to the event notifier and the illumination means. Pure carbon in the form of graphite or soot is added to the reactant mixture to generate the desired heat. Pharmaceutical compositions comprising these compounds, methods of treating diseases mediated by kinases utilizing pharmaceutical compositions comprising these compounds, and methods of preparing them are also disclosed.

1459827990-1993e24d-df64-44fe-a83b-121e383ff09b

The present invention provides a chewable composition containing granules of water-soluble dietary fiber. The data base layer reads TMP\_VMGI which is intermediate-state management information for the DVD-RW, and provisionally registers a file system into the UDF file system layer with reference to information included in the TMP\_VMGI. A contact-retaining shell of one of the connectors includes an integrally formed insertion plug having cantilever elements that electrically contact a conductive surface of the mating connector to provide a low-impedance pathway between the shell and the mating connector for purposes of grounding and/or shielding. The invention enables the use of stroboscope lamps in commercially available microscopes, which otherwise are not suitable for stroboscopic examinations. One edge is mounted upon the cover to drive the cover to move relative to the base, and the other edge locks the base when the lid is located at a close position relative to the base.

1459827990-ff17dddc-e208-4e78-aa58-de8f77801fcb

A method is provided for patterning a semiconductor region, which can be heavily doped. By this, even when the even pixels are saturated and signal charges overflow from the even pixels, and therefore, part of the signal charges intrude into the odd pixels adjacent to the even pixels, an adverse effect of blooming due to the saturation of the even pixels to signals of the odd pixels is eliminated since the reading operation performed on the odd pixels has already been completed. Three leg members extend between the upper disc member and the base ring member. The vehicle includes a chassis and an engine and cab mounted on the chassis.

1459827991-59373c9e-dd78-49b1-bda0-637817c67d5f

A cardiac rhythm management system provides both a safe maximum pacing rate limit and a physiological maximum pacing rate limit. The substrate has a top face and a rear face electrode forming portion opposed thereto, and is translucent to light in a first wavelength band. The pass transistors can be controlled, for example, by values stored in memory cells of a PLD. The invention is effective at stripping photo-resist and removing residues from low-k dielectric material used in Damascene devices. In order to improve the hybrid drive-train, particularly with regard to an operational mode that is highly dynamic, the electric machine arrangement is arranged approximately central in relation to the transverse direction of the vehicle. Said process allows at least a part of the aqueous stream coming from the Fischer-Tropsch reaction to be used as process water in a synthesis gas production plant, subsequently sent to a Fischer-Tropsch plant for the production of hydrocarbons.

1459827992-1ea412b5-e1e9-404a-b922-f72856fc74b8

A method and apparatus for interleaving multiple frames of data as disclosed provide for an extremely streamlined approach to achieving both methods of interleaving as defined in the IS-2000 standard while meeting the complex requirement of frame puncturing. This configuration allows the high-frequency knife to be maintained at different projection lengths based on the stopper making contact with the first abutment member and the stopper making contact with the projection-length-adjusting member. A single column select line may be provided to select a plurality of cached bytes, while a second select line selects a byte of the selected plurality. The device also has a transmission system for tracking predetermined objects. Preferably a first path is an interleaved path for video-on-demand with a lower bit error rate, with a second path being a non-interleaved path

with a lower delay for Internet Protocol telephony.

1459827992-87456118-8f9e-401d-b594-31623444e7d3

A face mask includes a first cloth-like piece, a pair of second cloth-like pieces, a pair of connecting piece for connecting the first and second cloth-like pieces, and an upper edge member for comfortable use and restricting excessive extension. According to the method, a group of metal pads and a group of LEDs are provided. The method then builds a keyterm index from the one or more content elements, and stores the keyterm index in a repository.

1459827992-c2681dc9-4af8-4ee7-ba0f-327e0f199c25

A digital camera has two imaging units. The magnet assembly may pass through the target center, thus allowing full target coverage. The IMS components may include a transport component for facilitating communication with an IMS core network. A mobile device initiates a subsequent multiple PPP connection by specifying the IP address of an initial connection in the IP Address Configuration Option during IPCP negotiation for the subsequent connection.

1459827992-def54567-9097-4046-af31-270173e8095a

A facility for performing an access control check is provided. A dual-hinge arrangement is utilized to maintain the slide in a horizontal orientation. A bunk assembly is fastened to and is adjustable on the bunk bracket in directions perpendicular to the directions of adjustment of the bunk bracket. By utilizing this assembly, the amount of concrete the patterns needed in a turnout is reduced.

1459827992-ef8424fc-9d12-46b3-8508-f26ff1ce6c9f

Disclosed are algorithms and agent-based structures for a system and technique for analyzing and managing the airspace. In order to prevent the piston from being blocked in the valve housing by the expansion thereof caused by the pressure part embedment, the pressure part and/or the control piston is/are provided with radial recesses in the embedment area which make it possible to limit joining forces and the resulting radial expansion of the piston. Disclosed event detection circuitry can be used to generate event timing data representing one or more phase variations in detected events. The cavity is placed subcutaneously within the patient. The LCD panel is sandwiched between the mounting bracket and the movable bracket and visible via the opening in the bezel. The method also includes calculating a ratio of the change of the counted number with respect to a change of the battery voltage, and determining a first peak point of the calculated ratio.

1459827993-4c510aeb-1e19-48d8-ab25-d41c24e6263e

Extending high k material of a second dielectric layer to surround at least one thru-via designed to provide a signal other than a power signal to a die may eliminate discrete AC coupling capacitors to reduce cost and improve performance of the package. The method comprises the steps of receiving a first component of a document over a first communication channel, receiving a second component of the document over a second communication channel, and combining the first and second components of the document at the mobile terminal. The spectrometer consists of an entrance slit, a combined diffraction grating/focussing element, and an exit slit. The intake passage includes an intake passage portion having an upper section extending upward substantially in the vertical direction and an intake passage portion arranged to continue from the upper section of the intake passage portion and have a section bent in the lateral direction of the vehicle body. The system includes logic configured to adaptively select a tone on which the pilot sequence is transmitted based one or more conditions in the transmission system.

1459827993-e62fe3fe-f9bf-4d06-9d84-f17097f8413d

A telescopic snap valve assembly and method of assembling a snap valve with a liquid holding bag in a box fitting. The interposer includes an interposer base having first and second surfaces. The nanotube regions are arranged to contribute

to heat transfer from the semiconductor device die to the heat-sinking support structure.

1459827994-69af93aa-c39d-43a0-9a6b-47251de17aa1

A pixel electrode connected to a signal line through a switching element and a common electrode connected to a common wiring are disposed, as alternating with each other, within each pixel region. The deflection electrode assembly includes a high voltage electrode, a low voltage electrode, and an insulating housing which positions the high and low voltage electrodes in a predetermined spaced relationship along the ink drop stream. In the slave ECU, a signal separation circuit individually receives a CAN communication signal and a serial communication signal transmitted to the CAN bus, while an input/output control circuit to which the serial communication signal is input as the power supply control signal outputs a signal to the power supply circuit to control power-on/off of the microcomputer. During other parts of the cycle an ac inverter voltage is rectified by active switching devices, preferably field effect transistors.

1459827994-6f7ae259-1425-4167-a130-52e540486bd9

The present technology is directed to prodrugs and compositions for the treatment of various diseases and/or disorders comprising methylphenidate, or methylphenidate derivatives, conjugated to at least one alcohol, amine, oxoacid, thiol, or derivatives thereof. Disclosed methods may further comprise determining an exposure parameter of one or more component image data sets prior to acquiring the sequence of image data sets. Ultra-short pulsed laser beam is irradiated in a predetermined pattern directed at the second surface and passing through the substrate, focused on the chrome layer or on its proximity. In the recording pause mode, the video signals are stored in the memory by cycling through selecting storage addresses, and the recording of the video signals is terminated.

1459827994-8435dfc0-ae7a-4ad7-bdd3-68fb2c25e616

A semiconductor device manufacturing method, includes the steps of forming an insulating film over a semiconductor substrate, thinning selectively a thick portion, whose film thickness is thicker than a reference value, of the insulating film, forming contact holes in a thinned portion of the insulating film 25, and forming conductive plugs in the contact holes. In one embodiment, the first and second signals are split prior to inputting the signals to the first and second output amplifiers, and a gain-adjusted portion of each signal is added to the other signal on the inputs of the output amplifiers. Therefore, the present invention can implement 2-bit cell or 3-bit cell of a high density using the existing process technology.

1459827994-b8d6f2f2-0df8-43e2-9797-8ef843f3e4e4

An aerosol deflection system having a concentration zone expelling an air stream through a first detection zone, a second detection zone, and a deflection zone. In one example, a key for the configurable lock on at least one data report associated with at least one customer problem is generated. A photoresist is deposited on the conformal conductive inorganic thin film over the gate structure and filling the reentrant profile. If so, the first processor may generate an authorization signal that includes information that is securely coded, and which is indicative of the determination. Each of the bearing assemblies having a sealing face overlying the end faces and biased into engage with the end faced by a pressure compensating seal located between the bearing and the housing.

1459827994-fcda369b-67d5-4b22-aa6c-fdc722409bf8

A blue electroluminescent polymer having an indolocarbazole unit in the backbone of a polyarylene polymer and an organo-electroluminescent device using the same. Furthermore, the invention relates to a blade connection and a fastening element for a blade connection. During implant of the medical device, the lead is inserted and a shaft is rotated with a tool to engage the seals. Simulation results show

that the extended RTSP method further improves the accuracy and energy consumption, i. The probes can also contain a minor groove binding group. What is described are compounds of the formula I, in which the radicals are as defined, and their physiologically acceptable salts and processes for their preparations.

1459827995-1a37569a-494a-4008-9cd5-e567f8e7f681

A power control system with a pseudo-power up, an aircraft including the power control system and a method of controlling power in an aircraft. The generated ultra fine particles can be efficiently sucked up into a transfer tube regardless of an arc voltage, and the resulting film can be stable in shape. A residual static imbalance is then determined after attachment of the corrective weight. Alternatively, germanium is implanted into a top portion of the silicon layer to form an amorphous silicon germanium layer. An aggregate difference measurement is also computed and is used to determine whether parity exists.

1459827995-ac86bd2c-7156-438f-b4c7-12c227bb22fd

A plurality of non-volatile storage elements on a common active layer are offset from neighbor non-volatile storage elements. The rear down frame member integrally has an arm supporting the main frame and a gusset reinforcing a joined portion of the main frame to the head pipe. The computing device includes a memory operable to store one or more modules. Beginning with the first or lowest level cart in the system, each successively higher cart is also wider and longer than the cart immediately beneath it. , in animal models of psychosis.

1459827995-b91a96ef-2f18-48c9-9043-3f6a3072ab42

A method and apparatus for configuring a server in a distributed data processing system is provided. Flexible tangs formed at the distal end of the blades cooperate with a movable member to hold the contacts closed when the contactor is in the closed state. More specifically, in one aspect, an oil-based fluid polymer suspension composition for use in oil or gas well servicing fluids is preferred containing:.

1459827996-4e1b39b5-149a-46ad-aaea-22f90f7d49de

A VDSL customer drop testing arrangement and equipment utilizes a test set top box having a sign-on identifier unique to an authorized test device to perform testing of the customer drop without the need to provision the drop for receipt of video programming or data services from any network information or service providers. Each S-machine is a dynamically reconfigurable computer having a memory, a first local time-base unit, and a Dynamically Reconfigurable Processing Unit. The source data includes a portion of a source image, and the source image includes an image of the background and a foreground. This description is not intended to be a complete description of, or limit the scope of, the invention. A first end of each rotation stand set is fixedly disposed on the rotation base. The rotating member is installed penetrating the first through hole and the second through hole and has a contacting portion located within the second through hole, wherein the position block is capable of being pushed by the contacting portion and moved along the transverse axis-direction of the plug body for disengaging the first rack components from the second rack components.

1459827996-755ef714-0c66-43ae-81bf-0484428097f3

Systems and methods for automatically applying fairings to a cable as the cable is deployed from a winch are provided. The particles are useful as proppants in fractured a subterranean geological formation comprising hydrocarbons. The method selects a transformation function T for reducing dimensions of the n-dimensional space by space-filling curves mapping said n-dimensional space to a m-dimensional space.

1459827996-a9e344e6-57ed-4308-9c02-0c3b7c1f27a0

A multiple tubes combination structure for being assembled with air tubes of an

airbed is disclosed, wherein a plurality of tubes are assembled in a combinational structure. The method includes receiving an assignment of first timeslots for uplink communications, and receiving an instruction to reduce monitoring to a set of timeslots. The anchorage pier assembly comprises a gravity block and the first clamping tool, and the first clamping tool connects with the cable.

1459827996-d1094c61-cf86-40f7-901c-0b2441ff9204

An orbital wastewater treatment system generally including a tank assembly and at least one impeller in the tank assembly for moving mixed liquor under process about the tank assembly is provided with an wastewater inflow sensor, an impeller power meter, and a control unit for periodically and incrementally varying impeller speed and weir height in order to reduce energy consumption. The temperature mapping balloon comprises a balloon with a thermal mapping coating disposed on the inside or outside of the balloon. High frequency voltage is then applied between the active electrode and one or more return electrode to non-thermally generate a plasma adjacent to the active electrode, and to volumetrically remove or ablate at least a portion of the target tissue.

1459827996-e331edb7-f9be-47f6-9064-8c2446121c18

A method of producing nitride based heterostructure devices by using a quaternary layer comprised of AlInGaN. Small amounts of solute are introduced into the conductive metal layer before polishing, resulting in a material with electrical conductivity and electromigration properties that are very similar or superior to that of the pure metal, while having hardness that is more closely matched to that of the surrounding oxide dielectric layers. The said microbial consortium is unique in producing a variety of metabolic products mainly CO<sub>2</sub>, methane, biosurfactant, volatile fatty acids and alcohols in the presence of specially designed nutrient medium. , from detergents, bleaching, relaxing, dyeing, and permanent waving, and heat, e. The image substrate can be adhered to an external surface of the front sheet so that the front sheet forms a rigid backing for the image substrate.

1459827997-273a2deb-4328-4cd8-9cff-4430dddc7589

The present disclosure is directed to communication systems and more specifically to communication devices having encoder and/or decoder blocks employing Low Density Parity Check Convolutional Codes. The silicon layer may be epitaxially grown on the substrate when implemented as sapphire, or bonded to the substrate when implemented as alumina-TiC. Each module includes a reflector comprising single crystal silicon and a reflector surface lying in a reflector plane substantially perpendicular to the substrate surface. The fluid-to-air heat exchanger heats airflow through the thermal simulator, with temperature of airflow exhausting from the simulator being tailored to correlate to temperature of the heated airflow exhaust of the electronics subsystem, rack or row of racks being simulated.

1459827997-8115bf16-6af2-4116-9d91-6392b2344c22

A JTAG-programmable IC includes a memory array having redundant columns, a partial-width data register, and a full-width bitline register. The present invention permits the accommodation of changes in communication resource availability due to link, equipment, or software failures or communication bandwidth resources being used by other collaborating programs. A feedback loop reference signal may be generated from the input signal and a coarse calibration signal may be generated from the feedback loop reference signal. The tool is adapted to install the fastener to the workpieces when the tool is in its engaged position. The base station includes a data transmitter configured to transmit the downlink data to the mobile station; and a control information receiver configured to receive from the mobile station through a path passing through the second base station, feedback information concerning the downlink data transmitted by the data transmitter. In particular, the low-power transmitters are arranged to simultaneously transmit a common information stream, and the transmitters are caused to transmit in a coherent manner.

1459827997-8fe9adde-d31a-4486-8640-e2c7747b543c

An electrochemical capacitor including a separating layer on a support. The methods employ drilling fluids comprising fragile gels or having fragile gel behavior and providing superior oil mud rheology and overall performance. A cooling air passage is provided between the holder and the circumferential wall to guide part of the air circulating inside the spiral casing to the motor. MMR models using extension parameters incorporating neighbor pixel relations are also presented.

1459827997-e4b6a0cc-d2b5-4d8c-a287-eb6d39edf5d3

Methods are provided for effecting functional control of program flow and/or data flow in digital signal processors and in processors which have closed and separated modules for effecting the program and data flow control or which operate in parallel arithmetic-logic units. A first probability distribution of word alignments within a first corpus comprising unaligned word-level parallel segments according to a model estimate is calculated. Vertical and horizontal adjustment units enable inter-shaft distances D1 and D2 between the input connection shaft and the output connection shaft to be changed. Further the transparent member may be curved to fit a body part of a patient receiving phototherapy. The controllers maintain a channel plan for sequencing the sweeping of consecutive channels. Methods for making the medical devices consist of either providing or forming a scaffold, then depositing a metallic or pseudometallic film cover onto the scaffold in such a manner as to form an integral, substantially monolithic junction between the deposited cover material and the scaffold.

1459827998-35893bea-2538-4e33-94df-9eb4b76220b3

A method of acquiring information on a resource region for transmitting PHICH and a method of receiving PDCCH using the same are disclosed. Also described are a method of preparing the composition, a cured composition derived from the curable composition, and an article comprising the cured composition. The core module and the sleeve each include various features providing for a minimum overall size, ease of insertion, removal, and cleaning, and enhanced sound transmission.

1459827998-6bd60335-c2bb-456f-9d68-a3bf07817bb1

An apparatus for processing medical waste is provided. The disclosed architecture employs techniques that exploit the availability of positive and negative examples to search through this space and suggest an initial record matching query. The VIPA generator receives an input light at a respective wavelength and produces a corresponding collimated output light traveling from the VIPA generator in a direction determined by the wavelength of the input light, the output light thereby being spatially distinguishable from an output light produced for an input light at a different wavelength.

1459827998-72b495e2-8726-4ba0-8ce6-99a2bc663256

A method for automatically generating a network topology for a directory service is provided, wherein the topology represents network sites and site links in a distributed computing environment. The secondary of a transformer drives the CCFL, with the primary of the transformer being driven through a capacitor from a full bridge. The user can generate personalization logic based on the personalization information.

1459827998-85b7427c-dbf4-4096-a9a0-33bb6999aaaf

The present invention provides a combinatorial approach for preparing arrays of chemically sensitive polymer-based sensors which are capable of detecting the presence of a chemical analyte in a fluid in contact therewith. The post-tensioning apparatus includes a post-tensioning cable slidably inserted into a cable chase disposed in each of the board sections, and a cable tension adjustment for selectively coupling the sections into a configuration for use of the board or for separating the board sections so that they can be folded into a compact collapsed

configuration. Accordingly, when light emission occurs, such a compound has high resistance against Joules' heat generated in an organic layer, between organic layers, and between an organic layer and a metallic electrode, and has high durability in high-temperature environments. The bulbous end portion has a valve needle smaller than the bore to inhibit obstruction to the discharge passageway for adhesive flowing thereto.

1459827999-2c7f9b01-f293-4425-a47e-6ac1e2f69229

With embodiments disclosed herein, the distribution of gated power is done using on-die layers without having to come back out and use package layers. A swirler inlet is axially open to and positioned substantially normal to the bypass flowpath and a swirler outlet is open to and positioned substantially parallel to the exhaust flowpath. Determination of an effect of the test agent on the sulfotransferase is by detecting the amount of sulfate in the polymeric sulfate acceptor that has been separated from the reaction solution. The first current is to be directed through the first diode and the first resistor. The following conditional expressions are satisfied as for Abbe numbers  $vd_1$  and  $vd_2$  of the first lens and the second lens and Abbe number  $vd_4$  of the fourth lens. The interleaved frames provide a higher effective frame rate with improved temporal resolution which is based on the accurate interleaving of the data from the plurality of physiological cycles.

1459827999-2e91ed21-ca99-47b1-ac48-9366e5145970

The invention concerns a plate for fuel cell, in particular of the ion-exchange membrane type, comprising supply channels connected to an intake orifice arranged in the center of one of the surfaces of the plate, and discharge channels wherein circulate respectively a reactive fluid stream with relatively high concentration and a reactive fluid stream with relatively low concentration. The motor includes a stator including a high-temperature superconductor material at a temperature. To determine the substitute signal, a static substitute value is defined on the basis of variables that characterize the operating state of the internal combustion engine. A pair of biased locking means each comprise a biasing means, such as a coiled metal spring, and a hook engagement member, such as a glass marble. Without flight, two MCG's are placed head-to-head so that the vortex wakes emit in opposite directions. To increase the rate at which the bed is inclined, ramps are placed between the extendable support bar and the bed.

1459827999-87c9c00b-de0f-487a-ae9a-443ccfc78b49

In a display apparatus of a hold type represented by a TFT liquid crystal display, blurring of dynamic picture when the dynamic picture is displayed is improved. 5 to 5 wt % of a C4-C8 alpha-olefin which has a natural density of 935-956 kgm<sup>3</sup>, a melt index MI5 of 0. Each of the switching elements includes a monocrystalline silicon layer. A service running on the network device is identified from the decoded packet or subsequent packets that are read, decoded and analyzed.

1459827999-b299b8ca-16d4-4a33-96f2-1726452b863d

A system and method for unloading a viscous product from a bag constrained by a bin where movable scrapers are utilized to increase the amount of product evacuated from the bag, to prevent damage to the bag containing the product, and to ease removal of the pump after pumping is complete by breaking the vacuum created during pumping. A signal received from an antenna is fed through an analog part and a subsequent digital part of said receiver. The first mirror controller and the second mirror current controller respectively control a first mirror current and a second mirror current about an estimated extremum point of the control surface to substantially maintain alignment between each of a first mirror and a second mirror, and an associated cavity mode. The iris lifted up from the lens to remove the build up of escaping pigment on that layer to let the fluid flow out at a normal rate to drain out of the trabecular meshwork and then the iris is lowered and the incision in the sclera is closed.

1459828000-0a32aa7d-6138-41c5-a2c0-e668e1b7fcb3

Disclosed is a novel game system, comprising a computer device; a game platform to communicate with the computer; and at least one game control module to detect environment data and to transfer the environment data to the game platform. The computer receives an initial digital data set representing the patient's teeth at their initial positions and a final digital data set representing the teeth at their final positions. Specifically, amplitude predistortion, phase predistortion and DC voltage level adjustments are made to the RF signal. The reservoir is capable of containing a protective material that can include, among others properties, anticorrosive properties. The totally reflective and partially reflective surfaces being inclined with respect to each other. According to this invention, only frames that are not so heavily compressed and therefore have a high probability of carrying enough watermark energy are folded and accumulated.

1459828000-202feb9c9-ae89-49d4-a960-d285fa857937

A method for purifying various nitrogen containing flavor and fragrance compounds is described. One transistor is connected from VSS to ground on the Q side of an SRAM cell. Each component in the portal that dynamically contributes page fragments to be aggregated to a portal page provides dynamic component specific cache information which includes component specific cache scope and expiration values. The first unknown state may be a state that already contains the target record, or may instead be a state that does not contain the record. The floor cleaning apparatus also includes a flow control valve assembly. The length of the damper unit changes as the second chamber slides relative to the first chamber.

1459828000-80f1a445-a7e6-4492-8f32-c9468a69515a

Various load and store instructions may be used to transfer multiple vector elements between registers in a register file and memory. A router capable of supporting the LDP extensions distributes neighbor-labels to be used by the router to label switch traffic destined for the directly connected neighbor router irrespective of a hop-by-hop Interior Gateway Protocol path determined based on link metrics. The cutting system includes a cutting blade, typically a rotary cutter, and a sacrificial plate or round bar contacting the cutting blade. The body portion defines a first part of a character. The display device includes a display panel having substrates, and a flexible printed circuit board having one end thereof fixed to a peripheral portion of a first side of the substrate, wherein the flexible printed circuit board forms an IF portion on which a plurality of input terminals is formed in the inside thereof in a state that the flexible printed circuit board is developed.

1459828000-90fd2726-3a6e-4c0d-8543-c3277b0e5fd6

A compound having thioacetal skeleton, a precursor thereof, a cured product thereof, and a composition for their production are provided for the thermally dissociatable material based on the inventors' finding that a thioacetal group is thermally dissociatable. One embodiment of the method is implemented in a first mobility forwarding entity and includes registering the first mobile device at the first mobility forwarding entity. The connecting area 40 is formed to have a lower electric resistance than impurity areas 42 and 44 formed in one of the of impurity area formation steps. The present disclosure also provides, in some embodiments, an intuitive means of assimilating search parameter weightings based on peer or social network preferences with global search results. Besides, a testing apparatus is also provided.

1459828001-332da671-3719-4ed7-a87f-aa51f3623a57

An inflator for inflating an inflatable device includes a housing. At least one sink periodically creates a neighboring sink list including information on at least one adjacent sink, and the sink requests node authentication to a base station when receiving an authentication request from the node and transmits its own neighboring

sink list to the node when the node authentication has been completed. The method includes the steps of telescoping upward at least two telescoping cases to accommodate at least one ice pop, placing the at least one ice pop within the telescoped ones of the at least two telescoping cases, wherein, upon placement of the ice pop within the telescoped ones, the ice pop is at least partially surrounded by a frozen liquid coolant. , and use non-print code of ASCII code to keep compatibility with a short message service function of existing mobile phone. Kinematic coupling structures are also provided for positioning the container on a surface so as to, for example, properly align the door with the port of a wafer processing tool.

1459828001-5ed9d189-4fae-4212-99a1-38f8ca7d7eae

A method, system and computer program product for limiting extreme loads and reducing fluctuations in load at session servers. The body has a top surface, a bottom surface, and a polygonal drive surface interposed between the top surface and the bottom surface. A gate region is disposed above the source region and adjacent the body region. The drive assembly can be mounted stationary to the drive tower, or it can be mounted on tracks so as to move vertically together with the screw pile. A plurality of terminals is received in the insulating housing.

1459828001-8f31a170-29ff-4c7e-824a-fb980903d8c4

A phase-frequency detector circuit is disclosed. The method includes assigning an initial score to the content of the one or more frames of data. At the same time, the present invention detects the case where the person falls onto the railroad track with stability and automatically transmits a stop signal or the like. The fluid and/or the magnetic elements move within the chamber under the influence of the magnetic field source to exert a force against a portion of the micro-device workpiece. A dependencies file specifies a set of dependencies among the modules of the system. The probe includes a relatively short shaft and an inflatable therapeutic element.

1459828001-a4d9948a-3450-4565-8f64-8bfade680490

Electric charges, which have been generated in a recording photo-conductor layer having been exposed to radiation, are accumulated at an accumulating section. According to various embodiments, the swell devices disclosed herein can be used alone or in combination with one another to provide heat and/or fire protection for electrical systems, devices, and/or assemblies. A first coupling device is affixed to the outer surface of the first mechanical housing of the first transducer device.

1459828001-f0328236-39d6-4315-b6d4-fe34c3085755

Provided is a method for producing surfactant granulates, comprising providing a mixture of anionic surfactant acids and builder acids having a weight ratio of 1:100 to 1:20 of builder acid to surfactant acid; and contacting the mixture with at least one solid neutralizing agent. For a federated search, a location description may be used to describe the location of each data source searched, and may further be used to connect the user to that particular data source. , enabling machined components to be utilized for weeks at that temperature. The information processor receives the current touch signal from the touch panel and a stored touch signal to compare the stored touch signal with the current touch signal to generate dynamic luminance information. The gap between the slits or width of slits of the light diffraction layer is preferably equal to or less than seven microns and it is possible to have two or more different widths or gaps in the range of equal to or less than 7 microns. The image display device comprises a motion detection part which detects the moving amount of an input image signal, and an edge emphasis part which subjects the input image signal to edge emphasis processing, and the image display device increases an edge emphasis degree of edge emphasis processing to an area where the moving amount of the input image signal is large.

1459828002-0c729a14-26cb-4642-9e02-3110229e51e5

A pressure reducing apparatus and a method of operating a pressure reducing apparatus are provided. The flexible body defines an internal chamber that is accessible through a small access opening. Nodes of the network are configured to selectively copy, use, verify, modify, create, and purge the network packets using file management semantics.

1459828002-23a831a3-633e-40f9-b85b-e99cc0f12a35

A disconnect mechanism for a power receptacle, which includes a disconnect block, a locking member slidably coupled to the disconnect block, and an electromagnetic device moveably coupled to the locking member. The sleeve portion defines a central void extending from a proximal end to a distal end of the earbud. Fluid is returned from the tissue processor to the fluid container via at least one fluid return aperture in the wall that separates the first and second cylindrical rings.

1459828002-ca87dc9c-154e-4201-9d80-af0e6492d23d

There has been a problem that the distortion characteristic of a switch circuit for a high frequency is deteriorated. The apparatus includes a user interface to define a query expression based on a condition and one or more parameters and to display a report of trace entries satisfying the query expression. Additional aspects of the present invention concern a user device utilizing a neighbor relation table to determine neighbor relation data, such as an internet protocol address, of a target cell.

1459828002-dce34049-3af7-43d3-a74f-afea0127b996

An assembly is provided that may be used in high data rate optical communications, such as free-space communication systems. The device includes a hollow plug detachably securable to a flexible port positioned about the stoma. The software components are selected by using a performance profile of the system, which comprises time data related to execution of the software components, memory and bus transactions.

1459828002-de8374cc-aab6-4a39-813f-ab0ad8d005ac

A window blind cleaning system for cleaning the slats of vertical or horizontal blinds of varying heights, with a user selected cleaning material placed over the cleaning heads, which the user remotely actuates to close the cleaning surfaces onto the slats to be cleaned. A single completion, which uses the same tubing string for both producing the well and delivering lifting gas to the wellbore at downhole. A system is employed for variably actuating the intake and exhaust valves.

1459828002-f91a8a32-c70c-4503-b42b-13b7c2658923

A method for monitoring the surface roughness of a metal, comprises impinging a laser beam onto the surface of a metal layer to induce the formation of a plasmon therein, and monitoring a current of decay electrons emitted by the plasmon. The system includes a plurality of wheels, an engine, an altitude sensor, a transmission, a memory for storing target engine speeds, and a processor. Furthermore, the progress of the desulfurization is monitored, using a change in a lambda probe voltage downstream from the NOx storage catalyst, which is determined at the end of a predetermined interval at the beginning of an nth rich operating phase. Similarly, the second mating section has a second set of a plurality of pins extending from a base of the second mating section and into the interior of the chamber. The user selects components from the toolbox so that the selected components are associated with the selected stages on the design surface. Also provided is a composition for reducing injury to cells, tissues or organs of a body following trauma including: and.

1459828003-31f1e9b2-b2dc-465c-94ac-bf68d684c809

An amplifier for electric guitar including a Cut control for attenuating high

frequencies whose operation is expanded via a switch to alternately function as a Master Volume control. In the recording tape cartridge, when the braking member is positioned at a rotation locking position at which the braking member is engaged with an engaging gear provided at a floor portion of a reel hub, rotation of the reel, which is accommodated within a case, with respect to the case is impeded. In the preparation step, the plate material is prepared. The module can be applied to the production of thin contactless micro-modules for smart cards and contactless electronic badges and tags. The product stream and hydrogen are fed into a reaction zone in which MSO present in the product stream and hydrogen react to form methyl isobutyl ketone.

1459828004-07f44f6e-a6e7-4817-b9a7-883379a662f3

An RJ-45 socket has a base, a circuit board, a casing and a cover. The memory hub includes several link interfaces coupled to respective processors, several memory controller coupled to respective memory devices, a cross-bar switch coupling any of the link interfaces to any of the memory controllers, a write buffer and read cache for each memory device and a self-test module. The inertial sensor has one inertial sensor mass, each mass has a wide portion and a narrow portion. The bracket includes a first wall abutting the rack, and a second wall transverse to the first wall. The third preferred embodiment measures gas density, such as, for example, density altitude. For every given number of arrays in a group, a trace-back process traces back the path followed by an encoding procedure for encoding the encoded set.

1459828004-5fe89b2e-0ed6-4121-9415-16793fffb9e9c

The retention device for retaining a fastener comprises an outer tubular shaft slidably disposed upon an inner tubular shaft. The first and second electrode are disposed to contact a sample within the sample chamber such that an electrochemical signal is generated. A first-side part of the bottom surface may be inclined upwardly towards the first edge portion, and a second-side part of the bottom surface may be inclined upwardly, in a lateral direction, towards the second edge portion. The stem portion is located adjacent the end of the outwardly turned flange portion of the airbag jump bracket.

1459828004-677fd6f1-d5d7-41e5-bff5-d3aaff8ba894

An electromagnet configured to contactlessly support a body includes an excitation amplifier configured to supply excitation current to the electromagnet, a carrier wave generation device, and a sensor configured to modulate the carrier wave and to output a sensor signal. It protects the vehicle from rain and other damaging weather and from persons who might wish to steal the vehicle or otherwise damage or vandalize it. The grooves formed by the groove forming step include grooves having a first depth D1, and grooves having a second depth D2 which is greater than the first depth D1. The discharge mouths of the tubes open into the oven chamber at the suction side of recirculation fans operating within the oven. The new variety has excellent heat tolerance and flowers that do not burn in bright sunlight. The invention is applicable to safety catheters for performing endovascular treatments by injecting embolic fluid, for example for treating arteriovenous malfunctions.

1459828005-83172191-0ae9-46ea-8b1b-48af80b20e9c

An user may define failover events in a network device by customizing the network device's response to a failure on the network. A determination is made regarding whether there is more than one Autonomous System in a network for one or more VPNs. All components of the drying oven that come into contact with the product do not have to be removed during cleaning, but can be cleaned-in-place using technology integrated into the drying oven. When the pad Pi changes its attitude, the anvil Ai relatively moves to a second relative level L2 so as not to hinder the pad Pi changing its attitude. The bend radius posts manage and protect the cables routed within the enclosure. In some examples, the electrical phase synchronization system includes an electrical power transmission network having a plurality of

transmission lines and a plurality of electrical power generation devices.

1459828005-cbbae344-e9de-4a5c-97a9-63583e44730b

A cutting device includes a rotatable base defining a plurality of closed-sided, tooth sockets. The individual leadless cardiac pacemakers comprise at least two leadless electrodes configured for delivering cardiac pacing pulses, sensing evoked and/or natural cardiac electrical signals, and communicating bidirectionally among the leadless cardiac pacemaker plurality. A dampening ring surrounding the sensor for dampening the relative motion of the sensor with respect to movement of the patient. A first drying agent is arranged in the second feed path. Methods of treatment with such compositions are also included. The apparatus has an inlet and an outlet that is located radially outward from the inlet in order to define a flowpath through the apparatus.

1459828005-f534e494-62b9-4174-b7ef-740eff8cc08f

Methods of forming areas of alternative material on crystalline semiconductor substrates, and structures formed thereby. The power supply delivers maximum power at a given switching frequency without a feedback signal while the output is below its regulated value. In addition, in the case of the hearing aid, the current time of day and the day of the week can also influence the choice of the active hearing program. A delivery extension of the interface device automatically connects and disconnects within the high vacuum chamber with the removable vapor receiving device by respective installation and removal motions. The overflow is created by either: a) allowing the water to rise above the upper surface of the upper modular filter and directly into the common passageway or b) by overflow pipes which connect to a downstream pollution removal structure; or a combination of paths a) and b).

1459828006-785e229d-3030-4c45-8046-fef6263c1e7e

Granulysin peptides are small antimicrobial agents with potent activity. An opening having sloped sidewalls is then etched into the back side of the substrate, exposing a portion of the active region contact. Each of the storage network elements is related to at least one of a plurality of host computers and information of these relations is used to determine whether a management operation can be conducted on the storage network element. The coordinates on the sample table by the moving mechanisms before the X-ray camera is tilted can be used as they are even after the camera is tilted.

1459828006-86187629-5a03-456f-be9d-292945141d45

An improved stocker configuration for storing workpieces in a fabrication facility is disclosed, employing workpiece compartments arranged stationarily around a robot handling assembly. The independent data objects are representative of security information associated with the token. The coated fluidized particles are dried by a pre-heated gas stream and thereby creating fluid-bed particles that are coated with a layer of the  $\text{XF}\backslash\text{u}2022\text{nH}202$  compound. In another aspect of the invention, a method of forming a trench isolation region includes forming a trench within a substrate. The video data stream and audio data stream are converted to analog signals for presentation. ;n and m are each independently an integer of 0 to 3;n+m is an integer of 0 to 3;R5 is a hydrogen atom or substituted lower alkyl;its pharmaceutically acceptable salt, or a solvate thereof.

1459828006-ca20b43e-64c9-4373-9ac6-60353a496aa5

A noise dosimeter with capability to rapidly predict noise exposure over an extended time period based on a measurement of short duration. The invention also relates to a method of casting of light-weight load-bearing structures with optimized compression zone where one or more channels, grooves, ducts, pipes and/or hoses formed in the load-bearing structure serves as molds for molding one or more cores of strong concrete in the light-weight load-bearing structure. In gas reservoirs, the maximum TE may be determined from diffusion considerations using a

dual wait time pulse sequence and this maximum TE is used to acquire data with dual TE. A top surface of the carriage and a top surface of a frontal cover form a pressure area.

1459828007-23aa0322-1789-44b7-aa0f-12b24faa1ab7

Calcium-strontium-hydroxyphosphate cement preparations are described, comprising a powder mixture, which contains molar quantities of the components calcium, strontium and phosphate in the mixture in the ranges 1. At least some embodiments described may be used to deform a body channel so as to decrease or prevent the normal intrachannel flow of material within the body channel. The angular difference is within 15 degrees. The power supply module is also applicable to a plurality of LCDs.

1459828007-2b58877c-043f-40d3-a414-9a08e3493ad2

A semiconductor memory device capable of performing a partial self refresh and semiconductor memory system including same is provided. It comprises a nozzle structure which is provided with coaxially arranged nozzle elements and is arranged to form one or more layers which cover a flexible elongated element on the surface of the flexible elongated element, which passes through the innermost nozzle element, and a guide member corresponding the diameter of the elongated element for controlling the flexible elongated element. The PSAP, which may be located in either an internet protocol Network or a public switched telephone network, transmits an emergency callback to the WTRU and includes the IE. An injector introduces an agglomerating material into the gas stream before the gas stream enters the agglomerator.

1459828007-514fa155-ee16-4ef5-9d11-058bf1e76192

Video recording according to the DVD-VR Specification allows to record only one sub-picture stream. The unit includes a light guide plate and at least one light emitting unit. The collection process is preferably computer assisted so as to incrementally add constraints to an initially under-constrained job request to produce the sufficiently constrained job request. Embodiments of the present invention may be implemented in an air-conditioning system as well as a water heating system. The determination is executed at one of the stages of selecting a tracing direction by an automatic tracing process, selecting an approximate Doppler waveform as an analysis target, and selecting an analysis result as a display target.

1459828008-484fb883-fc87-4f88-9101-5fc5cbdf2af1

A portable game feeder backpack that is worn by the user to spread feed for wild game or other granular material, e. The first number of pixels is counted between two certain points projected on the image sensor from a first section of a plane. The document collaboration may further be implemented by executing a collaboration phase. A first scanning pattern is emitted almost in the horizontal direction to an installation surface of the apparatus, and a second scanning pattern is emitted from an upper portion to a lower portion of the apparatus, toward the installation surface, via a window provided vertical to the installation surface. The other three sides of the elongate column each have female connection structures so as to provide a female connection side to the building unit. Each memory element accepts a common clock.

1459828008-8b1646d5-7c1b-47ee-a015-e46596020229

To provide a display device and a projector capable of enhancing the quality of dynamic images, of reducing limitations on light sources, enhancing the utilization efficiency of light, and of displaying images in full color, illumination light emitted from a light source lamp is irradiated onto some pixels of a liquid crystal light valve capable of displaying images in colors. In one implementation, an adhesive cover includes a top laminate layer adhered to a base layer that is adhered to a bottom adhesive layer. A block matching method or a method using block

shift information from a block-based coding method is used to determine the zone shift and to determine a reliability for the zone shift determination.

1459828008-eb114f60-ee4b-4f6d-9819-54c8e18eb5fd

There is disclosed a gas discharge display device comprised of microspheres containing ionizable gas, photons from the gas discharge within a microsphere exciting a phosphor such that the phosphor emits wavelengths in the visible and/or invisible spectrum. An assembly manifold is attached to the first and second fuel cell stacks. A conduit extends transversely through the cap and opened on opposed sides of a circumference of the body of the cap, the conduit being in fluid communication with the spout and having a passage in fluid communication with the cavity. The invention furthermore relates to a method for improving the confidentiality of a user input. The sheet of material can be sized to be carried in a purse or wallet or hung on a microphone stand and the like for easy access.

1459828009-8af00502-f025-4e07-bbf9-48d002859f52

A method and apparatus for monitoring and evaluating effects of electrostatic discharge associated with semiconductor manufacturing are disclosed. The sewage slurry separation system is configured for collecting sewage slurry from a sewer line, depositing the sewage slurry in a collection/settling chamber to separate the slurry into water and sludge. In the estimate contest, users provide estimated probabilities of occurrence for different possible outcomes of the event. In these configurations, the device assists the golfer in shaping a golf shot, such as a straight shot, fade, draw or putt. The general information for each still picture group includes the start position of a first still picture in each still picture group. The sandwiching support portion includes a lower plate-shaped body and a vertical wall.

1459828009-947651dd-a1ce-4624-8e6b-a868c7b6a254

A plasma display device includes a plasma display panel, and a driving pulse generator which generates pulses for driving the plasma display panel, and a memory storing data necessary for generating the pulses each having a frequency identical with one of a plurality of predetermined frequencies. A method and apparatus for transmission of compensated TPC commands when a substantial loop delay is experienced for one or more user equipment entities is disclosed. The housing has at least one pair of power cable lugs accessible from an exterior of the housing for coupling the PEM to a pair of power cables associated with a power feed. and a heat distortion temperature of greater than about 150° F.

1459828010-94602536-02b0-4d9f-851a-53e6f46bd6ab

The patient positioning device of this invention relates to an apparatus used to assist a patient into a supine position and additionally through which traction is applied to the spine, such as physical therapy and chiropractic treatment. The measuring transducer includes two straight measuring tubes for conveying the medium, wherein the measuring tubes are arranged in parallel to one another and the measuring transducer is embodied with micromechanical construction. After determining the physical addresses where any failure exists, the physical addresses locations associated with the physical locations of unusable memory cells or memory blocks are mapped out to avoid addressing them. Circuit topologies and control schemes for specific embodiments of LO buffers and mixers having adjustable size are disclosed. Buried hard mask materials permit self-alignment of the lines and contacts without a critical mask, such as for word-line electrode lines and word-line contacts in a memory device. These dyes find use in detection of analyte in a sample and the preparation of dye-conjugates.

1459828010-cd2315a0-1e09-499a-b4f1-7c2c5400b6bd

Disclosed are systems, methods, and algorithms for network layout. The processes can be carried out using a batch process or a continuous mode of operation. The formula is calculated using an input set of observed values for the exogenous

variables at given point in time, so as to obtain a price estimate for the asset at the given point in time.

1459828010-cebeeb43-b482-44e4-a5c8-85042b00eb48

The glass container stores and preserves pharmaceutical or diagnostic solutions for medicinal purposes. The number of pseudo grayscale levels is determined based on a parameter indicating the level of the dynamic range and a parameter indicating the level of the edge enhancement processing. The feeder has air vent holes and an outlet provided in an upper part thereof. Tags respond to the interrogations with symbols that each represent one or more bits of data. The preferred topology utilizes a Tow-Thomas circuit, which can be designed for the prerequisite gain and Q independently selecting two resistors. The influence of the disturbance of the electric potential distribution on the surface of a coating machine main body 5 is alleviated by the first and second sheet materials 21 and 22 to cause the electric potential distribution on the surface of the third sheet material 23 to be homogeneous to thereby preventing the attaching of atomized coating particles to the surface.

1459828011-04b3f43b-ebb8-461d-8a64-384546a62e43

The invention relates to compositions and methods for isolating nucleic acids from biological samples, including whole tissue. The collector is formed by active region with p-type ion implanting layer. The bend-limiting layer may comprise a plurality of blocks arranged in a line or plane and joined by a flexible film that is thinner than the blocks with the blocks positioned close enough to each other so that, if that plane of blocks is bent a predetermined amount, the edges of the blocks will interfere with each other and prevent the plane from being bent any further. Further, the fastening bracket member is attached to a monument.

1459828011-20352118-aae0-46bd-845e-277aba5bfb42

The invention relates to devices for aligning sheets, which are overlapped with an offset and supplied to the device by a stream feeder and which can be transferred to a device that is located downstream, after alignment of the front edge and one lateral edge of the sheets. Additionally, processes of preparing the compounds of formula, formulations containing same, and the administration of said compounds or formulations thereof in the treatment of inflammatory diseases are also disclosed. =150\xd7attachment energy eV, 100\xd7attachment energy eV\u2212250, and 20\xb0 C. The scroll may contain a greeting, message or simply contain artwork or a funny or entertaining scene. The satellite radio network broadcasts the text message so that it may be received by a satellite radio enabled device. The absorbent product has a very small re-wet amount.

1459828011-9839598a-95bf-4a9b-be00-806a17a92364

Treatment of lymphangioliomyomatosis with the MEK12 inhibitor CI-1040 delayed the development of primary tumors and blocked the estrogen-induced lung metastases in treated animals. The following features of the tree and its fruit are characterized with the tree budded on \u2018Nemaguard\u2019 Rootstock, grown on Handford sandy loam soil with Storie Index rating 95, in USDA Hardiness Zone 9, near Modesto, Calif. The structure can be cut or shaped into a virtually unlimited array of configurations. The correlations indicate which non-input signals are associated with which input signals. A lift system supports the carriage for vertical movement. Such imaging optical system may be constructed so as to be substantially telecentric on at least a same side thereof as at least one of the second plane or planes.

1459828012-42f98253-046d-44e1-8a63-4924631a992d

Disclosed is a method and system for transmittingreceiving a neighbor base-station information message in a broadband wireless access system. A roof member is pivotally connected to a top edge of the housing and at least one pivoting panel is connected to one of the first side wall and second side wall. Package substrates

are fabricated to enable multiple levels of trace routing with each trace routing level capable of reduced minimum trace width and spacing. A second dial tone is generated by the central office of the PSTN of the called party and this dial tone is relayed to the caller which prompts the caller to enter the telephone number of the called party to thereby establish communication between the caller and the called party.

1459828012-819da037-645c-4a7e-b2fa-fc681227bf

A seat fixing device for fixing a seat to a floor includes a device body. The semiconductor integrated circuit comprises a first terminal with a first voltage and a second terminal with a second voltage. In some embodiments, implementation of the selected vehicle operation mode may modify a conformity status of the vehicle relative to the administrative standard. The conversion compensates for the differing operating characteristics of the first and second cameras.

1459828012-8f10967a-e21d-48b3-b86b-b591b550229c

There are provided an electrode assembly and a secondary battery using the same. The method comprises obtaining the hash value of a password and re-sizing the hash value to fit the size of the 2D input data. The mobile computing device is also configured to execute a web browser or other application that access a network resource. The separation portion has a length which extends radially outward from a flat surface, and which is greater than a total sum of a maximum-minimum difference between the finish allowances of the diameters of the wafer and the support plate, and a maximum value of a positioning error between the wafer and the support plate generated upon adhesion thereof. The compositions and methods provide complete fill of small apertures with reduced void formation.

1459828013-40e41699-e9ab-49bc-adde-8e729efd8c32

A transmission apparatus includes at least an auxiliary transmission for supplementing a main transmission. The scoop includes a first base panel and a second base panel, each of the first and second base panels having a front edge, a back edge and two side edges. The lift-off process including emitting, from a radiation source, a radiation beam through the first substrate to an attachment interface formed between the first substrate and the at least one thick film element structure at the first surface of the first substrate. The O-rings are sheared cross-sectionally to allow the sleeve members to move axially with respect to one another.

1459828013-4af1715a-38d3-48fe-a3be-0001d6afbcb5

A method and cutting device makes incisions in an elongated food product, like a hot dog or sausage, to form a pattern or character after the product is cooked. The insulating layer is meltable in response to heat. The blade tip target portions pass through the projected image and reflect light to receptor ends of a plurality of optical fibers defining a detection conduit for conveying the reflected light to a processor.

1459828013-8ce55c67-839a-4f5b-8173-868c7fe0b937

To realize a light steering handle operation similar to that of a real bicycle, and to obtain an appearance similar to that of a real bicycle. In another embodiment, the invention discloses pharmaceutical compositions comprising compounds of Formula as well as methods of using them to treat diabetic and other glucagon related metabolic disorders, and the like. These outputs are applied to control inputs to the signal generating delay line to control the number of delay units through which a clock signal propagates before being output from a final delay unit. The communication link is established for one or more sessions The method further includes receiving, at the server, a plurality of actions associated with inputs to the vehicle.

1459828014-a899d820-4a1f-4d32-b56c-0f47ee343882

According to one aspect of the invention a device for purification of air is provided, including a metal plate, electrical connections connected to the metal plate in order to impress a voltage on the metal plate, a heating element for heating the metal plate, and a nozzle connected to a water supply in order to spray the metal plate with water. One of the chambers is provided with a blade and a rotatable member for assisting a user to position the crayons against the blade for sharpening purposes. Each sub-stream is then spreaded with a user specific spreading code with an intentional delay offset of few chips prior to modulating the encoded data for transmission.

1459828015-07a47bdc-8c55-4a68-84b8-67bc478f5b1a

Apparatus and methods are disclosed for controlling flow of fluid inside a chamber. The environment enables sellers to list items together with relevant information that buyers may need to understand the item. The subtractive color processing circuit carries out the weighting processing so as to increase the subtractive color image data corresponding to a line and decrease the subtractive color image data corresponding to another line.

1459828015-72af89f9-c342-458e-bdd0-c802c0ee5f1d

An apparatus and method for anchoring orthodontic appliances or the like in the mouth wherein anchor screws of different constructions are installed in the bone in different areas of the mouth to insure adequate bone contact and retention. The input data word is split into two intermediate data words into which respective high order portions and low order portions of the data values are written spaced apart by vacant portions. Reticule aim point field 750 permits the marksman to adjust the firing solution for momentary atmospheric effects and operational contingencies such as variations in ammunition. Each engaging profile is complementary with the adjacent engaging profile. In another embodiment, a bi-level multiplication region with a wide bandgap ternary layer and a narrower bandgap quarternary layer is provided at an increased thickness to improve gain per unit length. The thin voxelization algorithm receives a surface, maps the surface onto a plurality of volumetric picture elements, and generates a value for each voxel in the plurality of voxels that intersects with the surface.

1459828015-d669d3d5-006d-47c9-a84d-2f6df822f89c

An odd-cylinder V-type internal combustion engine including 2n1 cylinders arranged in two banks and pistons fitted in the cylinders has a crankshaft provided with n common crankpins each connected to the two paired pistons respectively belonging to the two banks, and one odd crankpin connected to the one unpaired piston. A fault pattern is generated within the sensor and is transmitted from the sensor to the control unit in order to enable an appropriate response to the fault pattern by the processor. The dividing wall distillation column exhibits the effects of a two distillation column from only one distillation column, thereby reducing energy and the costs of installing the apparatus as compared to conventional distillation systems.

1459828016-02efb5b3-cb7d-4754-8818-d1d3f4694f16

A container has a sealed top formed from adhered sealing panels at a top of the container that keeps contents of the container sealed until ready for use. For example, a data processing system is disclosed that includes a channel detector circuit. The method comprises pumping a drilling fluid down the drill string and cyclically venting the drilling fluid through the valve so as to cyclically reduce the pressure of the drilling fluid in the drill string.

1459828016-35424b48-8a33-4548-bc62-901cc885b4fe

An apparatus and methods for unloading panels. The printhead has a large number of nozzle assemblies. The feed gas stream may also include SO<sub>2</sub> and/or NO<sub>x</sub>. In a second mode of operation of the engine, gaseous fuel is added to the combustion air via the first fuel feed system and ignition fuel is injected into the mixture of

gaseous fuel and combustion air via the third fuel feed system.

1459828016-9f893408-8fdd-4acc-846c-165b3eedde9f

Dermatological disorders having an inflammatory or proliferative component are treated with pharmaceutical compositions containing on the order of 0. A plurality of statically deployed monitoring devices, each of which includes at least one radio frequency transmitter/receiver, are configured to run application tests, for example, for voice, messaging, or locations-based services, to provide testing of the wireless network to thereby generate test information related to the wireless network. The control features and loops interact by surface engagement to anchor the prosthesis relative to the inner catheter in a nonfrictional manner, thus to maintain lower axial prosthesis deployment and retraction forces. The illumination system is configured to house an illumination device in a manner that facilitates visually receiving information from a document while minimizing external non-document light transmission.

1459828016-b0f402c2-4cb3-4330-91e3-74afa1ae206f

Methods, systems and applications for updating, enhancing, organizing, and utilizing geographic maps, for locating points of interest and places of businesses, or POI's. The contactor arrangement may further include a conductor section. The cabin attendant seat includes at least one backrest element and two seat elements. The device includes a drain region adjoining a third portion of the body region, the third portion adjacent the first portion and separating the drain region from the first portion, wherein the source and drain regions are opposing.

1459828017-f4c32228-725a-49ef-a488-ba89e2580d91

A disk drive that approximates spiral slope in spiral patterns is disclosed. Thereafter, a second ferroelectric film is formed on the first ferroelectric film by CVD using a second source gas. Use of an existing sensor to diagnose multiple engine components provides cost reduction and sensor compaction benefits. The oxide rich cap is deposited on the low dielectric constant film in the absence of low frequency RF power from another gas mixture including the organosilicon compound and the oxidizing gas used to deposit the low dielectric constant film.

1459828018-0360acfd-2ebf-471a-9890-2f6298f19866

A method for manufacturing a semiconductor structure having an interlevel dielectric comprising patterning features in the interlevel dielectric, depositing a metal into the features, and melting and recrystallizing metal in the features using a laser. The invention is also directed to pharmaceutical compositions comprising these compounds and the use of these compounds and compositions in the prevention or treatment of such diseases in which T-type calcium channels are involved. The fourth magnetic layer has a rare earth metal magnetization-dominant composition and an axis of easy magnetization oriented longitudinally at room temperature. These timers allow the system to correctly associate therapy adjustments to posture states when the patient anticipates the posture change by adjusting therapy before engaging in the desired posture state. Indentations can be formed by mechanically removing features formed as described above.

1459828018-058e843c-f11e-4165-a45a-dca693c9e21b

During a first period of a set period, a reset switch element of each pixel is turned on to converge a voltage at a control electrode of a TFT to a predetermined voltage, and a step signal having a first voltage level is supplied from a step signal generation circuit. The reroute module identification block, includes an original module identification that provides an address of one or more original modules in the computer system, and a remapped module identification that provides logical destination module identifications of substitute modules in the computer system, where a substitute module replaces functions of an original module in the computer system. A locking device is included in the jaw arm assembly such that the jaw arms may be securely positioned in a number of locations to accommodate various

working angles. A time elapsed after the previous printing time is calculated on the basis of the current time and previous printing time. The second substrate is disposed above the first substrate to cover the integrated driving circuit and the pixel array.

1459828018-b33b7de6-03a3-4d4c-8724-a09108127d14

A method of controlling the behavior of an occupant of a vehicle includes sensing an auxiliary mode of the vehicle and comparing a first vehicle operation mode to a predetermined threshold to determine a first incident. The receiving station comprises a receiving unit configured to receive information containing ID information of a transmitting station, and a data extracting unit configured to extract the ID information from the received information. The interconnect location defines an access device for selectively accessing the termination locations. The integrated loop inductor may be integrated in CMOS technology and on the same IC chip as either both of the FET driver and the VCSEL diode.

1459828019-ae4b4ede-527d-40f3-842e-606e7936728d

A display unit with which lowering of long-term reliability of a transistor is decreased is provided. Three vertically aligned catch structures are disposed to receive and retain the bottle caps. , which are selected in order to achieve the best combination of product quality and production yield. Additionally, conductive traces are divided into separate sections and electrically connected by crossed jumper wires or bond wires. With respect to text areas, character recognition is performed on the binary image, then the recognition data is outputted. When corrected data during head shading correction and nonejection complementing in image processing exceed a maximum value capable of being recorded, complementing is controlled with a different color corresponding to data-amount which exceeds the maximum value.

1459828019-df63c54f-1ede-4f60-b12f-12124d16c981

A protection device includes a voltage detector having N or more sub-circuits each for monitoring a specific battery cell to output a detection signal when at least one of the battery cells outputs an abnormal voltage. In one embodiment, a general architecture includes a resource manager and multiple resource providers that support one or more resource consumers such as a system component or application. The integrated front end filter can include at least one active filter unit with an active reactance element in either of fixed and variable filter configurations and a decoder coupled to said at least one active filter unit and being responsive to a control signal for selecting a one of the passbands.

1459828019-fd297f74-b95a-48da-9dca-981eb7f56e9d

The invention relates to a liquid crystal gel containing polyoxyethylene-glyceryl-trioleate, propylene-glycol, isopropyl myristate and a hyaluronic acid salt or complex for use in the manufacture of transdermal pharmaceutical compositions and healing cosmetics. The amplifier includes complementary input pairs, and employs a steering circuit which provides a tail current  $I_{tail}$  to one pair when  $V_{cm}$  is less than a threshold voltage  $V_{th}$ , and provides  $I_{tail}$  to the other pair when  $V_{cm} > V_{th}$ . The multiple stages provide a sleeve that may be useful with a variety of borehole logging tools to reduce or eliminate the transmission of noise to the receiving elements.

1459828019-fde1b676-d471-4a78-bd02-0551ccff4b43

A lead-free solder includes at least one selected from 0. The heat exchanging plate portions are layered with predetermined spaces between them so that outside fluid passages are formed between the adjacent heat exchanging plate portions. This method comprises a rate matching step for each transport channel, a rate matching ratio being applied to each transport channel. More specifically, each node runs under the control of a separation kernel that partitions the nodes to define the subjects according to an SK configuration data.

1459828020-47b21673-643f-440a-a2b1-8fe1e9fca672

A variable mass cap 20 for a shock imparting implement grip has a butt element 22 connected to a tubular portion 24 constructed to receive a selected mass 26, 28. Preferred polymers of the invention are employed in photoresists imaged at wavelengths less than 250 nm such as 248 nm and 193 nm. The compounds can function as monomers, and copolymers can be formed from such monomers, such copolymers comprising, as polymerized units, a plurality of units of the compounds. The particulate materials comprise a protein. The socket releasably secures a second male connector with the lip inside the socket opening engaging a neck of the second male connector.

1459828020-72d47fe6-dbce-457c-87d2-17c33b0ba14a

An IGBT having a good balance between high switching speed and low on-resistance. The transparent portion may be controlled by a control unit coupled to the memory, along with a corresponding tag memory. A y-direction positional deviation between the power transmission coil and the power receiving coil is detected using voltages measured at the first and second search coils, and an x-direction positional deviation is detected using voltages measured at the third search coils.

1459828021-0a5b21ec-ee84-44cc-a49e-5912bfad9f40

Disclosed is a conductor pattern structure of a capacitive touch panel. An optical modulator is aligned with the light source so as to intercept light from the beam of light and produce a spatial modulation pattern across the long axis of the beam of light. Optionally, a storage system includes a pair of rails for supporting the tray. During this supply operation, a supply position of the second fluid to the substrate is moved radially outward from a rotational center of the substrate. The doped path preferably constitutes the entirety of the upper layer forming the photosensitive surface. The first actuator and the second actuator are each configured to receive a signal associated with a force feedback.
